# BRIEF SUBJECT INDEX

- Sexual Intercourse (Human)** [See also Dyspareunia, Extramarital Intercourse, Rape] 4986, 5017, 5108, 5973
- Sexual Receptivity (Animal)** [See Animal Sexual Receptivity]
- Sexuality** 4917, 5003, 5120, 5136, 5142, 5663, 5805
- Shame** [See Guilt]
- Shape Perception** [See Form And Shape Perception]
- Sheep** 4555, 4787
- Sheltered Workshops** 5894, 6030, 6054
- Shock** 4444, 4676, 4707, 4724, 4768
- Shock Therapy** [See Electroconvulsive Shock Therapy]
- Shopping** [See Consumer Behavior]
- Short Term Memory** 4450, 4473, 4474, 4478, 4481, 4486, 4487, 4494, 4495, 4496, 4497, 4501, 4503, 4516, 4517, 4521, 4523, 4524, 4905, 5661, 5715
- Short Term Psychotherapy** [See Brief Psychotherapy]
- Shoshone Indians** [See American Indians]
- Sibling Relations** 4969, 5709
- Siblings** [See also Heterozygotic Twins, Monozygotic Twins] 4914, 5709, 5751
- Side Effects (Drug)** [See also Drug Addiction, Drug Adverse Reactions, Drug Dependency, Heroin Addiction] 5844, 5848, 5850, 5854, 5884, 5886
- Sign Language** 5251, 5273
- Signal Detection (Perception)** 4342, 4353, 4375, 4378, 4381, 4384
- Signal Intensity** [See Stimulus Intensity]
- Significance (Statistical)** [See Statistical Significance]
- Similarity (Stimulus)** [See Stimulus Similarity]
- Simulation** [See also Computer Simulation, Flight Simulation, Markov Chains, Mathematical Modeling, Stochastic Modeling] 4305, 4460, 4464
- Simulators** [See Simulation]
- Size (Apparent)** [See Apparent Size]
- Size (Group)** [See Group Size]
- Size Discrimination** [See Apparent Size]
- Skilled Industrial Workers** 6381
- Skills** [See Ability]
- Skin (Anatomy)** 4329
- Skin Conduction** [See Skin Resistance]
- Skin Disorders** [See Alopecia]
- Skin Electrical Properties** [See Basal Skin Resistance, Skin Resistance]
- Skin Resistance** [See also Basal Skin Resistance] 4416, 4419, 4581
- Sleep** [See also NREM Sleep, REM Sleep] 4546, 4547, 4548, 4566, 4568, 4571, 4590, 5512, 5513, 5582, 5965
- Sleep Deprivation** 4582, 6348
- Sleep Disorders** [See also Narcolepsy] 5499, 5857
- Sleep Inducing Drugs** [See Hypnotic Drugs]
- Sleep Onset** 4716
- Slow Wave Sleep** [See NREM Sleep]
- Smell Perception** [See Olfactory Perception]
- Smiles** 4856
- Smoking (Tobacco)** [See Tobacco Smoking]
- Snake Phobia** [See Ophidiophobia]
- Social Acceptance** 5017, 5043, 5326, 5560, 5566
- Social Adaptation** [See Social Adjustment]
- Social Adjustment** 4985, 4999, 5229, 5616, 5736, 5864, 5976, 6356
- Social Approval** 5190, 5220, 5670
- Social Behavior** [See also Aggressive Behavior, Altruism, Animal Aggressive Behavior, Animal Communication, Animal Division of Labor, Animal Dominance, Animal Maternal Behavior, Animal Mating Behavior, Animal Sexual Receptivity, Animal Social Behavior, Arguments, Assistance (Social Behavior), Attack Behavior, Attribution, Bargaining, Charitable Behavior, Collective Behavior, Competition, Compliance, Conflict, Conformity (Personality), Cooperation, Eye Contact, Friendship, Group Discussion, Group Participation, Group Performance, Interpersonal Attraction, Interpersonal Communication, Interpersonal Influences, Interpersonal Interaction, Interviewing, Interviews, Involvement, Job Applicant Interviews, Leadership, Leadership Style, Negotiation, Peer Relations, Praise, Psychodiagnostic Interview, Reciprocity, Risk Taking, Social Acceptance, Social Adjustment, Social Approval, Social Demonstrations, Social Drinking, Social Facilitation, Social Interaction, Social Perception, Social Reinforcement, Threat Postures, Trust (Social Behavior), Verbal Reinforcement, Violence, War] 5054, 5062, 5102, 5104, 5144, 5951, 6072
- Social Casework** 5968, 6028, 6029, 6031, 6032, 6038
- Social Caseworkers** [See Social Workers]
- Social Change** 4961, 5035, 5067, 5087, 5114, 5122, 5140, 5439, 5584, 6028, 6031
- Social Class** [See also Lower Class, Middle Class] 4859, 5210, 5253, 6291
- Social Demonstrations** 5074
- Social Deprivation** [See also Social Isolation] 5057
- Social Desirability** 4889, 5049, 5214, 5221, 5225, 5328, 5333, 5670
- Social Drinking** 4695, 4715, 4762, 5075
- Social Environments** [See also Animal Environments, Classroom Environment, College Environment, Communities, Environmental Adaptation, Home Environment, Rural Environments, School Environment, Urban Environments, Working Conditions] 5054, 5203
- Social Equality** 5022, 5077, 5142, 5186, 6031, 6097, 6103
- Social Facilitation** 4830, 5182, 5373, 6035, 6048
- Social Groups** [See also Dyads, Minority Groups] 5173, 5212
- Social Immobility** [See Social Mobility]
- Social Influences** [See also Power, Prejudice, Social Approval, Social Desirability, Social Values] 5028, 5112, 5135, 5144, 5163, 5805, 5901, 6066
- Social Interaction** [See also Arguments, Assistance (Social Behavior), Bargaining, Charitable Behavior, Collective Behavior, Conflict, Cooperation, Eye Contact, Friendship, Group Discussion, Group Participation, Group Performance, Interpersonal Attraction, Interpersonal Communication, Interpersonal Influences, Interpersonal Interaction, Interviewing, Interviews, Job Applicant Interviews, Negotiation, Peer Relations, Psychodiagnostic Interview, Violence, War] 4293, 5158, 5727, 6053, 6084, 6195, 6368
- Social Isolation** 4718, 4815, 4816, 4822, 4824, 5043, 6076
- Social Learning** [See also Imitation (Learning), Nonverbal Learning] 5243, 6154, 6156
- Social Maladjustment** [See Social Adjustment]
- Social Mobility** 5076, 6335
- Social Movements** [See also Activist Movements, Civil Rights Movement, Student Activism, Womens Liberation Movement] 4254, 5074, 5092
- Social Perception** [See also Attribution] 4394, 4839, 4989, 4997, 5143, 5162, 5168, 5174, 5175, 5179, 5186, 5188, 5191, 5194, 5195, 5196, 5200, 5202, 5203, 5205, 5209, 5217, 5219, 5221, 5222, 5223, 5224, 5225, 5226, 5230, 5232, 5234, 5238, 5247, 5328, 5373, 5381, 5409, 5428, 5629, 5630, 5759, 6040, 6113, 6122, 6376
- Social Processes** [See also Industrialization, Racial Integration, Social Deprivation, Social Isolation, Social Mobility, Socialization] 5096, 5545
- Social Psychology** 4256, 5144, 5145
- Social Reinforcement** [See also Praise, Verbal Reinforcement] 4889, 4955, 5057, 5059, 5893, 5927, 6123
- Social Sciences** [See also Adolescent Psychology, Anthropology, Clinical Psychology, Comparative Psychology, Consumer Psychology, Developmental Psychology, Educational Psychology, Gerontology, Mathematical Psychology, Psychology, School Psychology, Social Psychology, Sociology] 4271, 5763
- Social Structure** [See also Lower Class, Middle Class, Social Class] 5068, 5127, 5133, 5160
- Social Values** 4999, 5034, 5047, 5092, 5115, 5117, 5193, 5254, 5415, 5793, 6255
- Social Work** [See Social Casework]
- Social Workers** 5118, 6032
- Socialization** 5114, 5215
- Socially Disadvantaged** [See Disadvantaged]
- Sociocultural Factors** [See also Acculturation, Birth Rites, Cross Cultural Differences, Cultural Assimilation, Culture Change, Ethnic Identity, Initiation Rites] 4984, 5023, 5048, 5051, 5084, 5103, 5326, 5449, 5454
- Socioeconomic Status** [See also Family Socioeconomic Level, Lower Class, Lower Income Level, Middle Class, Social Class] 4896, 4938, 4945, 4971, 4980, 4992, 5015, 5057, 5090, 5092, 5117, 5214, 5453, 5537, 5670, 6091, 6176
- Sociology** 6164
- Sociometric Tests** 5180, 5260
- Sociopath** [See Antisocial Personality]
- Sociopathology** [See Antisocial Behavior]
- Sodium** 4605, 4759
- Sodium Pentobarbital** [See Pentobarbital]
- Somatosensory Evoked Potentials** 4571, 4620
- Somatotypes** 5204
- Somesthetic Perception** [See also Cutaneous Sense, Kinesthetic Perception, Pain Perception, Pain Thresholds, Tactile Perception, Vibrotactile Thresholds] 4335

# BRIEF SUBJECT INDEX

**Somesthetic Stimulation** [See also Tactile Stimulation] 4561, 4702, 4909  
**Sonar** 4353  
**Sorting (Cognition)** [See Classification (Cognitive Process)]  
**Sound** [See Auditory Stimulation]  
**Sound Localization** [See Auditory Localization]  
**Sourness** [See Taste Stimulation]  
**South America** 5087  
**Space (Personal)** [See Personal Space]  
**Spain** 5326  
**Spatial Discrimination** [See Spatial Perception]  
**Spatial Organization** 4355, 4514, 5285, 5592  
**Spatial Orientation (Perception)** 4356, 4853, 5195  
**Spatial Perception** [See also Apparent Movement, Apparent Size, Depth Perception, Distance Perception, Motion Perception, Spatial Organization, Spatial Orientation (Perception)] 4261, 4356, 4514, 4641, 4783, 4853, 4928, 5345, 5745  
**Special Education** 5660, 5670, 5954, 6081, 6098, 6100, 6123, 6193, 6194, 6195, 6197, 6198, 6201, 6203, 6204, 6205, 6207, 6209, 6210, 6211, 6214, 6217, 6218, 6219, 6220, 6222, 6225, 6226, 6227, 6229, 6242  
**Special Education (Aurally Handicap)** [See Aurally Handicapped, Special Education]  
**Special Education (Emot Disturbed)** [See Emotionally Disturbed, Special Education]  
**Special Education (Gifted)** [See Special Education]  
**Special Education (Learning Disabil)** [See Learning Disabilities, Special Education]  
**Special Education (Mentally Retard)** [See Mentally Retarded, Special Education]  
**Special Education (Phys Handicaps)** [See Physically Handicapped, Special Education]  
**Special Education (Visual Handicap)** [See Special Education, Visually Handicapped]  
**Special Education Students** 5721, 6213  
**Special Education Teachers** 6092, 6117  
**Specialization (Academic)** [See Academic Specialization]  
**Spectral Sensitivity** [See Color Perception]  
**Speech** [See Verbal Communication]  
**Speech And Hearing Measures** 5722  
**Speech Characteristics** [See also Articulation (Speech), Pronunciation, Speech Pauses, Speech Rate, Speech Rhythm] 4456, 4967, 5241, 5246, 5253, 5255, 5261, 5271, 5282, 5918  
**Speech Development** 4886, 4913, 5678  
**Speech Disorders** [See also Articulation Disorders, Echolalia, Retarded Speech Development, Stuttering] 5583  
**Speech Handicapped** 5689  
**Speech Measures** [See Speech And Hearing Measures]  
**Speech Pauses** 4970, 5261, 6127  
**Speech Perception** 4340, 4341, 4344, 4352, 4454, 4456, 4849, 4862, 4892, 4897, 4913, 4923, 4926, 5241, 5271, 5290, 5689, 5722  
**Speech Processing (Mechanical)** [See also Compressed Speech, Synthetic Speech] 5241, 5262

**Speech Rate** 5688  
**Speech Rhythm** 5258  
**Speech Therapy** 4933, 5688, 5776, 5918, 6168, 6199  
**Speed** [See Velocity]  
**Speed (Response)** [See Reaction Time]  
**Spelling** 4426  
**Spinal Cord** [See Extrapyramidal Tracts, Pyramidal Tracts]  
**Split Personality** [See Multiple Personality]  
**Spokane Indians** [See American Indians]  
**Spontaneous Recovery (Learning)** 4504  
**Sports** [See also Baseball] 5156, 5370  
**Spouses** [See also Housewives] 4996, 5552, 5569, 5979, 5994, 6001, 6275, 6277  
**Spreading Depression** 4640  
**Stability (Emotional)** [See Emotional Stability]  
**Standardization (Test)** [See Test Standardization]  
**Standards (Professional)** [See Professional Standards]  
**Stanford Binet Intelligence Scale** 4282, 4290  
**Startle Reflex** 4635  
**State Hospitals** [See Psychiatric Hospitals]  
**Statistical Analysis** [See also Analysis of Covariance, Analysis of Variance, Cluster Analysis, Consistency (Measurement), Factor Analysis, Frequency Distribution, Interaction Analysis (Statistics), Item Analysis (Statistical), Normal Distribution, Statistical Measurement, Statistical Probability, Statistical Rotation, Statistical Significance, Statistical Tests] 4286, 4294, 4304, 4307, 4309, 4310, 4311, 4312, 4316, 5099, 5123, 5162, 5403  
**Statistical Correlation** 4291, 4297, 4316, 5381, 6234  
**Statistical Measurement** [See also Analysis of Covariance, Analysis of Variance, Cluster Analysis, Consistency (Measurement), Factor Analysis, Frequency Distribution, Interaction Analysis (Statistics), Item Analysis (Statistical), Normal Distribution, Statistical Probability, Statistical Rotation] 4302, 4303  
**Statistical Probability** 4314, 4317  
**Statistical Rotation** 4300  
**Statistical Significance** 4306  
**Statistical Tests** 4301, 4313, 4556  
**Statistical Validity** [See also Predictive Validity] 6040  
**Statistical Variables** 4294, 4297, 4307  
**Status** 5076, 5172, 5228, 5247, 5785, 6290  
**Stealing** [See Theft]  
**Stelazine** [See Trifluoperazine]  
**Stereotaxic Atlas** 4563, 4642  
**Stereotaxic Techniques** [See Chemical Brain Stimulation, Electrical Brain Stimulation, Spreading Depression]  
**Stereotyped Attitudes** 5110, 5214, 5237, 6326  
**Sterilization (Sex)** [See Male Castration, Ovarioectomy, Vasectomy]  
**Steroids** [See Corticosterone]  
**Stimulation** [See also Auditory Stimulation, Aversive Stimulation, Chemical Brain Stimulation, Electrical Brain Stimulation, Perceptual Stimulation, Prismatic Stimulation, Self Stimulation, Somesthetic Stimulation, Spreading Depres-

sion, Tactual Stimulation, Taste Stimulation, Visual Stimulation] 5360  
**Stimulators (Apparatus)** 4638  
**Stimulus (Conditioned)** [See Conditioned Stimulus]  
**Stimulus (Unconditioned)** [See Unconditioned Stimulus]  
**Stimulus Ambiguity** 5211  
**Stimulus Complexity** 4458  
**Stimulus Control** 4626, 4788  
**Stimulus Deprivation** [See Food Deprivation, Sensory Deprivation, Social Deprivation, Social Isolation, Water Deprivation]  
**Stimulus Discrimination** 4273, 4406, 4420, 4506, 4626, 4638, 4699, 4783, 4784  
**Stimulus Duration** 4358, 4359, 4360, 4403, 4430, 4519, 4751  
**Stimulus Exposure Time** [See Stimulus Duration]  
**Stimulus Frequency** 4484, 4487, 4507, 4794  
**Stimulus Generalization** 4373, 4467, 4788  
**Stimulus Intensity** 4330, 4336, 4346, 4347, 4416, 4418, 4550, 4584, 4602  
**Stimulus Intervals** [See also Interstimulus Interval, Intertrial Interval] 4365, 4794  
**Stimulus Novelty** 4584  
**Stimulus Parameters** [See Interstimulus Interval, Intertrial Interval, Stimulus Complexity, Stimulus Duration, Stimulus Frequency, Stimulus Intensity, Stimulus Intervals, Stimulus Novelty, Stimulus Salience, Stimulus Similarity, Stimulus Variability]  
**Stimulus Pattern** [See Stimulus Variability]  
**Stimulus Presentation Methods** [See also Tachistoscopic Presentation] 4328, 4330, 4347, 4354, 4429, 4431, 4485, 4494, 4496, 4500, 4511, 5674  
**Stimulus Salience** 4778  
**Stimulus Similarity** 4273, 4355, 4369, 4458, 4483, 4513, 4875  
**Stimulus Variability** 4330, 4424, 4530, 4550  
**Stipends** [See Educational Financial Assistance]  
**Stochastic Modeling** [See also Markov Chains] 4280  
**Stomach** 4578, 4611  
**Storytelling Technique** [See Mutual Storytelling Technique]  
**Strain Differences (Animal)** [See Animal Breeding, Genetics]  
**Strategies** 4898, 5183  
**Stress** [See also Environmental Stress, Occupational Stress, Physiological Stress, Psychological Stress, Stress Reactions] 4304, 4472, 4579, 4789, 4944, 5300, 5315, 5433, 5436, 5437, 5438, 5442, 5527, 5548, 5712, 5730, 6354  
**Stress Reactions** 4579, 5024  
**Strikes** 6274  
**Stroboscopic Movement** [See Apparent Movement]  
**Stroke (Cerebrum)** [See Cerebrovascular Accidents]  
**Strong Vocational Interest Blank** 6234, 6327  
**Student Activism** 5054, 5077, 5232, 6131  
**Student Admission Criteria** 6184, 6259  
**Student Attitudes** 5085, 5122, 6094, 6107, 6124, 6125, 6131, 6140, 6155, 6190, 6209, 6243, 6310

# BRIEF SUBJECT INDEX

- Student Protest** [See Student Activism]  
**Student Teachers** 6105, 6112, 6115, 6134, 6135  
**Students** [See also Business Students, College Students, Elementary School Students, Graduate Students, High School Students, Junior High School Students, Kindergarten Students, Medical Students, Nursery School Students, Roommates, ROTC Students, Special Education Students, Transfer Students] 5295, 6095  
**Studies (Followup)** [See Followup Studies]  
**Studies (Longitudinal)** [See Longitudinal Studies]  
**Study Habits** 6141, 6182, 6185, 6190, 6261  
**Stuttering** 5688  
**Subcortical Lesions** [See Brain Lesions]  
**Subnormality (Mental)** [See Mental Retardation]  
**Subprofessional Personnel** [See Paraprofessional Personnel]  
**Substantia Nigra** [See Mesencephalon]

 Tetrahydrocannabinol 4705, 4714, 4724, 4728  
 Thailand 5096  
 Thalamic Nuclei 4565  
 Thalamotomy 6020  
 Thalamus [See also Thalamic Nuclei] 4557, 4560, 4741  
 Theatre [See Drama]  
 Theft 5601  
 Thematic Apperception Test 5349  
 Theology [See Religion]  
 Theories of Education 4260, 6157, 6162  
 Theories [See Also Related Terms] 4388, 4872, 5151, 5257  
 Theory Verification 5168  
 Therapeutic Abortion [See Induced Abortion]  
 Therapeutic Community 5771, 6061, 6071, 6077  
 Therapeutic Techniques (Psychother) [See Psychotherapeutic Techniques]  
 Therapist Attitudes [See Therapist Characteristics]  
 Therapist Characteristics 5413, 5427, 5788, 5796, 5814, 5820  
 Therapist Effectiveness [See Therapist Characteristics]  
 Therapist Experience [See Therapist Characteristics]  
 Therapist Patient Interaction [See Psychotherapeutic Processes]  
 Therapist Personality [See Therapist Characteristics]  
 Therapist Trainees 5412  
 Therapists [See Also Related Terms] 5413  
 Therapy [See Treatment]  
 Therapy (Drug) [See Drug Therapy]  
 Therapy (Encounter Group) [See Encounter Group Therapy]  
 Therapy (Individual) [See Individual Psychotherapy]  
 Therapy (Music) [See Music Therapy]

Thermal Acclimatization 6298  
 Thinking [See also Abstraction, Divergent Thinking, Inductive Deductive Reasoning, Inference, Logical Thinking, Reasoning] 4264, 4448, 4502, 5540  
 Thioridazine 5856, 5887  
 Thiouthixene 5898  
 Thirst 4645, 4646  
 Thorazine [See Chlorpromazine]  
 Thought Disturbances [See Amnesia, Fantasies (Thought Disturbances), Obsessions]  
 Threat 5216, 5334  
 Threat Postures 4827  
 Thresholds [See also Auditory Thresholds, Pain Thresholds, Sensory Adaptation, Vibrotactile Thresholds, Visual Thresholds] 4741  
 Thyroid Stimulating Hormone [See Thyrotropin]  
 Thyrotropic Hormone [See Thyrotropin]  
 Thyrotropin 4719  
 Time 5153, 6367  
 Time Estimation 6352  
 Time Perception [See also Time Estimation] 4261, 4324, 4331, 4868, 4952, 5009  
 Tiredness [See Fatigue]  
 Tissues (Body) [See also Connective Tissues, Nerve Tissues, Skin (Anatomy)] 4535  
 Tobacco (Drug) [See Nicotine]  
 Tobacco Smoking 4762, 5000, 5111, 5255, 5768  
 Toes (Anatomy) [See Feet (Anatomy)]  
 Tofranil [See Imipramine]  
 Token Economy Programs 5140, 5646, 5894, 5941, 5949, 6082, 6219, 6269  
 Token Reinforcement [See Secondary Reinforcement]  
 Tolerance (Drug) [See Drug Tolerance]  
 Tolerance For Ambiguity 5198, 5427  
 Tone (Frequency) [See Pitch (Frequency)]  
 Tongue 4323, 4551, 4596, 4869, 4880, 5753  
 Top Level Managers 5293, 6364  
 Tortoises [See Turtles]  
 Touch [See Tactile Perception]  
 Toxic Disorders [See Alcohol Intoxication, Chronic Alcoholic Intoxication]  
 Toxic Encephalopathies [See Alcohol Intoxication, Chronic Alcoholic Intoxication]  
 Toxicity 5861  
 Toy Selection 4962  
 Toys 5256  
 Trace (Memory) [See Memory Trace]  
 Tracking [See also Visual Tracking] 6333  
 Traditionalism [See Political Conservatism]  
 Traffic Accidents (Motor) [See Motor Traffic Accidents]  
 Trainable Mentally Retarded 5676, 6208  
 Training [See Education]  
 Training (Clinical Methods) [See Clinical Methods Training]  
 Training (Clinical Psychology Grad) [See Clinical Psychology Grad Training]  
 Training (Community Mental Health) [See Community Mental Health Training]  
 Training (Graduate Psychology) [See Graduate Psychology Education]  
 Training (Motivation) [See Motivation Training]

Training (Personnel) [See Personnel Training]  
 Training (Psychiatric) [See Psychiatric Training]  
 Training (Psychotherapy) [See Psychotherapy Training]  
 Tranquilizing Drugs [See also Amitriptyline, Chlordiazepoxide, Chlorpromazine, Diazepam, Fluphenazine, Haloperidol, Meprobamate, Mesoridazine, Minor Tranquilizers, Neuroleptic Drugs, Perphenazine, Phenothiazine Derivatives, Pimozide, Reserpine, Tetrabenazine, Thioridazine, Thiouthixene, Trifluoperazine] 4685, 4730, 4756, 4825, 5850  
 Transfer (Learning) [See also Negative Transfer, Positive Transfer] 4420, 4424, 4802, 4924  
 Transfer Students 6187  
 Transference (Psychotherapeutic) [See Psychotherapeutic Transference]  
 Transportation [See Automobiles]  
 Transportation Accidents [See Motor Traffic Accidents]  
 Trauma (Emotional) [See Emotional Trauma]  
 Trauma (Physical) [See Injuries]  
 Treatment Effectiveness Evaluation 5429, 5834, 5863  
 Treatment Facilities [See also Child Guidance Clinics, Community Mental Health Centers, Hospitals, Nursing Homes, Psychiatric Clinics, Psychiatric Hospitals] 5773, 6075  
 Treatment Methods (Physical) [See Physical Treatment Methods]  
 Treatment [See Also Related Terms] 5657, 5768, 6228  
 Tremor 5587  
 Tribes 5051  
 Trifluoperazine 5851, 5869  
 Trust (Social Behavior) 4988, 5232, 6010, 6184  
 Tryptophan 4716  
 Tubocurarine 4765  
 Turkey 5000

**Validity (Test)** [See Test Validity]  
**Valium** [See Diazepam]  
**Values** [See also Personal Values, Social Values] 5134, 5341  
**Variability (Response)** [See Response Variability]  
**Variability (Stimulus)** [See Stimulus Variability]  
**Variability Measurement** [See Analysis of Covariance, Analysis of Variance]  
**Variables (Statistical)** [See Statistical Variables]  
**Variations (Seasonal)** [See Seasonal Variations]  
**Vasectomy** 6024  
**Vasodilator Drugs** [See Amphetamine, Angiotensin, Norepinephrine, Serotonin]  
**Vasopressin** 4744  
**Velocity** 4364  
**Veneral Diseases** 5141  
**Verbal Ability** 4884, 5261, 5592  
**Verbal Communication** [See also Articulation (Speech), Bilingualism, Compressed Speech, Consonants, Dialect, Etymology, Fingerspelling, Foreign Languages, Form Classes (Language), Grammar, Inflection, Initial Teaching Alphabet, Language, Language Development, Letters (Alphabet), Linguistics, Literacy, Morphemes, Nouns, Numbers (Numerals), Orthography, Phonemes, Phonetics, Phonology, Pronunciation, Psycholinguistics, Semantics, Sentence Structure, Sentences, Sign Language, Speech Characteristics, Speech Pauses, Speech Processing (Mechanical), Speech Rate, Speech Rhythm, Syllables, Syntax, Synthetic Speech, Verbs, Vocabulary, Vowels, Words (Phonetic Units), Written Language] 4295, 4498, 4527, 4531, 4896, 4910, 5178, 5200, 5251, 5273, 5274, 5278, 5322, 5380, 5691, 5918, 5949, 5963, 6163, 6228  
**Verbal Conditioning** [See Verbal Learning]  
**Verbal Learning** [See also Paired Associate Learning, Serial Anticipation (Learning), Serial Learning] 4430, 4431, 4442, 4450, 4462, 4463, 4464, 4468, 4471, 4485, 4510, 4889  
**Verbal Meaning** 4451  
**Verbal Reinforcement** [See also Praise] 4455, 4959, 6188, 6252  
**Verbalization** [See Verbal Communication]  
**Verbs** 4400, 4490, 4525, 4894  
**Verification (of Theories)** [See Theory Verification]  
**Vertebrates** [See also Amphibia, Baboons, Birds, Cats, Chickens, Chimpanzees, Dogs, Fishes, Frogs, Goldfish, Guinea Pigs, Lizards, Mammals, Mice, Monkeys, Norway Rats, Pigeons, Primates (Nonhuman), Quails, Rabbits, Rats, Rodents, Sheep, Turtles, Wolves] 4539  
**Vestibular Stimulation** [See Somesthetic Stimulation]  
**Veterans (Military)** [See Military Veterans]  
**Vibration** 6383  
**Vibrotactile Thresholds** 4323, 4325, 4327, 4336  
**Vicarious Experiences** 6212  
**Vicarious Reinforcement** [See Vicarious Experiences]  
**Videotape Instruction** 5417  
**Videotapes** 4253, 5274  
**Vigilance** 4381, 4384, 6352  
**Violence** 5233, 5599  
**Viral Disorders** [See Encephalitis, Rubella]  
**Vision** [See also Brightness Perception, Color Perception, Visual Discrimination, Visual Field, Visual Perception, Visual Thresholds] 4697  
**Vision Disturbances (Hysterical)** [See Hysterical Vision Disturbances]  
**Visions (Mysticism)** [See Mysticism]  
**Visual Cortex** 4550, 4577, 4680  
**Visual Discrimination** 4360, 4368, 4541, 4613, 4614, 4615, 4636, 4639, 4641, 4645, 4658, 4668, 4698, 4699, 4762, 4788, 4794, 4840, 4853, 4875, 4883, 4901, 5681  
**Visual Displays** 5285, 5677, 6384, 6385, 6391, 6399  
**Visual Evoked Potentials** 4367, 4544, 4554, 4559, 4602  
**Visual Field** 4328, 4360, 4372, 4854  
**Visual Masking** 4362, 4363, 4365, 4380, 4382, 4440  
**Visual Perception** [See also Brightness Perception, Color Perception, Visual Discrimination, Visual Field, Visual Thresholds] 4318, 4319, 4357, 4366, 4369, 4370, 4373, 4374, 4375, 4376, 4381, 4384, 4450, 4480, 4482, 4496, 4514, 4518, 4523, 4567, 4866, 4881, 4912, 5242, 6185, 6352, 6396, 6399  
**Visual Stimulation** [See also Illumination, Prismatic Stimulation, Tachistoscopic Presentation] 4364, 4467, 4494, 4544, 4550, 4552, 4561, 4692, 4757, 4794, 4901, 4905, 5544, 5708  
**Visual Thresholds** 4374, 4377, 4380, 4866  
**Visual Tracking** 4713  
**Visually Handicapped** [See also Blind] 5723, 6222, 6223, 6226  
**Vitamins** [See also Choline, Nicotinic Acid] 5870, 5881  
**Vocabulary** 5278, 6142  
**Vocalization** [See also Crying, Infant Vocalization, Voice] 4411  
**Vocalization (Infant)** [See Infant Vocalization]  
**Vocational Adjustment** [See Occupational Adjustment]  
**Vocational Aspirations** [See Occupational Aspirations]  
**Vocational Choice** [See Occupational Choice]  
**Vocational Counseling** [See Occupational Guidance]  
**Vocational Counselors** 6311, 6314  
**Vocational Education** 6191  
**Vocational Guidance** [See Occupational Guidance]  
**Vocational Interests** [See Occupational Interests]  
**Vocational Mobility** [See Occupational Mobility]  
**Vocational Preference** [See Occupational Preference]  
**Vocational Rehabilitation** 6039  
**Vocational Schools** [See Technical Schools]  
**Vocations** [See Occupations]  
**Voice** [See also Crying, Infant Vocalization] 4341, 5274, 5282, 5918  
**Volunteer Military Personnel** [See ROTC Students]  
**Volunteer Personnel** [See also ROTC Students] 5015  
**Vomit Inducing Drugs** [See Emetic Drugs]  
**Voting Behavior** 5094, 5281, 6292  
**Vowels** 4340, 5732  
  
**Wages** [See Salaries]  
**Wakefulness** 4546, 4547, 4566, 4587, 4590  
**War** 5107, 5131, 5215, 5520, 5698, 5762  
**Warning Signal** [See Signal Detection (Perception)]  
**Water Deprivation** 4569, 4617, 4734, 4735  
**Water Intake** 4705, 4707, 4740, 4759  
**Wechsler Adult Intelligence Scale** 5621, 5665, 5697  
**Wechsler Intelligence Scale Children** 5685, 6233  
**Weight (Body)** [See Body Weight]  
**West German Federal Republic** 5036  
**White Blood Cells** [See Leucocytes]  
**White Collar Workers** [See also Clerical Personnel, Management Personnel, Middle Level Managers, Top Level Managers] 6338  
**White Noise** 4571, 4575, 4584  
**White Rats** [See Rats]  
**Whites** [See Caucasians]  
**Widows** 5010  
**Witchcraft** 5627  
**Withdrawal Effects (Drug)** [See Drug Withdrawal Effects]  
**Wives** [See Housewives]  
**Wolves** 4787  
**Womens Liberation Movement** 5142  
**Word Associations** 4438, 4459, 4475, 4508, 4513, 4906  
**Word Blindness (Aphasia)** [See Aphasia]  
**Word Deafness** [See Aphasia]  
**Word Frequency** 4866  
**Word Meaning** 4490, 4895, 5250  
**Words (Form Classes)** [See Form Classes (Language)]  
**Words (Origin)** [See Etymology]

## BRIEF SUBJECT INDEX

**Words (Phonetic Units)** 4360, 4412, 4509, 4862  
**Words (Vocabulary)** [See Vocabulary]  
**Work (Attitudes Toward)** 6355  
**Work Environments** [See Working Conditions]  
**Work Rest Cycles** 6348, 6352  
**Work Study Programs** [See Educational Programs]  
**Working Conditions** [See also Job Enrichment, Noise Levels (Work Areas),

**Work Rest Cycles**] 6191, 6349, 6381, 6395  
**Workshops (Sheltered)** [See Sheltered Workshops]  
**Worship** [See Religious Practices]  
**Writing (Creative)** [See Literature]  
**Written Language** [See also Initial Teaching Alphabet, Letters (Alphabet), Literacy, Numbers (Numerals)] 4426, 5274, 5292

**Xylocaine** [See Lidocaine]

**Yoga** 4585, 4591  
**Young Adults** 4348, 4696, 4839, 4867, 4948, 5012, 5013, 5019, 5075, 5081, 5113, 5438, 5484, 5556, 5667, 5991, 6284  
**Youth (Adolescents)** [See Adolescents]  
**Youth (Adults)** [See Young Adults]  
**Youth (Children)** [See Children]

# AUTHOR INDEX

The Author Index is intended to be a name index only and not a person index. "Adams, P" will be listed separately from "Adams, Paul" even though the names may refer to the same person; however, two listings for "Adams, P." may refer to two different authors. All authors are listed, not just primary authors.

# P P P P P PASAR

is an innovative service designed to benefit the individual users of psychology-related information. It provides a comprehensive literature search capability at a level of complexity achievable only through automated retrieval techniques. The intellectual burden for conducting an effective search is shared by the requester and APA information specialists who formulate specific retrieval strategies, augmenting vocabulary and other search parameters supplied by the requester. Experience has provided APA information specialists with the skills to efficiently interact with the automated data base which contains records published in PSYCHOLOGICAL ABSTRACTS from 1967 through the present.

Charges for processing PASAR requests are based on the amount of computer time required to perform a search. Typically these charges range from \$40 to \$60 and will not exceed \$100 unless the requester is contacted first. The total charge for a search is based on its complexity and is in most cases unrelated to the number of references retrieved. For example, a complex search strategy involving many variables or limiting factors may require more computer time and may result in fewer references retrieved than a broad search with few limiting factors.

## PASAR Search Request Guidelines

The PASAR Request Form has been designed to assist you in constructing a comprehensive statement of your requirements. However, it should not restrict your input. Provide whatever other information you feel will augment the information specialist's understanding of your requirements. These guidelines should help to clarify items on the Request Form.

**ITEM 1. Narrative statement of search topic.** Provide a detailed description of the subject matter you wish to be retrieved. Please avoid submitting multiple, discrete requests on a single PASAR Request Form, since such cannot be processed for a single fee. However, multiple aspects of a primary subject may be requested. The distinction is illustrated in the following examples:

*Acceptable:* "the effects of socioeconomic status, education level, or birth order on career motivation in women."

"Career motivation" is the primary element of this request, while the other elements serve merely to qualify or narrow the scope of this rather broad subject area.

*Unacceptable:* "the measurement of employee attitudes concerning wages and benefits. Also desire references dealing with the factors that influence management decision-making with respect to personnel policies and procedures."

Although these two topics are closely related to the design and administration of personnel policies and procedures, two separate search strategies would have to be executed to retrieve the specific information requested, and a separate charge for each would have to be made.

**ITEM 2. Descriptor(s) relevant to dependent variable(s).** Provide a list of words or phrases that indicate the subject matter of prime interest. Descriptors for the "acceptable" example (see Item #1) might include: career motivation, career preference, and career aspirations.

**ITEM 3. Descriptor(s) relevant to independent variable(s).** Provide a list of words or phrases that will qualify or narrow the scope of the dependent variable. Descriptors for the "acceptable" example (see Item #1) might include: socioeconomic status, social class, educational level, birth order, and women.

**ITEM 4. Search qualifications.** Once the subject matter of the search has been defined, you may wish to refine it with specific requirements such as population or time frame. These qualifications are often essential to the actual information need; however, they can unnecessarily limit the search, causing retrieval of few of the relevant records. Therefore, consider your requirements carefully.

**ITEM 5. Sorting requirements.** Please indicate whether you would prefer to have references sorted alphabetically by author or chronologically by year.

**ITEM 6. Intended use of search results.** Provide a description of how the references resulting from your search will be used (e.g., definition of a research project, preparation of an article, proposal preparation, dissertation, etc.).

**Ordering information:** When ordering a PASAR search, please read the above guidelines carefully before completing the request form. A purchase order must accompany all institutional requests for a PASAR search. For individuals requesting a PASAR search, the signature of the person responsible for payment must appear on the PASAR request form.

## KEY TO THE TEXT

The examples of different types of *Psychological Abstracts* records presented here are number coded to provide definition of their elements.

### JOURNAL ARTICLE ABSTRACT

<sup>1</sup>8327. <sup>2</sup>Howard, R. Lee.; Glendenning, Robert L. & Meyer, Donald R. <sup>3</sup>(Ohio State U) <sup>4</sup>Motivational control of retrograde amnesia: Further explorations and effects. <sup>5</sup>*Journal of Comparative & Physiological Psychology*, 1974(Feb). Vol 86(2), 187-192. <sup>6</sup>Reports 5 investigations of variables related to the motivational control of retrograde amnesia for long-term habits, which result from single electroconvulsive shock treatments. Ss were 176 Long-Evans rats. In terms of the paradigms of M.J. Robbins and D.R. Meyer<sup>7</sup>(see PA Vol 44:11961), habits that were 3rd in a series were generally resistant to the treatment and were markedly impaired if the tests for retention were carried out in changed motivational contexts. The latter result is discussed in relation to the view that long-term habits are affected by the treatments if and only if, they operate as punishments. <sup>8</sup>(<sup>9</sup>) <sup>10</sup>(15 ref). <sup>11</sup>*Journal abstract*.

- 1 - Record number.
- 2 - Author(s) or editor(s). As many as four are listed; if there are more than four, the first is listed followed by "et al." Succession marks (i.e., Jr, II, III, etc) are not given.
- 3 - Affiliation of first-named author/editor only.
- 4 - Article title, including subtitles: If the original article is in a foreign language, the translated title is given in brackets and the language of the original article is indicated in parentheses.
- 5 - Primary publication title and bibliographic data.
- 6 - Text of abstract.
- 7 - Reference to a previous entry in *Psychological Abstracts*. If an abstract number is unavailable at time of publication, the issue number is given. Consult the Author Index of the PA issue noted in order to determine the record number for the article.
- 8 - Summaries included in the primary publication are listed when in language(s) other than that of the article.
- 9 - Number of references is included when there are 15 or more listed.
- 10 - Abstract source.

### BOOK ANNOTATION

<sup>1</sup>8328. <sup>2</sup>Chase, William G. <sup>3</sup>(Ed). <sup>4</sup>(Carnegie-Mellon U) <sup>5</sup>Visual information processing. <sup>6</sup>New York, NY; <sup>7</sup>Academic, <sup>8</sup>1973. <sup>9</sup>xiv, <sup>10</sup>555 p. <sup>11</sup>\$17.50. <sup>12</sup>Presents a series of readings on visual processes in cognition and linguistic comprehension and on information-processing models.

- 1 - Record number.
- 2 - Author(s) or editor(s). As many as four are listed, if there are more than four, the first is listed followed by "et al." Succession marks (i.e., Jr, II, III, etc) are not given.
- 3 - Designation of editor.
- 4 - Affiliation of first named author/editor only.
- 5 - Book title: If the book is in a foreign language, the original title is given followed by a translated title and the language of the book is indicated in parentheses.
- 6 - Place of publication.
- 7 - Publisher.
- 8 - Year of publication.
- 9 - Prepagination.
- 10 - Total pagination.
- 11 - Price.
- 12 - Text of annotation.

### BOOK CHAPTER CITATION

<sup>1</sup>8329. <sup>2</sup>Clark, Herbert H.; Carpenter, Patricia A. & Just, Marcel A. <sup>3</sup>(Stanford U) <sup>4</sup>On the meeting of semantics and perception. <sup>5</sup>In W.G. Chase (Ed), *Visual information processing*, New York, NY: Academic, 1973. xiv, 555 p. \$17.50.

- 1 - Record number.
- 2 - Author(s) of cited chapter. As many as four are listed, if there are more than four, the first is listed followed by "et al." Succession marks (i.e., Jr, II, III, etc) are not given.
- 3 - Affiliation of first-named author only.
- 4 - Chapter title.
- 5 - Referral to the whole book and its bibliographic data.

## CONTENT CLASSIFICATION

PA has subsections for some of the 17 major classification categories. These are displayed in the Table of Contents and are designed to group all abstracts relevant to a narrower topic than the major categories under a single heading. Abstracts that are relevant to a major category but not to any of the subsections are listed first and followed by abstracts that are relevant both to a major category and also to the subsections. It is expected that this will help readers locate material related to their interests more quickly.

## ABBREVIATIONS

In addition to commonly understood abbreviations\* (including all units of measurement, educational degrees, standard statistical abbreviations, and standard Latin and reference terms), standard abbreviations used in *Psychological Abstracts* records are:

ACTH	= adrenocorticotrophic hormone	NREM	= nonrapid eye movement
DNA	= deoxyribonucleic acid	REM	= rapid eye movement
E	= experimenter	RNA	= ribonucleic acid
EEG	= electroencephalogram or -graph	S	= subject
ESP	= extrasensory perception	TV	= television
Exp	= experiment	US	= United States
IQ	= intelligence quotient	USSR	= Union of Soviet Socialist Republics
LSD	= lysergic acid diethylamide	WAIS	= Wechsler Adult Intelligence Scale
MMPI	= Minnesota Multiphasic Personality Inventory	WISC	= Wechsler Intelligence Scale for Children

Computer languages and computer names will also be used without definition, e.g., ALGOL, COBOL, FORTRAN, IBM 360.

Language abbreviations used after translated titles are:

Afri	= Afrikaans	Geor	= Georgian	Port	= Portuguese
Alba	= Albanian	Germ	= German	Romn	= Romanian
Arab	= Arabic	Grek	= Greek	Russ	= Russian
Bulg	= Bulgarian	Hebr	= Hebrew	Slov	= Slovene
Chin	= Chinese	Hung	= Hungarian	Slok	= Slovak
Czec	= Czech	Iran	= Iranian	Span	= Spanish
Danh	= Danish	Ital	= Italian	Sscr	= Serbo-Croatian
Duth	= Dutch	Japn	= Japanese	Swed	= Swedish
Finn	= Finnish	Lith	= Lithuanian	Turk	= Turkish
Flem	= Flemish	Norg	= Norwegian	Ukrn	= Ukrainian
Fren	= French	Polh	= Polish	Yugo	= Yugoslavian

# PSYCHOLOGICAL ABSTRACTS

Volume 53

April 1975

Number 4

## GENERAL

6401. Berry, Patricia. **On reduction.** *Spring*, 1973, 67-84.—Discusses Jung's attitude to the reductive process, suggesting he intuited something much deeper about the essential nature of the process than was apparent in its practice. Jung was both critical of Freud's reductionism and assumed its need. In his later work in alchemy, Jung returned to reduction but not with its Freudian associations. It is felt that a psychological reduction, one freed of all literalism, would be a way of arriving at the irreducible—the quintessence of one's nature.—A. Farrell.

6402. Bozarth, Jerold. (U Iowa) **Reactions on evaluation.** *Journal of Applied Rehabilitation Counseling*, 1974(Fal), Vol 5(3), 143-146.—Discusses the differences between "research" and "evaluation," and presents methods for strengthening evaluation programs by clarifying questions and developing those which are designed to help rather than those which seek to determine the worth of a program.

6403. Bricke, John. (U Kansas) **Hume's associationist psychology.** *Journal of the History of the Behavioral Sciences*, 1974(Oct), Vol 10(4), 397-409.—The details of D. Hume's associationism have often been either misunderstood or neglected and many of his anticipations of later associationists have gone unnoticed. These defects are corrected and the scope and the limits of Hume's laws are delineated.

6404. Buhler, Charlotte. **The scope of humanistic psychology.** *Education*, 1974(Fal), Vol 95(1), 2-8.—Notes that in its short history since 1962, the American Association of Humanistic Psychology and its ideas and practices spread unexpectedly quickly and widely. The present article presents systematically the theories and practices which belong to its scope. Studies on the definition of mental health, human existence, and definitions of the goal of life are reviewed. The relation of these with developmental psychology and the study of life histories is shown. The simultaneous development of a novel approach to psychotherapy is discussed, as well as its recent connection with sensitivity training, group therapy, encounter groups, and growth center procedures. The Association's international development and its transpersonal division are noted. (17 ref)—*Journal abstract*.

6405. Calder, Bobby J. & Rowland, Kendrith M. (U Illinois) **A FORTRAN IV program for presenting optimally ordered paired comparison stimuli.** *Behavior Research Methods & Instrumentation*, 1974(Sep), Vol 6(5), 506.

6406. Creelman, C. Douglas. (U Toronto, Ontario, Canada) **Software management of timing in computer-**

**controlled on-line experiments.** *Behavior Research Methods & Instrumentation*, 1974(Sep), Vol 6(5), 488-492.

6407. de Lannoy, J.-D. (U Louvain, Belgium) [Skinner, Lorenz, Piaget: Comments on the article by M. Richelle, "Conditioning methods and behavior theory."] (Fren) *Revue de Psychologie et des Sciences de l'Education*, 1973, Vol 8(4), 399-406.—According to Richelle (see PA, Vol 53:Issue 4), when ethologists account for behavior by saying it is innate they are putting the explanation in an unknowable past. He further claims that J. Piaget's descriptions of stages of development are not explanations. The present article seeks to refute these criticisms and concludes that B. Skinner, K. Lorenz, and Piaget provide 3 perspectives focused on different aspects of conduct; they explain at different levels. Currently we do not have a frame of reference which will unify these different perspectives.—S. S. Marzolf.

6408. Diamond, Solomon (Ed.). (California State U, Los Angeles) **The roots of psychology: A sourcebook in the history of ideas.** New York, NY: Basic Books, 1974. xvii, 781 p. \$24.95.—Contains 28 chapters that trace the development of psychological theories regarding illusions, space perception, brain localization, memory, instinct, thought, child development, dreams, emotion, motivation, personality, mental illness, and social psychology.

6409. East, Robert. (Kingston Polytechnic, Kingston-upon-Thames, England) **A methodological suggestion for the study of re-evaluation of alternatives.** *European Journal of Social Psychology*, 1973, Vol 3(3), 329-332.—Reviews criticisms of cognitive dissonance research in the area of rating preference and re-evaluation in which Ss have been discarded because of unpredictable performance. A methodology and mathematical formula for using the discarded Ss is proposed and successfully applied.

6410. Fedida, P. (U Paris VII, France) **A metapsychology of the soma: Seminar in the curriculum of the U.E.R. Clinical Behavioral Sciences.** (Fren) *Bulletin de Psychologie*, 1973-1974, Vol 27(10-12), 647-655.—Describes a seminar which re-evaluated the meanings of the soma in the light of teachings from psychoanalysis and from modern biology.

6411. Franck, Robert. (U Louvain, Belgium) [Note on Marc Richelle and on Burrhus Frederic Skinner.] (Fren) *Revue de Psychologie et des Sciences de l'Education*, 1973, Vol 8(4), 407-410.—The 3 aspects of operant conditioning discussed by Richelle (see PA, Vol 53:Issue 4)—experimental, theoretical, and applied—are considered to be unrelated. It is suggested that the Skinnerian theory of behavior is not grounded on laboratory experiments; the experimental mechanisms of operant conditioning have no theoretical foundation; and the

applications are not justified either by theory or by laboratory successes.—S. S. Marzolf.

6412. H. D. **Tribute to Freud: Writing on the wall: Advent.** Boston, MA: David R. Godine, 1974. xiv, 194 p.—Presents an account of the poet Hilda Doolittle's (HD) sessions with Freud in 1933. A biography of HD and 6 letters from Freud to her are included.

6413. Hayes, John & Pulliam, Robert. (URS/Matrix Co, Falls Church, VA) **Development and evaluation of video systems for performance testing and student monitoring.** *US AFHRL Technical Report*, 1974(Jul), No 74-67, 210 p.—Experimentally evaluated a video performance monitoring system in 3 technical training settings: jet aircraft mechanic, power lineman, and instructor training. Using input from 1 to 8 video cameras, the system provided a flexible combination of signal processing, direct monitor, recording, and replay options. The design was based on hypothesized benefits or manpower savings in technical training, achieved by the monitoring of trainee performance and the standardization of measurement criteria using recorded performance samples. Research findings and recommendations are reported, and instructions for further use of the system are developed.—*Journal abstract.*

6414. Hillman, James. "Anima." *Spring*, 1973, 97-132.—Examines the concept of anima, noting that since Jung's original work on the anima notion no further contributions have been made. However, it is felt that precision in regard to anima is now particularly relevant. Anima and sexuality, eros, feeling, the feminine, and the psyche are discussed. Consciousness based on anima is considered to be inseparable from life, nature, the feminine, fate, and death. It is suggested that a more adequate description of consciousness and its activities would stem from the use of metaphors familiar to the alchemy of analytical practice (e.g., fantasy, image, reflection, and insight). The article is concluded in a subsequent issue.—A. Farrell.

6415. Holt, David. **Jung and Marx.** *Spring*, 1973, 52-66.—Discusses Jung's view of a coincidence between depth psychology and alchemy and attempts to show why the theories of Jung and of Marx should be considered together. Marx's view of a self-betrayal common to both man and nature is set forth; it is this central theme which is compared with Jung's psychology of alchemy. A vision of the world divided against itself is contrasted with a vision of creation divided against itself. It is held that Jung's psychology of alchemy must be understood as a materialism "baptized in the holy," i.e., matter as having life.—A. Farrell.

6416. Jung, C. G. **Religion and psychology: A reply to Martin Buber.** *Spring*, 1973, 196-203.—Disputes Buber's labeling of the author as a Gnostic. A primary interest in empirical research is expressed, with the question of religious label considered to be irrelevant. Dogma is contrasted with scientific study.

6417. Jung, C. G. **Three early papers.** *Spring*, 1973, 171-187.—Presents Jung's views on certain important psychological questions in 3 recently translated early papers. The 1st paper discusses Freud's ideas on dreams. The 2nd comments on a book dealing with sex and urging liberation in the widest sense. Finally, comments are presented on certain controversial features of a case

of catatonic attacks accompanied by fantasies.—A. Farrell.

6418. Kallen, Horace M. (New School for Social Research) **Creativity, imagination, logic: Meditations for the eleventh hour.** New York, NY: Gordon & Breach, 1973. x, 212 p. \$14.50.—Presents a philosophical analysis and discussion of the relationship between past, present, and future and the renewal of this relationship in terms of modern science and conceptions of creativity. The role of creativity in existence and survival value systems is also examined.

6419. Kimble, Gregory A.; Garnezy, Norman & Zigler, Edward. (U Colorado) **Principles of general psychology.** (4th ed.) New York, NY: Ronald Press, 1974. xii, 724 p. \$11.75.—This is the 4th edition of an introductory psychology textbook for undergraduates, which includes new material on recent developments in the field (e.g., biofeedback, behavioral genetics obesity, and behavior therapy).

6420. Kvale, Steinar. (U Oslo, Inst of Psychology, Norway) **The technological paradigm of psychological research.** *Journal of Phenomenological Psychology*, 1973(Spring), Vol 3(2), 143-159.—Examines the basis for the prevalence of the positivist assumption that the natural science conceptions and methods developed for the study of inanimate nature and of animals are adequate to the psychological study of man. It is held that the positivism of psychologists, being incapable of withstanding critical analysis, can only be promulgated to disguise their adoption of a technological-capitalist paradigm based on assembly-line working conditions and on the money system. Psychologists of this persuasion are conceived as promoting the interest of technological-capitalist society in the prediction and control of behavior. Structural analogies between the psychological laboratory and the assembly line, the positivist socialization of students, and the practical ineffectiveness of positivist methods are discussed. Phenomenology, which rejects the positivist assumption, is presented as the method appropriate to the psychological study of the actual experience and behavior of man in the world, despite the fact that it has yet to explore issues such as the contradictions of ideology and power. (28 ref)—B. Lindsey.

6421. Legrand, Michel. (Ctr de Psychologie Différentielle et Clinique, Louvain, Belgium) **[Skinner and psychoanalysis: Attempt at a confrontation.]** (Fren) *Revue de Psychologie et des Sciences de l'Education*, 1973, Vol 8(4), 411-421.—Proposes that a discussion of B. Skinner in relation to psychoanalysis (see PA, Vol 53:Issue 4) must be on a philosophical level since the 2 domains do not have a common scientific frame of reference. In terms of modern antipositivist epistemology the traditional objections that the analyst arbitrarily selects facts and is dogmatic in theory must be renounced. Skinner also selects only those data as facts which are relevant to his hypotheses. Both Skinnerians and analysts must be evaluated in terms of the extent to which the promised applications of their theories are fulfilled. Skinner eschews mentalism since it is nonphysiological. Since he also refers to mentalistic concepts as internal, this would seem to make them physiological. Science may be ethically neutral but both Skinner and

the analysts must consider the ethical question of what behavior is desirable.—S. S. Marzolf.

6422. Levy, Charles E. (Duquesne U) **Toward primordial reality as the ground of psychological phenomena.** *Journal of Phenomenological Psychology*, 1973(Spring), Vol 3(2), 173-186.—Articulates M. Merleau-Ponty's notion of primordial reality as a viewpoint which reconciles the partial truths of realism and idealism by eliminating their radical separation of subject and object. In realism the individual is seen merely as a certain type of object produced by the world. It is opposed by idealism, which sees the world merely as an appearance produced by the mind of the individual as subject. From the viewpoint of primordial reality there is a mutual interpenetration of the individual and the world in an overall, creatively unfolding structure. Primordial reality entails an ambiguity in the relation of the individual and world which blurs their clarity and distinctiveness. The presence of both realism and idealism in a current research psychology article and the conclusions to which they necessarily lead are examined. The authors of the article are regarded as having created an artificial laboratory phenomenon having no general implications, and an attempt is made to recapture the true phenomenon from the perspective of primordial reality.—B. Lindsey.

6423. Lyons, John O. (U Wisconsin) **The invention of the self.** *Hacettepe Bulletin of Social Sciences & Humanities*, 1973(June), Vol 5(1), 57-78.—Describes the discovery, or the invention, of the concept of the individual self, about the middle of the 18th century. Its origins in philosophy, religion, politics, and the arts are discussed, its manifestations in many forms of literature, and its influence on every form of human activity. (38 ref)—R. J. Anderson.

6424. Miklich, Donald R.; Purcell, Kenneth & Weiss, Jonathan H. (National Asthma Ctr, Denver, CO) **Practical aspects of the use of radio telemetry in the behavioral sciences.** *Behavior Research Methods & Instrumentation*, 1974(Sep), Vol 6(5), 461-466.—Presents a practical guide for the technologically unsophisticated behavioral researcher who wishes to use voice radio telemetry (RTel). Points discussed include how to determine suitability of RTel for a project, selection of consultants, suitable locales for RTel, costs, ethical-legal issues, and operating procedures.—Journal abstract.

6425. Nealis, Perry M. (U Wisconsin, Madison) **Has neurophysiology resurrected the Platonic soul?** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 611-619.—Previous authors have argued that the objective of psychological experimentation should be one of furthering the understanding of the processes by which human knowledge is acquired. However, there are those who argue that many hypothetical constructs employed by contemporary psychologists, in contrast to their assessments, reflect an epistemology embraced by Plato centuries past. The present author takes a different position, maintaining that modern psychological research is more characteristic of the Aristotelian position in contrast to Platonic doctrine. The viability of these traditional epistemologies is discussed in view of research in the areas of perception and neurophysiology. It is suggested that the Aristotelian approach to the resolution of the paradox of knowing about knowing is both

philosophically substantive and, unlike the Platonist position, operationally feasible.—Journal abstract.

6426. Pastore, Nicholas. (Queens Coll, City U New York) **Reevaluation of Boring on Kantian influence, nineteenth century nativism, Gestalt psychology and Helmholtz.** *Journal of the History of the Behavioral Sciences*, 1974(Oct), Vol 10(4), 375-390.—E. G. Boring, in *A History of Experimental Psychology* (1957), traces a direct line of descent from I. Kant to the 19th century nativists G. Müller, E. Hering, and C. Stumpf and thence to M. Wertheimer and W. Köhler. This sequence is re-evaluated, the relation of nativism to gestalt psychology is considered, and H. Helmholtz's Kantist tendencies of 1855 are discussed.

6427. Richelle, Marc. (U Liège, Belgium) [Remarks on the articles by J.-D. de Lannoy, R. Franck, and M. Legrand.] (Fren) *Revue de Psychologie et des Sciences de l'Education*, 1973, Vol 8(4), 423-426.—The 3 articles (see PA, Vol 53:Issue 4) represent 3 approaches and 3 categories of objection. Both Franck and Legrand object, but in opposite directions, to Richelle's relating conditioning methodology to theory and application. Arguing against 1 objection seems to support the other; both are right and both wrong. De Lannoy's views on phylogenesis are correct, and they do not conflict with those of Richelle. Operant conditioning is not incompatible with J. Piaget's laws of development. A response incompatible with Franck's affective reaction would only do violence to Franck. The epistemological questions raised by Legrand merit further examination; they relate to psychoanalysis as well as to conditioning and to all scientific theorizing.—S. S. Marzolf.

6428. Richelle, Marc. (U Liège, Belgium) [Conditioning methods and behavior theory.] (Fren) *Revue de Psychologie et des Sciences de l'Education*, 1973, Vol 8(4), 379-398.—Operant conditioning, demonstrated by the Skinner box, is a refinement of E. Thorndike's earlier work, and serves as a useful laboratory method, as a point of departure toward a theory of behavior, and as a procedure having wide applications in education and psychotherapy. The criticisms by ethologists (K. Lorenz), psycholinguistics (N. Chomsky), and those who investigate the ontogenesis of intellect (J. Piaget) are examined and answered. Operant conditioning is not reductionist and does not deny consciousness or mental events. The latter are not used as explanatory concepts; they are simply a kind of behavior. Most psychotherapies can simply remove negative controls and permit the appearance of desired behavior. Diagnosis of malfunction tends to place the fault in the individual rather than in the social or educational environment. The psychologist must take responsibility for bringing scientific methodology to bear upon social problems.—S. S. Marzolf.

6429. Ritsema, Rudolf. **The pit and the brilliance: A study of the 29th and 30th hexagrams in the I Ching.** *Spring*, 1973, 142-170.—Attempts to evoke the image-concepts of the Chinese terms in 2 interrelated hexagrams. In translating from the Chinese work, each English word is given the task of representing 1 particular Chinese character, allowing the reader to discover exactly where the same Chinese ideogram occurs. Hexagram 29, K'AN (the pit), is seen as related to a critical time in life. Its attribute, both as trigram and

hexagram, is falling. Glaring light is viewed as the prime feature of hexagram 30, LI (the brilliance). It reportedly refers to both cosmic and human spirit, to consciousness that, through brightness, brings about clear distinctions. —A. Farrell.

6430. Simmerman, Scott J. & Newlin, Robert J. (U North Carolina, Chapel Hill) **A simple interface to operate electromechanical equipment with digital logic.** *Behavior Research Methods & Instrumentation*, 1974(Sep), Vol 6(5), 514.

6431. Smith, Gary R. & Wasson, Samuel L. (Lafayette Clinic, Detroit, MI) **Modular solid state behavioral training system.** *Behavior Research Methods & Instrumentation*, 1974(Sep), Vol 6(5), 481-487.—Describes a system of modules to perform most behavioral training schedules which takes advantage of integrated circuit size, speed, reliability, economy, and sophistication to overcome the problems inherent in relay systems. The usual complexity of changing from one program to another is reduced to the simplicity of turning a switch.

6432. Sokal, Robert R. (State U New York, Stony Brook) **Classification: Purposes, principles, progress, prospects.** *Science*, 1974(Sep), Vol 185(4157), 1115-1123.—Analyzes the principles and procedures of scientific classification. The influence of electronic computers is traced. It is noted that the specification of data for classification by computer will enhance objectivity but not eliminate cultural and subjective biases. Techniques of cluster analysis and ordination also are discussed, and progress in classification is reviewed.

6433. Tversky, Amos & Kahneman, Daniel. (Hebrew U, Jerusalem, Israel) **Judgment under uncertainty: Heuristics and biases.** *Science*, 1974(Sep), Vol 185(4157), 1124-1131.—Describes 3 heuristics employed to assess probabilities and to predict values: (a) representativeness, (b) availability of instances, and (c) adjustment from an anchor. Biases to which these heuristics lead are enumerated, and the implied and theoretical implications are discussed. It is concluded that a better understanding of these heuristics and their resulting biases could improve judgments and decisions in situations of uncertainty.—R. Hall.

6434. Vitulli, Nicholas & Reynolds, James H. (Colgate U) **Use of an algebraic language in laboratory control programming with small (4K) computers.** *Behavior Research Methods & Instrumentation*, 1974(Sep), Vol 6(5), 493-496.—Describes an implementation of the FNEW program sequence that permits execution of multiple user-written machine language subprograms within a FOCAL program. Use of this capability in the context of process-control problems in the behavioral laboratory is discussed and illustrated.

6435. Weinberg, Charles B. (Stanford U, Graduate School of Business) **The change agent game (A computerized game in BASIC for use on time sharing terminals).** *Behavior Research Methods & Instrumentation*, 1974(Sep), Vol 6(5), 505.

6436. Wicks, Jerry W. (Bowling Green State U) **PYRAMID: A program designed to construct population pyramids on a computer terminal.** *Behavior Research Methods & Instrumentation*, 1974(Sep), Vol 6(5), 504.

6437. Wicks, Jerry W. (Bowling Green State U) **BALANCE: A FORTRAN IV program for computing the**

demographic "balancing equation" on a computer terminal. *Behavior Research Methods & Instrumentation*, 1974(Sep), Vol 6(5), 504.

6438. Wilden, Anthony. (U California, San Diego) [Freud, Signorelli, and Lacan: Repression of the signifier.] (Fren) *Revue de Psychologie et des Sciences de l'Education*, 1973, Vol 8(4), 427-465.—Continues the analysis of the forgetting of the proper name "Signorelli," a fragment of Freud's autoanalysis, by referring to the autobiographical passages of Freud's work and to the theories and formulations of J. Lacan about the unconscious. Analysis of the "Signorelli" forgetfulness has a theoretical and personal importance: it enables us to discover all the unconscious extensions through the subjective discourse and associations, and to work out a theory of the unconscious and repression on a linguistic and structural basis. (Flemish & English summaries) (32 ref)—*Journal summary*.

6439. Wolf, Ernest S. & Trosman, Harry. **Freud and Popper-Lynkeus.** *Journal of the American Psychoanalytic Association*, 1974, Vol 22(1), 123-141.—Examines Freud's relationship with J. Popper-Lynkeus, whom he held in high esteem but never met, in the light of the link between narcissistic transformation and psychological creativity. The nature of the Freud-Popper relationship suggests that narcissistic trends toward idealization and the formation of an alter ego may have wider applicability in the investigation of creative individuals. In Freud's case there are indications of an intense need to idealize and to establish a relationship with a man whom he saw as a double. The double counteracts the sense of isolation and estrangement which accompanies revolutionary discoveries. On the other hand, the presence of the double threatens the creative individual with sudden regressive pulls toward fragmentation and loss of the cohesive self. (32 ref)—*Journal summary*.

6440. Woolger, Roger. **Against imagination: The via negativa of Simone Weil.** *Spring*, 1973, 256-272.—Sketches certain ways in which the Weil doctrine is believed to repudiate the cultivation of imagination, felt to be a cornerstone of Jungian practice. It is suggested that this doctrine can be found in all religions where mysticism has flourished.

6441. Yáñez Cortés, Roberto. (U Buenos Aires, Argentina) [Phenomenological reduction on the formation of eidetic psychology.] (Span) *Acta Psiquiátrica y Psicológica de América Latina*, 1974(Jun), Vol 20(3), 173-179.—Discusses the formation of an eidetic psychology as a science of pure experience of conscience by the phenomenological reduction of 2 stages: the eidetic-logical and the neutral-eidetic-ontological stage.

6442. Zoja, Luigi. **Observations in transit between Zurich and Milan.** *Spring*, 1973, 274-281.—Considers whether the passage of years might bring to Jung's views a progressive loss of actuality. Topics include the thief as an archetypal role and as a moralistic label, Puer and the related mother complex, and Mediterraneanity as a polarity. Views of Swiss, Germans, and Italians are examined and contrasted. It is held that each person is in a unique relationship with his origins, country, duties, and destiny. This relationship, viewed as having a fundamentally archetypal character, raises certain problems.—A. Farrell.

## PSYCHOMETRICS AND STATISTICS

6443. American Psychological Association. (Washington, DC) **Standards for educational & psychological tests**. Washington, DC: American Psychological Association, 1974. 76 p.—Presents a revision of the 1966 *Standards for Educational and Psychological Tests and Manuals*. Topics include the appropriateness of certain tests for certain populations, guidelines in the administration and interpretation of tests and other assessment techniques, standards for reporting the reliability and validity of tests, and standards for the use of tests in various settings (e.g., clinical or occupational evaluations).

6444. Corman, L. [Identification responses on projective tests: Their significance.] (Fren) *Bulletin de Psychologie*, 1973-1974, Vol 27(13-14). 737-746.—Discusses the functions of certain categories of "identification" responses in testing situations, with special reference to selected projective tests.

6445. Hubert, B. (U Reims, France) [Studies of the formation of attitudes toward education and of measured changes in such attitudes, using the MTAI.] (Fren) *Bulletin de Psychologie*, 1973-1974, Vol 27(13-14). 755-764.—Reviews US research on the use of the Minnesota Teacher Attitude Inventory (MTAI). Findings are presented in the form of sets of hypotheses. (91 ref)

6446. Lapi, A.; Cattania, F. & Forti, A. [Clarifications on the Kohs Modified Cubes Test.] (Ital) *Rivista Sperimentale di Freniatria e Medicina Legale delle Alienazioni Mentali*, 1972(Oct), Vol 96(5), 1460-1480.—Describes each cube in series A through F with notes on relative difficulty. Suggestions are made on administration and evaluation of performance with regard to underendowed, phrenasthetic, and normally endowed Ss. (French, English, & German summaries)

6447. Marshall, Jon C. & George, Rickey L. (U Missouri, St Louis) **The interrelations of CPQ scales**. *Journal of Instructional Psychology*, 1974(Spring), Vol 1(2), 46-51.—Intercorrelations were determined for the scales of the Children's Personality Questionnaire (CPQ) using a sample of 113 4th-grade children. Of the 14 CPQ scales, the intelligence scale was the only one which did not significantly relate with any of the other scales. The remaining scales were able to be grouped into 3 constellations, identified as Sociability-Associability, Autonomy-Heteronomy, and Social Extroversion-Social Introversion.—*Journal abstract*.

6448. Terborg, James R. & Peters, Lawrence H. (Purdue U) **Some observations on wording of item-stems for attitude questionnaires**. *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 463-466.—Conducted a study with 50 undergraduates to examine whether mean differences in endorsement rate to reversed item-stems of the same attitude statement can occur independent of acquiescence, and whether these observed differences have any effect when summed in relation to an outside criterion. Using 2 within-group designs, a significant number of mean differences between item-stems were found. Analyses showed that these observed differences were not due to the effects of acquiescence. However, for both groups, total scores based on items where mean

differences in endorsement were observed correlated significantly with total scores based on items where no mean differences in endorsement were observed. Also, minor variations in mean rate of endorsement due to the direction of the item-stem wording had little effect on the correlations between the summated attitude scores and the outside criterion.—*Journal abstract*.

## Test Construction &amp; Validation

6449. Bartussek, Dieter. (U Hamburg, Psychologisches Inst, W Germany) [Note on the reliability and factorial validity of the German 16 PF.] (Germ) *Diagnostica*, 1974, Vol 20(2), 49-55.—Reports item and scale statistics of the German edition of the 16 Personality Factor Questionnaire (16 PF) obtained from a sample of 283 soldiers. The item stabilities, item-scale biserial correlations, and scale reliabilities obtained were low, and a factor analysis of the 6 or 7 most stable items per scale failed to replicate the original factor structure. However, a survey of 9 factor analyses of German translations of the 16 PF scales led to the conclusion that 3 of the 2nd-order factors are replicable.—*M. Morf*.

6450. Bhushan, V. (U Laval, Quebec, Canada) [Validation of l'Inventaire Minnesota des Opinions de l'Enseignant.] (Fren) *Bulletin de Psychologie*, 1973-1974, Vol 27(13-14), 747-754.—Examined the validity of the French edition of the Minnesota Teacher Attitude Inventory administered to 509 elementary school teachers in Quebec. Results indicate that the French version did not measure the same factors as the English version; test content did not apply to the French-Canadian culture. (18 ref)

6451. Campo, V. & Vilar, N. [Clinical utility of the animal test.] (Span) *Revista de Psicología General y Aplicada*, 1974(Mar-Apr), Vol 29(127), 355-357.—Presents preliminary work on the development of a test where the S's task is to draw any animal that he wishes.

6452. Christensen, Kathleen C.; Gelso, Charles J.; Williams, Rebecca O. & Sedlacek, William E. (U Maryland) **Variations in the administration of the Self-Directed Search, scoring accuracy, and satisfaction with results**. *Journal of Counseling Psychology*, 1975(Jan), Vol 22(1), 12-16.—Examined the effects of the test administrator's attitudes toward Holland's Self-Directed Search, the size of the group taking the instrument, and whether monitors were used during the administration on both self-scoring accuracy and satisfaction with results on the Self-Directed Search. Over 25% of the 184 college freshmen who took the instrument during orientation made scoring errors resulting in incorrect high-point codes, and over 50% obtained incorrect summary codes. Of the 3 independent variables, only monitoring reduced self-scoring errors, and none affected satisfaction. Questions are raised about whether, even with monitoring, error rates are too high and satisfaction too low to warrant the use of the instrument as a self-counseling device.—*Journal abstract*.

6453. Elliott, Colin. (U Manchester, England) **The British Intelligence Scale project: Phase II**. *AEP (Association of Educational Psychologists) Journal*, 1974(Spring), Vol 3(6), 9-13.—Describes the present status of the British Intelligence Scale. Most of the major issues have yet to be resolved: the final form of the scale is

undecided, the reliability and validity of the scale are unknown, and even its title may ultimately be altered. However, it is noted that if the scale succeeds even partially in its major aim of being a test of special abilities, it will represent a marked advance on any previously published test and will enable psychologists to define the cognitive strengths and weaknesses of children with greater precision, confidence, and scientific rigor than is currently possible. (16 ref)—*Journal summary*.

6454. Fischer, Manfred & Wiedl, Karl H. (U Trier-Kaiserslautern, I Div of Psychology, W Germany) [Variation-motivation.] (Germ) *Psychologische Beiträge*, 1973, Vol 15(4), 478-521.—Discusses variation motivation—the need for novelty and stimulus variation—as a general and differential psychological construct. The development of psychometric concepts and methods aiming to measure the need for variable stimuli input also are examined. The development of stimulus-variation-seeking scales and subscales and the use of tests and questionnaires is described. An appendix suggests a 132-item variation-motivation questionnaire in the German language. (English & French summaries) (6 p ref)—T. Fisher.

6455. Froese, Arthur; Vasquez, Ernesto; Cassem, Ned H. & Hackett, Thomas P. (Massachusetts General Hosp, Boston) Validation of anxiety depression and denial scales in a coronary care unit. *Journal of Psychosomatic Research*, 1974(Jun), Vol 18(3), 137-141.—Attempted to validate the Holland-Sgroi Anxiety-Depression Scale (designed to measure mental status, anxiety, and depression in medical patients) and the Hackett-Cassem Denial Scale (designed to quantitate behavior reflecting denial in critically ill medical patients). 51 male and 14 female inpatients randomly selected from a coronary care unit were interviewed to find out the medical history of their illness and their responses to it. Following the interviews the investigators independently rated the patients on the 2 scales and classified them in 3 categories of anxiety: none to mild, moderate, and marked. One-way analysis of variance showed the relationship between the rating scale scores and the clinical judgments to be highly significant ( $p < .001$ ). W. G. Shipman.

6456. Goodman, John T.; Streiner, David L. & Woodward, Christel A. (McMaster U, Hamilton, Ontario, Canada) Test-retest reliability of the Shipley-Institute of Living Scale: Practice effects or random variation. *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 351-354.—104 1st-yr female nursing students were group administered the Shipley-Institute of Living Scale for Measuring Intellectual Impairment. Retesting was conducted on subsamples at 2-wk, 1-mo, 2-mo, 3-mo, and 4-mo intervals with subsample sizes of 17-19 Ss. Although the actual differences were relatively small, consistent and significant increases were found for Abstractions raw score, Conceptual Quotient, and WAIS-equivalent IQ. No significant differences were found for Vocabulary raw score. Results are discussed within the context of test-retest reliability, magnitude of the actual differences, and the problem of practice effects. (15 ref)—*Journal abstract*.

6457. Hiesel, Erich & Lück, Helmut E. (U Köln, Inst für Sozialpsychologie, W Germany) [Construction of a short scale to measure scientific interest.] (Germ)

*Diagnostica*, 1974, Vol 20(2), 76-83.—Reports construction and validation of a 7-item scale to measure scientific interest (the WIS). On a sample of 793 females biserial correlations greater than .45, endorsement proportions between 28 and 64%, and a reliability of .81 were obtained. These values were generally replicated on school and university students and teachers. Correlations between the WIS and 12 personality and attitude measures were nonsignificant, with the exception of extraversion and attitude to psychological experimentation.—M. Morf.

6458. Kilpatrick, Dean G. & Smith, Alma D. (Medical U South Carolina) Validation of the Spence-Helmreich Attitudes Towards Women Scale. *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 461-462.—To evaluate the validity of the Spence and Helmreich Attitudes Towards Women Scale, 13 women members of the National Organization of Women (NOW) were administered the scale, which purports to measure attitudes towards the rights and roles of women in contemporary society. In comparison with normative data for female college students and mothers of college students reported by J. T. Spence and R. Helmreich (1972), the attitudes of the NOW members were significantly more feminist, suggesting that the scale is a valid measure of such attitudes.—*Journal abstract*.

6459. Larkin, Kevin C. & Weiss, David J. (U Minnesota) An empirical investigation of computer-administered pyramidal ability testing. Minneapolis, MN: University of Minnesota, Dept of Psychology, 1974. 59 p.—Administered 3 pyramidal adaptive tests and a conventional peaked test to undergraduates, using a time-shared computer. Results of 6 different pyramidal scoring systems are presented, as well as the degree of relationship among scoring methods and between scoring methods and the conventional test. Findings generally favor pyramidal testing, although further study of its psychometric characteristics is necessary. (30 ref)

6460. Linden, Kathryn W.; Linden, James D. & Bodine, Robert L. (Purdue U) Test bias: Fuss n' facts. *Measurement & Evaluation in Guidance*, 1974(Oct), Vol 7(3), 163-168.—Discusses racial and sex bias in existing measurement tools as a function of both interpretation and usage and test structure. It is suggested that tests be selected with regard to the relevance and adequacy of their norms and the reliability and validity of their scores for given populations.

6461. Löhr, Gerhard & Walter, Adelheid. [A scale to measure subjective satisfaction with life in old age.] (Germ) *Diagnostica*, 1974, Vol 20(2), 83-91.—Reports construction of a scale to measure subjective satisfaction with life in Ss older than 59 yrs. The content of the items covers positive self-evaluation, optimistic attitude to S's old age, and satisfaction with current daily activities. Endorsement proportions, point biserial correlations between items, and scale score are reported for an original item pool of 42 items from which the 20 items of the final scale were derived. The point biserial correlations of the final items ranged from .33 to .65.—M. Morf.

6462. Marschner, Günter. (Erschweiler Bergwerks-Verein, Alsdorf b. Aachen, W Germany) [The standardization and validation of the Büro-Test (BT): New norms for crafts and technical vocations, and further validity

data.] (Germ) *Diagnostica*, 1974, Vol 20(2), 55-62.—Reports new norms and validation data for G. Marschner's Büro-Test (1967), a designed to measure clerical skills and ability to manage office work. The sample consisted of 707 Ss in 6 groups ranging from semi-skilled workers to middle-level executives. The mean scores of the groups increased with the level of responsibility assigned to them, and significant differences in BT scores in the expected direction were obtained between Ss rated by supervisors as suitable or not suitable for further training and Ss whose qualifications were rated high or low.—*M. Morf*.

6463. Martuza, Victor R. & Kallstrom, Dale W. (U Delaware) **Validity of the State-Trait Anxiety Inventory in an academic setting.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 363-366.—Used the multitrait-multimethod procedure to assess the validity of the C. D. Spielberger et al (1970) dual conceptualization of anxiety and the interpretation of his scales based on that conceptualization. Ss were 58 education graduate students. Results support the state-trait conceptualization of anxiety and provide evidence of the validity of the State-Trait Anxiety Inventory scales within a graduate-level, educational environment.—*Journal abstract*.

6464. McBride, James R. & Weiss, David J. (U Minnesota) **A word knowledge item pool for adaptive ability measurement.** Minneapolis, MN: University of Minnesota, Dept of Psychology, 1974. 81 p.—Administered a series of 4 vocabulary naming tests to undergraduates to develop a large, homogeneous pool of vocabulary test items for a computer-administered adaptive testing research program. Data on reliability, dimensionality, test order effects, factor structures, and generalizability of the final item pools are presented, along with an outline for the design of future norming studies in adaptive testing. (26 ref)

6465. Overall, John E.; Johnson, James H. & Lanyon, Richard I. (U Texas, Medical Branch, Galveston) **Factor structure and scoring of the PSI: An application of marker variable analysis.** *Multivariate Behavioral Research*, 1974(Oct), Vol 9(4), 407-422.—Investigated the factor structure of the Psychological Screening Inventory (PSI) using a newly developed method of factor analysis to define an oblique simple structure. Item responses of 400 male and 400 female Ss in the original PSI normative samples were analyzed. The 2-fold objectives included interest in the factor structure of the PSI and interest in evaluating the utility of the marker variable method of factor analysis. 5 factors were defined to yield a good oblique simple structure. The analysis was repeated using different sets of marker variables to verify that the same solution would result.—*Journal abstract*.

6466. Pertejo, Jesusa. **[Relative worth of items on tests of graphic expression.]** (Span) *Revista de Psicología General y Aplicada*, 1974(Mar-Apr), Vol 29(127), 329-334.—Presents methods of analyzing graphic items, relating them to ego functions.

6467. Rosenzweig, S.; Ludwig, D. J. & Adelman, S. **[Test-retest reliability of the Rosenzweig Picture Frustration Test and of analogous semiprojective tests.]** (Fren) *Revue de Psychologie Appliquée*, 1974, Vol 24(3), 181-196.—Reports significant test-retest consistency for the main scoring categories of the Rosenzweig Picture

Frustration Test. Analysis of variance and split-half methods, which assume item homogeneity and internal consistency, are contra-indicated for this and other projective tests.

6468. Ryman, David H.; Biersner, Robert J. & La Rocco, James M. (US Navy Medical Neuropsychiatric Research Unit, San Diego, CA) **Reliabilities and validities of the mood questionnaire.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 479-484.—Scales were constructed for a 40-item mood questionnaire which was then administered to 1,140 Navy recruits. The questionnaire was shown to be similar to others in content and reliabilities. Construct, concurrent, and predictive validities of the scales with several criteria in a number of testing situations are also presented. Findings emphasize the usefulness of this questionnaire as a criterion measure or as a predictor of objective behavioral criteria under field-testing conditions.—*Journal abstract*.

6469. Schümer-Kohrs, Anke & Schümer, Rudolf. (U Mannheim, Fakultät für Sozialwissenschaften, W Germany) **[Data on the Wort-Bild-Test (WBT).]** (Germ) *Diagnostica*, 1974, Vol 20(2), 63-76.—Reports scale statistics of the Wort-Bild-Test (H. Anger et al, 1971), a nonverbal intelligence test, applied to a random sample of 660 Ss. The range of obtained scores equaled the possible range of scores from 0 to 45; the mean score was 29.5 and the standard deviation 9.6. Split-third reliabilities, not corrected for attenuation, were .84, .83, and .83; the retest reliability, over a 3-mo period, was .76. Demographic variables accounted for 36% of the variance.—*M. Morf*.

6470. Schwebcke, Axel; Lück, Helmut E. & Jandron, Earl. (Rhineland Pedagogical Coll, Div of Health Education, Cologne, W Germany) **[Problems and experience with the adaptation of tests constructed in a foreign language.]** (Germ) *Psychologische Beiträge*, 1973, Vol 15(3), 434-470.—Discusses the problems of intercultural research, particularly difficulty of adapting foreign-language tests in such a way as to gain psychologically valid and equivalent measures. The Personal Orientation Inventory (POI) of Shostrom is described in detail and recommended. It has been translated into German and retranslated, and the original and the translated versions were tested with 3 groups of students. Results show a highly satisfactory correspondence between the original and the translation. (5 p ref) (English & French summaries)—*T. Fisher*.

6471. Semin, G. R. & Rogers, R. S. (U Sussex, Brighton, England) **The generation of descriptive-evaluative responses in scale answering behaviour: A model.** *European Journal of Social Psychology*, 1973, Vol 3(3), 311-328.—Developed a model of S behavior in scale-answering situations allowing S to describe how much of some attribute an object possesses which he may internally represent. It also allows S to give an honest expression to his internal representation. 2 basic parameters (representation and description) characterized the process by which S gave a descriptive-evaluative response to E. The parameters of the model were demonstrated by 2 studies using a psychometric person-ality scale. In Study 1, object substitution was shown by contrasting self-referent and other-referent responses

using a personating technique. In Study 2, response modification was found to operate despite a scale format specially designed to eliminate such biases. 2 major implications of the model are discussed: (a) The nature of the descriptive-evaluative responses rendered the construction of nonfakable descriptive scales impossible. (b) Many experiments using descriptive scales are dubious tests of their stated hypotheses since there are no controls of descriptive and representative parameters. (33 ref)—*M. K. Phifer.*

6472. Smith, Gudmund J. & Nyman, G. Eberhard. (U Lund, Psykologiska Inst, Sweden) **The validity of the serial color-word test: A reply to Lennart Sjöberg.** *Scandinavian Journal of Psychology*, 1974, Vol 15(3), 238-240. Replies to L. Sjöberg's (see Pa. Vol 52:8951) conclusion that the reliabilities and validities of the serial Color-Word Test are at best moderate. The present paper claims that, given reliable and adequate criteria, the validities are high. Hence, the true reliabilities can hardly be low. Supporting data are presented. However, the test should not be used merely to identify psychiatric syndrome groups, but rather to broaden knowledge about them by unveiling their adaptive strategies.—*Journal abstract.*

6473. Westbrook, Bert W. (North Carolina State U, Raleigh) **Content analysis of six career development tests.** *Measurement & Evaluation in Guidance*, 1974(Oct), Vol 7(3), 172-180.—Identified a total of 117 behaviors for the 609 items found on 6 career development tests. The behaviors were arranged in an outline of career development behaviors. The 6 tests were compared in terms of their coverage of the major career development components and in terms of the specific learner behaviors included in the outline. It is suggested that this procedure demonstrated that a specific test provided an appraisal of only certain behaviors.—*Journal abstract.*

6474. Zimmerman, Irla L. & Woo-Sam, James. **A note on the current validity of the renormed (1972) Stanford Binet LM.** *AEP (Association of Educational Psychologists) Journal*, 1974(Spring), Vol 3(6), 34-35.—Compared 2 samples of school children given the Wechsler Preschool and Primary Scale of Intelligence and the Stanford-Binet Intelligence Scale, using both the 1960 and 1972 norm tables. The new norms uniformly reduced Binet scores, resulting in closer correspondence with the Wechsler. A side effect of the new Binet norms was a marked reduction in children identified as "gifted."

### Mathematical Models & Statistics

6475. Bolsmier, James D. (U Nebraska, Medical Ctr, Omaha) **On the two forms of the law of initial values.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 349-350.—Demonstrates that given the regression equation of either the raw-score form or the change-score form of the law of initial values, the other form can be derived algebraically. If the graph of a given form of the law is linear, the graph of the alternative form may be determined easily.

6476. Browne, M. W. (U South Africa, Pretoria) **Gradient methods for analytic rotation.** *British Journal of Mathematical & Statistical Psychology*, 1974(May), Vol 27(1), 115-121.—Employs gradient methods in orthogonal and oblique analytic rotation. Constraints are

imposed on the elements of the transformation matrix by means of reparameterizations. (16 ref)

6477. Deegan, John. (Rice U) **Specification error in causal models.** *Social Science Research*, 1974(Sep), Vol 3(3), 235-259.—Extended a typology of model specification errors, initially devised for single-equation multiple regression models, to include systems of equations embodied in recursive causal models. Results for the error forms identified are presented, inadequacies of traditional causal inference methods are discussed, and an alternative strategy for constructing recursive causal models is described.

6478. Feild, Hubert S. & Armenakis, Achilles A. (Auburn U) **On use of multiple tests of significance in psychological research.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 427-431.—The evaluation of a series of statistical tests in psychological research is a common problem faced by many investigators. As the number of statistical tests increases, the probability of making a Type-I error (i.e., of rejecting the null hypothesis when in fact it is true) increases as well. To help researchers evaluate their results, tables were constructed which show the probability of obtaining  $k$  or more significant results due to chance in a series of  $K$  independent statistical tests. Recommendations are also given for avoiding the problems of a Type-I error.—*Journal abstract.*

6479. Felson, Marcus. (U Illinois) **Standardization of scales in social science research: Breaking the routine.** *Social Science Research*, 1974(Sep), Vol 3(3), 261-265.—Reviews shortcomings of reporting regression coefficients in their original metric or standardized  $\beta$ 's. Some more flexible standardization procedures are suggested which facilitate computation, interpretation, and comparison.

6480. Finn, Jeremy D. (State U New York, Buffalo) **A general model for multivariate analysis.** New York, NY: Holt, Rinehart & Winston, 1974. xiii, 423 p.—Presents an overview of the rationale and procedures of multivariate analysis. Topics include the algebra of matrices, estimation and tests of significance in multiple regression analysis, correlational techniques, and models of analysis of variance. (3½ p ref)

6481. Golding, Stephen L. & Seidman, Edward. (U Illinois, Urbana-Champaign) **Analysis of multitrait-multimethod matrices: A two step principal components procedure.** *Multivariate Behavioral Research*, 1974(Oct), Vol 9(4), 479-496.—Presents a relatively simple technique for assessing the convergence of sets of variables across method domains. The technique, 2-step principal components analysis, empirically orthogonalizes each method domain into sets of components, and then analyzes convergence among components across domains. The proposed technique is directly compared with D. N. Jackson's (see PA, Vol 43:12045) multimethod factor analysis in the analysis of data from a battery of psychometric measures (including the Strong Vocational Interest Blank) administered to 231 male undergraduates. Both techniques produced evidence of cross-domain convergence. However, Jackson's method had several undesirable mathematical and interpretational consequences. The 2-step procedure appears to be a promising technique for the systematic, empirical analy-

sis of multitrait-multimethod matrices. (30 ref)—*Journal abstract*.

6482. Hakstian, A. Ralph. (U British Columbia, Vancouver, Canada) **The development of a class of oblique factor solutions.** *British Journal of Mathematical & Statistical Psychology*, 1974(May), Vol 27(1), 100-114.—Reviews C. W. Harris and H. F. Kaiser's (see PA, Vol 39:9008) class of oblique factor solutions, referred to as Case II, and develops it further. Certain features of the component matrices are explicated, an iterative procedure is presented for their simultaneous solution, and illustrative examples are given.

6483. Hakstian, A. Ralph; Osborne, John W. & Skakun, Ernest N. (U British Columbia, Vancouver, Canada) **Comparative assessment of multivariate association in psychological research.** *Psychological Bulletin*, 1974(Dec), Vol 81(12), 1049-1052.—Develops the notion of multivariate association among the variables in a set. Procedures stemming from an earlier inferential test are presented for comparing, between 2 populations, the strength of association that is present simultaneously in all pairs in a set of variables. Results are outlined of an investigation, using computer simulation methods, of the test statistic's sampling properties. The statistic is shown to follow closely the central  $F$  distribution, thus permitting adequate control of Type-I error. Applications are discussed.—*Journal abstract*.

6484. Hall, Charles E. (Abt Assoc Inc, Cambridge, MA) **Studies of single samples and whole populations: The point biserial and its generalizations.** *Multivariate Behavioral Research*, 1974(Oct), Vol 9(4), 447-459.—Reviews the point biserial correlation statistic, reviews some past generalizations of it, generalizes it further, and shows how these correlations are useful for studying the characteristics of observations in single samples or whole populations. The distinctions between analysis of variance techniques and complex point serial correlation analyses are examined in considerable detail.—*Journal abstract*.

6486. Howell, John F. & Games, Paul A. (Springfield Public Schools, MA) **The effects of variance heterogeneity on simultaneous multiple-comparison procedures with equal sample size.** *British Journal of Mathematical & Statistical Psychology*, 1974(May), Vol 27(1), 72-81.—Investigated the robustness of 3 multiple-comparison procedures (multiple  $t$  test, Tukey Wholly Significant Difference Test, and Scheffé  $S$  test) to the violation of the homogeneous population variance assumption using 3 different standard error estimates. The universal use of the Behrens-Fisher statistic with the Welch solution for critical values is recommended as yielding procedures highly robust to variance heterogeneity. (15 ref)

6487. Hubert, Lawrence. (U Wisconsin) **Spanning trees and aspects of clustering.** *British Journal of Mathematical & Statistical Psychology*, 1974(May), Vol 27(1), 14-28.—Uses the concept of a spanning tree for a weighted graph to characterize several methods of clustering a set of objects. Relationships between

spanning trees, single-link and complete-link hierarchical clustering, network flow, and 2 divisive clustering procedures are described. (24 ref)

6488. Hubert, Lawrence. (U Wisconsin, Madison) **Problems of seriation using a subject by item response matrix.** *Psychological Bulletin*, 1974(Dec), Vol 81(12), 976-983.—Aspects of the problem of sequencing  $S$ s on the basis of point dichotomous items are reviewed, as are several extensions to more general items. A majority of the results that are presented have been developed by qualitatively oriented archaeologists who are faced with the task of sequencing artifacts along a time continuum; the difficulties encountered in these attempts turn out to be formally equivalent to some of the problems psychologists face in sequencing  $S$ s on the basis of item responses. Comments are also included on the specialization to a more restrictive Guttman scale, and suggestions are given for reformulating some of the necessary terminology within a graph theory context. (22 ref)—*Journal abstract*.

6489. Jennrich, Robert I. (U California, Los Angeles) **Simplified formulae for standard errors in maximum-likelihood factor analysis.** *British Journal of Mathematical & Statistical Psychology*, 1974(May), Vol 27(1), 122-131.—Expresses standard errors for maximum-likelihood estimates of factor loadings in terms of the inverse of an augmented information matrix. The problem is viewed as one in constrained maximum-likelihood estimation. Results are given for canonical rotation and analytic rotations in the orthomax family.

6490. Jensema, Carl J. (Inst for Research on Exceptional Children, Champaign, IL) **An application of latent trait mental test theory.** *British Journal of Mathematical & Statistical Psychology*, 1974(May), Vol 27(1), 29-48.—Uses empirical and Monte Carlo data to find solutions for problems in applying A. Birnbaum's (1968) 3-parameter logistic mental test model through Bayesian tailored testing.

6491. Kaiser, Henry F. (U California, Berkeley) **A note on the equamax criterion.** *Multivariate Behavioral Research*, 1974(Oct), Vol 9(4), 501-503.—Presents a desirable property of the equamax criterion for analytic rotation in factor analysis.

6492. Kleiter, Ekkehard & Fillbrandt, Hartmut. (Pedagogical U, Flensburg, W Germany) **[Hypothesis-oriented formation of categories and hierarchical cluster analysis.]** (Germ) *Psychologische Beiträge*, 1973, Vol 15(4), 603-633.—Applies scientific theories to calculation methods for multivariate ordinals. Development of multitrait, multimethod testing procedures is advocated. It is suggested that hypothetical classifications of variables can be investigated by means of hierarchical cluster analysis. (French & German summaries) (31 ref)—*English summary*.

6493. Larsson, Bernt. **The stability of results: Some examples of the effects of scale transformations.** *Didaktometrie*, 1974(Oct), No 42, 20 p.—Presents simple examples of stability for 1 factor and  $2 \times 2$  factorial analyses of variance, for reliability, and for correlations. The findings are very different: from superstability (no transformation whatsoever can change the result) to almost total instability. Applications of the method to multivariate analysis are included. The technique can

also be used for scaling variables to obtain a best fit to mathematical models other than those involved in usual statistical analysis.—*Journal abstract.*

6494. **Lienert, G. A. & Krauth, J.** (U Düsseldorf, Psychologisches Inst, W Germany) [**Configural frequency analysis.**] (Germ) *Zeitschrift für Klinische Psychologie und Psychotherapie*, 1974, Vol 22(1), 3-17.—Configural frequency analysis can serve as a simple nonparametric tool for evaluating clinical trials which are treated by multivariate analysis of variance under parametric conditions. By means of an interaction structure analysis those factor combinations may be discovered which are most effective in producing configurations of observations. (English summary)

(19 ref)

6499. **Meyer, J. A.** (Inst National de la Santé et de la Recherche Médicale Groupe de Recherches U 123, Le Vesinet, France) **CONTEL: A FORTRAN IV program for factor and cluster analysis of mixed data.** *Behavior Research Methods & Instrumentation*, 1974(Sep), Vol 6(5), 506.

6500. **Novick, Melvin R. & Jackson, Paul H.** (U Iowa) **Statistical methods for educational and psychological research.** New York, NY: McGraw-Hill, 1974. xi, 456 p. \$16.50.—Presents a textbook on statistical principles and procedures for students in education and psychology which covers problems, data, and probability models,

elementary Bayesian methods, and Bayesian methods for comparing parameters. Additional topics include regression and correlation with applications to the estimation of ability, the logical basis of Bayesian analysis, and regression and the bivariate normal model.

6501. **Rock, Donald A.** (Educational Testing Service, Developmental Research Div, Princeton, NJ) **Appropriate method for the least squares analysis of categorical data.** *Psychological Bulletin*, 1974(Dec), Vol 81(12), 1012-1013.—Attempts to clarify some issues that have stemmed from J. E. Overall and D. K. Spiegel's (see PA, Vol 44:1534) article on least squares analysis, as well as from a number of subsequent articles. C. E. Werts and R. L. Linn (1971) provided a logical basis for selecting Method 3 from the Overall and Spiegel article. The present article outlines statistical as well as substantive arguments for the choice of Method 3. A variation of Method 3 is also suggested.—*Journal abstract.*

6502. **Rubin, Donald B.** (Educational Testing Service, Princeton, NJ) **Estimating causal effects of treatments in randomized and nonrandomized studies.** *Journal of Educational Psychology*, 1974(Oct), Vol 66(5), 688-701.—Presents a discussion of matching, randomization, random sampling, and other methods of controlling extraneous variation. The objective was to specify the benefits of randomization in estimating causal effects of treatments. It is concluded that randomization should be employed whenever possible but that the use of carefully controlled nonrandomized data to estimate causal effects is a reasonable and necessary procedure in many cases. (15 ref)—*Journal abstract.*

6503. **Shaffer, Juliet P.** (U Kansas) **Multiple comparisons with unequal sample sizes.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 572-574.—Notes that the use of C. Y. Kramer's (1956) proposed approximate method for multiple-range tests with unequal sample sizes may result in lower power for these tests than for the Tukey *A* test, a reversal of the situation for equal-sized samples. A modification of Kramer's procedure proposed by D. B. Duncan (1957) results in multiple-range tests which are more powerful than the Tukey *A* test.—*Journal abstract.*

6504. **Signorelli, Anthony.** (Union Coll) **Statistics: Tool or master of the psychologist?** *American Psychologist*, 1974(Oct), Vol 29(10), 774-777.—Examines the influence of statistics on the design and interpretation of psychological experimentation, the development of theory, and the construction of instrumentation. It is suggested that a statistical conceptualization of the universe and the objects that inhabit it is more akin to an Aristotelian mode of thinking than to a Galilean one. Psychological modes of thought and procedure which are largely based on statistical principles do not deviate from this generalization. The need for a reevaluation of the role of statistics in the development of psychological principles is discussed.—*Author abstract.*

6505. **Slater, Patrick.** (St George's Hosp Medical School, London, England) **Cluster analysis versus principal component analysis: A reply to E. E. Rump.** *British Journal of Social & Clinical Psychology*, 1974(Dec), Vol 13(4), 427-430.—Argues that E. E. Rump's 1974 advocacy of McQuitty's method of cluster analysis based on the comparison with principal components is based on a logical, although inconclusive,

argument. The suitability of both analytical procedures for different types of data is discussed.

6506. **Smith, A. F. & Payne, C. D.** (U Oxford, England) **An algorithm for determining Slater's *i* and all nearest adjoining orders.** *British Journal of Mathematical & Statistical Psychology*, 1974(May), Vol 27(1), 49-52.

—Presents a new procedure for determining P. Slater's *i* statistic (1960, 1961). Results agree with those of J. P. Phillips (1967, 1969), but the new procedure involves less work and is suited to computer implementation. A computer program is available.

6507. **Stewart, Thomas R.** (U Colorado) **Generality of multidimensional representations.** *Multivariate Behavioral Research*, 1974(Oct), Vol 9(4), 507-519.—Uses the term "generality" to refer to the degree to which a dimensional representation for a set of objects can be used to account for behavior in a variety of tasks or situations. A method using a factor analytic procedure in conjunction with multidimensional scaling to investigate generality is suggested, and an example of its use is presented. (34 ref)

6508. **Tuanga, L. N.** (U Gauhati, India) **A scaling formula for bounded mark intervals.** *British Journal of Mathematical & Statistical Psychology*, 1974(May), Vol 27(1), 53-61.—Presents a method for the adjustment of examiners' marks for a single test when the scripts are marked by several independent examiners, each of whom is assigned a different but statistically equivalent set of scripts.

## PERCEPTION AND MOTOR PERFORMANCE

### Perceptual Processes

6509. **Aaronson, Bernard S.** (Bureau of Research in Neurology & Psychiatry, Princeton, NJ) **ASCID trance, hypnotic trance, just trance.** *American Journal of Clinical Hypnosis*, 1973(Oct), Vol 16(2), 110-117.—Responses of Ss on the altered states of consciousness induction device (ASCID) were scored for depth of hypnosis on the LeCron-Bordeaux Scale to compare ASCID with hypnotic experience. Similar data were obtained with a group of Ss asked to experience themselves in a trance, although the relative frequencies of specific experiences were different. Both seemed related to conventional hypnosis but different from it and one another.—*M. V. Kline.*

6510. **Bizzi, Emilio.** **The coordination of eye-head movements.** *Scientific American*, 1974(Oct), Vol 231(4), 100-106.—Describes the sequence of events in the nervous system that coordinates eye and head movements in fixating a visual target. Initiation of movements following introduction of an unexpected target is based on a central nervous system motor program. As the head turns, vestibular motion receptors initiate signals leading to counterrotation of the eyes, thus maintaining target fixation. Other modes of coordination of eye-head movements and plasticity in the organization of the eye-head motor system are discussed.—*P. Tolin.*

6511. **Coe, William C.** (California State U, Fresno) **Experimental designs and the state-nonstate issue in hypnosis.** *American Journal of Clinical Hypnosis*, 1973(Oct), Vol 16(2), 118-128.—Reviews 5 experimental

approaches currently employed in hypnosis research. They are discussed in terms of limitations and applications, major empirical findings, and their relationship to the investigator's theoretical position in the state-nonstate issue about the nature of hypnosis.

6512. **Curton, Eric D. & Lordahl, Daniel S.** (Florida State U) **Effects of attentional focus and arousal on time estimation.** *Journal of Experimental Psychology*, 1974(Nov), Vol 103(5), 861-867.—Studied time estimation as a function of 2 variables, degree of attention directed to the stimulus interval and type of arousal treatment employed. 60 college students were assigned in equal numbers to the 4 cells of a  $2 \times 2$  design. Results show that (a) time estimates were reliably lower for Ss performing an attention-demanding task during the interval than for those engaged in a task designed to focus attention on the passage of time, (b) the 2 methods of arousing Ss interacted with the tasks employed in their effects on estimates, (c) the index of arousal used (pulse rate) did not correlate well with changes in time estimation, and (d) performance rates on the attention-demanding task did correlate positively with time estimates. (16 ref)—*Journal abstract.*

6513. **Ehrenwald, Jan.** (Roosevelt Hosp, New York, NY) **Out-of-the-body experiences and the denial of death.** *Journal of Nervous & Mental Disease*, 1974(Oct), Vol 159(4), 227-233.—An out-of-the-body (OOB) experience is an altered state of consciousness in which the S claims that he leaves his body, that he sees it and its usual environment from a vantage point apart from it, and that he journeys to distant places before being reunited with his physical self. A representative sample of OOB experiences, ranging from frankly pathological cases of depersonalization and derealization in delirious, neurotic, and organic cases to 2 clinically normal Ss, is reviewed. It is suggested that OOB experiences derive from the age-old quest for immortality and the need to deny or defy death. At the same time they may occasionally serve as vehicles for so-called psi phenomena. Some of the parapsychological implications of the OOB experience are discussed. (16 ref)—*Journal abstract.*

6514. **Fairbank, Benjamin A.** (New Mexico State U) **The subjective representation of numerical magnitude as indicated by digit inequality judgments.** *Journal of General Psychology*, 1974(Oct), Vol 91(2), 189-199.—Examined J. Parkman's (see PA, Vol 47:8230) scanning model which suggests that subjective representation of numbers may be described by a negatively accelerated curvilinear function of the numerical magnitude of denotative numbers. 2 university students were presented with 72 possible pairs of digits 1-9, omitting equal pairs, 3 times per session for 20 sessions. The time Ss required to select the larger (or smaller) of 2 digits was taken as an indicator of the similarity of the subjective representations of numbers. Those times were treated by a scaling procedure which allowed the preparation of a tentative scale of subjective magnitude. The resulting scale was increasing, curvilinear, negatively accelerated, and possibly logarithmic. (19 ref)—*Journal abstract.*

6515. **Gregory, R. L.** (U Bristol, Brain & Perception Lab, England) **Concepts and mechanisms of perception.** New York, NY: Charles Scribner's Sons, 1974. xl, 669 p. \$40.—Presents a collection of experimental reports.

descriptions of apparatus, and an analysis of the philosophy involved in the author's study of perception over the last 20 yrs. Topics include studies of perception in simulated space conditions; a case study of a man who, after being blind since infancy, had his sight restored in middle age; a device for reducing atmospheric image interference in telescopes; and a speculative account of brain function in terms of probability and induction. (15½ p ref)

6516. Griffiths, I. D. & McIntyre, D. A. (Atkins Research & Development, Epsom, England) **Sensitivity to temporal variations in thermal conditions.** *Ergonomics*, 1974(Jul), Vol 17(4), 499-507.—Conducted an experiment in which 32 college students each experienced 4 levels of change in temperature and reported their sensations. Changes were of 0, 3, 6, and 9°C and were symmetrical about a centerpoint of 23°C and linear over an exposure period of 6 hrs. Changes occurred in both upward and downward directions. Ss reported their warmth sensations at hourly intervals, gave a summary assessment on 11 semantic differential scales at the end of the period of exposure, and then completed the Eysenck Personality Inventory. The smallest rate of change was reliably detected, and changing environments were reported to be less pleasant and more uneven than the steady state. Degree of extraversion of the Ss and direction of changes in temperature were nonsignificant variables. A method of estimating the degree of dissatisfaction produced by temperature changes is briefly described. (French & German summaries) —*Journal abstract.*

6517. Gur, Ruben C. & Gur, Raquel E. (U Pennsylvania) **Handedness, sex, and eyedness as moderating variables in the relation between hypnotic susceptibility and functional brain asymmetry.** *Journal of Abnormal Psychology*, 1974(Dec), Vol 83(6), 635-643.—The number of eye movements to the right in response to verbal and spatial questions in an E-facing-S situation correlated moderately with measured hypnotic responsiveness for a sample of 30 male and 30 female right-handed undergraduates. This finding confirms earlier indications that hypnotic responsiveness may be a right hemisphere function in right-handed Ss. The correlation was not significant for 19 male and 11 female left-handed Ss. Further breakdowns of the sample produced much higher correlations with hypnotizability, indicating the roles of sex, handedness, and eyedness as moderating variables. Right-handed males yielded a correlation of .68 and left-handed females a correlation of .58, while the correlations for right-handed females and left-handed males were nonsignificant. Left-handed males, if also left-eyed, showed a correlation of .52. Left-handed males who were right-eyed, however, showed a correlation of .41. Right-handed females who were left-eyed and right-eyed produced correlations with appropriate opposite signs, but the differences were not significant. (45 ref) —*Journal abstract.*

6518. Gur, Ruben C. (U Pennsylvania) **An attention-controlled operant procedure for enhancing hypnotic susceptibility.** *Journal of Abnormal Psychology*, 1974(Dec), Vol 83(6), 644-650.—Describes a procedure which consists of instructing the S to press a button every time the word "relax" is mentioned in the hypnotic

instructions in order to avoid an electric shock. An experiment was conducted to assess the effect of this procedure, as well as its durability and generalizability, on 64 undergraduates varying in initial responsiveness to standard group inductions (as determined by the Harvard Group Scale of groups, Susceptibility). The effect existed and generalized only for Ss who showed at least some hypnotic responsiveness during pretest, but not for totally nonresponsive would (32 ref)—*Journal abstract.*

6519. Kirman, Jacob H. (Queens Coll, City U New York) **Tactile apparent movement: The effects of number of stimulators.** *Journal of Experimental Psychology*, 1974(Dec), Vol 103(6), 1175-1180.—Judgments of tactile apparent movement as well as judgments of simultaneity and successiveness were obtained from 6 undergraduates as a function of variation in the number of sequentially activated vibratory stimulators. Interstimulus onset interval (ISOI) and stimulus duration were also varied. It was found that the frequency of judgments of continuous movement increased monotonically as the number of stimulators increased from 2 to 8. Longer durations also increased the frequency of apparent movement judgments, and when long durations were combined with a large number of stimulators, good apparent movement was obtained over the entire range of ISOIs tested. Increases in apparent movement resulting from larger numbers of stimulators were accompanied by decreases in simultaneous judgments, with successiveness judgments unaffected. Increases in apparent movement due to lengthening stimulus duration, however, were associated with decreases in successiveness judgments, while simultaneous judgments did not significantly change.—*Journal abstract.*

6520. Landrigan, David T. & Forsyth, G. Alfred. (Fordham U) **Regulation and production of movement effects in exploration-recognition performance.** *Journal of Experimental Psychology*, 1974(Dec), Vol 103(6), 1124-1130.—Active vs passive conditions for processing information were investigated with a procedure involving tactual exploration of a psychophysically dimensioned random polygon followed by a visual recognition test. Ss were 108 female undergraduates. The investigation sought to establish the existence of separate regulation-of-movement and production-of-movement variables underlying the active-passive distinction. The physical dimensions on which perceptual recognitions might be made were systematically varied to determine the nature of the relationship between regulation-of-movement and production-of-movement across various physical dimensions. Results indicate that regulation-of-movement is an important variable underlying the active-passive distinction in tactual exploration of form. Production-of-movement differences were not evidenced. An interaction of regulation-of-movement with stimulus dimensions and production-of-movement demands the inclusion of a concern for stimuli in future investigations, and indicates that it is important to consider physical activity for its effect on the cognitive regulation of exploratory movements. (18 ref)—*Journal abstract.*

6521. McCurdy, John D. (Pennsylvania State U) **Synergetic perception.** *Journal of Phenomenological Psychology*, 1973(Spring), Vol 3(2), 217-246.—Presents an

analysis of synergetic perception (sensory communion) in terms of conceptions set forth by M. Merleau-Ponty (1962). It is held that however nonidentical and distinguishable the particular senses may be, they should be regarded as systematically interchangeable and reversibly equivalent by virtue of being specializations of the common sense constituted by the living body. The common sense is the respect in which sense perception is originally unspecialized; it gives sensation a primary unity and intelligibility which depends upon neither synthesis nor association. The isolation of special sensibles by the particular senses, and the movement from them toward a generality which unifies the special sensibles as the perspectival appearances of a more common sensible, are described. An analysis of the process by which visual sensations in the left and right eyes are unified is offered as an analogy for understanding the process of interchange among the particular senses.—*B. Lindsey.*

6522. McGurk, Harry & Lewis, Michael. (U Surrey, England) **Space perception in early infancy: Perception within a common auditory-visual space?** *Science*, 1974(Nov), Vol 186(4164), 649-650.—As part of a larger study of the development of audiovisual integration, 35 1-7 mo old human infants were exposed to modifications of the normal spatial relationship between their mothers' face and voice. There was no evidence that such modifications were experienced by the infants as violations of a preexisting expectancy for face and voice to occupy the same spatial location.—*Journal abstract.*

6523. Pastore, R. E. & Scheirer, C. J. (State U New York, Binghamton) **Signal detection theory: Considerations for general application.** *Psychological Bulletin*, 1974(Dec), Vol 81(12), 945-958.—Notes that while there exist a number of papers describing the theory of signal detection, it appears that many psychologists are not aware of the ease with which signal detection theory can be applied, the range of applications possible, or the limitations of signal detection theory. This paper briefly summarizes the assumptions of signal detection theory and describes the procedures, the limitations, and practical considerations relevant to its application. A worked example of an application of signal detection theory to the study of cognitive processes is included. (46 ref)—*Journal abstract.*

6524. Spanos, Nicholas P. & McPeake, John D. (Medfield Foundation, MA) **Involvement in suggestion-related imaginings, experienced involuntariness, and credibility assigned to imaginings in hypnotic subjects.** *Journal of Abnormal Psychology*, 1974(Dec), Vol 83(6), 687-690.—94 undergraduate hypnotic Ss were administered an arm-catalepsy suggestion. Half were challenged to bend an arm, and half were not. Thus, only the challenged Ss had an objective criterion (arm bending) for determining whether they passed the suggestion. All Ss rated the extent of imaginative involvement, experienced involuntariness, and credibility of imaginings generated by the suggestion. Under both conditions, ratings of imaginative involvement correlated with experienced involuntariness, degree of credibility assigned to imaginings, and hypnotic suggestibility. Findings indicate that the interrelations among the variables assessed were not simply a function of Ss' self-observa-

tions that they either passed or failed the catalepsy suggestion. Results also support the contention that imaginative involvement plays an important role in mediating hypnotic suggestibility.—*Journal abstract.*

6525. Willis, Jerry; Duncan, Joan & Udofia, Joni. (U Guelph, Ontario, Canada) **ESP in the classroom: Failure to replicate.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 582.—Results of a study with introductory psychology students failed to replicate M. Johnson's (see PA, Vol 51:4167) finding that students who answered test items attached to sealed envelopes which contained additional test information gave more correct responses than students whose envelopes did not contain the information.

### Auditory Preception

6526. Deutsch, Diana & Roll, Philip L. (U California, San Diego) **Error patterns in delayed pitch comparison as a function of relational context.** *Journal of Experimental Psychology*, 1974(Nov), Vol 103(5), 1027-1034.—Describes 2 experiments with a total of 31 undergraduates. Ss made delayed pitch comparisons when the tones to be compared were accompanied by tones of lower pitch. Results show that the pitches of these accompanying tones were chosen so that in some conditions the intervals formed by the standard and comparison combinations were identical, and in others they differed. This was true both when the standard and comparison tone pitches differed and also when these were identical. Although Ss were instructed to attend only to the standard and comparison tones, a substantial effect of relational context was manifested. When the standard and comparison tones differed, but were in an equivalent relational context, an increased tendency for their pitches to be judged as identical resulted. When the standard and comparison tones were identical, but were in different relational contexts, an increased tendency for their pitches to be judged as different resulted.—*Journal abstract.*

6527. Erickson, Milton H. **A field investigation by hypnosis of sound loci importance in human behavior.** *American Journal of Clinical Hypnosis*, 1973(Oct), Vol 16(2), 92-109.—Conducted 3 field investigations, each involving 1 S, using hypnosis to determine the possible significance of minor alterations of the loci of origin of sounds.

6528. Handel, Stephen. (U Tennessee, Knoxville) **Perceiving melodic and rhythmic auditory patterns.** *Journal of Experimental Psychology*, 1974(Nov), Vol 103(5), 922-933.—Conducted 2 experiments to investigate the perception of repeating auditory patterns; Ss were a total of 467 college students. Results show that in Exp I, the pattern elements differed along 1 sensory dimension (frequency, intensity, duration, or interval between elements). For these patterns, the pattern description was determined by an element preference and by organizing principles based on runs of identical elements. In Exp II, the pattern elements differed along 2 sensory dimensions achieved by overlaying 2 types of patterning used in Exp I (frequency-interval and frequency-duration). For these patterns, organization was based on the structural simplicity of the component patternings, with Ss tending to organize by the simpler

patterning. Results suggest that although the organization of different types of temporal patterns may be analyzed empirically, no fixed a priori set of principles will be sufficient.—*Journal abstract.*

6529. Horii, Yoshiyuki. (Purdue U) **A control program for a Glace-Holmes speech synthesizer.** *Behavior Research Methods & Instrumentation*, 1974(Sep), Vol 6(5), 505.

6530. Kuhn, Gary M. (Haskins Lab, New Haven, CT) **The phi coefficient as an index of ear differences in dichotic listening.** *Cortex*, 1973(Dec), Vol 9(4), 450-457. —Proposes the phi correlation coefficient as an index of ear differences in dichotic listening tests, specifically for the 2-response paradigm, where, as an index of ear difference over all trials, it would be statistically appropriate for correlation with overall performance. Using the same computational formula, the phi index may also be applied to the results of a 1-response, directed-recall listening test. The interest of the index lies in the fact that for a constant size of response set and number of dichotic trials, its values may be directly compared for statistical significance.—*R. Gunter.*

6531. Locke, Simeon & Kellar, Lucia. (Boston State Hosp, Neurological Unit, MA) **Categorical perception in a non-linguistic mode.** *Cortex*, 1973(Dec), Vol 9(4), 355-369.—Assessment of categorical perception in a nonlinguistic mode was undertaken to evaluate the "uniqueness" of the speech analyzing mechanism and its relation to the predicate that perceptual mechanisms employed in the analysis of language are lateralized to the left hemisphere and "innate." Identification and discrimination function was assessed in 15 musicians and 18 nonmusicians employing synthetically generated triads as stimuli. Categorization was considerably more prominent in the musicians, and discrimination more closely paralleled the prediction from the characterization curves than was true for nonmusicians. Evidence for some analysis of musical function in the hemisphere nondominant for language is reviewed and the suggestion is made that categorical perception is not unique for language nor limited to the left hemisphere.—*R. Gunter.*

6532. Yokoyama, T.; Osako, S. & Yamamoto, K. **Temporary threshold shifts produced by exposure to vibration, noise, and vibration-plus-noise.** *Acta Otolaryngologica*, 1974(Sep-Oct), Vol 78(3-4), 207-212.—In a study with 8 male medical students and teachers, changes in auditory sensitivity were recorded with a Békésy audiometer technique following exposure to (a) vibration in each of 300 cyc/min (5 Hz) and 1,000 cyc/min (16.7 Hz), (b) broad-band noise of 82 db sound level, and (c) both. Vibration at a frequency of 300 cyc/min and an amplitude of 6 mm, or at a frequency of 1,000 cyc/sec and an amplitude of 3 mm, were applied until the S could no longer tolerate them (a 20-min period) by a noise-controlled vibration exciter. There was no significant change in threshold sensitivity after exposure to vibration alone. Exposure to vibration and noise simultaneously caused greater threshold shifts and longer recovery time than exposure to noise alone. This was especially true with 1,000 cyc/min vibration. It is suggested that the effects of the combined noise and vibration might be the results of some disturbances of physiological homeostasis or possible mechanical inter-

actions with its blood supply. (French & German summaries)—*Journal abstract.*

### Visual Perception

6533. Alexander, Kenneth R. (Illinois Coll of Optometry, Chicago) **Sensitization by annular surrounds: The effect of test stimulus size.** *Vision Research*, 1974(Nov), Vol 14(11), 1107-1113.—Results of a study with 4 Os show that, as the diameter of the probe was increased from 4.8' to 2°, scotopic spatial sensitization could still be demonstrated. With increasing probe size, sensitization decreased and the peak of the function shifted to a larger diameter of background disc, with the background producing the highest threshold tending to be the same size as the probe. (French, German, & Russian summaries)

6534. Bagrash, Frank M.; Thomas, James P. & Shimamura, Keiko K. (U California, Los Angeles) **Size-tuned mechanisms: Correlation of data on detection and apparent size.** *Vision Research*, 1974(Oct), Vol 14(10), 937-942.—Obtained detection thresholds for uniformly illuminated and nonuniformly illuminated (disk-annulus) stimuli. The stimuli were presented at threshold, and 2 of the authors and a 3rd well-practiced O attempted to discriminate between uniform and nonuniform stimuli and made judgments of the apparent size of each stimulus. The uniform and nonuniform stimuli were not discriminated. Changes in apparent size were correlated with changes in detection thresholds. Findings support a multiple size-tuned mechanism interpretation. (French, German, & Russian summaries)—*Journal abstract.*

6535. Bryden, M. P. (U Waterloo, Ontario, Canada) **Perceptual asymmetry in vision: Relation to handedness, eyedness, and speech lateralization.** *Cortex*, 1973(Dec), Vol 9(4), 419-435.—Administered 3 tests of visual perceptual asymmetry—letter recognition, form recognition, and localization—to 32 right-handed and 32 left-handed Ss. Letter recognition was better in the right visual field for right-handed but not left-handed Ss. Neither form recognition nor dot localization showed a significant visual field effect, or any relation to handedness. Consideration of cerebral speech lateralization as assessed by a dichotic listening procedure did not improve the prediction of visual asymmetries. However, both sighting dominance and acuity dominance were related to the laterality effect, at least on the letter recognition task. Results emphasize the difficulty of obtaining stable laterality effects with nonverbal visual material, and indicate the importance of factors related to eye dominance. They suggest that the laterality effects obtained in letter recognition are unrelated to those obtained with dichotic listening, and therefore are mediated by a different mechanism.—*R. Gunter.*

6536. Buckley, Paul B. & Gillman, Clifford B. (U Wisconsin, Madison) **Comparisons of digits and dot patterns.** *Journal of Experimental Psychology*, 1974(Dec), Vol 103(6), 1131-1136.—Investigated the process of numeric comparison by asking 4 groups of 10 college students to judge which of 2 digits or which of 2 dot patterns was numerically larger. Stimuli were either digits or dot patterns in familiar, unfamiliar, or random configurations. Mean reaction time was systematically

related to the difference between logarithms of the stimulus values. A single numeric comparison process gave good account of the data for all stimulus types. This process was well described by a random walk model with variable step size and fixed boundaries. Reaction time matrices were further analyzed using J. B. Kruskal's 1964 multidimensional scaling program MD-SCAL, and the recovered stimulus configurations were successfully simulated from a simple version of the model. (15 ref)

6537. Carpenter, R. H. (U Cambridge, Physiological Lab, England) **An inexpensive servo-controlled "wedge."** *Vision Research*, 1974(Nov), Vol 14(11), 1269-1270.—Describes an easily constructed, automated variable neutral-density filter (wedge) for providing background stimulus conditions or for threshold or other S-controlled visual presentations in visual experiments. The device is a reliable computer peripheral.

6538. Cheng, M. & Outerbridge, J. S. (Royal Victoria Hosp, Otolaryngology Research Lab, Montreal, Quebec, Canada) **Inter-saccadic interval analysis of optokinetic nystagmus.** *Vision Research*, 1974(Nov), Vol 14(11), 1053-1058.—As the intensity of nystagmus, measured in 7 Ss, decreased, the interval histogram changed from being symmetric monomodal, to asymmetric monomodal, and finally to a multimodal form in which the high order modes were integral multiples of the basic mode. This characteristic change was distinctly altered when the S followed the optokinetic stimulus voluntarily. (French, German, & Russian summaries) (17 ref)

6539. Cohn, Theodore E. (U California, School of Optometry, Berkeley) **A new hypothesis to explain why the increment threshold exceeds the decrement threshold.** *Vision Research*, 1974(Nov), Vol 14(11), 1277-1279.—Presents an hypothesis—based on the idea that quantum fluctuations set the limit on an individual's ability to see changes in a steady background light—that only relatively few ganglion cells have the task of summing photons over a wide region and that they receive signals from a very small fraction of the receptors in their receptive field.

6540. Comerford, James P. (York U, Downsview, Ontario, Canada) **Stereopsis with chromatic contours.** *Vision Research*, 1974(Oct), Vol 14(10), 975-992.—Conducted an experiment with 3 normally seeing, paid adult Ss in which stereopsis occurred for stimuli defined by chromatic contours. A chromatic contour was defined as one formed by a spatial chromatic change with the chromatic components heterochromatically equated using the criterion of a minimally distinct border. Discrimination differed for different combinations of target and background hue. Discrimination was better when the stereoscopic target was at a 30' binocular disparity than at a 7' binocular disparity. It is suggested that the discrimination level was related to the distinctness of border of the target against the background for a given magnitude of binocular disparity. Several theories of the cue to stereopsis are discussed with relation to the results. (French, German, & Russian summaries) (18 ref)

6541. Di Lollo, Vincent; Lowe, D. G. & Scott, J. P. (U Western Australia, Nedlands) **Backward masking and interference with the processing of brief visual displays.**

*Journal of Experimental Psychology*, 1974(Nov), Vol 103(5), 934-940.—Conducted 3 experiments in which 2 spatially separate rows of letters were displayed to 3 male college students and 1 female research assistant in a tachistoscope either simultaneously or sequentially. A tone cue, indicating the row to be reported, was differentially timed to allow comparison of performance under the 2 modes of presentation at identical delays of cue. Performance on the temporally leading row was substantially impaired relative to performance on the corresponding row under simultaneous display conditions. It is suggested that the onset of the 2nd display interferes with the processing of the 1st display. Parallels with backward visual masking by a spatially superimposed pattern are discussed.—*Journal abstract.*

6542. Dwyer, William O. & White, Carol S. (Memphis State U) **Peripheral area-intensity interaction in simple visual reaction time.** *Vision Research*, 1974(Oct), Vol 14(10), 971-974.—2 normally seeing female Os performed simple reaction-time responses to peripheral stimuli of varying intensity and angular subtense. The area-intensity combinations were calculated which produced each of several criterion reaction times. An analysis of these combinations indicated that the area-intensity reciprocity was not in accordance with the theory of C. H. Graham et al (1939). An analysis of L. E. Hufford's (see PA, Vol 39:3525) data on spatial summation in reaction time produced similar conclusions. The present data and those of Hufford indicate that for small stimulus sizes, area has a greater effect than intensity in determining reaction-time responses. (French, German, & Russian summaries)—*Journal abstract.*

6543. Ellis, Hadyn D. & Shepherd, John W. (U Aberdeen, Scotland) **Recognition of abstract and concrete words presented in left and right visual fields.** *Journal of Experimental Psychology*, 1974(Nov), Vol 103(5), 1035-1036.—Both abstract and concrete words were better recognized by 12 right-handed Ss when they were presented in the right visual field (RVF) than when presented in the left visual field (LVF). Concrete words were significantly better recognized than abstract words when they fell in the LVF.

6544. Eriksson, E. Sture. (U Uppsala, Psykologiska Inst, Sweden) **A theory of veridical space perception.** *Scandinavian Journal of Psychology*, 1974, Vol 15(3), 225-235.—Proposes a theory of veridical space perception based on the principles of movement parallax. Since optical changes are ambiguous with regard to veridical distances it is suggested that veridicality is obtained on the basis of an interaction between optical information and information from the body-state system. The optical system generates size and shape constancy on the basis of proximal common motions described by a vector-derivative model. The body-state system is thought to register information in a similar manner, and the interaction between the 2 subsystems is assumed to function according to the vector-derivative principle. (23 ref)—*Journal abstract.*

6545. Frith, C. D. & Nias, D. K. (Inst of Psychiatry, London, England) **What determines aesthetic preferences?** *Journal of General Psychology*, 1974(Oct), Vol 91(2), 163-173.—88 male and female Ss rated for

personal preference 18 computer-constructed designs of quantitatively defined content. Principal component methods were used to extract the main dimensions along which the designs were perceived. The first principal component was identified as contour (amount of edge elements), an attribute that has hitherto been confounded with "information theory" definitions of complexity. The preference ratings indicate that Ss generally preferred the simplest designs. This contrasts with previous work that reports a preference for intermediate degrees of complexity. It is suggested, however, that the same conclusion would have emerged from the present research if it had not been possible to distinguish amount of contour and complexity. Thus it is suggested that contour is an important and basic dimension of perception that must be controlled in studies of aesthetic preferences. (19 ref)—*Journal abstract*.

6546. Gibbs, Thomas & Lawson, R. B. (U Vermont) **Simultaneous brightness contrast in stereoscopic space.** *Vision Research*, 1974(Oct), Vol 14(10), 983-987. —Manipulated the depth and lateral displacement between the test and inducing fields of a classical simultaneous brightness contrast configuration presented to 7 normally seeing, experienced adult Os. Depth separation varied with the binocular disparity carried by the test fields, whereas directional displacement arose from decentration of the test fields. Neither depth nor lateral displacement influenced the magnitude of simultaneous brightness contrast although stereoscopic size extent distance varied directly with disparity. Results indicate that simultaneous brightness contrast is not affected by depth adjacency. (French, German, & Russian summaries) (15 ref)—*Journal abstract*.

6547. Heggelund, Paul. (U Trondheim, Norway) **Achromatic color vision: II. Measurement of simultaneous achromatic contrast within a bidimensional system.** *Vision Research*, 1974(Nov), Vol 14(11), 1081-1088. —Measured the contrast effect within the bidimensional system of achromatic colors which was detailed in Part I (see PA, Vol 53:Issue 4). 2 experienced Os with normal vision were the Ss. Results show that different combinations of test and inducing luminance produced uniquely different achromatic colors of the test field. Although the different combinations could give the same achromatic quality or the same color strength, they could not give both together. The results are related to the question of color constancy, and it is shown that there is a consistent relationship between albedo and achromatic quality, and between illumination and color strength. Hence, achromatic color vision provides independent information about albedo and illumination through achromatic quality and color strength. (French, German, & Russian summaries) (24 ref)—*Journal abstract*.

6548. Heggelund, Paul. (U Trondheim, Norway) **Achromatic color vision: I. Perceptive variables of achromatic colors.** *Vision Research*, 1974(Nov), Vol 14(11), 1071-1079. —Achromatic colors are usually considered to be specifiable by a single perceptive variable, although a few bidimensional systems for specification of such colors have previously been presented. Some of the most important concepts of achromatic color are reviewed and evaluated against the color variations observed by 1 S (the author) in a disc-

ring configuration of fields. 4 different types of achromatic color variations were distinguished. It is shown that the unidimensional concept is untenable, and several limitations of the previous bidimensional systems are noted. A new bidimensional system is introduced which, contrary to the former, incorporates both the aperture and the surface colors within an orthogonal structure and accounts for both the intensive and qualitative variations encountered in both modes. (French, German, & Russian summaries) (40 ref)

6549. Hershberger, Wayne A.; Carpenter, David L.; Starzec, James & Laughlin, Nellie K. (Northern Illinois U) **Simulation of an object rotating in depth: Constant and reversed projection ratios.** *Journal of Experimental Psychology*, 1974(Nov), Vol 103(5), 844-853. —In 4 experiments, a total of 144 college-student Os viewed 2 types of pseudopolar motion projections (i.e., moving pictures) of a row of dots rotating in depth about one end and sweeping through limited sectors devoid of previously identified cues to rotation direction. One type incorporated a stimulus gradient of displacement-to-acceleration ratios, with the direction of the gradient being opposite to that found in normal polar projections which yield veridical impressions of rotation direction; the other type had no such gradient. As predicted, the former type yielded illusory judgments of rotation direction and the latter yielded judgments of chance accuracy, i.e., the dotted line's momentary orientation in depth (which end appeared momentarily nearer the O) was illusory and equivocal, respectively, when the displacement-acceleration gradient was reversed and absent. It is suggested that displacement-acceleration gradients in transformations of the retinal projection (image) mediate kinetic depth effects, i.e., are perceived as objective depth rather than objective motion. (15 ref)—*Journal abstract*.

6550. Hogben, John H. & di Lollo, Vincent. (U Western Australia, Nedlands) **Perceptual integration and perceptual segregation of brief visual stimuli.** *Vision Research*, 1974(Nov), Vol 14(11), 1059-1069. —6 experiments with 4 normally seeing males required the Ss to identify or guess the location of the missing dot when 24 of the 25 dots forming a  $5 \times 5$  matrix were presented in random order. In Exps I and II, dots were presented successively, at regular intervals in time. It was found that Ss's performance deteriorated as presentation of dots was strung out over greater intervals; most errors were the result of Ss' misidentifying one of the early presented dots as missing. These results are explained in terms of stimulus persistence. Exps III-VI examined the effect of inserting a temporal gap in the presentation sequence under conditions in which each dot was presented only once. When the temporal gap was greater than 30-50 msec, Ss reported the occurrence of 2 distinctly separate percepts, and the difficulty of the task was greatly increased. These results are interpreted on the basis of the concurrent operation of processes of stimulus persistence and of perceptual segregation. (French, German, & Russian summaries)—*Journal abstract*.

6551. Iwata, Junichi. [The effect of sensory-motor clues on transformation of spatial representation in children.] (Japa) *Japanese Journal of Educational Psy-*

chology, 1974(Mar), Vol 22(1), 21-30.—Groups of 112 children 4-9 yrs old predicted how objects would be perceived from different positions. Exp I provided 3 experimental situations: turning a covered landscape 180°, moving around it, and imagining it from the opposite position. Moving around the landscape was found most effective on the transformation of the perspectives. Exp II provided 4 different situations: observing the landscape after turning it 180°, moving around it 90° and 180°, verbalizing right-left and front-rear relations from various positions, and observing from various positions without verbalizing the spatial relations. Moving around the landscape was found most effective on transformation of spatial representations in children. No effect of verbalization was found. (English summary)—S. Choe.

6552. Kaiser, Peter K. (York U, Downsview, Ontario, Canada) **Determination of CIE chromaticity coordinates of colored lights produced by a projection color mixer.** *Behavior Research Methods & Instrumentation*, 1974(Sep), Vol 6(5), 473-476.

6553. Kerr, Larry. (Pennsylvania State U) **Detection and identification of monochromatic stimuli under chromatic contrast.** *Vision Research*, 1974(Nov), Vol 14(11), 1095-1105.—Detection thresholds for monochromatic stimuli superimposed on an achromatic background were determined for 2 experienced adult Os under conditions of simultaneous color and brightness contrast. Chromatic annuli selectively raised the thresholds for stimuli of similar wavelength composition relative to that of stimuli of different wavelength composition. The stimuli were then equated for detectability at near-threshold intensity levels under all annulus conditions, and their discriminability from one another was evaluated. All the stimuli were readily discriminated at threshold intensities under all annulus conditions, indicating that the chromatic mechanisms were active at threshold levels. The different annulus conditions did not differentially affect stimulus discriminability beyond the selective effect on detection thresholds. The selective effects on the detection thresholds may therefore have occurred within the chromatic visual mechanisms rather than the achromatic mechanism. (French, German, & Russian summaries) (15 ref)—*Journal abstract*.

6554. Lakner, Edward. (U Illinois, Survey Research Lab) **Recognition of numerals imbedded in words, pronounceable nonwords, and random sequences of letters.** *Journal of Experimental Psychology*, 1974(Dec), Vol 103(6), 1086-1091.—The numerals 2-9 were randomly imbedded at 1 of 3 locations within words, pronounceable word fragments, and random sequences of letters which were presented tachistoscopically in random order to a total of 24 undergraduate or graduate students in a 3 × 3 repeated measures design. Mean recognition time was shortest for numerals imbedded within words, while type of sequence interacted significantly with location of the imbedded numeral. Threshold differences were attributed to intraorganismic factors, since the experimental design controlled for differences in the response and the code used by Ss to report the tachistoscopically exposed stimuli.—*Journal abstract*.

6555. Larimer, James; Krantz, David H. & Cicerone, Carol M. (Temple U) **Opponent-process additivity: I.**

**Red/green equilibria.** *Vision Research*, 1974(Nov), Vol 14(11), 1127-1140.—A red-green equilibrium light is one which appears neither reddish nor greenish (i.e., either uniquely yellow, uniquely blue, or achromatic). A subset of spectral and nonspectral red-green equilibria was determined in 7 color-normal Os for several luminance levels to test whether the set of all such equilibria is closed under linear color-mixture operations. The spectral loci of equilibrium yellow and blue showed either no variation or visually insignificant variation over 1-2 log<sub>10</sub> units. It is concluded that spectral red-green equilibria were closed under scalar multiplication; consequently they were invariant hues relative to the Bezold-Brücke shift. The additive mixture of yellow and blue equilibrium wavelengths, in any luminance ratio, is also an equilibrium light. Small changes of the yellowish component of a mixture toward redness or greenness had to be compensated by predictable changes of the bluish component of the mixture toward greenness or redness. It is concluded that yellow and blue equilibria are complementary relative to an equilibrium white, that desaturation of a yellow or blue equilibrium light with such a white produce no Abney hue shift; and that the set of red-green equilibria is closed under general linear operations. (French, German, & Russian summaries) (15 ref)—*Journal abstract*.

6556. Lawson, R. B.; Cowan, Elisabeth; Gibbs, T. D. & Whitmore, Cynthia G. (U Vermont) **Stereoscopic enhancement and erasure of subjective contours.** *Journal of Experimental Psychology*, 1974(Dec), Vol 103(6), 1142-1146.—The Kanizsa pattern yields subjective contours without binocular disparity even though a depth impression may arise from the monocular interposition cue. 6 Ss (mean age = 32 yrs) estimated stereoscopic depth and contour clarity arising from disparate Kanizsa patterns. Results indicate that the clarity of subjective contours was enhanced by crossed disparities and attenuated by uncrossed disparities. Stereoscopic depth varied directly with disparity.—*Journal abstract*.

6557. Lefton, Lester A. (U South Carolina) **Internal contours, intercontour distance, and interstimulus intervals: The complex interaction in metacontrast.** *Journal of Experimental Psychology*, 1974(Nov), Vol 103(5), 891-895.—Tested 40 college students to examine the extent of metacontrast as a function of introducing the extent of metacontrast into the target, intercontour distance internal contours into the target, intercontour distance between the target and mask, and interstimulus intervals between the target and mask. Results show that (a) introducing internal contours made the targets more susceptible to metacontrast, (b) intercontour distance produced increases in accuracy, and (c) accuracy was a monotonic function of the delay of a masking ring. The data are discussed in terms of a lateral inhibitory model of metacontrast.—*Journal abstract*.

6558. MacKay, D. M. & MacKay, Valerie. (U Keele, England) **Do curvature-contingent chromatic aftereffects require "detectors for curvature"?** *Vision Research*, 1974(Nov), Vol 14(11), 1285-1287.—Reports results of experiments which found no significant results of experiments which curved similarly to those in L. A. Rigg's (see PA, Vol 51:4213) study. It is proposed that Rigg's results are ambiguous and that, if there is a curvature-specific component in Rigg's effects, it must

be weaker than that attributable to simple orientational adaptation.

6559. MacLeod, Donald I. & Hayhoe, Mary. (U California, San Diego) **Rod origin of prolonged afterimages.** *Science*, 1974(Sep), Vol 185(4157), 1171-1172. —Tested 1 normal and 3 rod monochromatic Ss to determine the origin within the eye of prolonged afterimages. The normal S was asked to find an intensity of a substituted background such that no afterimage at all was visible at the changeover of backgrounds. It is shown that after bleaching, once the cones have had time to recover their sensitivity, differently colored backgrounds (indistinguishable by rods but different for cones) were interchanged without reviving the afterimage. It is therefore concluded that this afterimage must be generated by rods alone.—*R. Hall.*

6560. MacLeod, Iain D. & Rosenfeld, Azriel. (U Maryland, Computer Science Ctr) **The visibility of gratings: Spatial frequency channels or bar-detecting units?** *Vision Research*, 1974(Oct), Vol 14(10), 909-915. —Interprets existing experimental data as evidence for the presence in the human visual system of channels selectively sensitive to narrow bands of spatial frequencies. A simple space-domain model is presented which accounts for much of the data. The model assumes the presence in the visual system of bar-detecting units whose receptive fields have various sizes and orientations, with the maximum response from any unit to a given stimulus determining the visibility of that stimulus. (French, German, & Russian summaries) (37 ref) —*Journal abstract.*

6561. Marquer, P. (U René Descartes, Experimental & Comparative Psychology Lab, Paris, France) **[Effect of the environment on the Müller-Lyer illusion.]** (Fren) *Bulletin de Psychologie*, 1973-1974, Vol 27(10-12), 572-577. —Examined the influence of ecological factors on the intensity of the Müller-Lyer illusion among Congolese youngsters. Ss were 4 groups of 25 youngsters each, 2 from an urban and 2 from a rural environment. One group from each environment had a mean age of 7½ yrs, one of 11½ yrs. All Ss completed an experimental perceptual task. No significant differences were found between the 11½ -yr-old urban and rural groups in strength of the illusion, but 7½ -yr-olds in the rural group perceived the illusion with greater strength than those in the urban group. The illusion became slightly weaker with increasing age in the rural groups. (34 ref)—*Z. M. Cantwell.*

6562. Matin, Ethel. (Columbia U) **Saccadic suppression: A review and an analysis.** *Psychological Bulletin*, 1974(Dec), Vol 81(12), 899-917. —Reviews the history of saccadic suppression and describes the suggested causes of the phenomenon. Primary emphasis is placed on "ordinary" saccadic suppression (i.e., decreased sensitivity for stimulation received from the outside environment either during or within a few hundred milliseconds of the time of occurrence of a saccade). However, the suppression of afterimages and entopic images is also considered. Some suggestions are made about the role of suppression in maintaining a stable visual world (constancy of visual direction) when voluntary saccades occur. (98 ref)—*Journal abstract.*

6563. McCann, J. J.; Savoy, R. L.; Hall, J. A. & Scarpetti, J. J. (Polaroid Corp, Vision Research Lab, Cambridge, MA) **Visibility of continuous luminance gradients.** *Vision Research*, 1974(Oct), Vol 14(10), 917-927. —A plateau of illumination was modulated with various patterns of gradual change: linear slopes and small numbers of low spatial frequency sinusoidal oscillations. Over the range of parameters tested with 8 Os, the threshold contrast necessary for the detection of these modulations was largely independent of the steepness of the gradient, the frequency of the sinusoids, and the size of the target on the retina. Visibility was a function of the fractional change in luminance across the target (contrast) and the pattern of the modulation (characterized by the number of cycles of sinusoid. (French, German, & Russian summaries) (21 ref) —*Journal abstract.*

6564. Murch, Gerald M. (Portland State U) **Color contingent motion aftereffects: Single or multiple levels of processing.** *Vision Research*, 1974(Nov), Vol 14(11), 1181-1184. —The monocular spiral aftereffect can be observed in the stimulated and unstimulated eye. When the aftereffect is made contingent upon a specific color, transfer does not occur. Results of 3 experiments with a total of 15 graduate student Ss show this to be the result of separate coding for color and movement, whereby the color coding occurred prior to binocular interaction. (French, German, & Russian summaries)—*Journal abstract.*

6565. Nachmias, Jacob & Sansbury, Richard V. (U Pennsylvania) **Grating contrast: Discrimination may be better than detection.** *Vision Research*, 1974(Oct), Vol 14(10), 1039-1042. —Postulates, in discussing results from earlier experiments, that a transducer function with a threshold-like nonlinearity exists prior to the point where psychophysical decisions are made. Models which do not favor an early threshold-like nonlinearity are also discussed, and it is concluded that insufficient evidence exists to favor any of these hypotheses.

6566. Nyborg, Helmuth. (U Aarhus, Psykologisk Inst, Risskov, Denmark) **Light intensity in the Rod-and-Frame Test reconsidered.** *Scandinavian Journal of Psychology*, 1974, Vol 15(3), 236-237. —Data collected by H. Nyborg (see PA, Vol 51:157) on the perception of the vertical in the rod-and-frame test (RFT) were reanalysed according to the method of signed errors presented by Nyborg (1974). Regression analysis showed that there was no systematic relationship between light intensity and frame dependence, and that the effect of light intensity on the perception of vertical in the RFT in general was negligible, thus confirming the conclusions drawn originally.—*Journal abstract.*

6567. Östberg, Olov & Stone, Peter T. **Methods for evaluating discomfort glare aspects of lighting.** *Göteborg Psychological Reports*, 1974, Vol 4(4), 19 p. —After a review of the different attempts to relate physiological mechanisms to discomfort glare, brief summaries are given of all techniques of subjective scaling of discomfort glare reported in the literature from 1900 to 1973. The main sources of assessment variance, as well as means of controlling them, are also discussed. Analysis shows that none of the scaling techniques presently in use can be appointed the rank of final

standard, especially since individual variability has not been dealt with properly. (83 ref)—*Journal abstract.*

6568. Pantle, Allan. (Miami U) **Motion aftereffect magnitude as a measure of the spatio-temporal response properties of direction-sensitive analyzers.** *Vision Research*, 1974(Nov), Vol 14(11), 1229-1236.—In 2 experiments with 9 and 8 undergraduates, respectively, the Os inspected spatially periodic, adapting patterns which were moved at different speeds in different experimental conditions. The magnitude of the motion aftereffect which was generated in each condition was measured. There was an interaction between pattern characteristics and adapting speed. For a variety of patterns the temporal frequency, rather than the velocity, of the adapting patterns was the critical determinant of aftereffect magnitude. The psychophysical results suggest (a) that the responses of direction-sensitive analyzers in humans are controlled by the temporal frequency of drifting patterns rather than their velocity and (b) that the peak response frequency of direction-sensitive analyzers is about 5 Hz under low photopic levels of illumination. (French, German, & Russian summaries)—*Journal abstract.*

6569. Regan, D. (U Keele, England) **Electrophysiological evidence for colour channels in human pattern vision.** *Nature*, 1974(Aug), Vol 250(5465), 437-439.—Spectral sensitivity curves for the red- and green-sensitive human visual channels were measured by evoked potentials (EP). 28 Ss viewed black-red checkerboard patterns, attenuated by superposed desensitizing disks of different wavelengths at increasing intensities. EP amplitudes were recorded as a function of time, and Fourier-analyzed for running averages. Results show that increasing intensity of desensitization did not affect amplitude, at first, or occasionally increased it slightly and then decreased it in proportion to the log intensity. Different desensitizing wavelengths showed similar amplitude effects but shifted response curves along the intensity axis. Comparing EP amplitudes with sensitivity curves obtained by heterochromatic flicker photometry showed visual effectiveness not to be directly proportional to luminance for pattern EPs. Implications concerning color-channel segregation and pattern-sensitive neurons are discussed. (24 ref)—*A. Cerf-Beare.*

6570. Remole, Arnulf. (U Waterloo, School of Optometry, Ontario, Canada) **Relation between border enhancement extent and retinal image blur.** (Germ) *Vision Research*, 1974(Oct), Vol 14(10), 989-995.—3 normally seeing Ss perceived a bright field on a dark ground as having a region of enhanced brightness adjacent to its borders. The spatial extent of this region was compared with the extent of blur of the borders in the retinal image. In agreement with Mach band theory, the 2 variables were closely related. Only for large entrance pupils was the enhancement extent markedly smaller than half the blur zone. It is suggested that this is because it followed the physiologically effective portion of the blur zone rather than the oblique incidence light constituting the periphery of the optical spread. (French, German, & Russian summaries)—*Journal abstract.*

6571. Rentschler, Ingo & Arden, Wolfgang. (Laboratorio di Neurofisiologia del CNR, Pisa, Italy) **Edge detection in luminance and colour discrimination.**

*Vision Research*, 1974(Oct), Vol 14(10), 1043-1045.—Discusses results of experiments on the transfer of luminance differences, concluding that the color discrimination mechanism seems to be similar, at all blur conditions, to that of luminance discrimination at very diffuse boundaries and therefore that edge detection is not essential for the transfer of color differences. (15 ref)

6572. Riggs, L. A.; Merton, P. A. & Morton, H. B. (National Hosp, Dept of Applied Electrophysiology, Queen Square, London) **Suppression of visual phosphenes during saccadic eye movements.** *Vision Research*, 1974(Oct), Vol 14(10), 997-1011.—In experiments with 3 Ss, a loss of visual sensitivity accompanied a saccadic eye movement even under conditions of total darkness. Optical factors were eliminated by the use of electrically produced phosphenes, rather than flashes of light, to test the changes in visual threshold. Separate experiments matching the brightness of electrical phosphenes to real lights allowed the threshold changes to be expressed in terms of real light. Results point to the conclusion that a substantial portion of saccadic suppression was neural, rather than optical in its origin. The time course of the suppression is consistent with electrophysiological studies in cat and monkey in which inhibition of nerve impulses occurs over a period that includes, but is considerably longer than, the duration of the eye movement. No correlation has yet been shown, however, between the occurrence of saccadic suppression and identifiable features of the human visually evoked occipital responses. (French, German, & Russian summaries) (50 ref)—*Journal abstract.*

6573. Ross, John & Hogben, J. H. (U Western Australia, Nedlands) **Short-term memory in stereopsis.** *Vision Research*, 1974(Nov), Vol 14(11), 1195-1201.—A new stochastic dot stereogram method for producing depth scenes from random point trains to each separate eye was used in 2 experiments to measure the time for which information is held to enable stereopsis. The authors and a student served as Os. Results indicate that one signal train may lag behind the other by 36-72 msec without affecting clear perception of form in depth. They suggest the existence of a visual memory system for stereopsis holding input to one eye for up to 50-70 msec but losing information about the input rapidly thereafter. The suggestion is confirmed by results with other less novel methods. (French, German, & Russian summaries)—*Journal abstract.*

6574. Rule, Stanley J.; Laye, Ronald C. & Curtis, Dwight W. (U Alberta, Edmonton, Canada) **Magnitude judgments and difference judgments of lightness and darkness: A two-stage analysis.** *Journal of Experimental Psychology*, 1974(Dec), Vol 103(6), 1108-1114.—Investigated the exponent for magnitude estimation of darkness to determine whether its negative value was attributable to an input or output transformation. 2 groups of 16 summer school students judged either lightness and lightness differences or darkness and darkness differences of Munsell grays. Difference judgments were subjected to a scaling solution derived from the 2-stage model of magnitude estimation. For the darkness data, scale values were related to reflectance by a power function with a positive exponent, while the exponent of a power function relating magnitude estimation and

scale values was negative. This result is consistent with a positive input exponent and a negative output exponent for magnitude estimation of darkness. For the lightness data, both input and output exponents were positive. (18 ref)—*Journal abstract*.

6575. Ward, Frank & Boynton, Robert M. (U Rochester, Ctr for Visual Science) **Scaling of large chromatic differences.** *Vision Research*, 1974(Oct), Vol 14(10), 943-949.—Evaluated minimally distinct borders (MDB) between juxtaposed heterochromatic fields by equivalent achromatic contrasts or by subjective ratings and subjected each to the Shepard-Kruskal multidimensional scaling analysis. Results of analyzing data from 2 Os show that the original stimuli could be arrayed in a 2-dimensional space on the basis of their sensory differences. Objective and subjective border ratings produced similar results. The MDB technique produced color scaling data that closely resemble those obtained by S. L. Guth (1971) with the subthreshold additivity method. The data provide additional information concerning the scaling of large sensory differences between spectral colors. (French, German, & Russian summaries) (15 ref)—*Journal abstract*.

6576. Weisstein, Naomi & Harris, Charles S. (State U New York, Buffalo) **Visual detection of line segments: An object-superiority effect.** *Science*, 1974(Nov), Vol 186(4165), 752-755.—14 Os identified a briefly flashed line segment more accurately when it was part of a drawing that looked unitary and 3-dimensional than when the line was in one of several less coherent flat designs.

6577. Wenderoth, Peter & Curthoys, Ian. (U Sydney, NSW, Australia) **On the non-additivity of visual tilt illusions.** *Quarterly Journal of Experimental Psychology*, 1974(Nov), Vol 26(4), 549-555.—Conducted 3 experiments with 14 undergraduate Ss in each to test whether single inducing figure (IF) lines tilted toward +60 or -30 would induce negative test settings relative to pretests and whether both IF lines presented together would induce more positive settings. In Exp I the visual tilt illusion induced by 2 orthogonal lines differed from the sum of the illusions induced by each line independently. The length of one of the orthogonal-inducing lines was varied in Exp II with the other inducing line remaining a fixed length. As length increased from zero (no line) to 100%, the size of the illusion increased monotonically. The increase in illusion was not due to the increasing length of the variable line alone since, in the absence of the line of fixed length, increasing the length of the variable line produced no significant trend in the illusion.—*Journal abstract*.

6578. Wijngaard, W.; Bouman, M. A. & Budding, F. (State U Utrecht, Netherlands) **The Stiles-Crawford colour change.** *Vision Research*, 1974(Oct), Vol 14(10), 951-957.—To obtain the Stiles-Crawford color change, the absorption of guided and unguided light by a cone outer segment as a function of the angle of incidence is estimated. The measurements by W. S. Stiles (1937) are fitted with reasonable success, both for the intensity effect and for the color change, using the phenomenon of self-screening to explain the color change. (French, German, & Russian summaries) (25 ref)

6579. Wyatt, Harry J. (Washington U, Medical School) **Singly and doubly contingent after-effects involving color, orientation and spatial frequency.** *Vision Research*, 1974(Nov), Vol 14(11), 1185-1193.—In 3 experiments with groups of informal and formal Ss, 2 singly contingent aftereffects were observed: an orientation effect contingent on spatial frequency and a spatial frequency effect contingent on orientation. These effects may be interpreted in terms of channels specific for orientation and spatial frequency. 2 doubly contingent aftereffects were also observed: a color effect contingent jointly on orientation and frequency and a color effect contingent on apparent frequency contingent on orientation. These effects may be interpreted in terms of channels specific for color, orientation, and spatial frequency. (French, German, & Russian summaries) (19 ref)—*Journal abstract*.

### Motor Processes & Performance

6580. Cratty, Bryant J. (U California, Los Angeles) **Psycho-motor behavior in education and sport: Selected papers.** Springfield, IL: Charles C Thomas, 1974. viii, 193 p.—Relates psychomotor activity to athletics and to therapeutic strategies and programs. Included are topics on intelligence in sports and physical education, movement abilities in early childhood, the theory and practice of modifying movement attributes, and psychological considerations for the athlete. (40 ref)

6581. Fenz, Walter D. & Jones, G. Brian. (U Waterloo, Ontario, Canada) **Cardiac conditioning in a reaction time task and heart rate control during real life stress.** *Journal of Psychosomatic Research*, 1974(Jun), Vol 18(3), 199-203.—On the basis of ratings by 2 jumpmasters, the 12 best and 12 worst parachutists of a group of 30 were studied. Heart rate was continuously recorded up to the time of the jump. The heart rate of the poor performers was generally somewhat higher than that of good performers. Good performers showed an increase in heart rate at the beginning of the jump sequence which leveled off, while poor performers showed a steady increase. The cardiac deceleration and the concomitant facilitation in performance seem to be centrally mediated.—*W. G. Shipman*.

6582. Roy, Eric A. & Marteniuk, Ronald G. (U Waterloo, Ontario, Canada) **Mechanisms of control in motor performance: Closed-loop vs motor programming control.** *Journal of Experimental Psychology*, 1974(Nov), Vol 103(5), 985-991.—Examined the generality of the closed-loop theory and the motor program theory as explanations for the control of motor responses. 30 undergraduates learned to move a cursor along a track in 1 sec, using a fast or slow response. The methodology used involved comparing performance, following acquisition, under changed or interrupted feedback conditions to a control condition in which feedback was the same as that in acquisition. Results suggest that the motor programming theory explained performance control in the fast response, while closed-loop theory explained performance control in the slow response, since only in the slow response were there large effects of manipulating feedback. These findings strongly suggest that the type of theory used to explain performance control depends on the type of response. (24 ref)—*Journal abstract*.

6590. Kantowitz, Barry H. (Purdue U) Double stimulation with varying response requirements. *Journal of Experimental Psychology*, 1974(Dec), Vol 103(6), 1092-1107.—Conducted 3 experiments with a total of 60 female undergraduates to test the unitary assumption of B. H. Kantowitz's 1974 response conflict model, which states that the same mechanism is responsible for both reaction time effects ( $RT_1$  and  $RT_2$ ) in double stimulation. Response conditions called for response ( $R_1$  and/or  $R_2$ ) to first stimuli ( $S_1$ ) and second stimuli ( $S_2$ ), to only  $S_1$ , or to only  $S_2$ . In Exp I,  $S_2-R_2$  was a subset of the  $S_1-R_1$  set such that  $S_1-R_1$  was characterized by 2 bits of uncertainty while  $S_2-R_2$  had 1 bit. Similar interactions

6586. Bradshaw, John L. (Monash U, Clayton, Vic, Australia) **Peripherally presented and unreported words**

between interstimulus interval (ISI) and response conditions were obtained for both RT<sub>1</sub> and RT<sub>2</sub>. In Exp II, S<sub>2</sub>-R<sub>2</sub> was not a subset of S<sub>1</sub>-R<sub>1</sub>. Both interactions obtained in Exp I disappeared. In Exp III, similar interactions between S<sub>1</sub>-R<sub>1</sub> information and ISI were obtained for both RT<sub>1</sub> and RT<sub>2</sub>. These similar patterns of interaction and additivity for both RT<sub>1</sub> and RT<sub>2</sub> support the unitary assumption. (26 ref)—*Journal abstract*.

6591. Lauer, L. W. (Texas A&M U) **Cognitive geography: A preliminary statement.** *New Scholar*, 1974(Spr), Vol 4(2), 205-210.—The field of cognitive geography seeks to relate objective environments and behaviors in terms of a subjective cognitive domain lying between them. A model is presented which outlines the basis for some continuity between the 3 realms of the geographical universe: physical, perceptual, and behavioral.—*Journal summary*.

6592. Rabbitt, P. M. & Vyas, S. M. (U Oxford, Queens Coll, England) **Interference between binary classification judgments and some repetition effects in a serial choice reaction time task.** *Journal of Experimental Psychology*, 1974(Dec), Vol 103(6), 1181-1190.—Hypotheses to explain the repetition effect in serial choice reaction tasks have suggested that on each consecutive trial S compares the percept of the current signal against his memory trace of the last. A direct test was made of this hypothesis, requiring a total of 34 college students in a serial self-paced choice reaction time task to classify each signal as being the same or different from its predecessor. Results of 3 experiments show that the nature of successive judgments interfered with the selection of successive responses made to implement them. Reaction times were also affected by the nature of comparisons between successive signals. Repetitions of signals, repetitions of responses, and repetitions of judgment were all shown to contribute to sequential effects. The hypothesis of identity between processes underlying repetition effects and those underlying binary classification of successive signals was shown to be untenable and, in view of the complexity of the interactions obtained, far too simple to be of use in interpreting experimental data. The nature of the interactions obtained raises difficulties for recent popular methodologies and for the decompositions of reaction time data obtained from these methodologies on the assumption of simple additivity of reaction times of component processes to give overall observed reaction time.—*Journal abstract*.

6593. Sivik, Lars. **Color meaning and perceptual color dimensions: A study of color samples.** *Göteborg Psychological Reports*, 1974, Vol 4(1), 31 p.—Presents a revised and comprehensive report of the author's 1970 study of the relations between semantic variables and perceptual color parameters. 71 color samples were judged by 168 passersby using 26 semantic differential scales, and results were factor analyzed. The factors of meaning were congruent with those of earlier studies. It is claimed that the relations between colors and meanings are advantageously illustrated and understood by means of so-called isosemantic mapping of the color-descriptive model used. Isosemantic patterns based on factor scores for each of the 4 factors and for each of the 4 elementary hue triangles were analyzed. Localized

variations of semantic dimensions within the color world show complex though systematic relations within the color variables, indicating the importance of "secondary" color areas (e.g., brown, orange, and pink). (19 ref)—*Journal abstract*.

6594. Vereb, Christine E. & Voss, James F. (U Pittsburgh) **Perceived frequency of implicit associative responses as a function of frequency of occurrence of list items.** *Journal of Experimental Psychology*, 1974(Nov), Vol 103(5), 992-998.—Investigated whether frequency judgments of implicit associative responses (IARs) vary as a function of frequency of occurrence of the word assumed to elicit an IAR (critical word, CW). 2 sets of CWs were presented to 200 undergraduates in a list, with frequencies of CW occurrence equal to 1, 2, 4, 8, or 16 in both sets. Data indicate that mean judged IAR frequencies were approximately 1-2 regardless of CW presentation frequency, whereas frequency estimates of CW occurrence increased appreciably as a function of CW occurrence. This finding suggests that IARs do not tend to occur with repeated CW presentations. In addition, more Ss gave nonzero judgments in the IAR experimental condition than in the control; and of the nonzero judgments, mean frequency estimates were greater at frequencies of 8 and 16 in the experimental than in the control conditions. The latter results suggest that an IAR occurs to the 1st presentation of a CW and the S then tends to discriminate the CW from the IAR. Subsequent IAR occurrences tend to be very few and are more likely to occur with a high frequency of CW presentations, thus suggesting a temporary loss of the discrimination.—*Journal abstract*.

#### Learning & Thinking & Conditioning

6595. Arai, Kunijiro. (Tokyo U of Education, Japan) **[The effects of visual illustrations on learning.]** (Japn) *Japanese Journal of Educational Psychology*, 1974(Mar), Vol 22(1), 45-49.—Studied the effect of stimulus variations on the concrete-abstract continuum. In Exp I, 4 groups of 72 2nd graders who had not attained the concept of a superordinate-subordinate relationship performed the concept learning tasks under 4 different stimulus conditions: concrete objects, geometric, linear, and verbal representations. The proposed difficulty levels were not confirmed; however, the result was in the expected direction. In Exp II, similar tasks were given to 3 groups of children: 1st and 2nd graders, 3rd and 4th graders, and 5th and 6th graders ( $N = 1,237$ ). Significant group differences of performance were found between the stimulus conditions. Age was positively correlated with the difficulty level of the stimulus conditions.—S. Choe.

6596. Arnberg, Peter W. **Observing and verbal behavior in simple problem solving after complex pretraining: Case studies.** *Reports from the Psychological Laboratories, University of Stockholm*, 1972(May), No 351, 19 p.—In a study of problem solving with tactile stimuli, responses and observing behavior of 12 university psychology students were recorded electrically, and the resulting information was processed via an event recorder. After discrimination pretraining, Ss were given another pretraining session in which they were to sum the values assigned to the 2 stimulus objects involved, in

order to arrive at the cue for the correct response. Ss were then given a problem where they only had to find out which one of 4 dimensions was relevant in order to get the correct cue. As could be expected after the more complex pretraining, Ss worked with hypotheses about the solution which were similar to the correct rule in the previous pretraining. This delayed the verbalization of the correct solution, and in 2 cases it was entirely prevented. This method made possible the study of gradual and seemingly unconscious learning of direction of selective attention and the effect of the changed direction on correct verbalization. (29 ref)—*Journal abstract*.

6597. Baumeister, Alfred A. & Blouke, Peter. (U Alabama) **Response pretraining in subject-paced paired-associate learning.** *Journal of General Psychology*, 1974(Oct), Vol 91(2), 295-299.—Attempted to (a) replicate the response pretraining phenomenon observed by W. Runquist and J. English (1964), (b) determine whether the effect could be generalized across different types of material, and (c) establish whether transfer effects are essentially negative or positive. 2 studies of 90 undergraduates indicate that under S-paced conditions, irrelevant response pretraining led to greater positive transfer. This effect was observed both for words and for consonant-vowel-consonants as responses.—*Journal abstract*.

6598. Blomkvist, Anna-Christina. **Figurative and numerical presentations of probabilities in rating games.** *Göteborg Psychological Reports*, 1974, Vol 4(7), 24 p.—In 3 studies, a total of 49 male probationary-institution inmate volunteers were given stimuli in the form of partly shaded geometrical figures and were asked to give ratio estimates of the shaded parts to the whole. The same stimuli were separately presented as illustrations of probabilities when Ss were asked to rate the favorableness of given games of chance. When Ss were presented games with probabilities in the form of illustrations (circles or rectangles) on the one hand, and numerical values on the other, the ratings did not differ in terms of Kendall's  $\tau$  Ratio estimates and ratings tended to be higher for stimuli in the form of rectangles than for stimuli in the form of circles. (15 ref)—*Journal abstract*.

6599. Carlin, Albert S.; Post, Robin D.; Bakker, Cornelis B. & Halpern, Lawrence M. (U Washington, Seattle) **The role of modeling and previous experience in the facilitation of marijuana intoxication.** *Journal of Nervous & Mental Disease*, 1974(Oct), Vol 159(4), 275-281.—40 male 21-34 yr old Ss without previous experience with marijuana smoked marijuana or placebo cigarettes in the presence of a model who exhibited marijuana-intoxicated behavior or did not. Marijuana-naïve Ss' self-ratings of intoxication were differentially affected by drugs and placebo, but were not affected by modeling. Performance on 4 of 6 cognitive measures (e.g., color-naming and alternate uses tasks) was impaired by drug consumption. On 1 additional task, performance was impaired by modeling in conjunction with consumption of the active drug. To clarify the nature of the relationship between previous experience with marijuana and self-ratings of intoxication, analyses were carried out which compared performance, symp-

toms, and ratings of marijuana-naïve and experienced Ss. Results indicate that previous experience is a socialization process through which individuals learn to discriminate and label the drug state as intoxication.—*Journal abstract*.

6600. de Montpeller, Gérard. (U Louvain, Lab de Psychologie expérimentale, Belgium) **[Temporal conditions in intentional and incidental learning: Effect of presentation time and inter-item interval.]** (Fren) *Psychologica Belgica*, 1974, Vol 14(1), 11-17.—Conducted 7 experiments with a total of 280 Ss to study paired-associate learning of words paired with nonsense syllables. The independent variables were (a) item presentation time, (b) interitem interval, and (c) incidental vs intentional learning. Results show that intentional learning was better than incidental learning in all conditions. This difference was greater for long interitem intervals. Higher presentation times favored recall more in the incidental than in the intentional learning condition. (English abstract)—S. Slak.

6601. Diveley, Sally & Rabinowitz, F. Michael. (Tulane U) **Modality and the transformation problem in paired-associate learning of children.** *Journal of Experimental Psychology*, 1974(Nov), Vol 103(5), 907-912.—Used a modified study-test procedure to investigate possible modality transformation problems in the paired-associate learning of 96 3rd-grade children. Ss were asked to point to the correct test-response item. Stimulus mode (picture vs word), study-response mode (picture vs word), and test-response mode (picture vs word) were factorially combined on both the original learning and transfer tasks. On the transfer task, given after S reached original learning criterion, the test-response mode was changed from pictures to words or vice versa. Consistent with the conceptual peg hypothesis, pictures, as compared to words, required less trials to criterion in both the stimulus and test-response modes during original learning. Evidence of modality transformation difficulties was obtained in the transfer analyses, as different response modes on the study and test trials interfered with transfer performance.—*Journal abstract*.

6602. Earhard, Marcia. (Dalhousie U, Halifax, Nova Scotia, Canada) **Free-recall transfer and individual differences in subjective organization.** *Journal of Experimental Psychology*, 1974(Dec), Vol 103(6), 1169-1174.—Conducted 2 experiments with a total of 112 undergraduates to determine whether whole-part and part-whole transfer depended on the learner being a good or a poor subjective organizer during free recall. Subjective organization was assessed by a free-recall pretest. When high organizers organized and performed better during the initial learning task, they had some difficulty transferring for a few trials and then achieved a better final level of learning than did the low organizers. When there was no difference in performance or in organization between high and low organizers in their acquisition of the 1st list, high organizers transferred better to the 2nd task whether it consisted of altogether new or some old and some new items. Results are discussed in terms of the organizational interpretation of the negative transfer from whole to part and from part to whole lists, and in terms of the basis for individual differences in

subjective organization and free recall. (21 ref)—*Journal abstract*.

6603. Galanter, Eugene & Owens, J. A. (Columbia U, Psychophysics Lab) **The independence of the simple reaction time on key force.** New York, NY: Columbia University, Psychophysics Lab, 1974. 12 p.—Reports a reaction-time experiment which assessed the influence of different key pressures on response distributions. Reaction-time distributions for 3 well-practiced Ss did not differ across force levels, indicating that the effect of changes in the design of a response key is an irrelevant variable in a reaction-time experiment. (18 ref)

6604. Grabitz, Hans J. & Grabitz-Gniech, Gisla. (U Mannheim, W Germany) **[The cognitive process foregoing decisions: Theoretical approaches and experimental investigations.]** (Germ) *Psychologische Beiträge*, 1973, Vol 15(4), 522-549.—Examines the various theoretical concepts regarding predecisional cognitive processes and discusses the methods applied to investigate and test them. The concepts surveyed include cognitive dissonance theory of L. Festinger; the conflict-theory approach of I. L. Janis and L. Mann; the reactance theories of R. A. Wicklund, and D. E. Linder and K. A. Crane; and the choice-certainty theories of J. Mills and A. Ross. Results of experiments testing these theories are described. The problems and difficulties connected with certain theoretical approaches and experimental schemes are scrutinized and explained. (English & French summaries) (3½ p ref)—T. Fisher.

6605. Haroche, Claudine. (U Paris VII, Lab de Psychologie Sociale, France) **[Experimental study of the role of an irrelevant specification in a question.]** (Fren) *Bulletin du CERP*, 1972(Oct-Dec), Vol 21(4), 167-170.—Notes results of a study of responses of 160 French secondary school students to questions containing qualifiers having no bearing on the sense of the original question. Results suggest that the concept of irrelevance can be quite variable and the importance of subjective interpretation of presumably irrelevant qualifiers is suggested.

6606. Johnson, Edgar M. (US Army Research Inst for the Behavioral & Social Sciences, Arlington, VA) **Numerical encoding of qualitative expressions of uncertainty.** *US Army Research Institute for the Behavioral & Social Sciences, Technical Paper*, 1973(Dec), No 250, 22 p.—14 US Army enlisted men and 14 college students numerically encoded on a 0-100 scale each of 15 probability phrases that systematically covered a wide range of probabilistic meaning within 3 sentence contexts: weather forecast, prediction of personal success, and an intelligence report. Results show no difference in encoding of phrases into numerical equivalents between the 2 groups or as a function of age, sex, or educational level. It is concluded that individuals are relatively consistent and that their numerical encodings indicate an underlying asymmetric probability scale comprised of a small number of scales. Findings suggest that direct use of numerical scales is most promising and would facilitate the use of tools of probability theory and decision theory in intelligence analysis.—A. J. Drucker.

6607. Koffman, Elaine C. & Weinstock, Roy B. (Mary Washington Coll) **Total time hypothesis in low-meaningful serial learning: Task, age and verbalization instruc-**

**tions.** *Journal of Experimental Psychology*, 1974(Dec), Vol 103(6), 1210-1213.—Rate of studying consonant-vowel-consonant items was factorially combined with task (serial or modified serial learning), age (adult or child), and verbalization instructions (nonverbalized or verbalized). Rate had no effect on number correct. Verbalization and modified serial learning impeded learning, and verbalization influenced the serial position curve.

6608. Leahey, Thomas H. & Wagman, Morton. (Virginia Commonwealth U, Academic Ctr) **The modification of fallacious reasoning with implication.** *Journal of General Psychology*, 1974(Oct), Vol 91(2), 277-285.—Divided 48 Ss into 4 groups based on experimental-control procedures and affirmation of consequent-denial of antecedent treated. Ss gave truth judgments on 2 verbal statements, one implicative and one disjunctive. They performed an inference task involving cards about which implication rules were read such that on most items one of the fallacies could be made. Results show an equivalent improvement on both treated and untreated fallacies for all groups. Most Ss treated implications as if it were the biconditional. It is suggested that findings support Piaget's theory of formal operations.—*Journal abstract*.

6609. Lindahl, Maj-Britt. (U Uppsala, Psykologiska Inst, Sweden) **Concept learning and the intradimensional spread of the relevant values of the instances: I. Effects of intraclass variability.** *Scandinavian Journal of Psychology*, 1974, Vol 15(3), 207-214.—Studied concept learning in 20 undergraduates, using 2 ranges of the concerned intraclass variability, one about twice the other. Depending upon the learning strategy used by the Ss, the smaller intraclass variability had a limited facilitating effect on concept learning. Some facilitation occurred when strategies involved a rather unselective attention to the appearance characteristics of the instances but not when they involved selective focusing on these characteristics, or on elements of relevant knowledge established pre-experimentally. Results are discussed in relation both to relevant stimulus-response conceptions and information-processing models of concept learning. It is concluded that automatic generalization as described in stimulus-response theories might have to be integrated into the information-processing models for some categories of learning.—*Journal abstract*.

6610. Lindahl, Maj-Britt. (U Uppsala, Psykologiska Inst, Sweden) **Concept learning and the intradimensional spread of the relevant values of the instances: II. Effects of extreme values and position of class border.** *Scandinavian Journal of Psychology*, 1974, Vol 15(3), 215-224.—Employed 30 undergraduates in an experiment with instances, the values of which varied continuously intradimensionally, which in turn resulted in continuously varying intradimensional differences between instances belonging to different classes. Results support the hypothesis that with Ss attending selectively to specific before-the-eyes characteristics of the instances, 1 hypotheses-testing routine may be described as follows: the Ss first select and test intradimensional differences for relevance in the order of their relative sizes, and then, on finding some such differences

presumably relevant, proceed to hypothesize midpoints or other easily registerable points on the involved dimension as class borders. This routine is concluded to (a) integrate various lines of thought within concept learning dealing with the effects on learning of intradimensional value separation and relative frequencies of relevant attributes and (b) represent a memory structure. (18 ref)—*Journal abstract*.

6611. Martin, David W. & Kelly, Richard T. (New Mexico State U) **Secondary task performance during directed forgetting.** *Journal of Experimental Psychology*, 1974(Dec), Vol 103(6), 1074-1079.—2 experiments with a total of 40 undergraduates examined the processing demands during a short-term memory task in which Ss were instructed to forget part of a list of stimulus words. This directed forgetting technique permitted variation of the memory load while holding list size constant. A simple reaction time (RT) task was performed concurrently with the encoding, retention, and serial recall of word lists. Results comparable to those reported in similar studies using pupillary response were obtained using RT as a secondary task. Within 4 sec following cues to forget a portion of the word list, secondary task performance was found to improve correspondingly. No evidence was found to indicate that the secondary task measure was influenced by verbalization.—*Journal abstract*.

6612. May, William W. (Appalachian State U) **A re-examination of the hierarchy-of-difficulty finding under conditions of reduced within-task interference.** *Journal of General Psychology*, 1974(Oct), Vol 91(2), 237-244.—Employed 1 between-Ss and 2 within-Ss designs to study the relative influence of task size and type of concept name on the hierarchy of difficulty (HOD) finding reported by E. Heidbreder (1947). The concepts used varied along one of their relevant dimensions of concrete object, spatial form, and number. Ss were 40 undergraduates. Results indicate that most efficient learning occurred when 2 concepts per dimension were used with monogram names; however, the HOD was not affected by reduced within-task interference. Object concepts remained easier to identify than forms, and forms were easier than numbers. A 2-stage mediation hypothesis is advanced to account for the results.—*Journal abstract*.

6613. May, William W. (Appalachian State U) **Reexamination of the contiguity hypothesis in a multiple-concept-attainment task.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 603-609.—Examined B. J. Underwood's (see PA, Vol 27:2544) hypothesis that conceptual behavior is facilitated as instance contiguity of like concepts is increased, using concepts which varied in difficulty. Ss were 60 undergraduates. Results do not support this hypothesis; a moderate mixture of instances tended to facilitate performance more than a condition of completely unmixed contiguity.—*Journal abstract*.

6614. McGuigan, F. J. & Winstead, C. L. (Hollins Coll) **Discriminative relationship between covert oral behavior and the phonemic system in internal information processing.** *Journal of Experimental Psychology*, 1974(Nov), Vol 103(5), 885-890.—Attempted to determine the relationship between electromyographic (EMG) measures of covert oral response patterns and class of

linguistic input. 12 right-handed Ss, aged 11-20 yrs, silently performed tasks (reading, viewing, memorizing, and recalling) that primarily involved bilabial verbal material (designed to heighten covert lip activity); they also covertly performed lingual-alveolar tasks (intended primarily to increase tongue activity). Results indicate that covert lip EMGs were especially prominent only during bilabial tasks, and that covert tongue EMGs were relatively prominent only for the lingual-alveolar tasks. Preferred-arm EMGs were consistently heightened during both kinds of tasks, but left-arm EMGs and leg EMGs were not. It is suggested that the speech and other musculature may participate in central-peripheral circuits by generating afferently carried phonetic codes that retrieve phonemes from a central store. While the neural phonetic code is not itself meaningful, it may facilitate semantic processing by differential retrieval of phonemes that do make differences in meaning.—*Journal abstract*.

6615. McNicol, D. & Gosbell, J. J. (U New South Wales, Kensington, Australia) **Effects of context and imagery on original and interpolated learning: Confusion of list markers, or reduction of interference?** *Journal of Experimental Psychology*, 1974(Nov), Vol 103(5), 1006-1013.—Conducted 2 experiments, using 144 undergraduates, to investigate changes in interference as a function of differences between original learning (OL) and interpolated learning (IL) in an A-B, A-C paradigm. In Exp I, the contexts of OL, IL, and the recognition tests were varied, and it was found that similar OL and IL contexts reduced discrimination between OL and both IL and extralist (EX) items. Changes in recognition context did not affect performance. In Exp II, OL and IL lists were learned by rote or with visual imagery. It was found that OL-IL and OL-EX discrimination was better when OL occurred with imagery, and that OL-IL and OL-EX discrimination was worse when IL occurred with imagery. Results support an interference model which postulates suppression of OL responses during IL, rather than a list marker model which assumes that similarity in OL and IL results in confusions about list membership at the time of retrieval.—*Journal abstract*.

6616. Meazzini, Paolo. (U Trieste, Inst Psicologia, Italy) **[The von Restorff effect: Experimental test of Green's hypothesis.]** (Ital) *Archivio di Psicologia Neurologia e Psichiatria*, 1974(Apr-Jun), Vol 35(2), 164-185.—Green's hypothesis that the von Restorff effect is the result of a structural change brought about by the first heterogeneous item of a list was checked through a replication of Green's study and control over confounding meaningfulness with heterogeneity. When the confounding of these 2 variables was avoided the retention of the heterogeneous item was no longer favored, supporting a primacy view of the effect.—L. L'Abate.

6617. Miller, Lance A. (IBM, Thomas J. Watson Research Ctr, Yorktown Heights, NY) **Conjunctive concept learning as affected by prior relevance information and other informational variables.** *Journal of Experimental Psychology*, 1974(Dec), Vol 103(6), 1220-1222.—Manipulation of prior relevance information led to superior performance by undergraduates in the relevance-certainty vs relevance-uncertainty condition. Concomitant manipulation of 2-dimensional value

variables (number and kind) resulted in the predicted absence of reliable performance effects.

6618. Noizet, G.; Gary, A.; Benedetti, M. & Bouttin, J. (U Provence, Ctr d'Aix, France) [The determinants of time of rest during problem resolution.] (Fren) *Bulletin de Psychologie*, 1973-1974, Vol 27(13-14), 765-773.—Tested the hypothesis that the "resting time"—the interval between the presentation of a stimulus and the response to it—can be divided into segments: the process of collecting and analyzing information, and the process of making a decision. Ss were 60 female elementary school students, each assigned to 1 of 4 experimental conditions. The experimental task, to discover in a set of elements (letters) the element not belonging, was presented in 3 variations. Results of data analysis support the hypothesis; the "resting time" included a period for collection and treatment of information which was distinct from the period of decision making.—Z. M. Cantwell.

6619. Norman, Kent L. (U Alabama) Rule learning in a stimulus integration task. *Journal of Experimental Psychology*, 1974(Nov), Vol 103(5), 941-947.—Studied 40 undergraduates to examine learning of simple linear and configural rules in a stimulus integration task. Ss learned to produce horizontal motor movements that represented a weighted average biased toward either the shorter or longer distance or the 1st or 2nd movement in a sequence of 2 fixed movements. On each trial Ss reported which of the 4 rules they thought was correct. Results indicate that overall learning rates for the 2 configural relationships dependent on relative magnitude were slightly superior to those for the 2 linear relationships dependent on temporal order. Differences in learning were ascribed to a hypothesis-sampling model in which Ss test 1 mode of bias at a time and learn the form of the rule in an all-or-none manner.—*Journal abstract*.

6620. Peterson, Lloyd R. (Indiana U) Learning. Glenview, IL: Scott, Foresman, 1975. 134 p. \$3.25.—Presents an introductory survey of classical and contemporary approaches to the study of learning. Topics include the theory behind, the measurement of, and research designed to test classical conditioning, instrumental conditioning, reinforcement, retention, verbal learning, and skilled performance concepts. (10% p ref)

6621. Pomm, Hermann P. [A mathematical interpretation of levels of learning.] (Germ) *Psychologische Beiträge*, 1973, Vol 15(3), 387-395.—Discusses the process of learning motor skills, learning curves, learning plateaus, etc. Learning plateaus are seen as periods of arrested progress, a time of revising, reorganizing, and switching to new methods and approaches. A mathematical model for the entire process is presented: the time of temporary decrease in the curve of growth and progress is interpreted graphically and based on mathematical formulas. As defined mathematically, the learning process is a process of disintegration which may cause a temporary standstill or decrease of achievement. (English & French summaries)—T. Fisher.

6622. Rigney, Joseph W. & Lutz, Kathy A. CAI and imagery: Interactive computer graphics for teaching about invisible processes. *Behavioral Technology Laboratories, U Southern California, Technical Report*,

1974(Oct), No 74, 43 p.—Reviews some theorizing about internal and external, digital and analog representational systems. The possibility that there are 2 overlapping internal analog representational systems, one for organismic states and the other for external world dimensionalities and objects, is considered. The concept of a working memory, or "mind's eye," and its importance in learning is described. Some conceptions of how this might serve in the generation of mental imagery from digital propositional information stored in long-term memory are noted. Research bearing on the use of external imagery for facilitating learning and improving retention is reviewed. A project to use the Plato IV system for automatically running Ss and collecting and analyzing data anywhere in the Plato IV network is described.—*Journal abstract*.

6623. Roberge, James J. (Temple U) Effects of negation on adults' comprehension of fallacious conditional and disjunctive arguments. *Journal of General Psychology*, 1974(Oct), Vol 91(2), 287-293.—41 adult Ss evaluated conclusions for 2 types of fallacious conditional arguments and their logically equivalent disjunctive forms. The presence of the negative "not" was varied systematically within the major premise of each argument. Results indicate that negation in the major premise had a significant effect on reasoning, and that this effect varied significantly according to the type of reasoning. A significant interaction between the type of reasoning and principle of inference was also obtained. The patterns of erroneous responses were consistent with those found in previous studies with children and adults. (18 ref) —*Journal abstract*.

6624. Robert, M. (U Paris VIII, France) [Psychological modeling and learning under a program of fixed interval reinforcement and training in time estimation.] (Fren) *Bulletin de Psychologie*, 1973-1974, Vol 27(10-12), 563-571.—Investigated the effectiveness of psychological modeling in learning under variations of conditioning. Ss were 50 male and female medical students 20-25 yrs old, randomly assigned to 4 experimental groups which were differentiated by conditioning situations and types of preliminary training (modeling or direct). Ss were given 3 types of training in estimating the duration of a series of time intervals. The 3 types involved variations in time intervals and task reinforcement. It was hypothesized that Ss in the modeling groups would show a positive transfer effect and that the modeling groups trained at fixed time intervals would perform better than those trained at variable time intervals, irrespective of whether or not beginning and ending of task were fixed to reinforcers, although those receiving training under a fixed condition would perform best. Results indicate no difference in attainment of criteria of acquisition among different conditioning groups. However, the less rigid the training, the better the transfer effect. A positive correlation was found between the attainment of the criteria of acquisition and the correct identification of the statement under fixed time interval training.—Z. M. Cantwell.

6625. Rouquette, Michel-Louis. (U Paul-Valéry, Lab de Psychologie, Montpellier, France) [The analysis of poorly defined problems.] (Fren) *Cahiers de Psychologie*, 1973, Vol 16(1), 3-9.—Proposes 3 fundamental types of

problem-solving situations for use in the study of poorly defined tasks: (a) Both the material of the problem and the requirements of the solution are specified. (b) The requirements of the solution are specified, but not the material to be treated. (c) The material is specified but the requirements of the solution remain indeterminate. In this categorization, material solutions have a descriptive value permitting characterization of the structure of any conceivable problem. The specification concept applies to both and is the basis for distinguishing between subcategories. Construction of the language was based on analysis of 47 statements of poorly defined problems from the literature of creativity. Examples illustrating use of the taxonomy are given. (English summary)—E. E. Brown.

6626. Santesson, Anna. (U Stockholm, Inst of Applied Psychology, Sweden) **The perception of logical principles in a test of reasoning ability.** *Reports from the Institute of Applied Psychology, University of Stockholm*, 1974, No 45, 10 p.—Asked 32 16-49 yr old Ss (predominantly university graduates) to group items whose solution, according to their opinion, was ruled by the same logical principle. Individual categorizing was limited to those items to which S had responded in a testing session prior to the experiment. The number of actual occurrences of each of the combinations of items was expressed as a percentage of the number of possible occurrences. The resulting matrix was treated by a method of cluster analysis, in turn yielding 3 interpretable clusters. When plotting the items belonging to these 3 clusters in a graph which related estimated item difficulty to the item sequence of a test based on decreasing solution frequencies, there was great variation within the clusters in both perceived and objective difficulty. Difficulty could not be said to have influenced the Ss in the sorting task. Within each of the obtained clusters an increase of objective difficulty had its correspondence in an increase of perceived difficulty. Thus, the same kind of relation was found within clusters as had previously been found between the 2 measures concerning the total test. (24 ref)—*Journal abstract*.

6627. Schmeck, Ronald R. (Southern Illinois U) **A tendency toward error repetition produced by previous experience with inconsistent feedback.** *Journal of General Psychology*, 1974(Oct), Vol 91(2), 221-229.—In a paradigm comparable to discriminative instrumental conditioning, 40 undergraduates performed 2 tasks employing the same "instrumental response"—the word "yes" spoken whenever a stimulus was thought to be correct. On Task 1, Ss were given inconsistent feedback (told that they were wrong when they were actually right); following Task 1, half of the Ss were informed that the apparatus had been malfunctioning but that the flaw had been corrected. Results indicate that the experience of inconsistent feedback on Task 1 had a tendency to increase the probability that Ss would repeat their errors while learning Task 1. A. Amsel's model (see PA, Vol 38:2017) was used to explain the data.—*Journal abstract*.

6628. Schwartz, Marian & Walsh, Michael F. (U Wisconsin, Madison) **Identical subject-generated and experimenter-supplied mediators in paired-associate learning.** *Journal of Experimental Psychology*, 1974(Nov),

Vol 103(5), 878-884.—Conducted 2 experiments in which a total of 120 college students were tested with materials and instructions that made the generated verbal mediators highly predictable (in Exp II, 100% predictable). This made it possible not only to supply mediators identical to the generated ones but also to maximize the probability that the supplied mediators would be the same as those which the supplied Ss would have generated for themselves. Results indicate that mediator origin per se had no significant effect on recall. It is suggested that in earlier studies a bias was operating against the supplied condition because the supplied mediators were, in a substantial proportion of instances, different from those which the supplied Ss would have generated for themselves.—*Journal abstract*.

6629. Seybert, Jeffrey A. & Weiss, Robert F. (U Oklahoma) **The negative reinforcing functions of nonconformity.** *Memory & Cognition*, 1974(Oct), Vol 2(4), 791-795.—Used N. E. Miller's (1959) general approach called "extension of liberalized stimulus-response theory" in 2 experiments with 108 undergraduates. Results show that Ss would learn an instrumental response, the reinforcement for which was the opportunity to escape from a situation in which they were a nonconformist. When the nonconformity situations were presented on an intermittent basis, speed of the response was a function of the percentage of nonconformity trials ( $p < .001$ ). When the opportunity to escape was delayed, response acquisition was an inverse function of the length of the delay ( $p < .001$ ). Results correspond to data collected in instrumental escape conditioning experiments on delay of reinforcement and intermittent shock using similar procedures. (29 ref)—*Journal abstract*.

6630. Stinessen, Lelf. (U Trondheim, Psykologisk Inst, Norway) **Verbalization of discovered principles for solving match-stick problems.** *Scandinavian Journal of Psychology*, 1974, Vol 15(3), 203-206.—Studied the problem-solving performance of a total of 78 high school and university students in 4 groups. The 3 experimental groups were taught part of a principle under conditions differing with respect to the amount of hints given as to the nature of the missing part of the principle. Ss' performance was compared to that of a control group that was taught the full principle. After practice, those who were taught the principle partially were asked to state the missing part of the principle, or any other general method found for solving the problems. Ss who were taught the full principle solved most problems, while performance under experimental conditions varied with the preciseness with which the stated principle specified relevant parts of the problems to be solved. The hints failed to influence performance with respect to both problem solving and ability to state principles.—*Journal abstract*.

6631. Swanson, James M. (U Texas) **The neglected negative set.** *Journal of Experimental Psychology*, 1974(Nov), Vol 103(5), 1019-1026.—Studied 18 Ss to investigate the effect of the negative set on the form of the functional relationship between RT and positive set size. Random forms were used as stimuli in S. Sternberg's (see PA, Vol 40:10810) memory scanning paradigm, and the type of negative set was varied. A linear

function relating RT and positive set size was obtained using the Sternberg-type (complementary) negative set; a log function was obtained using the G. Briggs- and J. Swanson-type (fixed) negative set; a flat function was obtained when unfamiliar items comprised an unknown negative set. These data support the hypothesis that dual classification processes operate under certain conditions in stimulus classification.—*Journal abstract.*

6632. Tarry, Roger M. (Bucknell U) **Basic principles of learning.** Glenview, IL: Scott, Foresman, 1975. 261 p. —Presents an overview of the fundamental principles of learning theory, their derivation, procedures for measurement, and empirical evidence of their validity. Avoidance, classical and instrumental conditioning, punishment, extinction, secondary reinforcement, and generalization are all discussed. (27 p ref)

6633. Thomas, David R. & Thomas, Doris H. (U Colorado) **Stimulus labeling, adaptation level, and the central tendency shift.** *Journal of Experimental Psychology*, 1974(Nov), Vol 103(5), 896-899.—3 groups of female undergraduates ( $n = 20$ ) were presented a 60° training stimulus (TS) line and subsequently were tested for recognition (i.e., generalization), either symmetrically with values of 40-80°, or asymmetrically with values of 40-60°. One of the 2 asymmetrical test groups was instructed to label the TS line in terms of its position on a hypothetical clock face. Results show that the symmetrical test group yielded a decremental gradient peaking at the TS value, whereas the asymmetrical control (i.e., no label) group showed a central tendency shift with maximal responding displaced to 50°. The asymmetrical clock-face group showed no shift but rather a sharp decremental gradient peaking at the TS value. Results are discussed in terms of both verbal mediation and adaptation level theory.—*Journal abstract.*

6634. Twitmyer, Edwin B. (U Pennsylvania) **A study of the knee jerk.** *Journal of Experimental Psychology*, 1974(Dec), Vol 103(6), 1047-1066.—Knee-jerks to the sound of a bell were obtained from 6 college students after 150-238 trials, during which the 2 patellar tendons were struck 0.5 sec after the sound of the bell. These knee-jerks to the bell alone were not the result of S's voluntary effort, and attempts to inhibit the kicks were wholly unsuccessful. With increased numbers of paired stimulations, the regularity of responding to the bell alone was greatly increased, and the pattern of the knee-jerks was exactly the same as that of knee-jerks resulting from blows to the patellar tendon. The knee-jerks to the bell can be explained only in terms of reflex action, wherein repeated association of the functioning of the motor cells of the lumbar segment of the spinal cord with excitation of centers of the medulla resulting from the sound of the bell resulted in the development of an unusual reflex arc.—*Journal abstract.*

6635. van Kreveld, D. (U Leyden, Psychological Inst, Netherlands) **Changeability of the transitivity schema for influence structures.** *Nederlands Tijdschrift voor de Psychologie en haar Grensgebieden*, 1974(Oct), Vol 29(7), 569-581.—Conducted 3 experiments to test the hypotheses (a) that the more transitive a previously learned structure, the smaller will be the number of errors in learning a new structure, and (b) that a reduction in

errors caused by the transition (transfer) of a previously learned structure will be obtained for large "learning distances" and "position-effects." Ss were 45, 96, and 75 students, respectively, for the 3 experiments, which measured the association of names of imaginary persons with the names of towns. In Exp I, which tested the content of the material and degree of transfer, the transfer effect in terms of "position" and "distance" was not found. In Exp II, the measurements indicated the degree of transfer in learning the names of variable dyads and transitive and intransitive triples. Exp III repeated the pattern of Exp II with easier and smaller structures. Results of the experiments did not confirm the hypotheses. Experience with transfer did not result in a general overall saving in learning a transitive structure.—*A. J. Ter Keurst.*

6636. Vidal-Madjar, A. (U Paris X—Nanterre, France) **[Guided discovery using simulation: Relation to the elaboration of procedures for the solution of problems.]** (Fren) *Bulletin de Psychologie*, 1973-1974, Vol 27(10-12), 606-621.—Conducted a study of guided discovery learning in which simulation was available to assist S in problem solution. Ss were 27 13-15 yr old students who were presented with 5 problems of increasing difficulty. Each problem was worked on in a 40-min session in which an S was paired with an O. Simulation materials were present in each session and their use was directed by either S or O to clarify problem solution for the S. Ss fell into 3 groups: (a) those able to discover a new operation at least in the 2nd problem; (b) those able to discover a new operation in problems 3 and 2; (c) those able to discover a new operation in problems 2, 3, and 4. Efficacy of simulation varied considerably among Ss. Details of observed behavioral differences among groups in approaches to problem solution and use of simulation are reported.—*Z. M. Cantwell.*

6637. von Thun, Friedemann S. (U Hamburg, Psychologisches Inst, W Germany) **[Intelligibility of informational texts: Measurement, improvement and validation.]** (Germ) *Zeitschrift für Sozialpsychologie*, 1974, Vol 5(2), 124-132.—Studied comprehension and retention of written information. Intelligibility theory states that comprehension and retention depend on the text's simplicity, organization and structure, brevity and conciseness, and supplementary stimulation (elements of style that arouse the reader's interest). 8 previously published articles were revised with close attention to three principles. 64 female students were given 4 original and 4 revised articles. For 6 of the 8 articles, students reading the revised articles had significantly higher comprehension and retention scores.—*English abstract.*

6638. Wickens, Delos D. & Dalezman, Joseph. (Ohio State U) **Spontaneous recovery and clustering of first-list responses.** *Journal of Experimental Psychology*, 1974(Dec), Vol 103(6), 1067-1073.—Conducted 2 experiments in which, following A-B, A-D learning, a total of 200 undergraduates were presented with a 32-item free-recall (FR) list with either the List-1 or List-2 response terms embedded randomly within it. This FR list was given either 2 or 20 min after completion of List-2 training. List-1 response term recall was found to be inferior to List 2 at 2 min, but was equivalent or slightly better than List-2 recall at a 20-min retention interval.

Similarly, List-1 response clustering was inferior to List 2 at 2 min but superior to List 2 at 20 min. Results are interpreted as support for the response class suppression hypothesis of retroactive interference. (17 ref)—*Journal abstract*.

6639. Wilcove, W. Gregg & Miller, Joseph C. (MacMurray Coll) **CS-UCS presentations and a lever: Human autoshaping.** *Journal of Experimental Psychology*, 1974(Nov), Vol 103(5), 868-877.—Conducted 6 experiments with 30 college students to investigate similarities and differences between animal and human behavior under autoshaping procedures. The naive, uninstructed Ss were placed in a room containing a lever, a translucent panel, and a slot for pennies. Within an experimental session, the translucent panel was lit (conditioned stimulus) for 5-sec duration on a variable-interval 20-sec schedule for 5 min and was then paired with penny delivery for 12 min. It is concluded that in the present experimental situation, humans (a) brought a prepotent response to the situation which became temporally controlled by a neutral stimulus predictive of reinforcement; (b) behaved as if environmental events (usually the unconditioned stimulus, UCS) were under response control and appeared to test hypotheses about response production of the UCS; and (c) demonstrated that human autoshaping processes are different from rat or pigeon autoshaping processes, although both animals and humans show similarities in response tendency. (17 ref)—*Journal abstract*.

6640. Yukawa, Takako. (Kyoto U, Japan) **[Identification as a motivational factor in learning: I. Effect of model on a choice behavior.]** (Japn) *Japanese Journal of Educational Psychology*, 1974(Mar), Vol 22(1), 11-20.—The 1st of 2 groups of 40 2nd graders, matched in terms of sex, IQ, and personality traits, performed a set of learning tasks with the personal assistance of a model during 3 20-min sessions 10 days apart. For Group 2, a model was present and gave demonstrations without any personal interactions. One wk after the last session, with a similarly matched group added as a control, Ss' identification and imitating behavior were rated in a test session in which 2 models, one familiar to the 1st group, the other unfamiliar to all groups, were present. Results show that identification with a model significantly facilitated children's imitation of the model's cognitive characteristics. (English summary)—*S. Choe*.

6641. Zajano, Michael J. & Grant, David A. (U Wisconsin, Madison) **Response topography in the acquisition of differential eyelid conditioning.** *Journal of Experimental Psychology*, 1974(Dec), Vol 103(6), 1115-1123.—Defining a criterion that identified that block of 8 training trials during which S first began to respond more frequently to the reinforced (conditioned) stimulus (CS+) than to the nonreinforced stimulus (CS-) identified 55 of 80 undergraduates as "discriminators" and permitted comparison of pre- and postdiscrimination frequency and topography of conditioned responses (CRs) to CS+ and CS-. Results show that on prediscrimination trials 2 Ss with V-topography gave a high frequency of CRs to both CS+ and CS-, achieving discrimination by suppressing CRs to CS-. Ss with C-topography Cs initially gave a low frequency of CRs to both CS+ and CS- and achieved discrimination by

increasing their response rate to CS+. Those Ss who changed from predominantly V to C or from C to V topography changed their response bias accordingly. Average topographic features of CRs to CS+ were different from those to CS- even before conditioned discrimination was evidenced by differential frequency of responding to CS+ and CS-. Findings indicate that there may be at least 4 distinct stages in the acquisition of the differentially conditioned eyelid response. They involve stimulus detection, stimulus identification, response selection, and response modification. (17 ref)—*Journal abstract*.

6642. Zajano, Michael J.; Grant, David A. & Schwartz, Marian. (U Wisconsin, Madison) **Transfer of differential eyelid conditioning: Effects of semantic and formal features of verbal stimuli.** *Journal of Experimental Psychology*, 1974(Dec), Vol 103(6), 1147-1152.—Following 80 differential eyelid-conditioning trials during which members of a set of 4 4-letter names of mammals were reinforced with the airpuff and members of a set of 4 7-letter names of birds were not (or vice versa), 80 undergraduates were given 40 transfer trials with 8 new words all paired with a delayed airpuff. The transfer words were 2 4-letter and 2 7-letter names of mammals, and 2 4-letter and 2 7-letter names of birds. Each S was classified as a V or a C in terms of his conditioned response topography. Both Vs and Cs may have encoded the training stimuli in terms of taxonomic category rather than in terms of word length, but only the Vs transferred their conditioned discrimination to the new words by responding more frequently to the taxonomic category that had been reinforced during training. There was no evidence that Vs transferred in terms of the word length that had been reinforced, and the Cs showed no differential transfer. The findings provide further evidence of the nature of the differences between Vs and Cs in eyelid conditioning.—*Journal abstract*.

#### Attention & Memory

6643. Anderson, John & Hastie, Reid. (U Michigan) **Individuation and reference in memory: Proper names and definite descriptions.** *Cognitive Psychology*, 1974(Oct), Vol 6(4), 495-514.—Investigated selected aspects of J. Anderson and G. Bower's (1973) human associative memory (HAM) model. 16 undergraduates received simple predicated facts about an individual person—some facts referred to him by proper name and others by his profession. In a "before" condition, Ss learned that the profession and name referred to the same individual before learning the facts, while in an "after" condition, they learned the identity after learning the facts. Subsequent to learning the facts and identities, Ss verified sentences based on what they had learned. Verification latencies indicated that in the before condition, one memory node was created to represent the individual, but 2 nodes were set up in the after condition. Asymmetries between proper names and professions indicate that the 2 types of referring expressions are treated differently in long-term memory.—*Journal abstract*.

6644. Anderson, John R. (U Michigan, Human Performance Ctr) **Retrieval of propositional information from long-term memory.** *Cognitive Psychology*,

1974(Oct), Vol 6(4), 451-474.—Presents 3 experiments in which a total of 54 undergraduates learned 26 sentences of the form, "A hippie is in the park." The experiments manipulated the number of such propositions involving a particular person (e.g., hippie) or a particular location (e.g., park). After learning the material, Ss were asked to judge whether particular probe propositions were from the study set. Results indicate that times to make these judgments about probe propositions increased with the number of study propositions involving the person or location used in the probe proposition. A model is presented which assumes an S simultaneously accesses memory from all concepts in a probe proposition and serially searches through all study propositions involving each concept. The model also assumes that search of memory terminates as soon as one search process from a concept finds the probe proposition or exhausts the study propositions attached to that concept. (17 ref) —*Journal abstract.*

6645. Bock, J. Kathryn & Brewer, William F. (U Illinois) **Reconstructive recall in sentences with alternative surface structures.** *Journal of Experimental Psychology*, 1974(Nov), Vol 103(5), 837-843.—Tested 40 undergraduates to examine recall for sentences admitting optional surface transformations. Results show that such sentences were consistently more difficult to recall correctly than were control sentences which did not admit optional transformations. There were strong biases in the degree to which the 2 surface forms of an optional-transform sentence were correctly recalled. The recall biases showed little relation to the transformational status of the sentences, but showed a strong relation to speech production preference ratings, supporting a theory of memory which postulates that sentences are remembered in terms of their underlying meanings and that in recall the speech output system is used to reconstruct new surface structures for these retained meanings. (21 ref)—*Journal abstract.*

6646. Ciccone, Donald S. & Brelsford, John W. (Rice U) **Interpresentation lag and rehearsal mode in recognition memory.** *Journal of Experimental Psychology*, 1974(Nov), Vol 103(5), 900-906.—Attempted to evaluate the contribution of rehearsals to 36 college students' performance on a continuous recognition task. Using 3-digit numbers as stimuli to minimize encoding variability, the spacing between successive item repetitions was systematically manipulated in variable rehearsal (VR) and constant rehearsal (CR) conditions. Performance on the 3rd presentation of critical items in both rehearsal conditions was observed following a constant long-term retention interval of 25 items. Results show that (a) the VR condition resulted in an inverted U-shaped lag function; (b) the CR condition, while attenuating any systematic effect of lag, produced a higher overall level of retention; and (c) rehearsals in both CR and VR conditions paralleled the performance data quite closely. These findings suggest that when contextual variability is reduced, performance on a recognition task may be mediated via rehearsal frequency. (20 ref)—*Journal abstract.*

6647. Coltheart, Max; Lea, C. David & Thompson, Keith. (U Reading, England) **In defence of iconic memory.** *Quarterly Journal of Experimental Psychology*,

1974(Nov), Vol 26(4), 633-641.—Evaluates D. Holding's (1970) objections to G. Sperling's (1960) model of visual information-processing. Findings of 3 experiments with 6 Ss support Sperling's model. (17 ref)

6648. Derks, Peter L. & Bauer, T. Michael. (Coll of William & Mary) **Study and response time for the visual recognition of "similarity" and identity.** *Journal of Experimental Psychology*, 1974(Nov), Vol 103(5), 978-984.—4 Ss (3 college students and 1 professor) compared successively presented pairs of line patterns for a match between any lines in the patterns (similarity) and for a match between all lines (identity). The patterns were presented in adjacent locations and were separated by a 0- or 5-sec delay. Conditions were varied between sessions. The exposure duration for the 1st pattern (study time) and the 2nd pattern (response time) was controlled by S's behavior. Results show that (a) for identity judgments, both study and response times were independent of the number of elements in the patterns; (b) for similarity judgments with 0-sec interval, both study and response times increased with the number of elements to be processed; and (c) for similarity judgments with a 5-sec interpair interval, some Ss were able to study the patterns with no increase in time for an increase in the number of elements. Qualitative differences within and between Ss were most evident in study times. (17 ref)—*Journal abstract.*

6649. Elliott, Maxwell C. (Simon Fraser U, Burnaby, British Columbia, Canada) **Physical size shift and release of proactive inhibition in short-term memory.** *Journal of Experimental Psychology*, 1974(Dec), Vol 103(6), 1216-1217.—Changed the physical size of a stimulus on the 4th trial of a short-term memory task with college students. A significant release of proactive inhibition effort was obtained. The possibility of the same mechanism being involved in the Von Restorff isolation effect found in long-term memory studies is discussed.

6650. Federico, Pat-Anthony & Montague, William E. (US Navy Personnel Research & Development Ctr, San Diego, CA) **Recognition memory for shapes as a function of encoding strategy.** *US Navy Personnel Research & Development Center Technical Report*, 1974(Sep), No 75-3, 19 p.—Investigated how imaginal and verbal encoding strategies interact with various stimulus characteristics to enhance or retard recognition performance; the secondary purpose was to test H. C. Ellis's (1972) conceptual coding hypothesis. A between-groups multivariate factorial analysis of covariance experiment with 96 undergraduates, and a within-S multivariate factorial analysis of variance experiment with 44 Ss, were conducted. In Exp I it was found that low codability (LC) shapes were better recognized under the verbal rather than the imaginal encoding set; high codability shapes were equally recognized under the imaginal and verbal encoding sets. However, in Exp II, where instructional set was a within-S factor, it was found that LC shapes were not better recognized under the verbal than the imaginal encoding set. Findings are discussed within the context of the studies, theories, and models brought to light in the extensive review of the relevant literature which had been conducted previously. (49 ref)—*Journal abstract.*

6651. Fijalkow, J. (U Quebec, Chicoutimi, Canada) **Research on lexical content in long-term memory: Antonym, synonym and frequency.** (Fren) *Bulletin de Psychologie*, 1973-1974, Vol 27(10-12), 601-605.—Tested the hypothesis that the order of production of synonyms and antonyms would reflect their frequency in use. Ss were 2 groups of college students of 50 students each. The same list of 48 words was presented to each group; 1 group was asked to supply synonyms, the other antonyms, for the same list of 48 words. The order of production of synonyms and antonyms did follow the order of use frequency, verifying the hypothesis.—Z. M. Cantwell.
6652. Fisher, Judith L. & Harris, Mary B. (U New Mexico) **Effect of note-taking preference and type of notes taken on memory.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 384-386.—To study the effect of note-taking, type of notes taken, and review on recall, 112 male and female college students were randomly assigned to 4 treatment groups using different combinations of note-taking and review. No treatment effects were found, but preference for detailed notes was significantly positively correlated with recall for those assigned to take detailed notes, more weakly correlated with recall for those assigned to take no notes, and nonsignificantly negatively correlated with recall for those assigned to take only notes on main points.—*Journal abstract*.
6653. Franks, Jeffery J. & Bransford, John D. (Vanderbilt U) **Memory for syntactic form as a function of semantic context.** *Journal of Experimental Psychology*, 1974(Nov), Vol 103(5), 1037-1039.—Investigated some effects of semantic context on the ability of 18 undergraduates to remember the syntactic form of certain input sentences. Results support D. Slobin's findings (see PA, Vol 43:3735) when considering short passives for which no actor was supplied by extrasentential semantic context. However, in the case of short passives for which extrasentential context supplied information about the actor, verbatim memory for the short passives was greatly reduced, and Ss tended to recognize alternate sentential forms (actives and full passives) expressing the meaning of the short passives plus the contextually given actor.—*Journal abstract*.
6654. Hacker, Michael J. & Hinrichs, James V. (U Iowa) **Multiple predictions in choice reaction time: A serial memory scanning interpretation.** *Journal of Experimental Psychology*, 1974(Nov), Vol 103(5), 999-1005.—12 undergraduates in a 4-stimulus, 2-response reaction time study were required to name the stimuli that they felt to be 1st and 2nd most likely to be presented on each trial. Responses following correct 1st predictions were faster than those following correct 2nd predictions, which in turn were faster than responses to unpredicted stimuli. Consistent with previous verbal prediction results, stimulus rather than response anticipation was the main component of the prediction effect for both the 1st- and 2nd-prediction data. Results also support a previously proposed prediction axiom for a serial, self-terminating memory scanning model.—*Journal abstract*.
6655. Hall, Douglas C. (Stanford Research Inst, Menlo Park, CA) **Eye movements in scanning iconic imagery.** *Journal of Experimental Psychology*, 1974(Nov), Vol 103(5), 825-830.—Investigated the relationship between eye movements and iconic imagery in 5 undergraduates. A stimulus consisting of 3 rows of 3 letters each was tachistoscopically presented. Recall of particular rows was directed by tone cues sounded immediately after stimulus presentation, and eye movements were observed during recall. Eye movements during recall suggest spatial scanning of the iconic image, since Ss had a strong tendency to look where the requested stimuli used to be. (21 ref)—*Journal abstract*.
6656. Hunt, R. Reed & Ellis, Henry C. (U New Mexico) **Recognition memory and degree of semantic contextual change.** *Journal of Experimental Psychology*, 1974(Dec), Vol 103(6), 1153-1159.—Recent speculations concerning the mechanism of recognition failure underlying the context effect in recognition memory have emphasized the importance of establishing similar functional encodings of the to-be-recognized item in training and testing. The purpose of the present experiment was to examine this suggestion by manipulating the similarity of the semantic interpretation of polysemous nouns at training and testing through contextual variations. Ss were 75 undergraduates. The general trend of recognition performance was consistent with previous reports of context variation, but some of the specific comparisons appeared to raise problems for the encoding specificity explanation of recognition failure. An alternative explanation in terms of decision processes is suggested.—*Journal abstract*.
6657. Jenkins, James J. (U Minnesota) **Remember that old theory of memory? Well, forget it.** *American Psychologist*, 1974(Nov), Vol 29(11), 785-795.—Contrasts the position of associationism—that psychological phenomena are capable of analysis into basic relations between basic units—with the position of contextualism—that the relevance of any analysis depends upon the purpose for which the quality of a particular event is being explicated. Important aspects of the position of contextualism are illustrated in a discussion of 3 types of experiments in the domain of memory. The contextual approach is shown to provide a more adequate account of the experimental data than the associative approach. (21 ref)—B. Lindsey.
6658. Johnson, Ronald E. (Purdue U) **Abstractive processes in the remembering of prose.** *Journal of Educational Psychology*, 1974(Oct), Vol 66(5), 772-779.—Reports that the patterning of recall of linguistic subunits of textual prose by 58 undergraduates was strongly related to the semantic dimensions of abstractness-concreteness, specificity of denotation, comprehensibility, and interest. Attesting to the generality of the findings, the relationships between the textual dimensions and recall were evident with 2 textual passages, with 2 methods of measuring the semantic dimensions, and at immediate and delayed retention intervals. Remembering was characterized as being both a reconstructive and an abstractive process. (22 ref)—*Journal abstract*.
6659. Jones, Bill. (U Waterloo, Ontario, Canada) **Response bias in the recognition of pictures and names by children.** *Journal of Experimental Psychology*, 1974(Dec), Vol 103(6), 1214-1215.—In general, 1st

graders adopted a rather lax criterion for names and a somewhat more conservative one for pictures. Recognition of pictures and names together generally resulted in unbiased performance. Results are discussed in terms of the iconic-verbal memory distinction.

6660. Klein, Gary A. & Klein, Helen A. (Wright-Patterson Air Force Base, Personnel & Training Requirements Branch, OH) **The influence of serial retention and theme identification paradigms on encoding.** *Quarterly Journal of Experimental Psychology*, 1974(Nov), Vol 26(4), 556-560.—Compared auditory and semantic encoding of 96 undergraduate Ss under a serial retention task and a theme identification task. Encoding features were evaluated with surprise recognition tests. Greater auditory encoding was obtained for the stimulus words in the serial retention condition than for the same words in the theme identification condition. Semantic encoding was only obtained in the theme identification condition. —*Journal abstract.*

6661. Lefton, Lester A. (U South Carolina) **Probing information from briefly presented arrays.** *Journal of Experimental Psychology*, 1974(Nov), Vol 103(5), 958-970.—Conducted 5 probe experiments to investigate the extraction of information from briefly presented arrays of letters. Ss were a total of 88 undergraduates. The 1st 2 experiments used a spatial single-item bar marker procedure. Results show a W-shape function of accuracy with stimulus position. The last 3 experiments investigated the use of a single item probe in which Ss examined each item in the array to indicate the presence or absence of a critical target; reaction time was the dependent measure. Results show that search through brief arrays of letters proceeded item by item and from left to right, as evidenced by an increase in reaction time from left to right and an increase in reaction time for the negative responses. A small order of approximation effect was exhibited in all experiments; this effect was attributed to guessing and was a precategorical analysis of the visual information. (17 ref)—*Journal abstract.*

6662. Liepmann, Dirk & Saegert, Joel. (American U, Beirut, Lebanon) **Language tagging in bilingual free recall.** *Journal of Experimental Psychology*, 1974(Dec), Vol 103(6), 1137-1141.—2 groups of 25 Arabic-English bilingual undergraduates learned 15 lists of 16 items each. The lists were constructed from a pool of only 32 items, so that there was a high degree of item overlap across lists. For 1 group all the items were presented in 1 language, while for a 2nd group mixed-language lists were used with the language of each item randomly varied across successive lists. It was hypothesized that if Ss store items as concepts independently of the language of input, the bilingual-list group would do more poorly than the unilingual-list group on recall of later lists; however, if Ss store items as language-specific units, the bilingual-list group would be expected to do better than the unilingual-list group. Data support the hypothesis of language-independent storage. The occurrence of increasing numbers of translation errors across lists was also interpreted as being consistent with this view. —*Journal abstract.*

6663. Light, Leah L. & Berger, Dale E. (Pitzer Coll) **Memory for modality: Within-modality discrimination is not automatic.** *Journal of Experimental Psychology*,

1974(Nov), Vol 103(5), 854-860.—In 2 experiments, investigated the automaticity of attribute memory; Ss were a total of 78 high school and college students. Results show that when instructed to attend to the case and color in which words were presented, Ss' retention input mode improved, but their recognition performance was depressed. Allocating attention to input mode thus appears to result in diminished attention to semantic aspects of words. When case and color were uncorrelated with taxonomic category, memory for mode of input dropped to chance levels. When case and color were redundant with taxonomic category, memory for mode of input was better than chance. Findings suggest, however, that this result was due to rule learning rather than to memory for input mode for individual items. —*Journal abstract.*

6664. Loiseau, Lucien. [Masking effect on the span of apprehension for verbal stimuli at different ages.] (Fren) *Psychologica Belgica*, 1974, Vol 14(1), 55-66.—Investigated the effect of combined proactive and retroactive masking on the span of apprehension for letters presented for 228 msec. In Exp I, 4 Ss 8½ yrs old, 8 Ss 11½ yrs old, and 12 Ss 17½ yrs old were used. Stimuli were zero-order or 2nd-order approximations to French with or without masking. Span of apprehension was greater for 2nd-order approximation, but the masking effect was not significant. In Exp II, 8, 8, and 12 Ss in the same age groups were used, with masking as independent variable and stimuli being letters in text-order, resulting in a significant masking effect. Results are interpreted as showing the probable masking effect in reading at different ages. The span of apprehension was interpreted as a limitation of verbal memory capacity. (English abstract)—*S. Slak.*

6665. Nelson, Douglas L.; Wheeler, Joseph W.; Borden, Richard C. & Brooks, David H. (U South Florida) **Levels of processing and cuing: Sensory versus meaning features.** *Journal of Experimental Psychology*, 1974(Nov), Vol 103(5), 971-977.—Compared retrieval cuing effectiveness of strong and weak rhymes and synonyms as a function of variations in the conditions associated with the coding of the target words, using 160 undergraduates. The 2 types of cues were presented either only during the test trial, or they were located on both the study and the test trial. Presentation during study was either fast (1.2 sec) or slow (3.0 sec). Results show that reliable cuing effects were obtained with both types of cues, and strong cues were superior to weak cues. Manipulations of coding conditions influenced the effectiveness of synonyms, but had no effect on rhymes. Presenting cues during study and increasing the length of study time significantly enhanced the utility of meaning cues but not of sensory cues. Results are explained by a model incorporating ideas derived from the levels-of-processing conception, from the encoding-specificity principle, and from generation-recognition models of cuing. —*Journal abstract.*

6666. Nilsson, Lars-Göran. (U Uppsala, Sweden) **Further evidence for organization by modality in immediate free recall.** *Journal of Experimental Psychology*, 1974(Nov), Vol 103(5), 948-957.—Conducted 2 experiments to investigate organization by modality. In Exp I, mixed lists of words were presented to 30

undergraduates auditorily and visually, by male and female voices, and by uppercase and lowercase letters. Ss were asked for immediate free recall after each list and were to indicate the mode of presentation for each word they could recall. Ss could tag the words to the same degree for each of the 3 types of list presentation. However, the degree of organization for modality was higher than for the other 2 types of variation. In Exp II, 60 undergraduates in 3 instruction conditions were presented words in the auditory and visual modalities orthogonally combined with 2 semantic categories. In immediate free recall, Ss could organize the words by modality or by category, depending upon instruction. In final free recall, organization by category increased and organization by modality decreased.—*Journal abstract.*

6667. Ornstein, Peter A. & Trabasso, Tom. (U North Carolina, Chapel Hill) **To organize is to remember: The effects of instructions to organize and to recall.** *Journal of Experimental Psychology*, 1974(Nov), Vol 103(5), 1014-1018.—Conducted 2 experiments to investigate G. Mandler's (1967) finding that organization and recall instruction led to the same degree of recall. Exp I employed taxonomically related materials, and Exp II used unrelated words; Ss were a total of 40 male college students. To minimize anticipation of a recall test unless Ss were specifically instructed, degree of organization was varied within Ss, while recall instruction was a between-Ss variable. A concept learning task was employed such that all Ss classified some, but not all, of the words on a list that was subsequently tested for recall. Only half of the Ss were given prior instructions about the recall task. In both experiments, organized material was recalled better than nonorganized material, and prior recall instructions did not lead to further increments in the recall of the organized items. However, these instructions did not invariably lead to enhanced recall of the items that were not classified; in fact, recall instructions seemed to be effective only when it was possible for Ss to organize implicitly the noncategorized items. In this sense, organization and recall instructions were not invariably equivalent.—*Journal abstract.*

6668. Potts, George R. (Dartmouth Coll) **Storing and retrieving information about ordered relationships.** *Journal of Experimental Psychology*, 1974(Sep), Vol 103(3), 431-439.—Conducted 3 experiments with undergraduate Ss ( $N = 47$ ), who learned and answered questions about 4- or 6-item linear orderings (e.g., Tom is taller than Dick who is taller than Sam, etc). Such an ordering is comprised of some adjacent pairwise relations that are necessary to the establishment of the ordering (e.g., Tom is taller than Dick, Dick is taller than Sam) and some remote relations that are deducible (e.g., Tom is taller than Sam). Reaction time (RT) to the remote relations was consistently shorter than RT to the adjacent relations. This effect reflects the operation of 2 separate factors. First, RT is very short to test sentences which begin with one of the end terms of the ordering. Second, with end term effects eliminated, RT is a simple monotonic decreasing function of inferential distance; the more remote, the shorter the RT.—*Journal abstract.*

6669. Powers, Marjorie & Kumar, V. K. (U Rochester, Nursing School) **Scaling words on degree of arousal and short- and long-term retention.** *Journal of Experimental*

*Psychology*, 1974(Nov), Vol 103(5), 1039-1042.—In Exp I, 40 undergraduates assigned scale values to 7 words, using the paired-comparison method. 45 percent of the Ss recalled the word with the highest scale value on a free-recall test following the scaling task and 90% recalled it after 24 hrs. Exp II involved a paired-associate task with another 40 undergraduates. The design conformed to a  $2 \times 2$  factorial design—cued or free-recall test, short- or long-term test following a single learning trial. Recall of pairs was very poor in all conditions. Results support the notion that stimulus and response terms are processed independently rather than as a unit.—*Journal abstract.*

6670. Read, J. D.; Read, Gayle & Excell, Ian. (U Lethbridge, Alberta, Canada) **Effects of probe-digit positions and feedback on item retrievability in short-term memory.** *Journal of Experimental Psychology*, 1974(Dec), Vol 103(6), 1207-1210.—In a short-term memory experiment with college students using the sequential probe technique, it was found that increased item retrievability was a function of the presentation of feedback about the correct target digit and not probe position alone.

6671. Resta, G. (Genoa Commune Medico-Psychological & Pedagogical Ctr, Italy) **[Forgetting as a means of remembering.]** (Ital) *Neuropsychiatria*, 1972(Jan), Vol 28(1-2), 25-36.—Examines and discusses the many clues leading to the supposition that it is possible to distinguish 2 aspects or different processes at work in memory reproducing. One of these tends to divide and select and consequently to inhibit any mnemonic material believed dangerous. Connected to this mnemonic process are factors such as removal and isolation. The other process tends to associate mnemonic traces with related information, whether recent or remote (i.e., formed by other mnemonic traces). Association with recent information makes understandable such processes as recognition of the objects perceived, while association with remote information (based on other mnemonic traces) explains the formation of short- and long-term memory storehouses. The mechanisms of identification and projection are also linked to special combinations and balances in the mnemonic processes, characterized by division-selection and association-integration. (French & German summaries) (17 ref)—*English summary.*

6672. Ritter, Walter & Buschke, Herman. (Albert Einstein Coll of Medicine, Yeshiva U) **Free, forced, and restricted recall in verbal learning.** *Journal of Experimental Psychology*, 1974(Dec), Vol 103(6), 1204-1207.—Forced recall by undergraduates resulted in greater retrieval than standard free recall and increased the retrieval of items without significantly increasing the intrusion rate. It is concluded that the inclusion of different, new items on each trial interferes with retrieval of repeated items from long-term storage.

6673. Scribner, Sylvia. (Rockefeller U, New York, NY) **Developmental aspects of categorized recall in a West African society.** *Cognitive Psychology*, 1974(Oct), Vol 6(4), 475-494.—Conducted 2 experiments among 96 West African 6-12 yr olds and 102 West African high school students and adults to determine the relationship between preferred mode of organization of categorizable material and use of organization in recall. Results show

that various child and adult groups differed in the types of organization they imposed on the material in a sorting task, with those exposed to school and modernizing influences showing a preference for taxonomic organization. All Ss, however, used their own form of organization to order their subsequent recall of the material, supporting the idea that organizing processes in recall are universal. (20 ref)—*Journal abstract*.

6674. Shapiro, Shelly R. & Erdely, Matthew H. (Douglass Coll, Rutgers State U) **Hypermnesia for pictures but not words.** *Journal of Experimental Psychology*, 1974(Dec), Vol 103(6), 1218-1219.—Investigated the time course of recall for pictorial and verbal inputs with undergraduates. A hypermnesic (incremental recall) effect was found for pictures but not words, and was shown to be independent of multiple-recall trials. Reasons for past difficulties in incremental memory research are offered.

6675. Strommes, Frode J. & Nyman, Jean. (U Turku, Finland) **Immediate and long-term retention of connected concrete discourse as a function of mnemonic picture-type sequence and context.** *Scandinavian Journal of Psychology*, 1974, Vol 15(3), 197-202.—2 stories, each containing 30 sentences of connected, concrete discourse, were presented to 30 Swedish high school students with or without an illustrating picture preceding each sentence, and with or without within-story context. Immediate paced recall with pictures or empty frames was demanded. With the with-context material, paced recall and free recall was also studied after the lapse of 1 yr. Story 1 was made according to the en-route mnemonic scheme and Story 2 according to the within-a-building scheme. On immediate recall, pictures as well as context had a strong positive effect. There was no interaction between pictures and context, which may be interpreted to mean that these factors may be intrapsychically identical. Recall after 1 yr was generally poor, but indicated that the en-route mnemonic scheme may be more effective in long-term memory. Very little reconstruction from the pictures seems to have taken place. (17 ref)—*Journal abstract*.

6676. Thorndyke, Perry W. & Bower, Gordon H. (Stanford U) **Storage and retrieval processes in sentence memory.** *Cognitive Psychology*, 1974(Oct), Vol 6(4), 515-543.—In 2 experiments, investigated the amount of time 24 undergraduates took to verify a sentence with respect to a set of subject-verb-object (SVO) propositions they had learned. 3 triplets of SVOs provided differing degrees of equivocation, including (a) unique SVOs, (b) a V with 3 SOs, and (c) an SV with 3 Os. A general class of models was proposed regarding the representation of propositional trees in memory and an algorithm by which a probe tree might be verified against a set of trees in memory. In Exp I, verification times were least for Condition (a), and were slower and equal for Conditions (b) and (c). In Exp II, a 4th condition, an SO with 3 Vs, produced verification times as slow as those in Condition (c). Of several models considered, the closest-fitting one assumed parallel search processes proceeding simultaneously from S, V, and O positions of the probe, scanning through memory trees structured according to the human associative memory (HAM) theory of J. Anderson and G. Bowers (1973).—*Journal abstract*.

6677. Thurner, Ronald D. & Mauldin, Michael A. (Cornell U) **Effects of delayed performance on a word association task upon ongoing short-term recall.** *Journal of Experimental Psychology*, 1974(Dec), Vol 103(6), 1202-1204.—Ss presented a list of numbers followed by a list of words were then cued to (a) recall numbers only; (b) recall numbers then words; (c) recall words then numbers; or (d) recall numbers, then perform a word association task. W. Epstein's 1969 only effect—(a) greater than (b)—was obtained. Also, recall in (a) was greater than (d).

### Motivation & Emotion

6678. Alegria, Jesus. (U libr  de Bruxelles, Belgium) **The time course of preparation after a first peak: Some constraints of reacting mechanisms.** *Quarterly Journal of Experimental Psychology*, 1974(Nov), Vol 26(4), 622-632.—Conducted 2 experiments with a total of 17 university students to study the time-course of preparation when a 2-choice stimulus arrives, in a predictable or unpredictable manner, after the moment at which it was expected. Ss watched the screen of an oscilloscope on which a spot moved horizontally. Vertical lines marked (a) the starting point of the spot's course,  $t_0$ , and (b) the points in time at which the stimulus could arrive. In Exp I, 5 intervals between  $t_0$  and  $t_1$ , ranging from 150 to 900 ms, were used in different blocks of trials. In Exp II, 3  $t_0$ - $t_1$  intervals, ranging from 100 to 400 ms mixed in a random way, were used. In both cases Ss were asked to react as fast as possible when the stimulus was presented at moment  $t_1$ . The time course of preparation was studied when the stimulus arrived at moment(s)  $t_1$ . Results show that reaction time reached a maximum 250 ms after  $t_0$ , irrespectively the predictability of the  $t_0$ - $t_1$  interval. It is also shown that an interval of about 1 sec was necessary to obtain reaction times as rapid as those observed at moment  $t_1$ . Results are discussed in terms of the evolution of an hypothetical state of preparation after a maximum which remains unused. (16 ref)—*Journal abstract*.

6679. Amerio, Piero. (U Torino, Inst di Psicologia Sperimentale F. Kiesow, Italy) **[Structural dimensions of the process of dynamic interrelations between personality, behavior, and social situation.]** (Ital) *Archivio di Psicologia Neurologia e Psichiatria*, 1974(Apr-Jun), Vol 35(2), 186-208.—Obtained structural dimensions of the dynamics of motivation-conflict-decision-action through a factor analysis (varimax rotation) of 24 variables, using a model based on Lewin's level of aspiration. The 104 Ss were homogeneous for age, sex, and cultural level. 7 factors were found, grouped in 3 main dimensions: (a) goal feeling as specific motivation; (b) adaptation to reality; (c) present specific situation feeling. These results are discussed from a cognitive-structural viewpoint.—L. L'Abate.

6680. Biller, J. D.; Olson, P. J. & Breen, T. (Devereaux Schools of California, Santa Barbara) **The effect of "happy" versus "sad" music and participation on anxiety.** *Journal of Music Therapy*, 1974(Sum), Vol 11(2), 68-73.—Conducted an experiment to evaluate (a) the effect of "happy" and "sad" music on anxiety, and (b) the effect on anxiety of active participation in that music by the S. 22 male and 38 female undergraduate

psychology students served as Ss. The music selected was judged by independent observers as having the Gestalt "happy" and "sad." Ss were given a percussion accompaniment instrument, the tambourine, with which to become actively involved with the music. The Spielberger-Gorsuch-Lushene (1970) State Trait Anxiety Inventory was used to measure anxiety. The "happy" music did not appear to produce higher levels of state anxiety than no music. There was a strong tendency, however, for "sad" music to lessen state anxiety more than did "happy" music.—F. O. Triggs.

6681. Boutwell, Richard C. & Fennell, Patrice. (Florida State U, Instructional Design & Development Program) **Investigation and theoretical consideration of the "blue-seven" phenomenon.** *Journal of General Psychology*, 1974(Oct), Vol 91(2), 301-302.—A study of 128 students supports W. Simon's (see PA, Vol 47:6129) "blue-seven phenomenon" in that 27% of Ss chose 7 from number 1-10, and 48% chose the color blue in a free-choice situation. Results are discussed in terms of societal and cultural influences which may have affected Ss' responses.

6682. Boutner, John & Cooper, Chris. (U Adelaide, SA, Australia) **The effect of a low rate of regular signals upon the reaction times of introverts and extraverts.** *Journal of Research in Personality*, 1974(Oct), Vol 8(3), 263-276.—In an RT (reaction time) task in Exp I involving responding to infrequent, regular signals, 8 undergraduate extraverts (from scores on the Maudsley Personality Inventory) produced higher proportions of missed signals and lengthened RTs than 8 introverts did. This result was only obtained after some time on task and is evidence that inhibitory states were formed more rapidly in extraverted Ss under low stimulation conditions. In Exp II mean RT was longer in 8 extraverted than 8 introverted Ss (from scores on the Eysenck Personality Inventory) in the 2nd half of the experiment, though there was no significant difference between the groups in the 1st half. Findings show that extraverts generated stronger inhibitory potential in continuous responding tasks, or that their characteristic arousal level may have been lower than that of introverted Ss. The need to distinguish between the different explanatory constructs is discussed, and a simple model amalgamating the major theoretical positions is outlined. (36 ref) —*Journal abstract.*

6683. Davenport, W. G. & Middleton, M. A. (U British Columbia, Vancouver, Canada) **A model for the prediction of nonrepeatable decisions.** *Journal of General Psychology*, 1974(Oct), Vol 91(2), 201-207.—Attempted to set up a variation of H. Feger's (1968) stochastic model to predict a nonrepeatable decision—participation or nonparticipation in a psychology experiment. Ss were 80 college students. Analysis by means of stepwise discriminant functions shows that this prediction could be made at significantly better than a chance level. It is suggested that such a model may be generally applicable for making similar decisions.—*Journal abstract.*

6684. Desportes, Jean-Pierre & Dequeker, Annie. (U Paris, Lab de Psychologie Sociale, France) **[Effects of the presence of the experimenter on performance as a function of the anxiety of subjects and of task structure.]** (Fren) *Bulletin du CERP*, 1972(Oct-Dec), Vol

21(4), 157-160.—Examined performance on a coding task of 31 university students who had been classified as anxious or nonanxious using the Taylor Manifest Anxiety Scale. Ss who had either been given instructions suggesting that their performance would be compared to that of others or who worked in the presence of the E did better than Ss given neutral instructions and left to work alone. Performance of anxious and nonanxious Ss did not differ. The importance of task structure is discussed.—R. L. Cook.

6685. Gaussin, José (U Louvain, Belgium) **[An attempt to extend signal detection theory as a model for decisions under risk.]** (Fren) *Bulletin du CERP*, 1972(Oct-Dec), Vol 21(4), 145-156.—Considers the validity of signal detection theory as a general model for decision-making in probabilistic binary choice situations. A series of pilot studies, 4 Ss in each, examined the usefulness of signal detection theory in the context of (a) tactual discrimination, (b) probability estimation, and (c) letter sequence identification, with the latter 2 experiments being repeated with multiple observations and multiple observers. Results confirm the appropriateness of the method. The potential advantages of signal detection theory are discussed. (English & Spanish summaries) (27 ref)—R. L. Cook.

6686. Gearty, Lawrence J. (Western Carolina U) **Differential reactions of male versus female aggression as a function of censure of vicarious aggression.** *Bulletin of the North Carolina Psychological Association*, 1973(Spring), 26-29.—Studied the effect on 35 male and 38 female college students of listening to a taped dialogue between an offensive man and a nonassertive woman who finally became very hostile in reaction to the man; Ss then heard 1 of 3 commentaries on the woman's response, one censuring it, one justifying it, and one neutral, and were then asked to indicate on a self-rating scale the degree of hostility that they themselves felt after the experience. Females indicated more hostility than males, but there were no differences among the commentary groups. It is concluded that experimental manipulations were effective in producing sex differences in hostile reactions. However, the hypothesis that censure of vicarious aggression leads to subsequent aggressive feelings was not supported.—R. S. Albin.

6687. Glover, Carl B. & Cravens, Richard W. (Virginia Polytechnic Inst & State U) **Trait anxiety, stress, and learning: A test of Saltz's hypothesis.** *Journal of Research in Personality*, 1974(Oct), Vol 8(3), 243-253.—Tested behavioral predictions from E. Saltz's, K. W. Spence's, and C. D. Spielberger's interpretations of trait anxiety in a complex verbal learning task. 53 high-anxious and 52 low-anxious (from scores on the Taylor Manifest Anxiety scale) male undergraduates were randomly distributed to test conditions of failure-stress, pain-stress, or neutral instructions. The learning data revealed that high-anxious-failure and low-anxious-pain Ss were disrupted, and supported Saltz's hypothesis; self-reported anxiety (A-State scale, State-Trait Anxiety Inventory) was observed only in high-anxious-failure Ss and supported Spielberger's theory of the arousal of state anxiety as a function of trait anxiety. However, the contradiction between self-reported anxiety and learning behavior in low-anxious-pain Ss indicated that the verbal

report of these Ss was an inaccurate or insensitive index of arousal. (31 ref)—*Journal abstract*.

6688. **Görlitz, Dietmar.** (Technical U Berlin, Inst of Psychology, W Germany) **[Motivation: Consensus of opinion and disagreements regarding its determinations: Preliminary remarks regarding a possible way for systematizing relevant conceptions.]** (Germ) *Psychologische Beiträge*, 1973, Vol 15(4), 575-602.—Discusses the psychology of motivation. Various definitions and theories are examined and the urgent need for a systematization of terms and concepts is emphasized. (English & French summaries) (31 ref)

6689. **Hollender, Marc H. & McGehee, James B.** (Vanderbilt U, Medical School) **The wish to be held during pregnancy.** *Journal of Psychosomatic Research*, 1974(Jun), Vol 18(3), 193-197.—50 women 16-31 yrs old were administered a questionnaire used to obtain a body contact score during their pregnancies. More than half of the women noted a change in the desire to be held and, of those who did, almost 3 out of 4 experienced an increase.

6690. **Horowitz, Mardi J. & Becker, Stephanie S.** (Mount Zion Hosp & Medical Ctr, San Francisco, CA) **Cognitive response to stress: Experimental studies of a "compulsion to repeat trauma."** *Psychoanalysis & Contemporary Science*, 1972, Vol 1, 258-305.—Tested the theory that stressful events which are incompletely assimilated and accommodated lead to intrusive and repetitive cognitive representations of the event and responses to it. Groups of male and female college students and a group of Navy hospital corpsmen viewed a film depicting a stressful event and a neutral film. Ss were asked to perform a perceptual task and to give introspective mental reports before and after both films. It was found that the Ss' mental reports contained more film references, intrusions, and visual images after the stress film than after the neutral film. No significant differences in performance of the perceptual task were found. It is concluded that even persons without psychiatric illness experience intrusive and repetitive thoughts after exposure to mild or moderately stressful stimuli. It is suggested that these cognitive processes represent an effort to complete an interrupted stress-processing program. (3 p ref)—*J. Kelly*.

6691. **Kobayashi, Yukiko.** (Tokyo U of Education, Faculty of Education, Japan) **[The effects of decision and the number of alternatives on information gathering.]** (Japn) *Japanese Journal of Educational Psychology*, 1973(Dec), Vol 21(4), 215-222.—Divided 144 9th graders into 4 equal groups who were alike as to their previous knowledge of evolution. All Ss were given preliminary information about evolution and were asked to give additional information under 4 different experimental conditions, consisting of combinations of 2 or 4 theories of evolution and a pre- or postdecision as to which theory each S judged to be correct. Results indicate that more information was sought when fewer alternative theories were available before commitment to 1 theory, but after commitment to 1 theory had been made, more information was sought when more alternative theories were available. (English summary)—*S. Choe*.

6692. **Leplat, J. & Pailhous, J.** (Ecole Pratique des Hautes Etudes, Lab de Psychologie du Travail, Paris,

France) **[Comments on the origin of errors.]** (Fren) *Bulletin de Psychologie*, 1973-1974, Vol 27(13-14), 729-736.—Describes the function of error in goal-setting behavior, with particular reference to learning. The focus is on selected elements which aid in making error a means of analyzing the individual's goal-directed activity. The following issues are discussed with respect to the implications of error: (a) possibilities of choice for the S, (b) possibilities of regulation of action, and (c) the concept of a norm and of its domains. Error was not independent of goal-directed behavior in learning, or of perceptions of the learner compared to those of a mentor in regard to the latter's goal-directed behavior. Further, error was found to have a role in the execution and control of action (toward a goal).—*Z. M. Cantwell*.

6693. **Loftis, Jack & Ross, Lee.** (State U New York, Buffalo) **Effects of misattribution of arousal upon the acquisition and extinction of a conditioned emotional response.** *Journal of Personality & Social Psychology*, 1974(Nov), Vol 30(5), 673-682.—Conducted 2 experiments to demonstrate that misattribution procedures can alter Ss' physiological response to a conditioned source of fear or arousal. A total of 89 female undergraduates served as Ss. Exp I demonstrated that extinction of a conditioned galvanic skin response is facilitated when Ss are led to attribute their arousal to a loud white noise present continuously throughout extinction. In Exp II, a similar misattribution manipulation was introduced during acquisition. No effect of the manipulation was apparent during acquisition, but misattribution Ss showed fewer responses than control Ss during extinction, when the misattribution source had been terminated. Results suggest that self-perception and attribution processes play an important role in the maintenance of emotional response. (30 ref)—*Journal abstract*.

6694. **Loftis, Jack & Ross, Lee.** (State U New York, Buffalo) **Retrospective misattribution of a conditioned emotional response.** *Journal of Personality & Social Psychology*, 1974(Nov), Vol 30(5), 683-687.—Replicated and extended prior experiments by J. Loftis and L. Ross dealing with misattribution and emotion (see PA, Vol 53:Issue 4), using 24 female undergraduates as Ss. Results show that extinction of a conditioned galvanic skin response was facilitated when Ss are led, after the completion of acquisition trials, to misattribute the source of the arousal they previously experienced during acquisition. These results demonstrate that self-perception and attribution processes may mediate the influence of past emotional experience and behavior upon future emotional response. The relevance of the present findings to alternative interpretations of misattribution research is also discussed. (17 ref)—*Journal abstract*.

6695. **Matlin, Margaret W.** (State University Coll New York, Geneseo) **Serial position, perceived serial position, and affect.** *Journal of General Psychology*, 1974(Oct), Vol 91(2), 245-258.—Investigated the influence of serial position on Ss' affect ratings of stimuli. 48 undergraduates saw nonsense words presented 1 or 10 times in 1 of 4 serial positions. Ss rated the words and then tried to recall their serial positions. Results indicate that (a) Ss' accuracy in identifying serial position was greatest for 1st and last items and least for middle items; (b) affect was a function of true serial position for high

frequency items only, with most positive affect for 1st and last items; and (c) affect was correlated with perceived serial position, with most positive affect for those items believed to have been seen last.—*Journal abstract*.

6696. **Matlin, Margaret W.** (State University Coll New York, Geneseo) **Frequency-affect relationship in a simultaneous spatial presentation.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 379-383.—72 college students saw a spatial display in which nonsense-word stimuli occurred 25, 10, 5, 2, 1, and 0 times. Occurrences of a given stimulus were either massed or distributed throughout the display. After a 4-min viewing period, Ss rated all stimuli on a 7-point good-bad scale. Affect was a linear function of frequency, corroborating R. B. Zajonc's 1968 results with temporal presentation of stimuli that high-frequency items are preferred to low-frequency items. However, mode of presentation of these stimuli (massed vs distributed) had no direct effect or interaction with their frequency.—*Journal abstract*.

6697. **Pasciak, Julian & Williams, Robert.** (Florida State U) **Note on the "blue seven phenomenon" among male senior high students.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 494.—Replicated and extended to high school students W. E. Simon's (see PA, Vol 47:6129) and W. E. Simon and L. H. Primavera's (see PA, Vol 49:4229) findings that elementary school, junior high, and college Ss, when requested to write down a number between 1 and 10 and the name of a color, most frequently wrote "blue" and "seven."

6698. **Raben, Charles S.; Wood, Michael T.; Klimoski, Richard J. & Hakel, Milton D.** (Ohio State U) **Social reinforcement: A review of the literature.** *US AFHRL Technical Report*, 1974(Aug), No 74-9(1), 61 p.—Summarizes major studies and theoretical positions within the incentive-motivation field in order to present an integrated picture of past and present research. Special emphasis is placed on delineating social reinforcement variables in an attempt to explicate their relative importance within the context of social reinforcement theory. However, little emphasis is placed on strategies which have investigated different combinations of these variables. A summary of social reinforcement concepts and research is included. (19 p ref)—*Journal abstract*.

6699. **Shibles, Warren.** (U Wisconsin, Whitewater) **Emotion: The method of philosophical therapy.** Whitewater, WI: Language Press, 1974. 492 p. \$9(cloth), \$7(paper).—Presents an analysis of traditional concepts of emotion in terms of contemporary research in both philosophical and experimental psychology and psychiatry. Topics include emotion as context; the relationship between emotion, language, and reason; and critiques of prominent theories of emotion and arousal. (16 p ref)

6700. **Sieber, Joan E.** (California State U, Hayward) **Effects of decision importance on ability to generate warranted subjective uncertainty.** *Journal of Personality & Social Psychology*, 1974(Nov), Vol 30(5), 688-694.—In a multiple-choice testing situation, 40 college students were required to assign to each alternative of each item a probability value corresponding to their subjective estimate of the correctness of the alternative. 2 levels of test importance were employed: Half of the students believed that they were participating in their last chance

at taking a midterm examination, while the other half believed that they would be allowed to retake the midterm if they failed to earn a grade of A in this attempt. As predicted, Ss who responded under conditions of high importance, relative to those who believed they would have a 2nd chance at the examination, generated less response uncertainty, assessed less accurately their state of knowledge, and tended to err through overestimation of the probability of correctness of high-probability alternatives and underestimation of the probability of correctness of low-probability alternatives. (29 ref)—*Journal abstract*.

6701. **Staats, Arthur W. & Warren, Don R.** (U Hawaii) **Motivation and the three-function learning: Food deprivation and approach-avoidance to food words.** *Journal of Experimental Psychology*, 1974(Dec), Vol 103(6), 1191-1199.—In 2 experiments with a total of 188 undergraduates, food words were considered as conditioned stimuli that elicit an appetitive emotional response. The emotional response—according to the 2-process, 3-stimulus-function learning theory involved—should be capable of mediating instrumental behavior toward the words. Motivational principles elaborated in the context of the 3-function theory predicted that Ss deprived of food would learn to respond more quickly with an approach instrumental response to food words than would deprived Ss whose task was to make an avoidant response. Moreover, this difference should be of a lesser magnitude with nondeprived Ss. In addition, in Exp II it was predicted that food-deprived Ss would learn to make an approach response to food words with less latency than nondeprived Ss. These expectations were supported. The findings contribute to the specification of motivational characteristics for the construct of a mediating emotional response (or state) in 2-process learning studies (e.g., transfer of control and auto shaping), and suggest a means for integrating relevant animal and human research. (24 ref)—*Journal abstract*.

6702. **Stang, David J.** (Queens Coll, City U New York) **Intuition as artifact in mere exposure studies.** *Journal of Personality & Social Psychology*, 1974(Nov), Vol 30(5), 647-653.—The role of demand characteristics in the relationship between repeated exposure and affect was explored in 2 role-playing studies and internal analyses of 2 real mere exposure experiments. In the 1st 2 studies, a total of 237 undergraduates made affect ratings of Turkish words or patterns that they imagined they had seen in varying frequencies. Results suggest that the findings of previous mere exposure experiments are intuitive, since role playing produced the same exposure effects as real experiments. In 2 experiments, 96 undergraduates made affect ratings of Turkish words actually seen in varying frequencies and then indicated what hypothesis they believed the E was testing. Internal analyses indicate a close relationship between the S's intuitions and ratings. Results raise questions about the role of demand characteristics in previous mere exposure experiments. (19 ref)—*Journal abstract*.

6703. **Stang, David J.** (Queens Coll, City U New York) **Methodological factors in mere exposure research.** *Psychological Bulletin*, 1974(Dec), Vol 81(12), 1014-1025.—Statistical analyses of the literature on the

effects of exposure frequency on changes in evaluative meaning indicate that 2 previously unrecognized variables are significantly related to the outcome of these previous experiments, while a previously suggested variable is probably not related. The analyses suggest that enhanced evaluative meaning is more likely to result from repeated exposure if a brief delay intervenes between exposure and rating than if no delay occurs, and is more likely with paralogues, ideographs, and portraits than with abstract visual and auditory patterns. The nature of the exposure sequence has typically been confounded with rating delay and does not seem to have an effect independent of the delay factor. 2 recent theories are used to account for the findings. (77 ref)—*Journal abstract.*

6704. Wallace, Anthony F. & Carson, Margaret T. (U Pennsylvania) **Sharing and diversity in emotion terminology.** *Ethos*, 1973(Spring), Vol 1(1), 1-29.—Examined semantic inconsistencies in terminology used to describe emotions, particularly in attempts to assign emotional labels in physiological studies. A wide variation was found in the emotional terms 10 adult Ss chose to describe a large number of sample stories. Each S used a core vocabulary of 2'-2' words describing emotions and a total vocabulary of emotional terms of 2'-2' words. Ss also exhibited a basic method of taxonomic categorization of their responses that was based on the dimensions of violence and intensity. A combination of individual and (more importantly) terminological diversity is postulated as the cause of these differences. Implications for psychological research are discussed. (32 ref)—C. Wright.

6705. Wilhelmy, Roland A. (U California, San Diego) **The role of commitment in cognitive reversibility.** *Journal of Personality & Social Psychology*, 1974(Nov), Vol 30(5), 695-698.—Tested the proposition that dissonance reduction reversal is produced by decommitting the S from future dissonance-arousing behavior rather than by the removal of the incentives offered for commitment to the behavior. Ss were 80 male undergraduates. The effects of 2 levels of monetary incentive, the presence or absence of decommitment, and whether or not the monetary incentive was withdrawn were examined in a 2 x 2 x 2 factorial design. A dissonance effect was produced and was shown to be reversible by decommitment acting alone or in combination with withdrawal of incentive. Withdrawal of incentive by itself produced results similar to those of other high-dissonance treatments.—*Journal abstract.*

## NEUROLOGY AND PHYSIOLOGY

6706. Balbi, R. (U Napoli, Clinica delle Malattie Nervose e Mentali, Italy) **[Neurobiology and mental health.]** (Ital) *Acta Neurologica*, 1973(Sep-Oct), Vol 28(5), 610-624.—Contends that neurobiological factors have been underestimated in mental hygiene. Like psychiatry, neurobiology is a multidisciplinary science which should do more than develop methods and provide statistical, demographic, and sociological data. Neurobiology is fundamental for the primary and secondary prevention of neuropsychic illnesses whose

pathogenesis is organic. Secondary prevention, the hygienic education of the public, is particularly emphasized. Neurobiological factors must also be especially considered in sociological investigations. Because mental hygiene and neurobiology are related to other sciences, investigations must be integrated with those of other disciplines. (Italian & English summaries) (56 ref)—M. J. Stanford.

6707. Dement, William C. (Stanford U) **Some must watch while some must sleep.** San Francisco, CA: W. H. Freeman, 1974. xiii, 148 p. \$5.95.—Presents an introduction to the scientific study of sleep, dreams, and insomnia. Topics include the effects of differing amounts of sleep, circadian rhythms, characteristics of rapid eye movement (REM) and non-REM sleep, sleep disorders and their treatment, and creativity during sleep. (10 p ref)

6708. Dimond, Stuart J. & Beaumont, J. Graham (Eds.). (University Coll Cardiff, Wales) **Hemisphere function in the human brain.** New York, NY: John Wiley & Sons, 1974. xiii, 398 p.—Presents a collection of 15 empirical and discussion papers on the role of the brain in guiding and controlling human behavior, how functions within the brain are organized, why one area is dominant over another, the effects of brain disorder, the problems of assessing consciousness, and the control and regulation of behavior.

6709. Giora, Zvi & Elam, Zohar. **What a dream is.** *British Journal of Medical Psychology*, 1974(Sep), Vol 47(3), 283-289.—A review of literature on the nature and function of dreams suggests that EEG indices alone fail to identify mental activity during REM sleep and should thus be abandoned as the method of proving cortical arousal during sleep. H. Bergson's (1902) concept of mental effort, which suggests that mentation is ongoing during sleep, is discussed as a basis for future research. (30 ref)

6710. Higenbottam, John A. (Ontario Hosp School, Blenheim, Canada) **Relationships between sets of lateral and perceptual preference measures.** *Cortex*, 1973(Dec), Vol 9(4), 403-410.—Examined the hypothesis that a common cerebral asymmetry dimension is reflected in sets of both lateral and perceptual preference measures. A set of 8 limb and ocular preference measures and a set of 9 visual and auditory perceptual preference measures were administered to 33 dextrals, 29 nonfamilial sinistrals, and 27 familial sinistrals. Multivariate analyses of variance suggest that groups of dextrals and sinistrals may be discriminated by a combined set of lateral and perceptual preference measures, although familial and nonfamilial sinistral groups cannot be discriminated. Results further suggest that perceptual preference patterns vary according to handedness classification and are relatively independent of each other if different sensory modalities are compared.—R. Gunter.

## Neuroanatomy & Electrophysiology

6711. American Society of Electroencephalography Technologists. **8th International Congress of Electroencephalography and Clinical Neurophysiology: Technicians program issue.** *American Journal of EEG Technology*, 1974(Jun-Sep), Vol 14(2-3), 96 p.—Reports

a symposium on EEG techniques and applications: instrumentation, assessment, recording methods, patient responses, reporting, terminology, and ethics.

6712. **Blom, Bernhard E. & Craighead, W. Edward.** (Pennsylvania State U) **The effects of situational and instructional demand on indices of speech anxiety.** *Journal of Abnormal Psychology*, 1974(Dec), Vol 83(6), 667-674.—Assessed the effects of contextual (experimental location) and instructional cues on behavioral, self-report, and physiological indices of speech anxiety. 42 male and 48 female undergraduates were randomly assigned within sex to 1 of 4 conditions in the  $2 \times 2$  design: (a) fear-anxiety clinic, (b) fear-speech laboratory, (c) simulate relaxation therapy-anxiety clinic, and (d) simulate relaxation therapy-speech laboratory. The clinic setting produced more behavioral anxiety than the laboratory setting. The fear test instructions produced both more behavioral and self-report anxiety than the simulate relaxation therapy instructions. The fear-clinic condition produced the greatest behavioral anxiety. No significant differences were obtained for the physiological measures. The demand and expectancy effects were comparable to those obtained for rat, spider, and snake phobic Ss in earlier studies. (26 ref)—*Journal abstract*.

6713. **Blum, Baruch.** (Tel-Aviv U, Sackler School of Medicine, Israel) **Collateral inhibition in the sensorimotor cortex of the cat and the squirrel monkey: Its role in control of neuronal discharges.** *Brain, Behavior & Evolution*, 1974, Vol 9(4), 237-247.—Recordings were taken with multiple microelectrodes from 10 cats' and 4 squirrel monkeys' sensorimotor cortices, aided by the use of collision techniques. Results provide some direct evidence for the operation of surround collateral inhibition including recurrent collateral inhibition. Data were also obtained hinting at a possible role of this later mechanism in the limitation of late or repetitive neuronal discharges. Thus, by the prevention of the antidromic responses of some neurons, it was possible to show a causal relationship between the silence of such neurons and the action of other neighboring neurons, and between their activity and the silence of their neighbors. These phenomena are interpreted as due to surround collateral inhibition. (30 ref)—*Journal abstract*.

6714. **Borda, Robert P. & Hablitz, John J.** (Methodist Hosp, Houston, TX) **A technique for recording the electroretinogram (ERG) from chronically implanted electrodes in animals.** *Vision Research*, 1974(Nov), Vol 14(11), 1219-1221.—Describes ERG recordings made in 2 rhesus monkeys from electrodes surgically implanted in the supraorbital bone. Response wave-forms had a high correlation with those recorded simultaneously from a corneal-wick electrode. The technique should be more convenient than the corneal wick for prolonged recording sessions or repeated measurements from the same animal. (French, German, & Russian summaries)

6715. **Böttge, Horst & Holoch, Jürgen.** (Technical U Munich, Inst for Ergonomy, W Germany) **[An identification system of spectral patterns in a spontaneous electroencephalogram and its application in vigilance research.]** (Germ) *Psychologische Beiträge*, 1973, Vol 15(3), 341-374.—Studied changes in the spectral parameters of the spontaneous EEG as indicators of various levels of psychophysical activity and performance. To

test their state of vigilance, 4 Ss were exposed to a series of 8 2-hr Mackworth Clock tests consisting of 4 12-signal 30-min test periods following each other without any interruption. 2 repeat tests were conducted 6 mo later. 4 states of vigilance were defined and measured: nondirected vigilance (open eyes, no task); directed vigilance (closed eyes, expecting signal, reaction to signal); reduced vigilance (eyes open, expecting signal, no reaction to signal) and vigilance with incorrect reaction (eyes open, reaction without any signal). The identification system for spectral patterns is explained and the 10 criteria developed for a flexible technique of analysis are discussed in detail. It is stated that the analysis of the 1st test measurements and the evidence of stimulus-nonspecific parameters in the spontaneous EEG activity describing the various states of vigilance indicate that the outlined system is workable and should be studied more extensively. (3 p ref) (English & French summaries)—*T. Fisher*.

6716. **Calissendorf, B.; Knave, B. & Persson, H. E.** (Karolinska Inst, Stockholm, Sweden) **Cyclic variations in the c-wave amplitude of the sheep ERG.** *Vision Research*, 1974(Nov), Vol 14(11), 1141-1145.—The c-wave amplitude in sheep changed as a function of time, and these alterations were dependent on frequency of the stimulus flash used. A slow oscillation was observed using 1-sec light stimuli and long flash intervals. Shorter flash intervals gave rise to oscillations with a frequency of about 2/hr, which were of relatively large amplitudes and reached a constant level after about 100 min. (French, German, & Russian summaries) (37 ref)

6717. **Clarke, Peter G.** (U Oxford, Lab of Physiology, England) **Are visual evoked potentials to motion-reversal produced by direction-sensitive brain mechanisms?** *Vision Research*, 1974(Nov), Vol 14(11), 1281-1284.—Results of study of the human averaged visual evoked potential (VEP) demonstrating direction-dependent adaptation to motion, together with other evidence, indicate that the motion-reversal VEPs were produced by direction-sensitive mechanisms within the brain. It is suggested that the hypothesized mechanisms might correspond to the directionally selective neurons reported in monkey visual cortex. (15 ref)

6718. **Cornwell, Anne C.** (Albert Einstein Coll of Medicine, Rose F. Kennedy Ctr for Research in Mental Retardation & Human Development, Yeshiva U) **Electroretinographic responses following monocular visual deprivation in kittens.** *Vision Research*, 1974(Nov), Vol 14(11), 1223-1227.—Studied changes in retinal function in kittens following light or pattern deprivation for brief periods of time. Monocular light deprivation in 2-5 mo old Ss for 1 wk or more resulted in a subsequently reversible reduction of the b-wave of the electroretinogram to light flashes during Nembutal anesthesia. Virtually no change occurred following monocular pattern deprivation for comparable periods of time. Predeprivation electroretinograms from each eye were normal. Posttests of light-deprived Ss to repetitive light flashes accentuated the difference between the 2 eyes. (French, German, & Russian summaries) (17 ref)—*Journal abstract*.

6719. **Harter, M. Russell; Seiple, William H. & Musso, Mario.** (U North Carolina, Greensboro) **Binocular**

**summation and suppression: Visually evoked cortical responses to dichoptically presented patterns of different spatial frequencies.** *Vision Research*, 1974(Nov), Vol 14(11), 1169-1180.—The effects of continuous dichoptic presentation of different sized grid patterns to the 2 eyes on monocular and binocular averaged visually evoked cortical responses (VERs) were investigated in 5 visually acute adults. Patterns were continuously presented to both eyes by means of a haploscope, and VERs were elicited by a momentary increase in the brightness of the grid viewed by the left or right eye (monocular VERs) or both eyes (binocular VERs). Greater amplitude VERs were obtained when grids with elements subtending 15' and 30' were flashed for both monocular and binocular flash conditions. The effects of pattern presented to one eye depended on the pattern presented to the other eye. Binocular VER amplitude and binocular summation were greatest when identical sized pattern elements were presented to the 2 eyes and least when different sized pattern elements were presented to the 2 eyes. Monocular VERs were influenced both by variations in pattern size presented to the eye receiving the increment in brightness and by the pattern size presented to the other eye which was not flashed. Monocular VER amplitude to the flashed eye progressively decreased as the elements presented to other nonflashed eye were varied in size, particularly when the flashed eye viewed diffuse light. There was a tendency for the effects of eye flashed, interocular suppression, and binocular summation to be greater in VERs recorded over the right than the left cerebral hemispheres. (French, German, & Russian summaries) (58 ref)—*Journal abstract*.

6720. Hawley, T. T.; Stern, J. A. & Chen, S. C. (Washington U) **Computer analysis of eye movements during reading.** *Reading World*, 1974(May), Vol 13(4), 307-317.—Describes the application of a computer-based analysis system to the evaluation of electro-oculographically recorded eye movements during reading. Using this technique, 5 eye movement patterns were identified which could be discriminated both qualitatively and quantitatively from normal forward-going reading patterns. The computer-analysis system is detailed and an example of its use in eye movement research is presented.—C. K. Miller.

6721. Johnston, Victor S. & Chesney, Gregory L. (New Mexico State U) **Electrophysiological correlates of meaning.** *Science*, 1974(Dec), Vol 186(4167), 944-946.—Recorded frontal and occipital evoked potentials in 7 student volunteers during a speed task in which they were required to identify numbers and letters in the form of context-sensitive symbols. This technique offers an appropriate methodology for investigating the representation of meaning in the brain. The approach revealed that late components of frontal, but not occipital, evoked potentials reflected the change of meaning of a symbolic stimulus when it appeared in different temporal contexts. (18 ref)—*Journal abstract*.

6722. Kien, J. (Technischen Hochschule, Darmstadt, W Germany) **Sensory integration in the locust optomotor system: II. Direction selective neurons in the circumoesophageal connectives and the optic lobe.** *Vision Research*, 1974(Nov), Vol 14(11), 1255-1268.—The responses of the optomotor neurons (M1, M2, B1,

and B2) of female adult Australian plague locusts to movement of a single edge compare well with responses predicted by the behavioral model formulated in Part I (see PA, Vol 53:Issue 4) and confirm the necessity for the new optomotor model in the locust. (French, German, & Russian summaries) (25 ref)

6723. Maxwell, A. E.; Fenwick, P. B.; Fenton, G. W. & Dollimore, J. (Inst of Psychiatry, London, England) **Reading ability and brain function: A simple statistical model.** *Psychological Medicine*, 1974(Aug), Vol 4(3), 274-280.—Presents a simple statistical model of the way the brain may function, suggested by the analysis of intelligence test results in 150 children (mean age = 7 yrs). The model describes the statistical behavior of an ideal array of elements, representing the brain, during tests of cognitive ability. Predictions from the model indicate that comparison of the EEG recording taken from groups of children who were good or poor readers would show amplitude differences. These were found between the groups when the eyes were open but not when the eyes were closed—a result explained by the model.—*Journal abstract*.

6724. Moller, Aage R. (Karolinska Inst, Dept of Physiology II, Stockholm, Sweden) **Responses of units in the cochlear nucleus to sinusoidally amplitude-modulated tones.** *Experimental Neurology*, 1974(Oct), Vol 45(1), 104-117.—The coding of small rapid changes in amplitude of pure tones in single units in the cochlear nucleus of the rat was studied using sinusoidally amplitude-modulated tones. The variation in the reproduction of the amplitude modulation of the sound in the discharge frequency of the units as a function of sound intensity was compared with the variation of the mean discharge frequency with sound intensity. In most units the mean discharge frequency had no or only a slight dependence on the sound intensity at intensities higher than 10-20 db above threshold. Stimulus-response curves for 50-msec tone bursts were different from those for continuous tones in that the latter reached a saturation level at a much lower intensity than the former. The modulation of the discharge frequency was determined from cycle histograms of the discharge, locked to the modulation waveform. The ratio between the modulation of the histogram and the tones was studied in a wide sound-intensity range. The ratio between modulation of the histogram and the modulation of the sound amplitude decreased only slightly with increasing sound intensity over the entire intensity range studied.—*Journal abstract*.

6725. Mosko, Sarah S. & Jacobs, Barry L. (Princeton U) **Midbrain raphe neurons: Spontaneous activity and response to light.** *Physiology & Behavior*, 1974(Oct), Vol 13(4), 589-593.—Analysis of rat midbrain raphe units shows that the discharge of these neurons is slow in rate, rhythmic, and stable across time, suggesting that serotonergic neurons may serve a pacemaker function in the central nervous system. The response of raphe neurons to light and dark conditions shows an effect of light which warrants further investigation—a subtle alteration in discharge rate could possibly be of functional significance. (27 ref)

6726. Orne, Martin T. & Paskewitz, David A. (Inst of the Pennsylvania Hosp, Unit for Experimental Psychia-

try, Philadelphia) **Aversive situational effects on alpha feedback training.** *Science*, 1974(Nov), Vol 186(4162), 458-460.—In an experiment with 22 male undergraduates, anticipation of electric shock did not depress alpha activity in a feedback situation though it was associated with reported anxiety and heightened arousal indexed by greatly increased heart rate and number of spontaneous skin conductance responses. Contrary to previous reports, a reduction in alpha activity is not a necessary consequence of apprehension or heightened arousal.—*Journal abstract*.

6727. **Pirch, James H. & Osterholm, Karen C.** (U Texas Medical Branch, Galveston) **Operant conditioning of cortical steady potential responses in rats.** *Life Sciences*, 1974(Aug), Vol 16(4), 723-732.—Investigated whether amplitudes of cortical steady potential (SP) responses to an auditory stimulus could be altered by operant conditioning procedures using food reinforcement with 7 implanted female Holtzman albino rats. The negative SP responses to the 5-sec tone alone diminished with repeated presentation of the stimulus. When food reinforcement was given immediately following the tone, SP response amplitudes increased and stabilized after 4-5 sessions. Thereafter, the Ss were required to increase or decrease the amplitudes of response in order to obtain reinforcement. 2 of 3 Ss required to increase amplitudes were successful, and 3 of 4 Ss required to decrease amplitudes were successful. It is concluded that changes in cortical SP responses can be operantly conditioned. (21 ref)—*Journal abstract*.

6728. **Quy, Roger J. & Kubiak, Edward W.** (U Keele, England) **A comparison between "aware" and "naive" conditions in the suppression of GSR activity.** *Quarterly Journal of Experimental Psychology*, 1974(Nov), Vol 26(4), 561-565.—Aware (A) and naive (N) groups ( $n = 10$  undergraduates in each) received different instructional sets, the former being informed both of the nature of their task and the response-reinforcement contingency. Negative reinforcement was given to these groups whenever a spontaneous galvanic skin response (GSR) was emitted during 4 4-min trial periods. 2 corresponding yoked-control groups, CA and CN, received noncontingent reinforcement over the same periods. Results indicate that the contingent reinforcement groups both showed learned suppression of spontaneous GSR activity, but comparison between the A and N groups revealed a significant Time  $\times$  Instructional Set interaction. It is suggested that the "aware" instructional set had an inhibitory effect upon learning.—*Journal abstract*.

6729. **Ratcliff, Floyd (Ed.).** (Rockefeller U, New York, NY) **Studies on excitation and inhibition in the retina: A collection of papers from the laboratories of H. Keffer Hartline.** New York, NY: Rockefeller University Press, 1974. xx, 668 p.—Presents a collection of 35 research papers published between 1932 and 1972 on neural activity generated by single photoreceptor units in the eye of the horseshoe crab (*Limulus*), the activity of single optic nerve fibers of the vertebrate retina, and the dynamic and steady state characteristics of inhibitory interaction in the lateral eye of the horseshoe crab.

6730. **Ratcliff, Floyd; Knight, Bruce W.; Dodge, Frederick A. & Hartline, H. K.** (Rockefeller U, New

York, NY) **Fourier analysis of dynamics of excitation and inhibition in the eye of *Limulus*: Amplitude, phase and distance.** *Vision Research*, 1974(Nov), Vol 14(11), 1155-1168.—Results of experiments on the lateral eye of *Limulus* show that 3 basic processes—excitation, self-inhibition and lateral inhibition—govern the dynamics of the eye's neural network. All lateral inhibition may be represented by a single transfer function scaled by the summed lateral inhibitory coefficients. Discharges of impulses from 3 units were recorded simultaneously. Findings show that (a) variation in amplitude of excitation produced proportional variation in amplitude of lateral inhibition on a neighboring unit at a fixed distance but no phase shift, and (b) the amplitude of lateral inhibition varied with distance to the units affected, but there was no phase shift. (French, German, & Russian summaries) (60 ref)—*Journal abstract*.

6731. **Reiman, V.; Korth, M. & Keidel, W. D.** (U Erlangen, Physiologisches Inst, Nürnberg, Germany) **[Correlation analysis of EEG and eye movements in man.]** (Germ) *Vision Research*, 1974(Oct), Vol 14(10), 959-963.—To examine the role of the arhythm in connection with the reafference principle, eye movements and EEG were recorded simultaneously from 13 20-30 yr old Ss and were analyzed by computer. During fixation in the dark, there was high correlation in the frequency range of 8-12 Hz and less correlation at lower frequencies. When Ss viewed a patterned field the reversed effect was observed. This is in accordance with the reafference hypothesis. (French, German, & Russian summaries) (27 ref)—*English summary*.

6732. **Schicht, William W.; Zeiner, Arthur R. & West, Gerald L.** (U Oklahoma, Health Sciences Ctr) **The role of test trial sequences in the development of backward conditioning of the skin conductance response.** *Biological Psychology Bulletin*, 1974(Mar), Vol 3(3), 76-83.—Attempted to replicate backward conditioning of the skin conductance response and to test the hypothesis that a variable, forward trace conditioning accounts for the earlier results. Ss were assigned to 3 independent groups: a random unpaired control group, a backward-conditioning group, and a backward-conditioning group confounded with a forward-conditioning contingency. Both backward-conditioning groups differed from the control but they did not differ from each other. Group differences in motivation and individual differences in activation interpretations were considered unlikely as explanations of the results. (17 ref)—*Journal abstract*.

6733. **Shaw, C.; Yinon, U. & Auerbach, E.** (Hadassah U Hosp & Medical School, Vision Research Lab, Jerusalem, Israel) **Diminution of evoked neuronal activity in the visual cortex of pattern deprived rats.** *Experimental Neurology*, 1974(Oct), Vol 45(1), 42-49.—The "deprived" cortex of 16 monocularly deprived rats showed a considerable diminution in response to specific visual stimuli. Many neurons (57.7%) in the deprived cortex did not respond to any visual stimuli, and 29% reacted nonspecifically to any stimulus anywhere in the visual field. In comparison, 7.4% neurons in the nondeprived cortex were not responsive to visual stimuli, and 41.3% gave indefinite response. In the normal cortex 51.1% of the cells were motion, orientation, or direction selective while the number for the deprived cortex was

handled in a similar way, but in the empty chamber, showed a slight increase in reinfection rate, moderate corticosterone levels and adrenal gland weights, and normal body weight gains. (21 ref)—*Journal abstract*.

6751. Hartung, G. Harley. (Central Missouri State U) **Responses of middle-aged women to maximal cycling exercise.** *American Corrective Therapy Journal*, 1974(Jul-Aug), Vol 28(4), 103-106.—Reviews literature on women's physiological responses to exercise and reports mean blood pressure, oxygen consumption, and heart rate in 29 healthy female Ss aged 33-48 given a work-capacity test on a bicycle ergometer. (17 ref)

6752. Hoehn-Saric, Rudolf et al. (Johns Hopkins U) **Attitude change and attribution of arousal in psychotherapy.** *Journal of Nervous & Mental Disease*, 1974(Oct), Vol 159(4), 234-243.—Studied (a) the effect of arousal without confusion on patients' suggestibility and (b) the role of attribution of the source of arousal on the acceptance of a persuasive communication. Ss were 3 groups of 42 psychoneurotic outpatients. 2 groups received 3 adrenalin arousal sessions during which a persuasive communication was given. One group was told that they were receiving an arousing inhalant, the 2nd group did not know that the inhalant was arousing, and the 3rd group was a control group and received an inert inhalant. Short-term attitude change, measured by the semantic differential technique, was identical in the informed and uninformed adrenalin groups. The combined adrenalin groups, however, showed a regular response pattern to the intervention and more directional attitude change significantly more frequently than the control group. Although adrenalin arousal had some effect on suggestibility, ratings of therapist performance and patient responses suggest rather complex interactions. Adrenalin patients, not the controls, showed increased cardiac lability to topics which had been discussed under adrenalin arousal in previous sessions.—*Journal abstract*.

6753. Johnson, J. & Lockwood, P. (U Hosp of South Manchester, England) **EEG evaluation of a sleep recorder.** *British Journal of Psychiatry*, 1974(Sep), Vol 125, 265-267.—Compared the duration of sleep as estimated by a sleep recorder with estimation of sleep made simultaneously in 14 Ss with EEG monitoring. The recorder underestimated the total duration of sleep by 10%. This was largely due to retained capacity for making responses in Stage I sleep, early Stage 2 sleep, and REM sleep.—*Journal summary*.

6754. Lader, Malcolm. (U London, Inst of Psychiatry, England) **The peripheral and central role of the catecholamines in the mechanisms of anxiety.** *International Pharmacopsychiatry*, 1974, Vol 9(3), 125-137.—Anxiety is both an emotional state and a personality trait and may be either normal or pathological. Data from the literature are discussed which show that the physiological changes of anxiety can be induced by sympathomimetic agents, but the accompanying psychological changes may not be typical of anxiety. Conversely, the physiological concomitants can be attenuated using  $\beta$ -adrenoceptor blocking agents, although psychic anxiety may be only partly ameliorated. The central biochemical aspects of anxiety are poorly understood. Catecholamines rather than indoleamines appear to be

involved in stress reactions. The locus coeruleus, a structure in the brainstem projecting widely to the cerebral cortex, has mainly adrenergic neurones and can be postulated to play a key role in the genesis of anxiety. In the treatment of anxious patients a combination of a central anxiolytic such as a benzodiazepine and a peripheral  $\beta$ -blocker such as propranolol may be most efficacious. (38 ref)—*Journal abstract*.

6755. Lynch, James J. & Katcher, Aaron H. (U Maryland, Medical School, Inst of Psychiatry & Human Behavior, Baltimore) **Human handling and sudden death in laboratory rats.** *Journal of Nervous & Mental Disease*, 1974(Nov), Vol 159(5), 362-365.—Studied the effect of human handling on the survival of laboratory rats immersed in a tank of agitated water (the Richter water chamber). 12 of 22 male Holtzman rats who had been handled died while all of the unhandled rats survived. The death of the handled rats followed diving in the water tank. Findings suggest that it would be helpful to re-examine experimental procedures that purport to show a connection in infrahuman studies between aversive emotional states (e.g., helplessness-hopelessness) and psychosomatic pathology and abnormal behavior.—*Journal abstract*.

6756. McKinlay, Sonja M. & Jefferys, Margot. (Boston U) **The menopausal syndrome.** *British Journal of Preventive & Social Medicine*, 1974(May), Vol 28(2), 108-115.—Results of a postal questionnaire survey of 638 45-54 yr old women living in the London area indicate, consistent with other recent surveys, that hot flushes and night sweats are clearly associated with the onset of a natural menopause and that they occur in the majority of women. Hot flushes were reported to occur more frequently (usually daily) and over more of the body by women whose menstrual flow showed evidence of change or cessation. For 25% of those women whose menses had ceased for at least 1 yr, hot flushes persisted for 5 yrs or more. The other 6 symptoms specified—headaches, dizzy spells, palpitations, sleeplessness, depression, and weight increase—showed no direct relationship to the menopause but tended to occur together, each being reported by approximately 30-50% of the respondents with little variation according to menopausal status. None of the 6 sociodemographic variables investigated—employment status, school-leaving age, social class, domestic workload, marital status, and parity—had any marked association with the reported frequency of symptoms. The majority of respondents did not anticipate or experience any difficulties and only about 10% expressed regret at the cessation of menses. Despite embarrassment and/or discomfort from hot flushes, reported by nearly 75% of those experiencing this symptom, only 20% had apparently sought medical treatment. (21 ref)—*Journal abstract*.

6757. Minneman, Kenneth P.; Lynch, Harry & Wurtman, Richard J. (Massachusetts Inst of Technology) **Relationship between environmental light intensity and retina-mediated suppression of rat pineal serotonin-N-acetyl-transferase.** *Life Sciences*, 1974(Nov), Vol 15(10), 1791-1796.—Studied the dose-response relationship between intensity of ambient lighting and pineal biosynthetic activity by measuring serotonin-N-acetyl-transferase activity in pineals of male Sprague-Dawley rats

exposed to strong light for 2 days, and then to darkness or to various light intensities for 3 hrs. As little as .5  $\mu$  watts/cm<sup>2</sup> caused a greater than 50% suppression of serotonin-N-acetyl-transferase activity; maximum inhibition was obtained with 15  $\mu$  watts/cm<sup>2</sup>. (16 ref)—*Journal abstract*.

6758. Parker, David M. & Howard, Marthe. (California State U, Northridge) **Effects of repeated administration of the psychophysiological test for motion sickness susceptibility.** *Journal of General Psychology*, 1974(Oct), Vol 91(2), 273-276.—Results show that when 12 undergraduates were exposed repeatedly to D. Parker's psychophysiological test for motion sickness susceptibility, the susceptibles showed decremental skin conductance responses. After the 2nd trial, Ss' scores indicate that they could not be classified as susceptibles under the previously established criteria. It is concluded that a time-related effect was operating which reduced scores on repetitions of the test. It is suggested that Ss be screened for recent experience before taking the test.—*Journal abstract*.

6759. Powell, D. A.; Lipkin, M. & Milligan, W. L. (VA Hosp, Columbia, SC) **Concomitant changes in classically conditioned heart rate and corneoretinal potential discrimination in the rabbit (*Oryctolagus cuniculus*).** *Learning & Motivation*, 1974(Nov), Vol 5(4), 532-547.—Corneoretinal potential (CRP) and heart-rate changes of a total of 76 New Zealand rabbits were measured in 3 differential classical conditioning experiments in which the directionality of the heart-rate response was related to CRP acquisition and the certainty or uncertainty of the stimulus situation. Results suggest that heart-rate decelerations were associated with stimuli that predicted upcoming aversive events, while heart-rate accelerations were associated with asymptotic CRP responding late in conditioning. Findings are interpreted in terms of (a) changes in general somatic activity and (b) the cue properties associated with conditioned stimuli which predict aversive events. (28 ref)—*Journal abstract*.

6760. Simpson, G. C.; Cox, T. & Rothschild, D. R. (U Nottingham, England) **The effects of noise stress on blood glucose level and skilled performance.** *Ergonomics*, 1974(Jul), Vol 17(4), 481-487.—32 healthy male, young adult students were randomly assigned to 1 of 4 groups. Groups A and B were preloaded with glucose; Groups C and D were not. Groups A and D carried out a pursuit rotor task under 50-dB (nonstressful) white noise. Groups B and C carried out the same task under 80-dB (stressful) white noise. Blood samples were taken from each S, and blood glucose levels as well as time on target were measured. Statistical analysis of the results showed that noise stress impaired performance and that preloading with glucose attenuated the impairment. This change in performance was accompanied by a reduction in the high blood glucose level caused by preloading. Preloading in the nonstressful condition impaired performance without an associated fall in the high blood glucose level. It is suggested that blood glucose levels may be used as an indicant of stress. (French & German summaries)—*Journal abstract*.

## Genetics

6761. Hogarth, Robin M. (European Inst of Business Administration, Fontainebleau, France) **Monozygotic and dizygotic twins reared together: Sensitivity of heritability estimates.** *British Journal of Mathematical & Statistical Psychology*, 1974(May), Vol 27(1), 1-13.—Examines the method of estimating the heritable component of behavioral traits by comparing observed similarities between pairs of MZ (monozygotic) twins as opposed to DZ (dizygotic) twins. The technique of sensitivity analysis is used to investigate the importance of assumptions made to calculate heritability estimates. This permits not only the investigation of specific assumptions, but also the effects of different combinations of assumptions. The assumptions examined include the level of assortative mating, degree of intrainpair environmental similarity of MZ as opposed to DZ twins, and the presence of genotype-environment covariance. It is noted that estimates of genetic variance—although large—are sensitive to small changes in these assumptions and that different combinations of assumptions can produce similar estimates of genetic variance. Although this work is effected within the classical twin method, its implications are valid for more sophisticated analyses of the "nature-nurture" problem. (25 ref)—*Journal abstract*.

6762. Roubertoux, P. (U René Descartes, Differential Psychology Lab, Paris, France) **[Genetic diversity and individual differences.]** (Fren) *Bulletin de Psychologie*, 1973-1974, Vol 27(10-12), 552-562.—Reviews research in behavior genetics, especially genetic analysis of behavior concerned with (a) studies of the heritability of measurable behavioral characteristics, including breakdown of phenotypic variation and determination of composition of genotypic variation; and (b) contributions of the life sciences and the behavioral sciences to studies of "controlled evolution." (43 ref)—Z. M. Cantwell.

6763. Smith, Roy H. & Connor, James L. (Mary Washington Coll) **The inheritance of behavioral wildness in house mice (*Mus musculus* L.).** *Animal Learning & Behavior*, 1974(Nov), Vol 2(4), 249-256.—Ranked 14 behavioral measures according to their ability to differentiate performances of a wild population of 36 mice from 3 domestic inbred strains. These "wildness" rankings were then analyzed for their ability to predict genetic and Genotype  $\times$  Environment interactions. Genetic parameters were derived from analysis of C57/BL6, DBA/2, and A/J strains ( $n = 36$ ) and 20 Ss from each of their hybrid crosses via the diallel technique of genetic analysis. Genotype  $\times$  Environment interactions were assessed both as mean differences in stock performances resulting from rearing in a laboratory vs naturalistic environment and as differences in environmental variability within stock genotypes. Behavioral characters ranking high on "wildness" failed to demonstrate any unitary pattern of Genotype  $\times$  Environment interactions. The diallel genetic analysis revealed many examples of additive variation but relatively few examples of dominant variation. An extremely wide range of interactions occurred between genotype and rearing environments, with "wildness" and "developmental homeostasis" concepts both failing to account for all the observed interactions. (22 ref)—*Journal abstract*.

# PSYCHOPHARMACOLOGY AND PHYSIOLOGICAL INTERVENTION

6764. Larsson, K.; Feder, H. H. & Komisaruk, B. R. (U Göteborg, Unit of Psychobiology, Sweden) **Role of the adrenal glands, repeated matings and monoamines in lordosis behavior of rats.** *Pharmacology, Biochemistry & Behavior*, 1974(Sep-Oct), Vol 2(5), 685-692.—Administered tetrabenazine intraperitoneally to estrogen-primed female Sprague-Dawley rats which were ovariectomized or ovariectomized and adrenalectomized. The drug treatment facilitated sexual receptivity in the nonadrenalectomized Ss but had no such effects in adrenalectomized ones. Injection of saline, the solvent of tetrabenazine, in combination with repeated mating exerted the same facilitatory effect as the drug on the lordosis behavior. As in the case of tetrabenazine the effects only occurred in the presence of the adrenals. The facilitatory effect on the lordosis behavior is interpreted as due to adrenal steroids with progestational action which were secreted as a response to tetrabenazine, saline, or/and repeated mating. (29 ref)—*Journal abstract*.

6765. Schiff, Anshel J. (Purdue U) **An improved electrode system for recording EEG from the skull.** *Physiology & Behavior*, 1974(Oct), Vol 13(4), 595-597.—Describes a simple and relatively rapid procedure for constructing and implanting electrodes in rat or rabbit skull which eliminates shortcomings of other techniques.

6766. Smith, Landgrave T. (U Oklahoma, Health Sciences Ctr, Oklahoma City) **The interanimal transfer phenomenon: A review.** *Psychological Bulletin*, 1974(Dec), Vol 81(12), 1078-1095.—The phenomenon described as interanimal transfer of learned responses from trained donor animals to untrained recipient animals by means of brain extracts has been regarded as problematic by many investigators and has generated extensive literature. Among major issues have been the reproducibility of the phenomenon and the viability of a learning interpretation of the recipients' behavior. The learning interpretation, if correct, makes direct experimental approaches to brain-behavior relationships feasible in the context of learning and memory. The review led to a number of conclusions with respect to the issues and evidence. Reproducibility has become less of a problem but has not been eliminated. Several species have been used successfully, and the effect has been reported over a wide range of tasks. The transfer effect, considered at a behavioral level of analysis, exhibits an empirical relationship with donor training and learning. While there is also evidence of a transfer of a nonspecific arousal factor, it cannot account for all of the data. Given the relatively crude extracts used in many cases, a 2-factor explanation of transfer appears most likely, in which an arousal transfer occurs under one set of conditions, and a learning transfer under others. The behavioral challenge resulting from this notion is the clear separation of the 2 effects. Biological and chemical mechanisms of the effect have not been widely researched, possibly due to a lack of formal consensus about what the transfer effect represents and thus its significance. (3 p ref)—*Journal abstract*.

6767. Zornetzer, Steven F.; Boast, Carl & Hamrick, Michael. (U Florida, Medical School) **Neuroanatomic**

**localization and memory processing in mice: The role of the dentate gyrus of the hippocampus.** *Physiology & Behavior*, 1974(Oct), Vol 13(4), 569-575.—Produced long-term (LTM) and short-term memory (STM) deficits in a 1-trial inhibitory avoidance task in a total of 138 male Swiss mice by the disruption of various hippocampal subfields in 2 experiments. Disruption of neural tissue was accomplished by the mere presence of stainless steel electrodes and by the spontaneous deposition of  $Fe^{++}$  ions. LTM was impaired only in Ss with bilateral  $Fe^{++}$  ion deposition in the dentate gyrus. STM was impaired by tissue damage to various other regions of hippocampus. Bilateral deposition of  $Fe^{++}$  ions in the dentate gyrus did not increase the severity of the STM deficit resulting from the concomitant damage to other hippocampal subfields. Data indicate that a high degree of neuroanatomical localization of function regarding memory processing occurred. Possible mechanisms by which  $Fe^{++}$  ion deposition can interfere with the role of the dentate gyrus in information processing are discussed. (37 ref)—*Journal abstract*.

## Brain & Electrical Stimulation & Lesions

6768. Alml, C. Robert & Weiss, Charles S. (Ohio U) **Drinking behaviors: Effects of lateral preoptic and lateral hypothalamic destruction.** *Physiology & Behavior*, 1974(Oct), Vol 13(4), 527-538.—The lateral preoptic (LPO) and/or lateral hypothalamic (LHA) areas of 139 male Holtzman albino rats were bilaterally destroyed, and drinking thresholds were measured following subcutaneous NaCl (NC) injection. Also measured were latencies to drink and water intakes following NC and polyethylene glycol (PG) injections and water deprivation (WD). Lesions confined to the LPO were associated with elevated drinking thresholds and elongated latencies to drink following NC, PG, and WD. LPO plus some LHA destruction, in addition to the above, was associated with attenuated intake following NC and PG, but not WD. Minimal LHA damage affected all measures similar to that produced by lesions confined to the LPO, while greater LHA destruction affected the measure like the LPO plus some LHA lesions, with the additional deficit of attenuated WD intake. Gross LHA and simultaneous LPO-LHA lesions resulted in complete adipsia. (28 ref)—*Journal abstract*.

6769. Beyra, M. (U Louvain, Lab de Neurophysiologie, Belgium) **Effects of intracranial reward strength on escape threshold.** *Physiology & Behavior*, 1974(Oct), Vol 13(4), 507-511.—Male Wistar albino rats with monopolar electrodes implanted in the lateral posterior hypothalamus were trained for self-stimulation behavior (ICSS). Ss were allowed to self-stimulate in a 2-compartment test chamber. 38 different electrical stimuli were used to maintain ICSS. In 1 compartment, a foot shock of increasing voltage was administered. It was observed that the voltage of the foot shock required to elicit an escape response increased during ICSS. This attenuation of aversive state was related to the strength of the reinforcing effect elicited by brain stimulation. It is concluded that the reinforcing effect involves 2 factors of which only one seems to be responsible for the escape threshold modification. (24 ref)—*Journal abstract*.

6770. Brunner, Robert L.; Haggblom, Steven J. & Gazzara, Russell A. (Purdue U, Lab of Developmental Neurobiology) **Effects of hippocampal X-irradiation-produced granule-cell agenesis on instrumental runway performance in rats.** *Physiology & Behavior*, 1974(Oct), Vol 13(4), 485-494.—In Exp I, 10 male Wistar rats in which x-irradiation during early postnatal life had interfered with the acquisition of dentate granule cells ran faster than 10 controls during extinction of a runway response acquired under a consistent food reward schedule. Randomly rewarded and nonrewarded trials increased running speeds to an equal extent in x-irradiated and control groups during extinction. Exps II and III showed that unlike a reported total inability of hippocampal lesioned rats to pattern their running responses appropriate to a single alternation schedule of reward and nonreward, 21 x-irradiated Ss, while impaired in acquiring response alternation, had persistent deficits compared to the 21 controls only when the task was made very simple by reducing the number of daily trials to 2. Results are discussed in terms of an hypothesized reduction in the aversiveness of nonreward and a consequent reduction in the growth of inhibition in x-irradiated rats. (24 ref)—*Journal abstract*.

6771. Buchanan, Denton C. & Caul, William F. (Vanderbilt U Hosp) **Gastric ulceration in rats induced by self-imposed immobilization or physical restraint.** *Physiology & Behavior*, 1974(Oct), Vol 13(4), 583-588.—Assessed gastric ulceration in 12 male Holtzman rats after they were placed in a self-immobilization condition in which the unrestrained S could avoid footshock by remaining motionless. 12 Ss received equivalent but unavoidable footshock which was not contingent on movement within the apparatus. A 3rd group of 12 received no shock and served as a deprivation control. The 1st 2 groups showed a similar degree of ulceration which was greater than that observed in the deprivation control Ss. 2 methods of physical restraint were also yoked in series to the shock circuit of the self-imposed condition to assess the influence of different forms of restraint. In 2 groups of 12 Ss, restraint via the legs plus shock condition produced a greater degree of ulceration than did whole body restraint plus shock. Heart rate and body weight changes were evaluated for each of the 5 conditions. (24 ref)—*Journal abstract*.

6772. Burešová, O. & Bureš, J. (Czechoslovak Academy of Sciences, Inst of Physiology, Prague) **Functional decortication in the CS-US interval decrease efficiency of taste aversive learning.** *Behavioral Biology*, 1974(Nov), Vol 12(3), 357-364.—Studied conditioned taste aversion in 160 male hooded Drückrey rats with the cortical spreading depression (CSD) technique. Water-deprived Ss had a 15-min access to water on the familiarization Days 1 and 2. On Day 3 they were offered .1% saccharin (conditioned stimulus; CS) followed after 30-300 min by intraperitoneal lithium chloride injection as the unconditioned stimulus (UCS; .14 M/2% body weight). Saccharin intake on Day 4 increased proportionally to the duration of CS-UCS interval from 40% (30 min) to 86% (240 min) and 103% (300 min) of Day 3 consumption. Bilateral CSD evoked 15 min after CS termination and maintained during the rest of the CS-UCS interval impaired the taste aversion

conditioning with 120- and 180-min delays (85% and 89%) but not with 30- and 60-min delays (32% and 50%). Gustatory experience acquired during unilateral CSD on Day 3 yielded strong conditioned aversion with 20- and 60-min CS-UCS delays (40% and 43%). When bilateral CSD was induced 10 min after hemidecorticate exposure to saccharin, significant aversion was found with the 20- and 40-min delays (38% and 53%) but not with 50- and 60-min delays (95% and 87%). It is concluded that CSD interferes with the short-term storage of the gustatory information acquired with the intact brain. (15 ref)—*Journal abstract*.

6773. Carlsson, Sven & Larsson, Knut. **Self-stimulation and mating behavior in the male rat.** *Göteborg Psychological Reports*, 1974, Vol 4(5), 7p.—Studied a presumed relationship between self-stimulation of the brain and sexual behavior in 2 experiments with a total of 15 male albino rats. In Exp I Ss were allowed self-stimulation during a 5-min period and thereafter were transferred to a mating cage with a female. No effects of the self-stimulation were recorded in the mating behavior. In Exp II Ss were allowed 1 intromission and thereafter presented with a lever for self-stimulation, still having access to the female. The sexual responses were completely inhibited, and self-stimulation at normal rate resumed. It is concluded that there is no necessary link between self-stimulation of the brain and sexual behavior.—*Journal abstract*.

6774. Cooper, Barrett R. et al. (U North Carolina, Medical School, Chapel Hill) **Alteration of avoidance and ingestive behavior after destruction of central catecholamine pathways with 6-hydroxydopamine.** *Pharmacology, Biochemistry & Behavior*, 1974(Sep-Oct), Vol 2(5), 639-649.—Bilaterally infused a total of 56 male Sprague-Dawley rats with 6-hydroxydopamine (6-OHDA) into the ventral tegmental area containing A-10 dopamine cell bodies, the tegmental segment of the ascending norepinephrine pathways, the globus pallidum, or the caudate-putamen. 50 Ss served in control groups. The maximum antagonism of active avoidance acquisition occurred following placement of 6-OHDA into the ventral tegmental and caudate areas. No effect on either avoidance or ingestive behavioral measures occurred after infusion of 6-OHDA into the norepinephrine pathways. Factor analysis of behavioral and biochemical data suggested that only striatal dopamine content bore a high relationship to avoidance behavior, while ingestive behavioral measures were highly related to both striatal and limbic dopamine content. Results suggest a functional-anatomical of dopamine pathways in brain. (27 ref)—*Journal abstract*.

6775. de Castro, John M. (Georgia State U) **A selective spatial discrimination deficit after fornixotomy in the rat.** *Behavioral Biology*, 1974(Nov), Vol 12(3), 373-382.—Trained 15 fornix-lesioned and 15 sham-operated male Holtzman albino rats in a plus (+)-shaped maze, for food reinforcement, to run to a specific goal arm (position discrimination groups) or to make a specific turn (response discrimination groups). Acquisition and 5 successive reversals of the discrimination were run. Fornix lesions produced a selective impairment in the acquisition and reversal performance of the position discrimination. The response discrimination was not

affected by the lesion. Results indicate that the hippocampal-fornix system is involved in the long-term storage or retrieval of the spatiotemporal relationships of stimuli in the environment. (26 ref)—*Journal abstract.*

6776. Dewar, A. J. (U Edinburgh, Scotland) **Changes in incorporation of ( $^{14}$ C) uridine into uridine nucleotides in rat visual cortex during first exposure to light.** *Experimental Neurology*, 1974(Oct), Vol 45(1), 134-140. —The 1st exposure of newly weaned Piebald Virol Glaxo rats to light resulted in a transient change in the labeling of uridine nucleotides in the visual cortex but not in the frontal cortex. 30 min after exposure to light, the proportion of intraventricularly administered [ $^{14}$ C]uridine incorporated into uridine diphosphate and uridine triphosphate was increased significantly relative to the dark control value. After a 3-hr exposure to light, no differences were seen between the light-exposed experimental and dark-exposed control Ss. (19 ref)—*Journal abstract.*

6777. Goldstein, Melvin L. (Indiana U, Kokomo) **A simple method for determining the shock threshold of the white rat.** *Journal of General Psychology*, 1974(Oct), Vol 91(2), 303-304. —Used W. Dixon and F. Massey's (1957) "up and down" technique to determine shock thresholds on 4 male albino rats; the technique involves subjecting S to a series of 1-sec shocks at 60-sec intervals. The thresholds determined for each S were 39, 52, 31.5, and 45.5 v.

6778. Greene, Ernest & Stauff, Chris. (U Southern California) **Behavioral role of hippocampal connections.** *Experimental Neurology*, 1974(Oct), Vol 45(1), 141-160. —Evaluated the functions of particular afferent and efferent connections of the hippocampus in a sequence of learning tasks. 9 male Long-Evans hooded rats with damage to the fornix were impaired in learning to reverse a position habit, learning to alternate position, learning to extinguish running for water reward, and learning a passive avoidance habit. Ss with lesions of the subiculum or of the cingulum ( $N = 12$ ) were impaired in avoidance learning only. Exploration of an open field, learning of the original position habit, and running latencies in performing the maze habits were not significantly affected by any lesion treatment. Results support the position that the hippocampus is involved in separable functions. "Response suppression" may be one of its activities, but the hippocampus also appears to have a special role in the storage and recall of spatial habits. (42 ref)—*Journal abstract.*

6779. Hannon, Roseann & Bader, Arlene. (U of the Pacific) **A comparison of frontal pole, anterior median and caudate nucleus lesions in the rat.** *Physiology & Behavior*, 1974(Oct), Vol 13(4), 513-521. —48 CFH strain male hooded rats with frontal pole cortex, anterior median cortex, caudate nucleus, or sham control lesions were tested in 3 experiments on activity, spatial reversal learning, and delayed response learning. Performance of the lesioned groups was compared with that of higher mammals with frontal and caudate lesions on similar problems. Ss with either type of frontal lesion were significantly more hyperactive than controls during the 1st hour of testing but were not impaired on reversal or delayed response learning. Caudate lesioned Ss were significantly more hyperactive than the frontally lesioned

groups, were significantly impaired on the reversal task, and showed some indication of impairment on the delayed response task. (54 ref)—*Journal abstract.*

6780. Hartje, W. & Ettlinger, G. (Aachen Technical U, Faculty of Medicine, W Germany) **Reaching in light and dark after unilateral posterior parietal ablations in the monkey.** *Cortex*, 1973(Dec), Vol 9(4), 346-354. —Undertook a detailed comparison of the accuracy of reaching with the ipsilateral and contralateral hand in the light and in the dark after unilateral posterior parietal ablations in 4 rhesus monkeys. Reaching in the light was impaired only in the contralateral hand, with gross and predominantly medial misreaching. In the dark, reaching with the contralateral hand was even more impaired than in the light, but with no significant tendency toward medial misreaching. Reaching with the ipsilateral hand in the dark was also impaired but much less and not as consistently as with the contralateral hand. A predominance of lateral errors was observed for the ipsilateral hand in the dark. Results indicate that the disorder of reaching found after unilateral posterior parietal ablations in monkeys cannot be explained as a disturbance of visual orientation. The findings suggest the presence of a disorder of visuomotor coordination in addition to a nonspecific spatial disturbance in the dark and a contralateral somatosensory defect.—*R. Gunter.*

6781. Hodos, William & Fletcher, Gordon V. (U Maryland) **Acquisition of visual discrimination after nucleus rotundus lesions in pigeons.** *Physiology & Behavior*, 1974(Oct), Vol 13(4), 501-506. —Investigated the effects of lesions of nucleus rotundus thalami in 5 White Carneaux pigeons on the postoperative acquisition of visual intensity and pattern discriminations. Ss were pretrained to peck stimulus discs and obtain grain reward from a dispenser. Following pretraining, bilateral lesions were made in nucleus rotundus. After recovery from surgery, the Ss were given their 1st exposure to the stimuli. The performance of these Ss was compared with the preoperative performance in the same discrimination task of 27 pigeons that were being trained concurrently in another experiment. Results indicate that nucleus rotundus lesions impair original learning as well as retention of established discrimination performances.—*Journal abstract.*

6782. Hoffman, Howard S. & Ratner, Alan M. (Bryn Mawr Coll) **A shock-delivery system for newly hatched precocial birds.** *Journal of the Experimental Analysis of Behavior*, 1974(Nov), Vol 22(3), 575-576.

6783. Howard, James L. & Breese, George R. (U North Carolina, Child Development Inst, Biological Sciences Research Ctr, Chapel Hill) **Physiological and behavioral effects of centrally-administered 6-hydroxydopamine in cats.** *Pharmacology, Biochemistry & Behavior*, 1974(Sep-Oct), Vol 2(5), 651-661. —Intraventricular injections of 6-hydroxydopamine (6-OHDA) into cats produced a greater reduction of brain norepinephrine than dopamine content while producing no change in brain serotonin. The effects immediately after the 1st injection of 6-OHDA included hypothermia, increase in respiratory rate, and in the presence of pargyline, sham rage. Following the 1st injection, a prolonged period of hypophagia and hypodipsia occurred. Subsequent injections produced less hypothermia and greater increases in

respiratory rate. Measurement of sleep-wake ratios indicated that paradoxical sleep was initially reduced by 6-OHDA administration, but eventually recovered to occupy its normal percentage of the cycle. However, wake time was increased and slow-wave sleep time decreased. Ss treated with 6-OHDA had lower baseline heart rates than controls and showed no evidence for acquiring a conditioned heart-rate response, although heart-rate response to shock was potentiated. (29 ref)—*Journal abstract*.

6784. Kling, John O. & Bartley, Kerry S. (Coll of St Teresa) **Effects of frontal ablations on visual discrimination in the rat.** *Journal of General Psychology*, 1974(Oct), Vol 91(2), 305-306.—6 rats were given 100 reinforcements on continuous reinforcement and then assigned to either the experimental or control group. Both groups acquired the original discrimination in 4 sessions. The experimental group did not reverse more quickly in any of the 3 test reversals than the control group.

6785. Martin, David G.; Hawryluk, Garry A. & Guse, Linda L. (U Manitoba, Winnipeg, Canada) **Experimental study of unconscious influences: Ultrasound as a stimulus.** *Journal of Abnormal Psychology*, 1974(Dec), Vol 83(6), 589-608.—Used ultrasound as a stimulus to study its effects on behavior without S awareness. In Exp I evoked responses were elicited in 7 of 24 undergraduates by ultrasonic tones when Ss were reporting the presence of no stimulus. In Exp II with 20 male Ss, galvanic skin response conditioning to a compound stimulus made up of ultrasound and a red light resulted in shorter latencies to the compound stimulus than to the red light alone, during extinction. The differences did not appear among control Ss, supporting the occurrence of conditioning without awareness. In Exp III with 16 Ss, reaction-time performance was disrupted by providing ultrasound as an anticipatory cue for 1 of 2 lights over 150 trials and then reversing the ultrasound-light pairing. The ultrasound did not facilitate reaction time to the paired light during the 1st 150 trials, however. Results support learning without awareness, and the method is discussed as it might be extended to the study of unconscious influences and to clinical applications. (75 ref)—*Journal abstract*.

6786. Neill, Darryl B.; Ross, Joseph F. & Grossman, Sebastian P. (Emory U) **Effects of lesions in the dorsal or ventral striatum on locomotor activity and on locomotor effects of amphetamine.** *Pharmacology, Biochemistry & Behavior*, 1974(Sep-Oct), Vol 2(5), 697-702.—In 2 experiments electrolytic lesions in the dorsal portion of the anterior striatum of 7 adult male Sprague-Dawley albino rats reliably increased spontaneous wheel running compared to 9 controls and potentiated the stimulant effects of amphetamine on activity in both running wheels and stabilimeters. Comparable lesions in the ventral aspects of the striatum of 8 Ss produced a decrease in spontaneous wheel running and did not modify the activating effects of amphetamine in either wheels or stabilimeters. (31 ref)—*Journal abstract*.

6787. Pager, J. (U Claude Bernard de Lyon, Lab d'Electrophysiologie, Villeurbanne, France) **A selective modulation of olfactory input suppressed by lesions of the anterior limb of the anterior commissure.** *Physiology & Behavior*, 1974(Oct), Vol 13(4), 523-526.—Performed

unilateral sections of the anterior limb of the anterior commissure (AAC) on either the right or left sides of 7 male Wistar rats. The specific and selective activation observed in the mitral cell layer of the olfactory bulbs of hungry Ss receiving food odor disappeared in the side of the unilateral section. The nonspecific arousal effect disappeared as well. Results are discussed in terms of the AAC centrifugal modulating role of the olfactory input. (20 ref)—*Journal abstract*.

6788. Sagvolden, Terje & Wester, Knut. (U Oslo, Inst of Neurophysiology, Norway) **Habituation of the startle reflex in rats with septal lesions.** *Behavioral Biology*, 1974(Nov), Vol 12(3), 413-418.—Compared the habituation rate of the startle reflex in rats with septal lesions to the rate in control rats when 27 male albino Moll-Wistar rats were matched according to the initial response amplitude. The lesions were mainly restricted to the dorsal part of the septal nuclei. Ss with septal lesions required more trials than control rats to attain the habituation criterion when the rats were tested 33 or 93 days after the operation, but not when they were tested on the 10th postoperative day. Results may be due to a loss of response inhibition or to increased arousal in the Ss with septal lesions. (16 ref)—*Journal abstract*.

6789. Shibata, M. & Bures, J. (Gifu U, Japan) **Functional decortication employing reverberating cortical spreading depression: Experimental evaluation of advantages and limitations.** *Experimental Neurology*, 1974(Dec), Vol 45(3), 415-423.—Data from 13 male hooded (Druckrey) rats anesthetized with allobarbitol suggest that functional decortication by reverberating cortical depression decreases the amount of externally applied KCl, but that its practical use is limited by long cycle duration, obligatory electrophysiological control, and presence of focal lesion or preservation of activity in the treated area. Implications for behavioral studies are noted. (18 ref)

6790. Stevens, Robin & Cowey, Alan. (U Nottingham, England) **Visual discrimination learning and transfer in rats with hippocampal lesions.** *Quarterly Journal of Experimental Psychology*, 1974(Nov), Vol 26(4), 582-593.—Conducted 2 experiments on 10 male hooded Lister rats with hippocampal brain damage and on a control group of 10 rats with neocortical lesions. In Exp I the hippocampal group learned a difficult visual discrimination as promptly as the controls, and neither group was subsequently impaired by adding relevant or irrelevant background cues to the original stimuli. In Exp II the Ss learned a simultaneous visual discrimination in which the stimuli differed in both brightness and orientation. The hippocampal group was impaired relative to the controls on acquisition and showed poorer transfer to stimuli differing only in brightness or orientation. Results are incompatible with the hypothesis which attempts to explain the effects of hippocampal damage by a widespread reduction in sensory gating, but they are consistent with a more restricted version of the same hypothesis. (27 ref)—*Journal abstract*.

6791. Stoller, William L. (Indiana U) **Food, water and saccharin solution intake in rats with posterior striatal lesions.** *Physiology & Behavior*, 1974(Oct), Vol 13(4), 599-602.—Striatal damage in the albino rat did not influence food or water intake, differential consumption

of a saccharin solution and water, or body weight, suggesting that the portion of the posterior striatum which was damaged is of little or no importance in the regulation of food and water intake.

6792. Thomas, John B. & Thomas, Kay A. (Coll of Wooster) **Square-runway avoidance behavior and septal lesions in the rat.** *Physiology & Behavior*, 1974(Oct), Vol 13(4), 577-582.—In Exp I 10 septal-lesioned male Wistar rats acquired the square-runway avoidance response significantly faster than did 10 controls. In Exp II 8 lesioned Ss and 8 controls were compared on the acquisition of a regular 1-way avoidance response in the same apparatus. This change in procedure facilitated the avoidance responding of the control Ss and inhibited avoidance acquisition by the Ss with septal lesions. (15 ref)—*Journal abstract*.

6793. Ware, C. B.; Diamond, I. T. & Casagrande, V. A. (State U New York, Downstate Medical Ctr, Brooklyn) **Effects of ablating the striate cortex on a successive pattern discrimination: Further study of the visual system in the tree shrew (*Tupaia glis*).** *Brain, Behavior & Evolution*, 1974, Vol 9(4), 264-279.—Previous studies have shown that tree shrews without striate cortex can easily discriminate between 2 simple patterns presented simultaneously. It has been suggested that these animals cannot actually identify patterns without striate cortex, but simply detect differences between 2 stimuli by scanning. The present study showed that 7 tree shrews with damage to striate cortex, including complete removal, could discriminate horizontal from vertical stripes when presented either simultaneously or successively. This result supports the view that tree shrews do have the capacity to identify patterns in the absence of striate cortex. Results also show that the Ss could perform the same discrimination following damage to the temporal cortex. However, if the lesion included all of the striate cortex plus a large amount of temporal cortex, the Ss failed to discriminate the orientation of stripes even when they were displayed simultaneously. —*Journal abstract*.

6794. Whishaw, Ian Q. & Robinson, T. E. (U Lethbridge, Alberta, Canada) **Comparison of anodal and cathodal lesions and metal deposition in eliciting postoperative locomotion in the rat.** *Physiology & Behavior*, 1974(Oct), Vol 13(4), 539-551.—Conducted experiments with a total of 432 male Sprague-Dawley albino rats in which anodal lesions elicited more vigorous running in the first 8 postoperative hrs than cathodal lesions. Vigorous dose dependent running also followed injections of FeCl<sub>3</sub> and CuCl<sub>2</sub> but was less vigorous following H<sub>2</sub>O or HCl injections. Injections of other transition metals and AlCl<sub>3</sub> were ineffective. Particularly active sites for both lesions and injections were the dorsomedial and posterior hypothalamic nuclei, but running also followed anterior hypothalamic-preoptic and anterior lateral hypothalamic lesions. Behavioral tests administered at 24 hrs failed to reveal persistent deficits correlated with effective lesion placements for running, but increasing the lesion size in the caudal hypothalamus decreased postlesion running and increased the occurrence and severity of postlesion akinesia and somnolence. A zone of tissue inflammation surrounded sites of anodal cavitation and sites of FeCl<sub>3</sub>

and CuCl<sub>2</sub> injections. Results suggest that the irritative action of metals deposited by injection or lesion produce postoperative running and tissue inflammation, possibly concurrently. (34 ref)—*Journal abstract*.

6795. Wilburn, Margaret W. & Kesner, Raymond P. (U Utah) **Effects of caudate nucleus stimulation upon initiation and performance of a complex motor task.** *Experimental Neurology*, 1974(Oct), Vol 45(1), 61-71.—Stimulation of the caudate nucleus at either 7 or 100 Hz impaired performance of a complex motor task by 6 adult implanted cats. The disruptive effects on execution of the task occurred at low amperages and appeared to involve interference with temporal programing of response components. Task initiation was impaired by stimulation at higher amperages. Electrical stimulation of anterior sites in the caudate nucleus resulted in impairment of performance at lower stimulation intensities than did stimulation of posterior sites. Although stimulation (7 Hz) of hippocampus, nonspecific thalamic nuclei, or mesencephalic reticular formation also resulted in performance deficits, the topography of interference effects and the threshold intensities required for disruption were different from those resulting from stimulation of the caudate nucleus. (17 ref)—*Journal abstract*.

6796. Yoshimura, H.; Gomita, Y. & Ueki, S. (Kyushu U, Faculty of Pharmaceutical Sciences, Japan) **Changes in acetylcholine content in rat brain after bilateral olfactory bulbectomy in relation to mouse-killing behavior.** *Pharmacology, Biochemistry & Behavior*, 1974(Sep-Oct), Vol 2(5), 703-705.—Measured acetylcholine (Ach) content in male Wistar King-A rats. 14 Ss with olfactory bulbectomy (OB) exhibited significantly lower Ach levels in the cortex than did 13 intact and 9 sham-operated controls. However, there was no significant difference in Ach level of all brain areas between the killer and nonkiller OB Ss. Results may suggest that cortical cholinergic function was activated by bulbectomy, but the change in cortical Ach level was not related to muricide. (15 ref)—*Journal abstract*.

6797. Zeigler, H. P. & Karten, Harvey J. (Hunter Coll) **Central trigeminal structures and the lateral hypothalamic syndrome in the rat.** *Science*, 1974(Nov), Vol 186(4164), 636-637.—Extrahypothalamic lesions of central trigeminal structures produced a syndrome of aphagia, adipsia, finickiness, and food spillage in 12 Holtzman rats. The similarity of these effects to the lateral hypothalamic syndrome and the location of trigeminal structures within the diencephalon suggest that some components of the lateral hypothalamic syndrome are due to incidental damage to trigeminal fibers of passage. (24 ref)—*Journal abstract*.

### Drug Effects

6798. Alhava, Eeva & Mattila, Mauri J. (U Helsinki, Finland) **Dose-dependent differences of amphetamine levels in brain and heart of adult and developing mice.** *Acta Pharmacologica & Toxicologica*, 1974(Mar), Vol 34(3), 211-221.

6799. Anson, John E. & Chandler, B. J. (Stephen F Austin State U) **Chlorpromazine effects on self-punitive behavior.** *Journal of General Psychology*, 1974(Oct), Vol 91(2), 307-308.—64 albino rats were tested in a runway and injected intraperitoneally with chlorpromazine or

saline. The self-punitive effect was shown for all Ss injected with saline early or late in escape training. Ss receiving chlorpromazine either early or late in escape training failed to exhibit sustained performance during punished extinction and performed similarly to chlorpromazine-injected Ss tested in regular extinction.

6800. Antonaccio, Michael J.; Halley, Jeanne & Kerwin, Linda. (CIBA-GEIGY, Pharmaceuticals Div, Summit, NJ) **Functional significance of  $\alpha$ -stimulation and  $\alpha$ -blockade on responses to cardiac nerve stimulation in anesthetized dogs.** *Life Sciences*, 1974(Aug), Vol 16(4), 765-777.—Investigated whether  $\alpha$ -stimulants could inhibit responses to sympathetic nerve stimulation via a feedback inhibition loop mediated by prejunctional  $\alpha$ -receptors. Responses to cardiac nerve stimulation in 54 anesthetized dogs were compared before, during the peak effect of a drug infusion, and during a second drug infusion subsequent to the intravenous administration of phentolamine. The drugs infused were norepinephrine, phenylephrine, clonidine, naphazoline—all  $\alpha$ -stimulants—and guanethidine. All drugs caused marked elevations of blood pressure, an indication of  $\alpha$ -stimulation, but only guanethidine caused significant blockade of responses to sympathetic nerve stimulation. In addition, phentolamine, an  $\alpha$ -receptor blocker, and desipramine, an inhibitor of amine uptake, did not potentiate responses to sympathetic nerve stimulation. Results do not support the hypothesis that sympathetic nerves are under a functionally significant feedback loop mediated by  $\alpha$ -receptors. (16 ref)—*Journal abstract*.

6801. Balthazart, Jacques. (U Liège, Lab de Biochimie Générale et Comparée, Belgium) **Short-term effects of testosterone propionate on the behaviour of young intact male domestic ducks (*Anas platyrhynchos*).** *Psychologica Belgica*, 1974, Vol 14(1), 1-10.—Investigated social displays, sexual behavior, and aggression in 5 male domestic ducks that received intramuscular injections of 79 mg testosterone propionate for 21 days, compared with 5 control males in a group that included 8 females (4 of which received injections of 21.9 mg estradiol monobenzoate). Among injected males a significant increase occurred in sexual behavior and in 5 out of 6 social displays, but not in aggression. Reasons for low aggression and for the nonoccurrence of one social display are discussed. (21 ref)—*S. Slak*.

6802. Baños, Guadalupe; Daniel, P. M.; Moorhouse, S. R. & Pratt, O. E. (Inst of Psychiatry, London, England) **Inhibition of entry of some amino acids into the brain, with observations on mental retardation in the aminoacidurias.** *Psychological Medicine*, 1974(Aug), Vol 4(3), 262-269.—Abnormally high levels of various amino acids were maintained in the bloodstream of Wistar rats, causing saturation of amino acid transport into the brain and partial exclusion from the brain of other amino acids necessary for protein synthesis. Excluded amino acids could be made to enter the brain by raising their concentration in the bloodstream. The possible relevance of these findings to improvements in the dietary treatment of some inborn errors of metabolism is discussed. (28 ref)—*Journal abstract*.

6803. Barrett, James E. (U Maryland) **Conjunctive schedules of reinforcement: I. Rate-dependent effects of pentobarbital and d-amphetamine.** *Journal of the*

*Experimental Analysis of Behavior*, 1974(Nov), Vol 22(3), 561-573.—Keypecking of 4 adult male White Carneaux pigeons was maintained under conjunctive schedules of food presentation in which both a fixed-interval (FI) and a fixed-ratio (FR) schedule had to be completed before a peck produced food. For 2 Ss, pecks on a single key completed both schedule requirements. For 2 other Ss, each requirement was scheduled on a separate key. On the 2-key schedule, a peck after 5 min on the key scheduling the FI requirement produced food if at least 10 pecks had occurred on the ratio key. When each requirement was scheduled on a separate key, response rates on the FR key were generally higher in the early portion of the interval and declined as the interval progressed; responding on the FI key, once initiated, typically remained at a constant rate throughout the interval. Responding under the single-key schedule was characterized by a high rate early in the interval; this then changed to a lower rate that continued until a peck produced food. For all Ss, increases in response rates with pentobarbital and dextroamphetamine were inversely related to the control rate of responding. When equivalent rates on each key of the 2-key schedule were compared, both drugs increased rates on the FR key less. Although the effects of both drugs were rate dependent, each drug differentially modified the pattern of responding under the single-key schedule. (15 ref)—*Journal abstract*.

6804. Beahrs, John O.; Carlin, Albert S. & Shehorn, Janice. **Impact of psychoactive drugs on hypnotizability.** *American Journal of Clinical Hypnosis*, 1974(Apr), Vol 16(4), 267-269.—Pretested 11 adult male marijuana smokers for hypnotic susceptibility, and then tested them for hypnotic susceptibility under 4 experimental conditions: (a) after smoking a cannabis cigarette containing 7.5 mg tetrahydrocannabinol and receiving a placebo intramuscular injection; (b) after smoking a placebo cannabis cigarette and receiving 2 mg haloperidol intramuscularly; (c) after receiving a combination of both drugs; and (d) after placebo smoking and placebo injection. The drugs had no systematic effect on hypnotizability as measured by a modified version of the Harvard Group Scale of Hypnotizability.—*M. V. Kline*.

6805. Bond, Alyson & Lader, Malcolm. **The use of analogue scales in rating subjective feelings.** *British Journal of Medical Psychology*, 1974(Sep), Vol 47(3), 211-218.—Administered 16 visual analog scales to 8 normal Ss to test the validity of the scales in measuring drug effects; Ss received 150 mg of butobarbital sodium, 15 and 30 mg of flurazepam, and a placebo. Results indicate that (a) there were no significant effects on Factor 1 (Alertness), but there was a tendency for Ss to rate themselves as more alert after placebo; (b) there was a significant Drug  $\times$  Times interaction effect on Factor 2 (Contentedness); and (c) Factor 3 (Calmness) also showed a significant Drug  $\times$  Times interaction effect which was caused by the anti-anxiety effect of flurazepam. (15 ref)—*M. E. Pounsel*.

6806. Booth, D. A. & Nicholls, Joy. (U Birmingham, England) **Behavioral specificity of chloralose-induced feeding in the rat.** *Psychopharmacologia*, 1974, Vol 39(2), 145-150.—Latency of feeding in the satiated crossbred male albino rat was markedly shortened after intraperi-

toneal injection of chloralose. Feeding generally began before the onset of drinking or sedation. The optimum dose to facilitate food intake appeared to be lower at night than by day. It is concluded that chloralose has a primary appetite-inducing effect which is much more powerful than that of 2-deoxyglucose.—*Journal abstract.*

6807. **Borison, Richard L.; Mosnaim, Aron D. & Sabelli, Hector C.** (U Health Sciences/The Chicago Medical School, IL) **Biosynthesis of brain 2-phenylethylamine: Influence of decarboxylase inhibitors and d-amphetamine.** *Life Sciences*, 1974(Nov), Vol 15(10), 1837-1848.—2-Phenylethylamine (PEA) is an endogenous brain amine which probably modulates affective behavior. Using a gas-liquid chromatographic method for the quantification of PEA (as its dinitrophenylsulfonic acid derivative), 340.9  $\pm$  45.8 ng of PEA/g of wet brain was found in white male New Zealand rabbits. Brain PEA levels were markedly decreased by the intraperitoneal administration of 200 mg/kg, 4 hrs before sacrifice, of the levoaromatic amino acid decarboxylase inhibitors  $\alpha$ -methyldopa, levo- $\alpha$ -methyldopa hydrazine (MK-486), or a combination of both. Since MK-486 inhibits only peripheral decarboxylase, brain PEA must be in part of peripheral origin. Another decarboxylase inhibitor, RO-4-4602, failed to affect brain PEA content. Dextroamphetamine (10 mg/kg) induced a small depletion of PEA after 30 min in untreated Ss; when given in combination with RO-4-4602, brain PEA content was markedly decreased. 4 hrs after dextroamphetamine injection, brain PEA levels were markedly increased. This supports the view that amphetamine releases PEA and stimulates its synthesis. (35 ref)—*Journal abstract.*

6808. **Braithwaite, R. A.; Nakra, B. R. & Gaiind, R.** (Guy's Hosp, Poisons Unit, London, England) **Steady-state plasma concentrations during single and multiple dosage schedules of amitriptyline.** *Psychological Medicine*, 1974(Aug), Vol 4(3), 338-341.—Measured plasma amitriptyline and nortriptyline concentrations in 5 healthy adult males who each received 2 different dosage regimes of amitriptyline (Tryptizol) for 14-day periods (25 mg 3 times daily and 75 mg once nightly). Mean steady-state plasma concentrations during the 2 dosage regimes were in close accord. The daily variations in drug-plasma concentrations were only minimal during the 3 times/day dosage regime but during the once nightly dosage regime there was an average decline in total drug plasma concentrations (amitriptyline plus nortriptyline) of about 30%. It is concluded that antidepressant medication with amitriptyline using a single nightly dose schedule might be more reliably taken by patients without there being any significant reduction in therapeutic efficacy. (17 ref)—*Journal abstract.*

6809. **Browne, R. G.; Harris, R. T. & Ho, B. T.** (Texas Research Inst of Mental Sciences, Houston) **Stimulus properties of mescaline and N-methylated derivatives: Difference in peripheral and direct central administration.** *Psychopharmacologia*, 1974, Vol 39(1), 43-56.—Trained 35 male Sprague-Dawley rats in a 2-lever operant chamber to discriminate the drugged (intraperitoneal—ip—mescaline) state from the nondrugged state (saline, ip). On session days following mescaline administration, only responses on the right lever of the operant chamber were reinforced, and on days following saline

only responses on the left lever were rewarded. The degree of discrimination between mescaline and saline was determined by the percentage of responding on the state appropriate lever during extinction. Ss were then tested for stimulus generalization after ip or intraventricular (iv) injections of various doses of mescaline, N-methylmescaline (NMM), N,N-dimethylmescaline (DMM), or saline. Mescaline iv exhibited a dose-dependent generalization to the cue produced by systemically injected mescaline, indicating a central nervous system locus of action. NMM demonstrated only saline responses regardless of the dose or route of administration. DMM at a dose of 50 mg/kg, ip, generated responses characteristic of mescaline, suggesting a similarity in behavioral effects between DMM and mescaline. It is concluded that NMM and DMM, 2 possible metabolites of mescaline, apparently do not play a significant role in the mescaline-induced internal stimuli. (23 ref)—*Journal abstract.*

6810. **Charpy, Jean-Pierre & Guey, Nicole.** (UER de Marseille-Luminy, Marseille, France) **[Experimental and clinical study of the effects of marihuana.]** (Fren) *Cahiers de Psychologie*, 1973, Vol 16(1), 31-55.—Divided 24 21-30 yr old teachers who had never smoked marihuana into 2 groups of 6 men and 6 women each. One group smoked a placebo, the other smoked 3 g marihuana. Ss were tested before smoking, again the same afternoon after smoking, and 1 wk later. Instruments were 1 projective test, 3 intellectual tests (figure arrangement, immediate recall, and reproduction of the duration of sounds), and 3 sensorimotor tests, one requiring the use of judgment. After smoking marihuana, an increase in productivity on the projective test was noted, correlated with loss of learning effectiveness. Despite increased productivity, vocabulary did not become richer or more precise. Relaxation of expression and control was noted, and in some Ss pathological and morbid responses. These results indicate a global effect of marihuana on the cognitive and affective functioning of the total personality. The nonsignificance of other results may have been a matter of timing. (English summary) (15 ref)—*E. E. Brown.*

6811. **Chesher, G. B.** (U Sidney, NSW, Australia) **Facilitation of avoidance acquisition in the rat by ethanol and its abolition by  $\alpha$ -methyl p-tyrosine.** *Psychopharmacologia*, 1974, Vol 39(1), 87-95.—In 4 experiments with a total of 60 Sprague-Dawley, 30 DA, and 20 Wistar male rats, intraperitoneal ethanol (1.5 or 2.0 g/kg) significantly facilitated the acquisition of a 2-way shuttle box avoidance task. This effect was abolished by the prior administration of the catecholamine synthesis inhibitor,  $\alpha$ -methyl p-tyrosine methyl ester hydrochloride (80 mg/kg). This dose of the inhibitor itself had no effect upon acquisition. Results are consistent with the hypothesis that facilitation of avoidance acquisition by ethanol may be related to this drug's effect on newly synthesized catecholamine. (15 ref)—*Journal abstract.*

6812. **Cox, Verne C. & King, James M.** (U Texas, Arlington) **The effects of estradiol on food intake and weight in ovariectomized rats with amygdaloid lesions.** *Physiological Psychology*, 1974(Sep), Vol 2(3-A), 371-373.—The effects of estradiol on increased food intake and

body weight gain induced by ovariectomy were examined in 8 female Holtzman albino rats with lesions of the cortical and medial amygdaloid nuclei. 16 additional Ss served as controls. Lesioned Ss displayed typical ovariectomy-induced hyperphagia and weight gain. Estradiol injections were effective in maintaining normal food intake and weight gain in ovariectomized lesioned Ss. 6813. Cushman, Paul & Kreek, Mary J. (St Luke's Hosp Ctr, New York, NY) **Methadone-maintained patients: Effect of methadone on plasma testosterone, FSH, LH, and prolactin.** *New York State Journal of Medicine*, 1974(Oct), Vol 74(11), 1970-1973.—Studied the effects of a single dose of methadone on levels of plasma testosterone, follicle stimulating hormone (FSH), prolactin, and luteinizing hormone (LH). Hormone levels in 8 male methadone patients ranging in age from 25 to 42 yrs were determined immediately before and 2, 4, 24, 26, and 28 hrs following a standard daily dose of methadone. Although some correlation between high plasma methadone levels and low testosterone levels was found, there were no significant changes in levels of plasma testosterone, prolactin, FSH, or LH following ingestion of methadone. It is concluded that daily methadone doses taken by stable tolerant individuals do not adversely effect plasma testosterone or plasma pituitary hormone levels. (20 ref)—*J. Kelly*.

6814. Dandiya, P. C. & Kulkarni, S. K. (SMS Medical Coll, Jaipur, India) **A comparative study of d- and l-amphetamine on the open field performance of rats.** *Psychopharmacologia*, 1974, Vol 39(1), 67-70.—Open-field behavior following the administration of dextro- or levoamphetamine was compared in male Haffkine albino rats ( $n = 25$  in each drug group). A significant difference was found between the effects of the 2 isomers on horizontal activity, dextroamphetamine alone causing horizontal stereotypy. In both cases dose-response relations were curvilinear. Although both isomers produced vertical stereotypy, the dose-response relations were generally monotonic, increasing with no significant differences between isomers. These differential effects on behavior have been explained on the basis of stereospecificity of adrenergic neurons for amphetamine. Results are consistent with earlier hypotheses that the horizontal and vertical stereotyped behaviors of rats in the open field situation are functions of brain noradrenergic and dopaminergic systems, respectively.—*Journal abstract*.

6815. Davis, Michael & Sheard, Michael H. (Yale U, Medical School) **Effects of lysergic acid diethylamide (LSD) on habituation and sensitization of the startle response in the rat.** *Pharmacology, Biochemistry & Behavior*, 1974(Sep-Oct), Vol 2(5), 675-683.—Measured the effect of LSD on the acoustic startle response in a total of 180 male Sprague-Dawley albino rats in 4 experiments. A low dose (20  $\mu\text{g/kg}$ ) facilitated startle but a high dose (160  $\mu\text{g/kg}$ ) at first facilitated but then depressed startle somewhat, relative to an intermediate dose (40  $\mu\text{g/kg}$ ). 2-brom-LSD (160  $\mu\text{g/kg}$ ) had no detectable effect, and 40  $\mu\text{g/kg}$  LSD did not change startle in raphe-lesioned Ss. LSD appeared to augment sensitization rather than act on the startle circuit directly, since it did not increase startle unless given in conjunction with either background noise or repetitive tones.

LSD did not prevent between-session habituation. Relationships between habituation, sensitization, and the midbrain raphe nuclei are discussed. (18 ref)—*Journal abstract*.

6816. de Souza, Maria R.; Karniol, Isaac G. & Ventura, Dora F. (U São Paulo, Brazil) **Human tonal preferences as a function of frequency under  $\Delta^1$ -tetrahydrocannabinol.** *Pharmacology, Biochemistry & Behavior*, 1974(Sep-Oct), Vol 2(5), 607-611.—Measured tonal preference distributions in 25 normal-hearing, male graduate and undergraduate student volunteers, before and after the ingestion in double-blind conditions of 5, 10, 20, and 40 mg of  $\Delta^1$ -tetrahydrocannabinol ( $\Delta^1$ -THC), an active constituent of marihuana, and placebo. Placebo and 5 mg of  $\Delta^1$ -THC did not change the typical inverted U-shaped distribution of preferences as function of sound frequency. At higher dosages there was a reliable tendency towards preference for the highest pitched tones, and in a few cases, a disruption of the responses. Increase in pulse rate, alterations in time production tasks, and subjective effects were other actions of the higher dosages of the drug. (17 ref)—*Journal abstract*.

6817. Dittich, A. & Woggon, B. (Universitätsklinik Zürich, Switzerland) **[Subjective changes in volunteers without prior experience of cannabis induced by ( $-\Delta^9$ -trans-tetrahydrocannabinol.)** (Germ) *International Pharmacopsychiatry*, 1974, Vol 9(3), 138-151.—27 male and 9 female students (mean age = 25 yrs) received either 350  $\mu\text{g/kg}$   $\Delta^9$ -tetrahydrocannabinol (THC) or placebo orally, in a double-blind study, to assess high-dosage effects of THC. THC caused profound depersonalization and derealization syndromes. Anxious-depressive and euphoric-stimulated states occasionally appeared during 1 intoxication, at approximately the same time, and/or at different times. Some Ss, with their eyes closed, had optical hallucinations which could be influenced by suggestion. The tests used, as well as behavior observation of the Ss, showed a great inter- and intraindividual variability of the intensity of THC effects. 2 hrs after application of the drug, the following subjective side effects were observed: weariness and feebleness, heaviness of the legs, dizziness, and hypersensitivity against cold. While no difference between THC and placebo was found in self-assessed changes in the ability to concentrate, results of the test show a significant decrease of performance under THC. (23 ref)—*English summary*.

6818. Dykstar, Linda A.; McMillan, D. E. & Harris, L. S. (U North Carolina, Chapel Hill) **Antagonism of morphine by long acting narcotic antagonists.** *Psychopharmacologia*, 1974, Vol 39(2), 151-162.—Studied the effects of intramuscular diprenorphine, naltrexone, and naloxone on the schedule-controlled behavior of 8 male White Carneaux pigeons. Naltrexone decreased the rate of responding under the fixed-ratio (FR) and fixed-interval (FI) components of a multiple FI, FR schedule. Naltrexone and diprenorphine were equipotent in blocking the rate-decreasing effects of morphine on schedule-controlled behavior when the antagonists were given immediately before morphine, and both were more potent morphine antagonists than naloxone. Higher doses of all 3 antagonists were required to block the effects of morphine as the time between the administra-

tion of the antagonist and morphine increased. Naltrexone provided a slightly better antagonism of morphine than diprenorphine when morphine was given 2 or 6 hrs after the antagonist, and both antagonists had a longer duration of antagonist action than naloxone. (25 ref) —*Journal abstract.*

6819. Entingh, Dan & Damstra-Entingh, Terri. (U North Carolina, Medical School, Div of Chemical Neurobiology, Chapel Hill) **Avoidance training and incorporation of <sup>3</sup>H-uridine into RNA, UMP and UDP-sugars in mouse brain.** *Pharmacology, Biochemistry & Behavior*, 1974(Sep-Oct), Vol 2(5), 579-584.—The incorporation of <sup>3</sup>H-uridine into RNA and selected nucleotides of the brains of 14 experimental and 14 control male C57BL/6J mice during avoidance training was assayed using intracranial injections of precursor. The net incorporation of uridine into total brain RNA, as assayed by 3 methods in 2 experiments, was not detectably affected by training. Training induced a decrease in the amount of radioactivity recovered from the brain as uridine monophosphate, while concomitantly increasing the amount of radioactivity in substances that chromatographed as uridine diphosphate sugars. Results suggest that changes in the cerebral metabolism of uridine observed during this form of avoidance training may reflect changes in the cellular uptake of uridine, or the metabolism of carbohydrate compounds, rather than increases in the rate of cerebral RNA synthesis. (23 ref)—*Journal abstract.*

6820. Everitt, Barry J.; Fuxe, Kjell & Hökfelt, Tomas. (U Cambridge, England) **Inhibitory role of dopamine and 5-hydroxytryptamine in the sexual behaviour of female rats.** *European Journal of Pharmacology*, 1974(Nov), Vol 29(1), 187-191.—Administered drugs which interfere with either dopamine (DA), serotonin (5-HT), or noradrenaline (NA) transmission in the central nervous system to 70 estrogen- and 50 estrogen + progesterone-treated female Sprague-Dawley rats and made observations on their sexual behavior. Decreasing either DA or 5-HT transmission enhanced the sexual receptivity of estrogen-treated females, while increasing DA and/or 5-HT-decreasing NA inhibited this behavior to varying degrees in estrogen + progesterone-treated females. Results suggest specific roles for these amines in controlling sexual receptivity. (19 ref)—*Journal abstract.*

6821. Farnsworth, Norman R. (U Illinois, Medical Ctr, Coll of Pharmacy) **Psychotomimetic plants: II.** *Journal of Psychedelic Drugs*, 1974(Jan), Vol 6(1), 83-84.—Presents a list of 43 new species of psychotomimetic plants. Family, genus, species and literature references are indicated. This updates the author's initial listing of 174 such plants (see PA, Vol 51:8695).

6822. Fishkin, Steven M. (VA Hosp, Oklahoma City, OK) **Alcohol and alterations in consciousness.** *Biological Psychology Bulletin*, 1974(Mar), Vol 3(3), 110-112.—Argues for the use of subjective data in the study of altered states of consciousness. Subjective data provide "knowledge of" altered states, whereas behavioral data provide "knowledge about" the phenomena. The 2 approaches complement one another in the study of altered states.

6823. Glick, Stanley D.; Jerussi, Thomas P.; Waters, Donald H. & Green, Jack P. (Mt Sinai School of

Medicine, City U New York) **Amphetamine-induced changes in striatal dopamine and acetylcholine levels and relationship to rotation (circling behavior) in rats.** *Biochemical Pharmacology*, 1974(Nov), Vol 23(22), 3223-3225.—High doses of dextroamphetamine induce rats to rotate to the right or left in a manner similar to the rotation toward the side of the lesion of rats unilaterally lesioned in the nigro-striatal systems. The present experiment tested the hypothesis that there is an intrinsic bilateral imbalance in the dopamine (DA) content of left and right nigro-striatal systems which is accentuated by amphetamine. 12 female Sprague-Dawley rats were injected intraperitoneally with 20 mg/kg dextroamphetamine sulfate; 12 controls were injected with saline. An index of rotation, comparing pre- and postinjection turning to the right or left, was obtained for each S. Amphetamine caused significant rotation (5 Ss to the left and 7 to the right) compared to saline. In vitro determinations showed that amphetamine increased striatal acetylcholine levels and decreased DA and norepinephrine levels. In the amphetamine group only, contralateral to ipsilateral striatal DA levels were directly correlated ( $p < .05$ ) with the magnitude of the rotational difference. There were no significant correlations between any of the other chemical ratios and rotation. Results indicate that there is a normal DA imbalance in the left and right striata and that the potentiation of this imbalance by amphetamine is associated with rotation. —B. McLean.

6824. Greaves, George. (Gallia-Jackson-Meigs Community Mental Health Ctr, Gallipolis, OH) **Toward an existential theory of drug dependence.** *Journal of Nervous & Mental Disease*, 1974(Oct), Vol 159(4), 263-274.—A review of 5 leading theories of drug dependence—acquired drive, avoidance paradigm, metabolic disease, conditioning, and automedication—finds them all lacking. Drug dependence is discussed within the context of "passive euphoria," and it is suggested that persons who become drug dependent are those who are not able, for reasons of attitudes or other factors, to create euphoria in usual ways. It is argued that most drug programs err seriously by failing to help the drug-dependent person to find euphoric alternatives to drugs. Because of the ascetic orientation of most drug programs, they thus tend to undermine the very goal for which they strive. (87 ref)—*Journal abstract.*

6825. Grenngress, Pamela M. & Tonge, Sally R. (Ciba-Geigy Ltd, Basel, Switzerland) **The accumulation of noradrenaline and 5-hydroxytryptamine in three regions of mouse brain after tetrabenazine and iproniazid: Effects of ethinyloestradiol and progesterone.** *Psychopharmacologia*, 1974, Vol 39(2), 187-191.—Conducted an experiment to determine preliminary information on the effects of ethinyloestradiol and progesterone on monoamine synthesis. 4 groups of 5 ovariectomized albino mice were injected with tetrabenazine. 12 hrs later, 1 group was injected with iproniazid, 1 with iproniazid and ethinyloestradiol, and 1 with iproniazid and progesterone. All Ss were killed 4 hrs after the iproniazid injection (16 hrs after tetrabenazine), and noradrenaline (NA) and 5-hydroxytryptamine concentrations were determined in 3 regions: the forebrain (cortex, hippocampus), the middle-brain (hypothalamus,

thalamus, striatum), and the hindbrain (midbrain, pons, medulla, cerebellum). Ethinylestradiol increased the accumulation of NA in the fore- and middle-brain regions; progesterone decreased the accumulation of NA in the fore- and middle-brain regions and of 5-hydroxytryptamine in the middle- and hind-brain regions. It is suggested that the results could help to explain the increased incidence of depressive disorders at times when estrogen levels are suddenly reduced (e.g., postpartum and menopausal depressions), because low NA concentrations seem to be related to depression. —*Journal abstract.*

6826. Harris, Lance; Zucker, Robert A. & Lynn, Edward J. (American Lake VA, Psychology Services, Tacoma, WA) **Some effects of nitrous oxide on fear.** *Journal of Psychedelic Drugs*, 1974(Jan), Vol 6(1), 29-41. —Investigated the fear-reducing potential of nitrous oxide inhalation in 40 female Ss with strong responses to the snake item of the Fear Survey Schedule. 4 groups of 10 Ss were each given varying nitrous oxide doses and individually asked to approach a tame snake. Instruments used included an approach distance measure; the Fear Thermometer; questionnaires recording attitude and expectations, drug use history, and perceptions of the experiment; the Adjective Checklist; and a semantic differential. Results indicate significant fear reduction as a result of initial inhalation, and lack of effect corresponding to dosage level. The greatest fear reduction is reflected in the verbal-cognitive data, the second greatest in the overt-motor response category. (33 ref)—R. Tomasko.

6827. Heacock, Del & Wickle, Robert. (Boise State Coll) **The effect of alcohol and placebo on reaction time and distance judgment.** *Journal of General Psychology*, 1974(Oct), Vol 91(2), 265-268. —Observed 20 19-24 yr old Ss' performance on reaction time (RT) and distance judgment (DJ) tasks following 5 doses of alcohol or placebo. The alcohol and placebo groups both showed impairment of RT by trials; DJ was only affected in the alcohol group. It is suggested that alcohol may lead to a misperception of when to react rather than an actual physical impairment of reaction time. —*Journal abstract.*

6828. Herrenkohl, Lorraine R. (Temple U) **Differential effects of progesterone on lactation and nursing behavior in late pregnant and postparturient rats.** *Physiology & Behavior*, 1974(Oct), Vol 13(4), 495-499. —Injected 2-mg doses of progesterone subcutaneously into nulliparous Sprague-Dawley rats from Days 18-23 of gestation. The injections delayed the onset of birth, caused a high mortality among young, and produced young that failed to thrive. Since nursing behavior appeared normal, the difficulties appeared to be with lactation. Because mammary glands contained milk, problems with secretory activation in the glands were ruled out. Even though the pups suckled teats, they got no milk, suggesting dysfunctions in milk release. To determine whether progesterone might alter maternal behavior once it was established after birth, progesterone was injected during the 1st postpartal week. The injections depressed litter weights and increased the latency to crouch over pups. During the 2nd postpartal week, the injections reduced the latency to crouch, causing females to act vigorously toward pups at a time

when maternal behavior typically starts to decline. Thus, depending upon the stage of the reproductive cycle in which progesterone is introduced, it can either inhibit or enhance nursing behavior. The action of progesterone during late gestation appears to be only on milk release. (30 ref)—*Journal abstract.*

6829. Herz, A.; Bläsig, J. & Papeschi, R. (Max-Planck-Inst für Psychiatrie, München, W Germany) **Role of catecholaminergic mechanisms in the expression of the morphine abstinence syndrome in rats.** *Psychopharmacologia*, 1974, Vol 39(2), 121-143. —Studied the effects of dextroamphetamine, cocaine, and levodopa on the precipitated morphine withdrawal syndrome in medium- and highly dependent male Sprague-Dawley rats. Intraperitoneal administration of the drugs shortly before precipitating withdrawal by levallorphan induced a dose-dependent increase of dominant withdrawal signs such as jumping and a decrease of recessive signs such as wet dog shaking; signs such as diarrhea and ptosis decreased, whereas rhinorrhea, salivation, and lacrimation increased. Therefore, the effects of these drugs are interpreted as potentiation of withdrawal. Activation of noradrenergic or dopaminergic mechanisms with desipramine or apomorphine induced an increase in the intensity of withdrawal. When catecholamines (CA) were previously depleted by alpha-methyl-para-tyrosine (AMT), apomorphine lost a great part of its effectiveness. Blockade of CA synthesis by AMT alone resulted in decreased jumping while at the same time writhing largely increased, inducing a profile of signs characteristic for a weak withdrawal. Selective inhibition of noradrenaline synthesis by FLA-63 resulted in a reduction in withdrawal intensity. Ro 4-4602 + levodopa, given after AMT, antagonized and reversed the reduction of withdrawal. It is concluded that brain CA, especially noradrenaline, are involved in the manifestation of the morphine withdrawal syndrome. (45 ref) —*Journal abstract.*

6830. Holtzmann, Stephen G. (Emory U) **Tolerance to the stimulant effects of morphine and pentazocine on avoidance responding in the rat.** *Psychopharmacologia*, 1974, Vol 39(1), 23-37. —Determined dose-response curves for the effects of morphine (3-10 mg/kg) and pentazocine (1.0-30 mg/kg) on continuous avoidance responding in 5 experiments with 10 male CFE rats. Each dose of morphine was retested following 3 days of morphine administration. The pentazocine curve was redetermined after 3 days of treatment with either pentazocine or morphine. Upon initial testing, morphine and pentazocine both generated biphasic dose-response curves. Graded increases in response rates were produced by 3-3.0 mg/kg of morphine and by 1.0-10 mg/kg of pentazocine; behavior was disrupted by 10 mg/kg of morphine and by 30 mg/kg of pentazocine. The stimulant effects of the lower doses of morphine and pentazocine were markedly reduced by 3 days of drug treatment; the disruptive effect of the highest dose of each drug was similarly attenuated. Findings show that each drug can develop to a stimulant component of tolerance can develop to a stimulant component of tolerance in the rat. The development of pentazocine cross-tolerance to morphine provides additional support for the view that a common mechanism mediates the effects of morphine and

pentazocine on avoidance behavior. (29 ref)—*Journal abstract*.

6831. Houser, Vincent P. & Van Hart, Dale A. (VA Hosp, Psychotropic Drug Lab, Perry Point, MD) **Modulation of cholinergic activity and the aversive threshold in the rat.** *Pharmacology, Biochemistry & Behavior*, 1974(Sep-Oct), Vol 2(5), 631-637.—Used the spatial preference technique to measure the analgesic potency of atropine sulfate, eserine sulfate, pilocarpine nitrate, scopolamine methylbromide, and scopolamine hydrobromide in 18 male Sprague-Dawley rats. Enhanced cholinergic tone via the intraperitoneal administration of eserine or pilocarpine in conjunction with scopolamine methylbromide produced significant increments in the aversive threshold. These increments could not be accounted for solely by changes in motor activity or the debilitating effects of enhanced peripheral cholinergic stimulation. Scopolamine hydrobromide (1.0 mg/kg) fully blocked the increments in the aversive threshold noted after the administration of pilocarpine (10.0 mg/kg). Results suggest that agents which enhance cholinergic tone can produce significant analgesia in the rat. While no firm conclusions can be made without further evidence, especially with regard to the antianalgesic effects of the anticholinergics, it is possible that central cholinergic mechanisms may mediate the aversive qualities of electric shock in the rat. (22 ref)—*Journal abstract*.

6832. Houser, Vincent P. (VA Hosp, Psychotropic Drug Lab, Perry Point, MD) **The alternation of aversive thresholds after chronic administration of two tranquilizing agents.** *Behavioral Biology*, 1974(Nov), Vol 12(3), 383-392.—Administered chlorpromazine (.06, .125, and .25 mg/kg), and chlordiazepoxide (2.0, 4.0, 8.0, 16.0, and 32.0 mg/kg), to 3 male squirrel monkeys performing under a titration schedule to ascertain their effects upon aversive thresholds. Both agents reliably raised the aversive threshold to electric shock, but chlorpromazine was more potent in this regard. Chlordiazepoxide was able to augment the aversive threshold to moderate levels only under the middle range (i.e., 8 and 16 mg/kg) of doses tested, while chlorpromazine was able to raise the threshold to maximum levels under the 0.25 mg/kg dosage. Results suggest that chlordiazepoxide may have analgesic properties at moderate doses, while chlorpromazine may raise the aversive threshold by interfering with the execution of the operant response.—*Journal abstract*.

6833. Huang, Jen-Tzaw & Ho, Beng T. (U Minnesota) **Discriminative stimulus properties of d-amphetamine and related compounds in rats.** *Pharmacology, Biochemistry & Behavior*, 1974(Sep-Oct), Vol 2(5), 669-673.—Trained 20 male Sprague-Dawley rats to discriminate between 0.8 mg/kg of dextroamphetamine sulfate and saline. During the discriminative training, Ss were shaped to respond to 1 of 2 levers for a food reward when they were given amphetamine and to respond to the other lever when they were treated with saline. Ss receiving low doses (.2-.4 mg/kg) of amphetamine exhibited mostly saline-like responses, but at a dose of .8 mg/kg they produced more than 80% responses on the amphetamine lever. Doses higher than 2.4 mg/kg caused an initial stereotyped behavior, and the Ss showed a

period of latency before responding on the amphetamine lever. In order to elucidate the structural characteristics of amphetamine involved in the production of the discriminative stimulus properties, a number of amphetamine derivatives and related compounds were administered. Levoamphetamine, ephedrine, norephedrine, 4-methoxyamphetamine, and methylphenidate all produced discriminative stimulus properties similar to dextroamphetamine, but doses 2-10 times greater than dextroamphetamine were necessary. Results suggest that most psychomotor stimulants, although having different structures, are likely to produce discriminative stimulus properties similar to dextroamphetamine. (15 ref)—*Journal abstract*.

6834. Huang, Jen-Tzaw & Ho, Beng T. (U Minnesota) **Effects of nikethamide, picrotoxin and strychnine on "amphetamine-state."** *European Journal of Pharmacology*, 1974(Nov), Vol 29(1), 175-178.—Trained 5 male Sprague-Dawley rats to discriminate between dextroamphetamine sulfate (.8 mg/kg) or saline by selectively pressing 2 levers programed on differential response at low-rate 15-sec schedule for food reinforcement. Intraperitoneal nikethamide (25-75 mg/kg), strychnine (.5 and 10 mg/kg), and picrotoxin (1.0 and 2.0 mg/kg) did not produce dextroamphetamine-like responding in the Ss. Results indicate that in order for drugs to produce similar discriminative cues they should possess a specific pharmacological property in common.—*Journal abstract*.

6835. Itil, Turan M. et al. (New York Medical Coll, NY) **"Psychotropic" action of sex hormones: Computerized EEG in establishing the immediate CNS effects of steroid hormones.** *Current Therapeutic Research*, 1974(Nov), Vol 16(11), 1147-1170.—In a series of studies based on quantitative pharmaco-EEG with computerized cerebral biopotentials, and using a series of statistical procedures, the immediate effects of mesterolone, an androgen, and cyproterone acetate, an antiandrogen, on human brain function were demonstrated in healthy male adult volunteers. Effects were determined even in dosages without measurable hormonal effects. According to computer EEG profiles, the effects of high and extremely high dosages of mesterolone on brain function were similar to those of stimulatory tricyclic antidepressants, while in low dosages the effects resembled those of certain psychostimulant compounds such as dextroamphetamine and isocarboxacid. The computer EEG profiles of cyproterone acetate in high dosages were similar to those of anxiolytics, and in low dosages they resembled those of sedative tricyclic antidepressants. Pilot clinical trials with male and female adult patients supported the prediction of the quantitative pharmaco-EEG. Mesterolone was effective in some depressive males, while cyproterone acetate in very low dosages was effective in male anxiety and in high dosages was useful in alleviating the symptoms of the female premenstrual syndrome. (26 ref)—*Journal abstract*.

6836. Jacob, Joseph J. & Michaud, Gérard M. (Pasteur Inst, Lab of Pharmacology & Toxicology, Paris, France) **Acute physical dependence in the waking dog after a single low dose of morphine.** *Psychological Medicine*, 1974(Aug), Vol 4(3), 270-273.—Found that in waking mongrel dogs, a small dose of morphine (0.1 mg/kg intravenously) was sufficient to (a) induce a quite

appreciable state of sedation which might be more closely related to clinical analgesia than experimental nociception; and (b) allow for precipitation of clear-cut signs of abstinence (agitation, tachycardia, tachypnoea, mydriasis, hyperthermia, tremors, salivation, and urination) when naloxone (3 mg/kg subcutaneously) was injected 1.5 hrs later.—*Journal abstract*.

6837. Jacobs, Barry L. (Princeton U) **Evidence for the functional interaction of two central neurotransmitters.** *Psychopharmacologia*, 1974, Vol 39(1), 81-86.—Conducted a series of experiments with a total of 188 male Sprague-Dawley rats in which Ss pretreated with pargyline and then given either levotryptophan or levodopa displayed strikingly similar behavioral syndromes. Especially prominent were tremor, rigidity, lateral head weaving, and reciprocal forepaw treading. Because of the overt similarity in these 2 syndromes, it was hypothesized that they might be dependent upon a common neurochemical substrate. This was tested by observing whether blocking either the biosynthesis of serotonin or dopamine or their receptors was capable of blocking the production of the syndrome produced by precursors of the other transmitter. Pretreatment with  $\alpha$ -methyl-p-tyrosine, a catecholamine synthesis inhibitor, failed to affect either syndrome, whereas *p*-chlorophenylalanine, a serotonin synthesis inhibitor, blocked both. The dopamine receptor blocker pimozide had no effect on either syndrome, while the serotonin receptor blockers cinanserin and methysergide blocked or markedly diminished both syndromes equally. It is concluded that at least a portion of the syndrome that emerges following pargyline and levodopa is mediated by serotonin rather than dopamine.—*Journal abstract*.

6838. Karkischenko, N. N. (Rostov-on-Don Medical Inst, USSR) **The participation of endogenic monoamines in the systemic action of neuroleptics and antidepressants.** (Russ) *Farmakologiya i Toksikologiya*, 1974, Vol 37(3), 271-275.—Used changes in the level of excitability of various brain structures of 54 rabbits in response to electrical stimulation as a measure of the effects of endogenic catecholamines liberated by the introduction of cocaine and amphetamine, and of endogenic serotonin. The effects of a range of doses of aminazine and amitriptyline on these changes were then studied. The depressing action of aminazine was due to adrenolytic, and in part to its antiserotonine activity in the dorsal hypothalamus, amygdala, and nuclei of the basal reticular formation, and to its cholinolytic effects in several brain structures. The stimulating action of amitriptyline was due to its adrenaline- and serotonine-positive effect in the dorso-medial nuclei of the amygdala, posterior hypothalamus, reticular formation, and somato-sensory cortex. Its depressing action was a result of its serotonine-sensitizing effect on tonsil basolateral nuclei and cholinolytic action on most of the brain structures. (English summary)—A. G. Pook.

6839. Khadzai, Ya. I. & Nikolaeva, A. V. (Kharkov Chemico-Pharmaceutical Scientific Research Inst, USSR) **Features peculiar to the development of the somniferous effect of sodium amytal with its rectal administration.** (Russ) *Farmakologiya i Toksikologiya*, 1974, Vol 37(3), 312-315.—Concludes from experiments on 20 rabbits that sodium amytal in doses of 40, 80, and

160 mg/kg, introduced into the rectum exerts a soporific action similar to that achieved by intramuscular and subcutaneous administration, and superior to that following administration through the mouth. (English summary)

6840. Komendantova, M. V. & Eltsova, Z. I. (Moscow Medical Stomatological Inst, USSR) **The action of analgesics in adrenalectomy against the background of hydrocortisone administration.** (Russ) *Farmakologiya i Toksikologiya*, 1974, Vol 37(3), 275-279.—After subtotal adrenalectomy, the analgesic effect of amidopyrine on white rats increased greatly, but the effect of morphine was weakened. The toxicity of both preparations increased. When there was a surplus of hydrocortisone, the analgesic effect of both preparations decreased and the toxicity of amidopyrine was reduced, but that of morphine was unchanged. (English summary) (27 ref)—A. G. Pook.

6841. Kuhn, D. M.; Appel, J. B. & Greenberg, I. (U South Carolina) **An analysis of some discriminative properties of  $\Delta$ -amphetamine.** *Psychopharmacologia*, 1974, Vol 39(1), 57-66.—Trained and tested 6 male Sprague-Dawley albino rats on a 2-lever discrimination task based upon the presence or absence of dextroamphetamine sulfate (1.0 mg/kg). This compound produced strong discriminative cues. A dose-effect function was then ascertained, and the discriminative effective dose was found to be .23 mg/kg amphetamine. To determine the effective duration of amphetamine action, the interval between injection and testing was varied; it was found that the discriminative effects of the drug began to dissipate between 60 and 90 mins postinjection. To compare the discriminative cues of other drugs with those of amphetamine, injections of LSD, psilocybin, tetrahydrocannabinol, mescaline, and caffeine were given during extinction. In all cases, Ss responded predominantly on the saline-related lever. Only methamphetamine produced dextroamphetamine-like responding. Alpha-methyl-para-tyrosine, a compound which depletes brain catecholamines, disrupted the amphetamine-saline discrimination. (27 ref)—*Journal abstract*.

6842. Lagergren, Krister & Levander, Sten. (Karolinska Sjukhuset, Stockholm, Sweden) **A double-blind study on the effects of piracetam upon perceptual and psychomotor performance at varied heart rates in patients treated with artificial pacemakers.** *Psychopharmacologia*, 1974, Vol 39(1), 97-104.—Pacemaker-patients have previously been found to have significantly impaired performance in tests of critical flicker fusion (CFF), 2-choice reaction time (RT), and vernier visual acuity (KVAT) when the heart rate is reduced from 70 to 45 beats/min in sitting position. 12 52-79 yr old patients treated with artificial pacemakers were given 1.6 g piracetam orally 3 times/day for 9 days and placebo for another 9 days. The effects on performance were compared in CFF, RT, and KVAT at heart rates of 70 and 45 beats/min in sitting position. With placebo, there were significant impairments in CFF and RT at 45 beats/min and a similar trend in KVAT. With piracetam, there were significantly fewer impairments in CFF at 45 beats/min and similar trends in RT and KVAT. With piracetam there were also significant increases in

KVAT, irrespective of heart rate, compared with placebo. Results indicate that piracetam had some protective effect against the influence of an assumed cerebral hypoxia at 45 beats/min or a cortical arousing effect, which counteracted the decrement in vigilance associated with the slow heart rate. (22 ref)—*Journal abstract*.

6843. Lawrence, David K.; Pertwee, Roger G.; Gill, Edward W. & Piper, Julian M. (U Oxford, England) Brain levels and relative potency of the 1,2-dimethylheptyl analogue of  $\Delta^1$ -tetrahydrocannabinol in mice. *Biochemical Pharmacology*, 1974(Nov), Vol 23(21), 3017-3027.—Unlabeled and tritium-labeled forms of the 1,2-dimethylheptyl analog of  $\Delta^1$ -tetrahydrocannabinol ( $\Delta^1$ -DMHP) were prepared as incompletely separated mixtures of threo- and erythro-isomers. The *n*-heptyl analog (*n*-heptyl- $\Delta^1$ -THC) was also prepared, and this compound and samples of  $\Delta^1$ -DMHP containing different proportions of threo- and erythro-isomers were compared with  $\Delta^1$ -THC using the mouse ring "catalepsy" test. *n*-Heptyl- $\Delta^1$ -THC was twice as active as  $\Delta^1$ -THC. The duration of action of both drugs did not differ from that of  $\Delta^1$ -THC. Brain and blood levels of  $\Delta^1$ -DMHP and its metabolites were measured at various times after injections with  $^3$ H- $\Delta^1$ -DMHP and were compared with the corresponding levels of  $\Delta^1$ -THC and its metabolites. The major metabolite in the mouse of  $\Delta^1$ -DMHP was identified as 7-hydroxy- $\Delta^1$ -DMHP. The brain levels of this metabolite and  $\Delta^1$ -DMHP itself correlated equally well with the behavioral effect and showed that the higher activity of  $\Delta^1$ -DMHP is not due to metabolic or distribution effects, and that the fraction of the injected dose which reached the brain was lower than for  $\Delta^1$ -THC. It is concluded that the differences in the potencies of  $\Delta^1$ -THC and  $\Delta^1$ -DMHP in producing behavioral changes in the mouse are due to differences in activity at the site of action. (19 ref)—*Journal abstract*.

6844. Lecanuet, Jean-Pierre; Deweer, Bernard & Bloch, Vincent. (LPN-CNRS, Gif-sur-Yvette, France) Effects of post-exposure anaesthesia on the retention of imprinting. *Behavioral Biology*, 1974(Nov), Vol 12(3), 365-372.—Data from 2 experiments with a total of 95 hybrid (Harco) chicks show that Ss anesthetized immediately, 6 min, or 15 min after the end of a 20-min imprinting session, exhibited significantly less following behavior than untreated controls, when tested 3 days later. Results are interpreted in terms of consolidation disruption, implying a consolidation period of at least a 15-min duration for this type of perceptual learning. (18 ref)—*Journal abstract*.

6845. Liljequist, R.; Linnoila, M. & Mattila, M. J. (U Helsinki, Finland) Effect of two weeks' treatment with chlorimipramine and nortriptyline, alone or in combination with alcohol, on learning and memory. *Psychopharmacologia*, 1974, Vol 39(2), 181-186.—Used a double-blind crossover design to treat 20 healthy male student volunteers with nortriptyline, chlorimipramine, or placebo for 2 wks. On the 14th day of treatment the effect of drugs and their interaction with alcohol was tested in 2 kinds of learning situations. The presence of the antidepressants in plasma was checked by means of the tyramine pressor test. Alcohol alone significantly increased the numbers of mistakes in the paired-associated

learning test. Nortriptyline alone slightly increased the numbers of mistakes in paired-associated learning and impaired backward recall of digits. Chlorimipramine alone had no measurable effect on learning or memory. Nortriptyline enhanced the deleterious effect of alcohol on the ability to learn new material, whereas chlorimipramine antagonized alcohol in this respect. Both antidepressants significantly shifted to the right the dose-response graph for the tyramine effect on systolic blood pressure. (20 ref)—*Journal abstract*.

6846. Little, Betsy C.; Matta, Raymond J. & Zahn, Theodore P. (U Keele, England) Physiological and psychological effects of progesterone in man. *Journal of Nervous & Mental Disease*, 1974(Oct), Vol 159(4), 256-262.—Hypothesized that fluctuations in progesterone levels can account for the psychophysiological changes occurring during the luteal phase of the menstrual cycle. Progesterone (10 mg/day) was administered daily to 6 men during either the 2nd or 3rd wk (double blind) of a 4-4½ wk period. Skin conductance (SC), heart rate (HR), and respiration were recorded continuously during rest, presentation of mild tones, and performance of time estimation and reaction time tasks. Body temperature was taken in the morning and the Nowlis Adjective Check List of Mood was given daily. Results show a significant rise in temperature and reaction time and decrease in HR variability during progesterone administration which returned to baseline soon after stopping drug intake. Significant decreases in SC level and increases in the "sluggishness" of spontaneous and elicited SC responses persisted for a week postdrug. Expected increases in base HR and respiration rate and changes in mood were not significant. Data only partially support the progesterone hypothesis of premenstrual tension and suggest that the role of estrogen or some other hormone may be important. (18 ref)—*Journal abstract*.

6847. Livrea, P.; di Reda, L. & Bertolino, A. [Modification of HVA and 5-HIAA levels in the rat brain after acute and chronic treatment with ethanol.] (Ital) *Acta Neurologica*, 1974(Mar-Apr), Vol 29(2), 220-226.—Employed as Ss 3 groups of 10 male rats each. Group 1 were controls, Group 2 was fed ethanol acutely, and Group 3 received ethanol continuously. In the acute group 5-hydroxyindoleacetic acid (5-HIAA) level of the brain increased and the homovanillic acid (HVA) level fell more than in the controls, while in the continuously fed group 5-HIAA level fell and HVA increased more than in the controls. (49 ref)

6848. Luttge, William G.; Hall, Nicholas R. & Wallis, Cleatus J. (U Florida, Medical School, Ctr for Neurobiological Sciences) Studies on the neuroendocrine, somatic and behavioral effectiveness of testosterone and its 5 $\alpha$  reduced metabolites in Swiss-Webster mice. *Physiology & Behavior*, 1974(Oct), Vol 13(4), 553-561.—Conducted 4 experiments with a total of 81 female and 158 male mice in which dihydrotestosterone and 3 $\alpha$ -androstenediol were more potent in feedback suppression of gonadotropin secretion than testosterone and 3 $\beta$ -androstenediol, as assessed by inhibition of ovarian compensatory hypertrophy and by production of testicular atrophy. All 4 of these androgens were potent stimulators of seminal vesicle growth. When dissolved in propylene glycol

vehicle, testosterone was by far the most effective stimulator of male sexual behavior, followed by  $3\beta$ -androstenediol and finally  $3\alpha$ -androstenediol. Dihydrotestosterone failed to stimulate sexual behavior when dissolved in this vehicle; however, when dissolved in an oily vehicle dihydrotestosterone was nearly as potent as testosterone. (62 ref)—*Journal abstract*.

6849. Maitre, Michel et al. (U Louis Pasteur, Strasbourg Cedex, France) **Protective effect of adenosine and nicotinamide against audiogenic seizure.** *Biochemical Pharmacology*, 1974(Oct), Vol 23(20), 2807-2816.—Intraperitoneal injection of adenosine into male RB strain Swiss albino mice sensitive to audiogenic convulsions rapidly produced in proportion to the dose administered: sedation, modification of the EEG, lowering of arterial pressure, and protection against audiogenic seizures. Simultaneous injection of adenosine and nicotinamide produced the most striking protection, the effect being independent of all the others. During the protective period to convulsions, there was an elevation in the energy rich compounds, adenosine triphosphate and phosphocreatine, which was attributable to a reduction in their rate of degradation. During the same period, a diminution in the cerebral level of noradrenaline took place. The pharmacological effects of adenosine appear to oppose those of its structural analog, caffeine with regard to mobility, arterial pressure, basal metabolic rate, and body temperature. (28 ref)—*Journal abstract*.

6850. Mashkovsky, M. D. et al. (Ordzhonikidze All-Union Scientific Chemico-Pharmaceutical Inst, Moscow, USSR) **[A comparative study of the pharmacological activity of some derivatives of the pyrazinoindol group.]** (Russ) *Farmakologiya i Toksikologiya*, 1974, Vol 37(3), 267-271.—In vitro experiments indicate that some pyrazinoindol derivatives, even at very low concentrations, inhibit the activity of liver mitochondria in rats, and selectively block the deamination of serotonin. In vivo experiments show that some of the compounds increased the convulsive effect of tryptamine in intact rats, the head-twitch response to 5-oxytryptophane in mice, and the pressor effects of tyramine and norepinephrine in anesthetized rats. The derivatives were, however, not as powerful monoaminoxidase inhibitors as phenazine. (English summary) (19 ref)—A. G. Pook.

6851. Maugh, Thomas H. **Marihuana: The grass may no longer be greener.** *Science*, 1974(Aug), Vol 185(4152), 683-685.—Reports that research since 1969 has produced a growing body of evidence suggesting that the effects of marihuana use are cumulative and dose-related. It is stated that prolonged heavy use of marihuana (or less frequent use of hashish) is associated with 6 different types of potential hazard, including possible chromosome damage.

6852. Meisch, Richard A. & Thompson, Travis. (U Minnesota, Psychiatry Research Unit) **Ethanol intake as a function of concentration during food deprivation and satiation.** *Pharmacology, Biochemistry & Behavior*, 1974(Sep-Oct), Vol 2(5), 589-596.—In Exp I the ethanol intake and responding of 6 male Sprague-Dawley albino rats were measured at concentrations of 0 (water control), 2, 4, 8, 16, and 32% during daily 1-hr sessions in operant conditioning chambers. Ss were run first food-

deprived (80% of free-feeding weight) and then food-satiated (free access to food in home cages). Ethanol intake was greater when Ss were food-deprived, but under both food conditions (a) ethanol intake exceeded that of water at all concentrations, (b) quantity (mg) consumed increased with the concentration, and (c) the highest rate of responding occurred at the beginning of the session. In Exp II fixed-ratio responding by the same Ss, maintained by contingent presentation of 32% ethanol, exceeded water control responding. This finding strengthened the conclusion that this concentration can serve as a reinforcer for the food-satiated rat. (31 ref)—*Journal abstract*.

6853. Miller, Lyle H. et al. (Temple U, Medical School) **Polypeptide influences on attention, memory and anxiety in man.** *Pharmacology, Biochemistry & Behavior*, 1974(Sep-Oct), Vol 2(5), 663-668.—Examined the effects of ACTH<sub>1-34</sub> and ACTH<sub>4-10</sub> on a variety of bioelectric and behavioral measures of attention, memory and anxiety in a total of 40 healthy, male medical students within the context of a disjunctive reaction time paradigm. In 2 experiments ACTH<sub>1-34</sub> had no effect on any of the measures involved; ACTH<sub>4-10</sub>, however, served to improve visual memory, decrease anxiety, reinstate a previously habituated alpha blocking response in the occipital EEG, and generally influence the occipital EEG toward a pattern consistent with increased attention. Results suggest a direct polypeptide influence on central nervous system attentional mechanisms. (20 ref)—*Journal abstract*.

6854. Mitchell, Denis; Parker, Lorne F. & Woods, Stephen C. (U Washington) **Cyclophosphamide-induced sodium appetite and hyponatremia in the rat.** *Pharmacology, Biochemistry & Behavior*, 1974(Sep-Oct), Vol 2(5), 627-630.—In 2 experiments a total of 15 male Long-Evans rats were intraperitoneally administered 100 mg/kg cyclophosphamide. An increase of both sodium preference and consumption resulted in Ss given a choice between water and saline (.15 M) to drink. Measurement of serum sodium concentration revealed that the cyclophosphamide-treated Ss had lower values than the 15 non-drugged controls, indicating that the cyclophosphamide-elicited sodium appetite was caused by a drug-induced need for sodium. (23 ref)—*Journal abstract*.

6855. **National Clearinghouse for Drug Abuse Information.** (Rockville, MD) **Mescaline.** *National Clearinghouse for Drug Abuse Information, Report Series*, 1973(May), Ser 15(1), 16 p.—Describes the pharmacology, chemistry, clinical effects, and treatment use of mescaline. A number of articles are reviewed to show the drug's history and legal status, and to present the opinions of experts regarding it. (60 ref)

6856. **National Clearinghouse for Drug Abuse Information.** (Rockville, MD) **Phencyclidine (PCP).** *National Clearinghouse for Drug Abuse Information, Report Series*, 1973(Apr), Ser 14(1), 11 p.—Describes the pharmacology, chemistry, clinical effects, uses, and treatment uses of phencyclidine (PCP). A number of articles are reviewed to show the drug's history and legal status, and the treatment of acute intoxication with PCP. (43 ref)

6857. Negrete, Juan C. **[Alcohol and transit.]** (Span) *Acta Psiquiátrica y Psicológica de América Latina*,

1974(Apr), Vol 20(2), 132-141.—Outlines the main effects of alcohol on drinking behavior and stresses the hazards of different kinds of drinkers. (26 ref)

6858. Niwaguchi, Tetsukichi; Inoue, Takako & Sakai, Tokiyasu. (National Research Inst of Police Science, First Chemistry Section, Tokyo, Japan) **Studies on the *in vitro* metabolism of compounds related to lysergic acid diethylamide (LSD).** *Biochemical Pharmacology*, 1974(Nov), Vol 23(21), 3063-3066.—Reports results of experiments which investigated the metabolism of several LSD derivatives by rat liver supernatant in order to find clues to the mechanism of the hallucinogenic action of LSD.

6859. Oliverio, Alberto & Castellano, Claudio. (CNR, Lab di Psicobiologia e Psicofarmacologia, Rome, Italy) **Genotype-dependent sensitivity and tolerance to morphine and heroin: Dissociation between opiate-induced running and analgesia in the mouse.** *Psychopharmacologia*, 1974, Vol 39(1), 13-22.—Studied morphine and heroin-induced running activity (running fit), analgesia, and tolerance in 300 male BALB/cJ, C57BL/6J, and DBA/2J mice. Acute tolerance developed in all strains tested within 48 hrs. The effects of the opiates on the running fit and analgesia were strain-dependent, and a negative strain correlation was evident between the 2 measures. The development and the recovery from acute tolerance were also genetically determined. It is concluded that the motor and analgesic effects of morphine in the mouse are 2 distinct phenomena and that the same neuronal and biochemical model cannot explain them. Results are discussed in relation to the brain regional and biochemical differences reported for these strains. (25 ref)—*Journal abstract*.

6860. Paalzow, Gudrun & Paalzow, Lennart. (Uppsala, Biomedical Ctr, Sweden) **Theophylline increased sensitivity to nociceptive stimulation and regional turnover of rat brain 5-HT, noradrenaline and dopamine.** *Acta Pharmacologica & Toxicologica*, 1974(Mar), Vol 34(3), 157-173.—Theophylline decreased the thresholds of nociceptive stimulation (motor response, vocalization, and vocalization afterdischarge) in male Sprague-Dawley rats, the effects being maximal 30 min after administration. Theophylline increased the endogenous level of dopamine (DA) in the telencephalic cortex and decreased the level of noradrenaline (NA) in regions including the diencephalon and the striatum. After inhibition of tyrosine hydroxylase with  $\alpha$ -methyl- $p$ -tyrosine, theophylline decreased the depletion of DA brought about by the inhibitor in the telencephalic cortex, indicating a decreased turnover of DA in this region. Theophylline accelerated the decrease in NA concentration in the diencephalon-striatum region induced by the enzyme inhibition, indicating an increased turnover of NA. The 5-hydroxy-indoleacetic acid content in the telencephalic cortex was decreased by theophylline and increased in the mesencephalon-pons-medulla oblongata regions. Inhibition of tyrosine hydroxylase counteracted the decrease in the threshold of vocalization afterdischarge produced by theophylline. It is suggested that there is a relationship between a reduced turnover of DA and serotonin in the telencephalic cortex and the theophylline-induced decrease of the threshold for vocalization afterdischarge, while the

modulation of the vocalization response may be related to the serotonin metabolism in lower brainstem structures. (35 ref)—*Journal abstract*.

6861. Parker, Lorne F. & Radow, Barbara L. (U Washington, Physiology-Psychology Group) **Morphine-like physical dependence: A pharmacologic method for drug assessment using the rat.** *Pharmacology, Biochemistry & Behavior*, 1974(Sep-Oct), Vol 2(5), 613-618.—45 female Wistar albino rats maintained on various dosage regimens of morphine showed dose-related taste aversions to a saccharin solution offered to them upon withdrawal from the drug. Maximal saccharin aversions occurred between 72 and 96 hrs after termination of morphine injections and gradually returned to baseline preference levels after 14 days of morphine abstinence. Results suggest that the morphine-treated Ss associated the aversive components of the morphine withdrawal syndrome with saccharin consumption and manifested conditioned aversions to the saccharin solution which extinguished as the withdrawal syndrome subsided. Findings are discussed with regard to the potential use of conditioned taste aversions in determining whether test compounds are capable of causing physical dependence in rats. (33 ref)—*Journal abstract*.

6862. Peres, Vera L.; Gentil, Cleber G.; Graeff, Frederico G. & Covian, Miguel R. (School of Medicine, São Paulo, Brazil) **Antagonism of the dipsogenic action of intraseptal angiotensin II in the rat.** *Pharmacology, Biochemistry & Behavior*, 1974(Sep-Oct), Vol 2(5), 597-602.—Injected .01-2.0  $\mu$ g of angiotensin II (A II) into the medial septal area of 45 unanesthetized male Holtzman rats in normal water balance causing dose-dependent drinking during the 60-min period following drug administration. Pretreatment with 5 and 10  $\mu$ g of locally injected haloperidol, 15 min prior to A II (.3  $\mu$ g), partially antagonized the dipsogenic effects of A II and a dose of 25  $\mu$ g of haloperidol completely blocked this effect. A cataleptic-like state followed haloperidol administration. The injection of doses as high as 25  $\mu$ g of dopamine in the same brain site caused no drinking. Pretreatment with 3  $\mu$ g of intraseptal Sar<sup>1</sup>, Ala<sup>1</sup>, Ile<sup>1</sup>-angiotensin I, a competitive antagonist of A II at peripheral receptors, completely antagonized the dipsogenic effect of A II. The same dose (3  $\mu$ g) of the A II analog alone caused only a mild but significant drinking response. Results suggest that A II acts on specific receptors in the central nervous system that may be similar to peripheral angiotensin receptors. The role of brain catecholamines in the mediation of A II-induced drinking remains uncertain. (44 ref)—*Journal abstract*.

6863. Plotnikoff, Nicholas P.; Kastin, Abba J. & Schally, Andrew V. (Abbott Lab, Experimental Therapy Section, North Chicago, IL) **Growth hormone release inhibiting hormone: Neuropharmacological studies.** *Pharmacology, Biochemistry & Behavior*, 1974(Sep-Oct), Vol 2(5), 693-696.—Observed significant potentiation of the behavioral effects of DOPA in male Sprague-Dawley ICR mice pretreated with growth hormone-release inhibiting hormone (GH-RIH). In addition, a slight reduction of oxotremorine-induced symptoms was seen. No significant effects of GH-RIH were observed in several other tests involving the central nervous system

(CNS). Results support the authors' concept of the CNS actions of peptides.—*Journal abstract.*

6864. **Pohle, W. & Matthies, H.** (Medizinischen Akademie Magdeburg, Inst für Pharmakologie und Toxikologie, E Germany) **Incorporation of <sup>3</sup>H-leucine into brain cells after learning.** *Pharmacology, Biochemistry & Behavior*, 1974(Sep-Oct), Vol 2(5), 573-577.—Immediately after a brightness discrimination, <sup>3</sup>H-leucine was administered intraperitoneally to male Wistar rats. One hour after injection the brains were prepared for microautoradiographical examination. In the 7 conditioned Ss, as compared to the 14 controls, the incorporation of leucine into neurons was increased in all structures of the hippocampal formation, in the visual cortex, and in the cingulate cortex, whereas no increase in incorporation was found in other cortical structures or in thalamic and hypothalamic nuclei investigated. (23 ref)—*Journal abstract.*

6865. **Pollock, Steven H.** (Medical Coll of Wisconsin, Milwaukee) **A novel experience with *Panaeolus*: A case study from Hawaii.** *Journal of Psychedelic Drugs*, 1974(Jan), Vol 6(1), 85-89.—Describes the author's hallucinogenic experience with the *Panaeolus cyanescens* mushroom in Oahu, Hawaii. The ingestion of 12 mushrooms is reported to result in an alteration of visual perceptions, a heightened sense of well-being, and an increase in auditory acuity. Botanical information is presented along with results of a paper chromatograph study indicating the presence of psilocybin in the mushrooms. This is the first report of their occurrence in Hawaii. (30 ref)—*R. Tomasko.*

6866. **Quinton, Elton E.** (U Louisville, Neuropharmacology Program) **Effects of pretraining on subsequent cycloheximide induced amnesia.** *Pharmacology, Biochemistry & Behavior*, 1974(Sep-Oct), Vol 2(5), 585-588.—In Exp I 48 male C57BL/6J mice were trained on a passive avoidance (PA) task, given 1 extinction trial, and then were injected with cycloheximide or saline shortly before retraining on the PA task. On a subsequent test trial, the performance of the cycloheximide group was inferior to the saline group, but superior to a cycloheximide group of 25 Ss not given the pretraining experience. In Exp II 20 Ss were given cycloheximide before each of 2 training sessions while 20 others received cycloheximide before the 1st training session and saline before the 2nd. The group given cycloheximide before each training session was amnesic for both sessions to an equal degree, while the other group was amnesic for only the 1st session. These data seem to indicate that pretraining has limited effect on subsequent cycloheximide-induced amnesia and that such amnesia is the result of impaired memory formation rather than impaired memory retrieval. (20 ref)—*Journal abstract.*

6867. **Raft, David; Gomez, Raoul & Ewing, John A.** (U North Carolina, Medical School, Chapel Hill) **The pentobarbital test dose for depressant drug dependence.** *Journal of Nervous & Mental Disease*, 1974(Nov), Vol 159(5), 366-370.—Evaluated J. A. Ewing and W. E. Bakewell's (1967) single dose pentobarbital test for depressant drug dependence in 24 healthy young college student volunteers. Ss were given 200 mg of pentobarbital or placebo, and mental status and physiological signs were evaluated in 1 hr. Serum pentobarbital levels were

studied hourly. 12 Ss had a history of moderately heavy alcohol consumption while 12 were abstainers. A history of moderately heavy alcohol intake was particularly associated with resistance to the effects of pentobarbital consonant with current concepts of cross-tolerance due to induction of liver enzyme systems. It is concluded that a single 200-mg pentobarbital test can be used to screen out Ss who fall asleep, but that inferences as to tolerance to barbiturates or minor tranquilizers should be drawn cautiously for those who react to the test otherwise. Continuing test doses of pentobarbital offer a more reliable diagnosis in doubtful cases.—*Journal abstract.*

6868. **Renis, M.; Giovine, A. & Bertolino, A.** (Ospedale Psichiatrico "Casa Divina Provvidenza," Lab di Biochimica e Neuropathologia, Bisceglie, Italy) **[The effect of ethanol on the MAO-activity of mitochondrial fractions of rat brain: MAO-DA and MAO-NA.]** (Ital) *Acta Neurologica*, 1974(May-Jun), Vol 29(3), 293-298.

6869. **Rieger, H. & Krieglstein, J.** (U Mainz, Neuro-Psychiatrische Klinik, W Germany) **Quantitative analysis of the EEG effects produced by imipramine, desipramine, promazine, and monodesmethyl promazine in the isolated perfused rat brain.** *Psychopharmacologia*, 1974, Vol 39(2), 163-179.—Preparations of male Sprague-Dawley rat brains were perfused for 30 min with simulated blood containing imipramine, (IM), desipramine, promazine (PMZ), and monodesmethyl PMZ. Control experiments were performed without a drug added to the simplified blood. The EEG was recorded at various times on a magnetic tape and was evaluated visually and quantitatively. EEG effects of IM and PMZ as well as the effects of these drugs with their monodesmethyl metabolites were compared. The drugs produced clear EEG changes compared with the control EEG. An increase of the amplitude and a slowing of the frequency were found for all drugs. Only the changes produced by desipramine were not statistically significant. Furthermore, IM and PMZ provoked grouped sharp waves. The monodesmethyl PMZ caused grouped sharp waves. The pronounced similarity of the EEG effects produced by IM and PMZ as well as the clear difference between the IM and desipramine effects were the most striking results. It is suggested that IM becomes a typical antidepressant in the whole organism after demethylation. (38 ref)—*Journal abstract.*

6870. **Schechter, Martin D.** (Eastern Virginia Medical School, Norfolk) **Effect of propranolol, d-amphetamine and caffeine on ethanol as a discriminative cue.** *European Journal of Pharmacology*, 1974(Nov), Vol 29(1), 52-57.—Trained 14 female albino rats to escape a shock in a 3-compartment chamber contingent upon their ability to discriminate between 2 drug states—1.5 mg/kg ethanol and .9% saline. This discriminative ability was dose responsive and was tested after pretreatment with 1, 5, 10, and 20 mg/kg propranolol, 4.0 mg/kg dextroamphetamine sulphate, and 100 mg/kg caffeine. Results of the pretreatment experiments show that, of the 3 possible antagonists, only amphetamine significantly decreased the S's ability to discriminate between ethanol and saline. (30 ref)—*Journal abstract.*

6871. **Segal, Menahem.** (NIMH, St Elizabeths Hosp, Lab of Neuropharmacology, Special Mental Health Research Div, IRP, Washington, DC) **Lithium and the**

**monoamine neurotransmitters in the rat hippocampus.** *Nature*, 1974(Jul), Vol 250(5461), 71-72.—Investigated iontophoretic Li<sup>+</sup> application to pyramidal cells in locus coeruleus (LC), in interaction with (a) serotonin, (b) noradrenaline, (c) gamma-aminobutyric acid (GABA), and (d) electrical stimulation of LC cells. Of 35 cells from 8 male rats, Li<sup>+</sup> (25–100 nA) excited 3 cells slightly, slowed 2 slightly, and left 30 unaffected. Noradrenaline application (15-sec pulses, 50–100 nA) inhibited spontaneous and acetylcholine-enhanced activity in 15 cells. Concurrent Li<sup>+</sup> application reversibly antagonized inhibition in 7 while in 5 recovery was still incomplete after 10–30 min; 3 cells were unaffected. Inhibitory serotonin action was reversibly antagonized in 3 out of 7 cells after Li<sup>+</sup> application of 2–3 min. 15 cells, inhibited by GABA (0–5 nA), were unaffected by Li<sup>+</sup>, as was unsystematically explored acetylcholine excitation. Inhibition produced by electrical stimulation of LC cells was partially antagonized by Li<sup>+</sup> in 5 out of 6 cells, possibly due to remote location of cell terminals. Data are interpreted as supporting the hypothesis that cyclic adenosine monophosphate (AMP) mediates monoamine response, with Li<sup>+</sup> exerting antagonistic action by changing ionic balance created by monoamines like GABA and noradrenaline. Conclusions concerning psychoactive potential of Li<sup>+</sup> caution against inference for chronic application from that of acute iontophoretic mode.—A. Cerf-Beare.

6872. Silverstein, Melvin J. & Lessin, Phyllis J. (U California, Ctr for the Health Sciences, Los Angeles) **Normal skin test responses in chronic marijuana users.** *Science*, 1974(Nov), Vol 186(4165), 740–741.—The cell-mediated immunity of 22 chronic marijuana smokers showed no difference from that of normal controls when evaluated by in vivo skin testing with 2,4-dinitrochlorobenzene. However, a significant difference was found between the chronic marijuana users, all of whom could be sensitized to 2,4-dinitrochlorobenzene, and age-matched cancer patients, who showed a decreased capacity to be sensitized.

6873. Standley, Kay; Soule, A. Bradley; Copans, Stuart A. & Duchowny, Michael S. (National Inst of Child Health & Human Development, Bethesda, MD) **Local-regional anesthesia during childbirth: Effect on newborn behaviors.** *Science*, 1974(Nov), Vol 186(4164), 634–635.—Studied the possible effects of anesthetics and analgesics administered during normal deliveries on the behavior characteristics of 60 48–72 hr old firstborn, healthy infants. Such administration correlated significantly with newborn behaviors as evaluated by the T. B. Brazelton neonatal assessment scale. 3 days after birth, infants whose mothers received local-regional anesthesia were more irritable and motorically less mature than those infants whose mothers were not medicated.—*Journal abstract.*

6874. Stevens, J.; Wilson, K. & Foote, W. (U Oregon, Medical School, Boston) **GABA blockade, dopamine and schizophrenia: Experimental studies in the cat.** *Psychopharmacologia*, 1974, Vol 39(2), 105–119.—Examined the effects of blocking putative gamma-aminobutyric acid (GABA) inhibition on dopamine cells of origin in ventral tegmental area and substantia nigra of freely moving cats with chronically implanted cannulas and recording

electrodes. Instillation of the GABA blocking agent bicuculline in ventral tegmental area induced arousal, searching, slinking, hiding, evidence of fear, catatonic stance, staring, and sniffing behaviors which were accompanied by spike activity from nucleus accumbens in several Ss. Similar amounts of bicuculline placed in substantia nigra did not induce fear but were followed by ipsilateral grooming, circling, and hyperesthesia, with EEG spiking in caudate nucleus and medial and lateral geniculate nuclei in several Ss. The relationship of these findings to dopamine-induced stereotypies in mesolimbic and nigrostriatal systems and to evidence of dopamine excess or hypersensitivity in limbic striatum in patients with schizophrenic disorders is considered. (35 ref)—*Journal abstract.*

6875. Stix, Allen H. **Chlordiazepoxide (Librium): The effects of a minor tranquilizer on strategic choice behavior in the Prisoner's Dilemma.** *Journal of Conflict Resolution*, 1974(Sep), Vol 18(3), 373–394.—Compared the effects of 2 dosages (25 and 10 mg) on the strategic choice behavior of 108 male graduate students in the Prisoner's Dilemma game. Ss were assigned to either a drug, placebo, or no-capsule control group. Ss given chlordiazepoxide showed more mutual cooperation and less mutual uncooperation than the placebo or no-capsule groups. Although all chlordiazepoxide Ss won more than the other Ss, there was a nonsignificant inverse relationship between the drug dose and the amount won. Sociopharmacology is discussed as a social scientific specialization centered upon the effects of mind-affecting drugs on the person as a social actor and the courses followed by social processes. (18 ref)—L. Gorsey.

6876. Tadokoro, Sakutaro; Higuchi, Yoichiro; Kuribara, Hisashi & Okuizumi, Kiyoko. (Gunma U, School of Medicine, Behavior Research Inst, Maebashi, Japan) **Behavioral suppression induced by oral administration of monosodium L-glutamate in rats.** *Pharmacology, Biochemistry & Behavior*, 1974(Sep-Oct), Vol 2(5), 619–625.—24 adult male Wistar rats, trained under a fixed-ratio 30 schedule of food reinforcement, were observed for behavioral changes after administration of monosodium L-glutamate (MSG). Following the administration of more than .5 g/kg of MSG, transient suppression was observed as a function of dose level. Responses were inhibited immediately after MSG, attained the minimum at 20–25 min, and then abruptly returned to the initial level. When MSG 2.0 g/kg was concurrently accompanied by subcutaneous diazepam .25–1.0 mg/kg or oral caffeine 5–20 mg/kg, the MSG-induced suppression was markedly modified. The several minutes suppression observed immediately after MSG was significantly antagonized by these drugs. However, the suppression observed at 15–30 min was significantly enhanced by diazepam in proportion with the dose, and markedly antagonized by caffeine. There were indications that MSG's central action might be involved in the development of behavioral suppression induced by it. The exact nature of the toxic hazards of MSG remain obscure, but present indications are that one should refrain from adding a large dose of MSG to food. (33 ref)—*Journal abstract.*

6877. **Tompkins, E. Crosby.** (Mead Johnson & Co, Evansville, IN) **The use of the immobility reflex (animal hypnosis) as a possible procedure for detecting sedative activity.** *Life Sciences*, 1974(Aug), Vol 16(4), 671-684. —Induced the immobility reflex in Dutch Belted rabbits, and determined the amount of electrical current necessary to interrupt this state before and after intravenous drug administration. Morphine and the major tranquilizers (chlorpromazine, haloperidol, and reserpine) elevated the arousal threshold over a wide dose range, while the minor tranquilizers (chlordiazepoxide and meprobamate) were active over a considerably narrower range. The sedative-hypnotics (phenobarbital, pentobarbital, ethanol, chloral hydrate, and ectylurea) demonstrated approximately the same degree of activity as the minor tranquilizers but resulted in a loss of righting reflex at the higher doses. Dextroamphetamine significantly lowered the arousal threshold. Imipramine, desmethylinipramine, nialamide, aspirin, diphenylhydantoin, chlorpheniramine, and diphenhydramine possessed little, if any, activity. Thus, the drug-induced changes in arousal threshold in rabbits exhibiting the immobility reflex can be used to classify compounds possessing major or minor tranquilizing or sedative-hypnotic activity. (27 ref) —*Journal abstract.*

6878. **Tricklebank, M. D. & Adlard, B. P.** (U Manchester, Medical School, England) **Effects in the suckling rat of chronic treatment with tryptophan and a monoamine oxidase inhibitor.** *Experimental Neurology*, 1974(Oct), Vol 45(1), 79-93. —In 7 experiments, daily administration of levotryptophan (TRY, 150 mg/kg) and tranlycypromine (TCP, 2.5 mg/kg) to developing hooded rats from 10-22 days of age resulted in continuously elevated levels of cerebral 5-hydroxytryptamine (5-HT) throughout this period. This treatment may yield useful information on the possible role of disordered 5-HT metabolism in certain forms of mental retardation. In this study such chronic treatment led to disturbed exploratory behavior in an open field. At 22 days of age, Ss' mean latency to move from the center of the open field was significantly higher than that of controls, as was the mean locomotor activity. Acute TRY/TCP treatment at 22 days of age produced no significant disruption of behavior, despite higher levels of brain 5-HT than in chronically treated Ss. This suggests that abnormal behavior at 22 days was a function of chronic drug treatment. However, these behavioral effects were reversible, since they were not observed 4 wks after termination of treatment. (29 ref) —*Journal abstract.*

6879. **Turek, I. S.; Soskin, R. A. & Kurland, A. A.** (Maryland Psychiatric Research Ctr, Baltimore) **Methylenedioxymphetamine (MDA): Subjective effects.** *Journal of Psychedelic Drugs*, 1974(Jan), Vol 6(1), 7-14. —Studied the effects of MDA on 10 Ss, 9 having previous LSD experience. 75 mg of MDA were taken orally and blood pressure and respiration were recorded hourly. WAIS Digit Span and Digit Symbol subtests were administered and handwriting samples taken. 3 questionnaires were given to assess subjective effects: the Psychedelic Experience, the Subjective Drug Effects, and the Ludwig-Levine Modification of the Linton-Lands. Questionnaire responses indicate the MDA response is characterized by increased introspectiveness, heightened

self-awareness, greater intuitiveness, relaxation, acceptance, calmness, and serenity. MDA is considered less likely than LSD to produce experiences involving sense of ego loss and less likely to provide sense of awareness beyond usual conceptions of time and space. High variability of reactivity in this small sample is noted. Implications for drug-assisted psychotherapy are discussed. (21 ref) —*R. Tomasko.*

6880. **Vachon, Louis; Sulkowski, Adam & Rich, Edwin.** (Boston U, Medical School) **Marihuana effects on learning, attention and time estimation.** *Psychopharmacologia*, 1974, Vol 39(1), 1-11. —10 healthy, young adult male volunteers smoked a marihuana cigarette with 2.5%  $\Delta^9$ -tetrahydrocannabinol ( $\Delta^9$ -THC) and a THC-exhausted placebo cigarette. The marihuana administration was associated with an increase in heart rate, elevation of systolic blood pressure, conjunctival reddening, and specific airway conductance increase; time perception and Automated Digit Symbol Substitution Test performance were impaired. Diastolic blood pressure and attention measured by the Continuous Performance Test were not affected. The placebo preparation produced a subjective pleasant "high" but no physiologic effects nor performance change. The "high" induced by the active preparation was often rated as unpleasant. (32 ref) —*Journal abstract.*

6881. **Wallach, Marshall B.; Hinc, Bromfield & Gershon, Samuel.** (Syntex Research, Palo Alto, CA) **Cross tolerance or tachyphylaxis among various psychotomimetic agents on cats.** *European Journal of Pharmacology*, 1974(Nov), Vol 29(1), 89-92. —2,5-dimethoxy 4-methylamphetamine (DOM), a perception-distorting psychotomimetic agent, elicits a marked behavioral syndrome in cats which is antagonized by pretreatment with DOM. The present experiment with male and female cats examined this tachyphylaxis to determine the ability of various other types of psychotomimetic agents to antagonize the DOM-induced syndrome. Intraperitoneal mescaline and dextro-LSD, but not levo-LSD, could prevent the occurrence of the DOM-induced behavior. Ditrane, tryptamine, and dextroamphetamine did not antagonize DOM. It appears that the perception-distorting psychotomimetic agents exhibited either cross-tachyphylaxis or cross-tolerance and may share a common mechanism of action. —*Journal abstract.*

6882. **Wilson, C. W.; O'Brien, C. & MacAirt, J. G.** (U Dublin, Trinity Coll, Ireland) **The effect of metronidazole on the human taste threshold to alcohol.** *British Journal of Addiction*, 1973(Jun), Vol 68(2), 99-110. —Describes methods used in measuring the taste threshold to alcohol in 163 Ss, whose metronidazole and phenylthio carbimide thresholds were also measured. Ss tasted 5 mls of ascending concentrations of alcohol and water for 20 sec, spat it out, and washed out their mouths with diluent water; they were also administered 600 and 800 mg of metronidazole over 14-hr and 20-hr periods, respectively. Results indicate that (a) Ss detected alcohol as sweet and burning tastes at a concentration of  $4.2 \pm$  a Standard Error (S.E.) of .24% alcohol and a mean concentration of  $21.2 \pm$  S.E. 1.22% alcohol respectively; (b) administration of 600 mg of metronidazole caused no change in the taste threshold to alcohol 6 days after the administration of the drug; and (c) a significant elevation of both sweet

and burning taste thresholds followed the 2nd administration of the drug. (36 ref)—*Journal abstract*.

6883. Wilson, Marvin C. & Schuster, Charles R. (U Mississippi, School of Pharmacy) **Aminergic influences on intravenous cocaine self-administration by rhesus monkeys.** *Pharmacology, Biochemistry & Behavior*, 1974(Sep-Oct), Vol 2(5), 563-571.—Conducted 2 experiments with a total of 17 drug-naïve male monkeys to study how agents known to alter central aminergic systems affect cocaine self-administration. Acute treatment with pargyline (50 and 100 mg/kg) decreased the behavior; alpha-methylparatyrosine (50 mg/kg) increased the behavior. Treatment with the peripheral alpha adrenergic blocking agents phentolamine and phenoxybenzamine (5-8.0 mg/kg) did not significantly alter the behavior. Chronic treatment (5-10 days) with reserpine (1-1.0 mg/kg) produced an initial increase in self-administration to which tolerance developed. Upon discontinuation of reserpine treatment, cocaine self-administration was decreased below baseline levels. Results implicate either dopamine or norepinephrine as mediators of either cocaine-based reinforcement or of the other effects of cocaine which may regulate the frequency of its administration. (17 ref)—*Journal abstract*.

6884. Wright, D. C.; Chute, D. L. & McCollum, G. C. (U Missouri, John M. Dalton Research Ctr) **Reversible sodium pentobarbital amnesia in one trial discrimination learning.** *Pharmacology, Biochemistry & Behavior*, 1974(Sep-Oct), Vol 2(5), 603-606.—Reversal of drug-induced retroactive amnesia, previously observed in passive avoidance, was extended to a task measuring response choice rather than latency. 50 thirsty male Sprague-Dawley rats were given 3 drugged (D) and 3 nondrugged (ND) continuous reinforcement barpress for water sessions in a 2-bar box with 1 bar (B<sub>1</sub>) present. During the 7th session, all Ss were undrugged and both bars were present; 3 non-reversal (NR) groups received a single reinforcement after pressing the originally reinforced bar (B<sub>1</sub>) while 3 reversal (R) groups received a single reinforcement only after pressing the previously unavailable bar (B<sub>2</sub>). All Ss were D or ND injected immediately after this session. All Ss were again injected prior to the 24-hr test with both bars present in extinction. NR Ss performed 80-84% of their test barpresses on B<sub>1</sub> as did R Ss given D postlearning and ND pretest (group R-D-ND). R groups given ND postlearning and pretest (R-ND-ND) or D postlearning and pretest (R-D-D) showed retention with 60-68% B<sub>2</sub> presses in test. The difference between groups R-D-D and R-D-ND suggests that the apparent amnesia shown by R-D-ND results from retrieval failure, not consolidation failure.—*Journal abstract*.

6885. Yamaguchi, Kiyoko & Iwahara, Shinkuro. (Tokyo Metropolitan Inst for Neurosciences, Japan) **Effects of chlordiazepoxide upon differential heart rate conditioning in rats.** *Psychopharmacologia*, 1974, Vol 39(1), 71-79.—20 mg/kg of intraperitoneal chlordiazepoxide (CDP) almost completely blocked classical differential conditioning in heart rate (HR) in 10 unanesthetized male Wistar-Kimichi rats, compared to 12 controls, but it only slightly depressed simple HR conditioning to the same conditioned stimulus (CS). The

simultaneously observed differential conditioning in respiratory rate (RR) was also inhibited by CDP with little effect upon simple RR conditioning. Motor activity as measured by changes in electromyograph records immediately preceding as well as during the CS was not affected either by CDP or by the differential conditioning procedure. Results are explained in terms of the drug's disinhibitory action.—*Journal abstract*.

6886. Zinberg, Norman E. & Delong, James V. (Harvard U) **Research and the drug issue.** *Contemporary Drug Problems*, 1974(Spr), Vol 3(1), 71-100.—Examines the nature and functions of research on psychoactive drugs. Basic drug research is complicated by the influence of set (expectations) and setting (the total social and physical environment) on individual reactions to psychoactive drugs. Research techniques which measure physical risks can not adequately assess the psychic risks of drug use. It is suggested that research on drug use needs to examine the benefits and rewards perceived by drug users as well as the risks and damages resulting from drug use. It is concluded that research can illuminate the consequences of drug use but cannot of itself lead to final drug policy decisions.—J. Kelly.

## ANIMAL PSYCHOLOGY

6887. Bresler, David E. & Bitterman, M. E. (U California, Medical School, Los Angeles) **A shocking grid for pigeons.** *Behavior Research Methods & Instrumentation*, 1974(Sep), Vol 6(5), 471-472.

6888. Carew, Thomas J. & Kupfermann, Irving. (New York U, Medical School) **The influence of different natural environments on habituation in *Aplysia californica*.** *Behavioral Biology*, 1974(Nov), Vol 12(3), 339-345.—Studied habituation of the defensive-withdrawal reflex in *Aplysia californica* (marine mollusk) in the animal's natural environment. Ss in a calm environment showed a brisk withdrawal reflex which habituated with a time course comparable to controlled laboratory studies. By contrast, Ss in a turbulent environment showed a very weak reflex response which habituated significantly faster than the calm-environment Ss. Ss in a turbulent environment also had a much higher threshold for another defensive response—the inking reflex. Data suggest that different tactile environments significantly influence the animal's behavioral responsiveness, and that habituation is a behavioral modification that normally occurs in the life of *Aplysia*.—*Journal abstract*.

6889. Fox, M. W. (Washington U) **Concepts in ethology: Animal and human behavior.** Minneapolis, MN: University of Minnesota Press, 1974. xvii, 139 p. \$8.50.—Presents an introduction to the origins, history, concepts, and applications of ethology. The author's research on wolves and dogs is used to discuss similarities and differences in the behavior of wolves, dogs, and man. (4 p ref)

6890. Garcia, John; Hankins, Walter G. & Rusiniak, Kenneth W. (U California, Los Angeles) **Behavioral regulation of the milieu interne in man and rat.** *Science*, 1974(Sep), Vol 185(4154), 824-831.—Discusses differences in conditioning between adaptation to beneficial or toxic foods internally and adaptation to external

harmful environments in mammals. Experimental data are reviewed to illustrate acquired aversion to toxic foods, and taste enhancement if recuperation follows ingestion. Rats exposed to harmful or lethal radiation doses, on the other hand, do not learn to avoid the harmful space. Self-regulatory functions in rats and men are reviewed and theoretical and methodological considerations examined. It is concluded that the way food effects are stored in memory may be fundamentally different from the way specific space-time strategies for external contingencies are stored in memory.—R. Hall.

6891. Harlow, Harry F. & Suomi, Stephen J. (U Wisconsin, Madison) **Induced depression in monkeys.** *Behavioral Biology*, 1974(Nov), Vol 12(3), 273-296. —Presents a review of recent studies conducted at the Wisconsin Primate Laboratory which have been directed toward the experimental production and cure of human-type psychopathologies in rhesus monkeys, with the primary emphasis being on depression. Data are presented which (a) identify different procedures used to produce depression (e.g., maternal separation, peer or agemate separation, vertical chamber-induced depression, and isolation); (b) determine the susceptibility of any given monkey to these procedures; and (c) outline methods and modes of therapy. Results suggest that profound depressions can be produced in monkeys relatively easily by a variety of techniques and that these induced depressions either closely resemble human depression or have such similarity that closely correlated human and animal depressive patterns can be obtained with refined techniques. (47 ref)—*Journal abstract*.

6892. Holland, H. C. (Bethlem Royal Hosp, Kent, England) **Displacement activity as a form of abnormal behaviour in animals.** In H. R. Beech (Ed), *Obsessional states*, London, England: Methuen & Co, 1974. viii, 352 p. 45.

6893. Kupfermann, Irving & Carew, Thomas J. (New York State Psychiatric Inst, New York) **Behavior pattern of *Aplysia californica* in its natural environment.** *Behavioral Biology*, 1974(Nov), Vol 12(3), 317-337. —Conducted systematic observations on 4 classes of behavior—feeding behavior, sexual behavior, locomotion, and defensive behavior—in the marine gastropod mollusk. Feeding was the most frequent behavior observed. Although Ss fed during a large proportion of the day, there were periods during which they would not eat, either after a normal meal, or after a meal which was fed to them by the E. Ss showed definite food preferences, but large Ss appeared to exhibit relatively less selectivity. Sexual behavior (copulation and egg laying) occurred at a special location where the same Ss remained over a period of a week or longer. During exposure to air in the intertidal zone, animals were inactive, but otherwise they locomoted over a distance of 10 M or more per day. Ss were typically aggregated into groups. Defensive withdrawal occurred very infrequently and spontaneous inking behavior was never observed. (37 ref)—*Journal abstract*.

6894. Lee, Richard M.; Robbins, Myral R. & Palovcik, Reinhard. (Edsel B. Ford Inst for Medical Research, Detroit, MI) ***Pleurobranchaea* behavior: Food finding and other aspects of feeding.** *Behavioral Biology*, 1974(Nov), Vol 12(3), 297-315. —Conducted 6 experi-

ments to systematically describe aspects of the feeding behavior of *Pleurobranchaea californica*, a marine gastropod mollusk ( $N = 42$ ). The first 3 experiments were concerned with food finding. In contrast to earlier reports, locomotion in the presence of food chemical was not random; reversals in direction were more frequent; and if the chemical gradient were steep enough, Ss turned in the direction of food. The remaining experiments were concerned with the location of chemical receptors, responses to tactile stimuli, and satiation. Food-chemical stimuli elicited feeding responses when the anterior edge of the oral veil and foot, the rhinophore tips, and certain other anterior areas were stimulated. Pieces of meat (squid), when used as tactile stimuli to many anterior body areas, elicited approach responses; but nonfood, tactile stimuli (in the presence of squid extract) had little effect. (20 ref)—*Journal abstract*.

6895. Levenson, Shirley & Wilsoncroft, W. E. (California State U, Northridge) **Gathering behavior in female mice: Effects of experience and parturition.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 519-522. —36 female Swiss-Webster mice, about 60 days old, were tested on 35 consecutive days under pregnancy-lactation, ovariectomy, and intact (no treatment) conditions. Stimulus materials (yarn and paper strips) were systematically dispersed over the floor area of the home cage and 5 min were allotted for gathering. Scoring was in terms of differences in the dispersion of the stimuli. All materials were removed from the cage after the 5-min test. The 3 groups all improved over the 5 wks of testing ( $p < .001$ ), regardless of hormonal condition. The pregnant-lactating group displayed a significant increase in gathering between their pre- and postpartum test days and differed from the other 2 groups only during the postpartum tests. None of these Ss had an opportunity to build or utilize a "nest."—*Journal abstract*.

6896. Mukherjee, R. P. & Saha, S. S. (Zoological Survey of India, Calcutta) **The golden langurs (*Presbytis geei* Khajuria, 1956) of Assam.** *Primates*, 1974(Dec), Vol 15(4), 327-340. —Studied the ecology and behavior of golden langurs in the western forests of Assam. During the survey, 10 groups were observed of which one was an all male group and the rest were bisexual. Group composition, sex ratio of adult males and females, ratio of adult females to juveniles and infants, percentage of females with infants, number of males in each group, daily activity pattern, intra- and intergroup and interspecific relations, reaction to disturbances, and vocalization are described. The similarity and differences in the behavior of golden langurs from those of Hanuman langurs are discussed.—*Journal abstract*.

6897. Pi, Jorge S. (Parque Zoológico, Barcelona, Spain) **An elementary industry of the chimpanzees in the Okorobikó Mountains, Rio Muni (Republic of Equatorial Guinea), West Africa.** *Primates*, 1974(Dec), Vol 15(4), 351-364. —Describes sticks which have been shaped and used by chimpanzees of the subspecies *Pan troglodytes troglodytes* in the mountainous region in central Rio Muni. References are also made to the utilization of these sticks for the obtaining of termites. It is indicated that in Rio Muni this elemental industry is known only to some of the groups of these pongids, inhabiting moreover areas relatively close to each other.

A new map is presented which indicates in summary manner the distribution of the principal elemental industries known to chimpanzees in the wild. (27 ref)—*Journal abstract*.

6899. Tuber, David S.; Hothersall, David & Voith, Victoria L. (Ohio State U) **Animal clinical psychology: A modest proposal.** *American Psychologist*, 1974(Oct), Vol 29(10), 762-766.—Describes initial experiences in the development of a field of applied animal psychology dealing with the behavioral problems of pet animals. A team approach is suggested where (a) the pet's problem is analyzed; (b) a remedial training program based on classical and operant conditioning is used; (c) the owner is instructed in the implementation of the program; and (d) a follow-up assessment of the procedure's effectiveness is proposed. The case histories of 3 dogs with behavioral problems are presented.—*Author abstract*.

### Learning & Motivation

6900. Auge, Robert J. (Denison U) **Context, observing behavior, and conditioned reinforcement.** *Journal of the Experimental Analysis of Behavior*, 1974(Nov), Vol 22(3), 525-533.—4 White Carneaux and 1 Silver King pigeons made observing responses for stimuli signaling either a fixed-interval 30-sec schedule or a fixed-ratio  $x$  schedule, where  $x$  was either 20, 30, 100, 140, or 200 and the schedules alternated at random after reinforcement. If observing responses did not occur, food-producing responses occurred to a stimulus common to both reinforcement schedules. When the fixed-interval schedule was paired with a low-value fixed ratio, i.e., 20 or 30, the presentation of the stimulus reliably signaling the fixed-ratio schedule reinforced observing behavior, but the presentation of the stimulus reliably signaling the fixed-interval schedule did not. The converse was the case when the fixed-interval schedule was paired with a large-valued fixed ratio, i.e., 100, 140, or 200. Results show that the establishment and measurement of conditioned reinforcement is dependent upon the context or environment in which stimuli reliably correlated with differential events occur. (39 ref)—*Journal abstract*.

6901. Badia, Pietro & Culbertson, Stuart. (Bowling Green State U) **Changeover from unsignaled to signaled avoidance with and without a feedback stimulus in rats.** *Animal Learning & Behavior*, 1974(Nov), Vol 2(4), 278-284.—Conducted 2 experiments with 3 female Sprague-Dawley rats in which, by pressing a lever, unsignaled avoidable shocks could be changed to signaled avoidable shocks for periods of 1 min, after which unsignaled avoidance was automatically reinstated. A correlated stimulus identified the signaled schedule. Under these conditions, Ss changed over at a rate sufficient to remain in the signaled schedule more than 90% of the time. Both experiments showed that changeover performance was under the control of the correlated stimulus. Presenting the signaled schedule without the correlated stimulus did not maintain changing over. Exp II showed that a 1-sec presentation of the correlated stimulus was sufficient to maintain changeover perform-

ance. Results are attributed to the conditioned reinforcing properties of the correlated stimulus.—*Journal abstract*.

6902. Biederman, G. B. et al. (U Toronto, Ontario, Canada) **Memory of conditioned food aversion follows a U-shape function in rats.** *Quarterly Journal of Experimental Psychology*, 1974(Nov), Vol 26(4), 610-615.—Conducted 2 experiments with a total of 160 male Wistar rats to examine the limits of the cholinergic memory hypothesis using conditioned saccharin aversion. Ss drinking saccharin solution for the 1st time were poisoned by injection of lithium chloride and then offered saccharin solution 90 min, 1, 2, 3, 7, 10, or 14 days later. The memory function was U-shaped, with 90-min and 14-day groups retaining the most aversion to saccharin. Intervention with an anticholinesterase (physostigmine) failed to produce a disruption or enhancement of memory, as was expected on the basis of theories that the laying down of memories depends on modification of cholinergic synapses. (17 ref)—*Journal abstract*.

6903. Bronstein, Paul M.; Dworkin, Terry & Bilder, Benjamin H. (Brooklyn Coll, City U New York) **Age-related differences in rats' spontaneous alternation.** *Animal Learning & Behavior*, 1974(Nov), Vol 2(4), 285-288.—37 15-day-old Sprague-Dawley albino rats made random choices in a T maze, while adult levels of alternation (approximately 70%) were noted among 119 30-day-olds. Also, younger Ss were insensitive to a lengthening of the intertrial interval, unlike older Ss whose rate of alternation decreased when a 1-hr delay was interposed between arm entries. Findings are consistent with the hypothesis that hippocampal development is a factor in the ontogeny of postweaning locomotion. The unsystematic pattern of goal-arm selections among 15-day-olds suggests that ontogenetic variation in the utilization of stimuli may underlie developmental shifts in spontaneous alternation. (20 ref)—*Journal abstract*.

6904. Bryant, Donna & Church, Russell M. (U North Carolina, Chapel Hill) **The determinants of random choice.** *Animal Learning & Behavior*, 1974(Nov), Vol 2(4), 245-248.—Conducted an experiment with 12 male Charles River CD albino rats to describe a pattern of reinforcement sufficient to produce an unpredictable pattern of choice response. On each trial 2 levers were inserted into an experimental chamber. If the reinforcement was always contingent upon single alternation (a simple pattern), Ss learned to alternate at significantly better than chance level; if reinforcement was contingent upon alternation on 50% of the trials (an insoluble pattern), Ss developed a position preference. To produce apparently random responding, the less preferred response (an alternation) was differentially reinforced on 75% of the trials. A simple stochastic model adequately describes the results.—*Journal abstract*.

6905. Capaldi, E. J. & Morris, Michael D. (Purdue U) **Reward schedule effects in extinction: Intertrial interval, memory, and memory retrieval.** *Learning & Motivation*, 1974(Nov), Vol 5(4), 473-483.—In 2 experiments a total of 68 Holtzman albino rats were trained in a runway such that partial reward occurred on Trial 1 of the day and consistent reward on subsequent massed trials (Group PRTI), or consistent reward occurred on

Trial 1 of the day and partial reward on subsequent massed trials (Group PRTM). Under spaced (24-hr) extinction, Group PRTI was more resistant to extinction than Group PRTM, and under massed (1-min) extinction, Group PRTM was more resistant to extinction than Group PRTI. Findings suggest that (a) distinctive stimuli were associated with Trial 1 of the day and with subsequent massed trials; (b) these distinctive stimuli functioned as retrieval cues for memories, memory retrieval being independent of intertrial interval; and (c) behavior in extinction was controlled by a stimulus compound consisting of the memory of nonreward plus stimuli which accompanied the memory of nonreward on rewarded acquisition trials.—*Journal abstract.*

6906. Christman, C. L. (US Public Health Service, Rockville, MD) **A digital sequential generator for implementing reinforcement schedules.** *Journal of the Experimental Analysis of Behavior*, 1974(Nov), Vol 22(3), 577-580.

6907. Dean, P.; Weiskrantz, L. & Cowey, A. (Dept of Experimental Psychology, Oxford, England) **An apparatus for the automatic presentation of object discriminations to monkeys.** *Quarterly Journal of Experimental Psychology*, 1974(Nov), Vol 26(4), 605-609.—Describes a modification of the Gloster Saro universal vending machine which may aid in the reduction of testing errors in object discrimination experiments. The machine, which has space for up to 371 objects, moves the objects on trays by 2 electric motors, and the control circuits of these are adapted for external operation by relays and modular programming equipment. A series of simple object discriminations or a concurrent (serial) discrimination task can then be given by remote control. The objects are so treated that by touching either of them the animal completes a circuit, enabling the response to be recorded and appropriately reinforced. Learning in the apparatus appears to be about as efficient as in the Wisconsin General Test Apparatus.—*Journal abstract.*

6908. Domjan, Michael & Bowman, Thomas G. (U Texas, Austin) **Learned safety and the CS-US delay gradient in taste-aversion learning.** *Learning & Motivation*, 1974(Nov), Vol 5(4), 409-423.—Decrements in taste-aversion learning produced by extensions of the interval between the conditioned stimulus (CS) flavor and the unconditioned stimulus (UCS) poisoning may be attributed to decay of the CS trace during long CS-UCS intervals. J. W. Kalat and P. Rozin (see PA, Vol 50:10890) alternatively proposed that such decrements occur because during extended CS-UCS intervals Ss learn that the CS is safe. They sought to show that trace decay is not responsible for the CS-UCS delay gradient by demonstrating that learning is disrupted even if the CS is reintroduced during extended CS-UCS intervals. The present 3 experiments with a total of 95 Charles River and 9 Wistar male rats showed that such a 2nd CS presentation during conditioning may (a) enhance subsequent intakes of the CS solution whether or not Ss are poisoned; and/or (b) facilitate aversion learning, the facilitation being greater the closer the 2nd CS exposure is to poisoning. Results question the adequacy of previous evidence for the contribution of learned safety to the CS-UCS delay gradient and suggest that some other process is also involved. (21 ref)—*Journal abstract.*

6909. Dunlap, William P.; Hughes, Larry F.; Dachowski, Lawrence & O'Brien, Thomas J. (Tulane U) **The temporal course of the frustration effect.** *Learning & Motivation*, 1974(Nov), Vol 5(4), 484-497.—General activity of male albino rats subsequent to reward (R) and nonreward (N) was monitored at 5-sec intervals with a stabilimeter in the runway goal box. Activity of never-rewarded control Ss was also measured. In Exp I ( $n = 36$ ) it was found that the frustration effect (difference between N- and R-trial activities) disappeared after about 40 sec of goal box confinement. This disappearance of the frustration effect was due to activity increase on R trials rather than activity decrease on N trials as a function of time. Comparison of N-trial activity with control group activity indicated that frustration did not dissipate within 60 sec. Exp II ( $n = 72$ ) investigated activity following reward and nonreward as a function of reward magnitude. Evidence from these experiments suggests that the late R-trial activity increase results from frustration, possibly conditioned to apparatus cues on N trials. (19 ref)—*Journal abstract.*

6910. Dutch, J. & Brown, L. B. (Victoria U Wellington, New Zealand) **Adaptation to 23.5-hr food and water deprivation schedules in the rat and guinea pig.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 367-370.—Compared 20 male Sprague-Dawley rats and 20 male white guinea pigs on a 23.5-hr water-deprivation schedule and on a 23.5-hr food-deprivation schedule. Rats showed a satisfactory adjustment to both these schedules, while guinea pigs adjusted to the water-deprivation but not to the food-deprivation schedule.—*Journal abstract.*

6911. Dutch, J. (Victoria U Wellington, New Zealand) **Information and incentive characteristics of secondary reinforcement demonstrated in resistance to extinction.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 445-446.—After many trials on continuous reinforcement (CRF) or fixed ratio (FR) schedules, male Sprague-Dawley rats were extinguished under 3 conditions. The magazine click was a weak but effective incentive for CRF Ss and a strong incentive for FR-10 Ss. With extended training the click also became an informative stimulus for FR-10 Ss, reducing resistance to extinction.—*Journal abstract.*

6912. Dutch, J. (Victoria U Wellington, New Zealand) **Schedules of secondary reinforcement and resistance to extinction.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 443-444.—Following 5,000 trials on a fixed-ratio schedule of 5, 36 male Sprague-Dawley rats were extinguished with secondary reinforcement presented on several schedules. In general, responses made in extinction increased with higher schedules.—*Journal abstract.*

6913. Dysart, Judy; Marx, Melvin H.; McLean, Jim & Nelson, James A. (U Missouri) **Peak shift as a function of multiple schedules of reinforcement.** *Journal of the Experimental Analysis of Behavior*, 1974(Nov), Vol 22(3), 463-470.—Studied N. Guttman's (1959) conclusion that an ordinarily positive stimulus can take on negative qualities when a frame of reference is provided by another stimulus and reinforcement schedule. 30 male White Carneaux pigeons were trained to respond to 2 stimuli on the wavelength continuum, 550 nm and 570

nm, each correlated with an independent schedule of reinforcement. The multiple schedule component in effect during the 550-nm stimulus (S1) was always a variable-interval 1-min. During the 570-nm stimulus (S2), the 2nd component of the schedule was either variable-interval 30-sec, or 1-, 2-, or 5-min, or extinction for different groups of birds. Generalization gradients were obtained after this training, with the following results: (a) response rate to S1 during training was related to the reinforcement frequency associated with S2 and (b) the distribution of responding during generalization testing was a function of the schedules of reinforcement used during training and the response rates they produced. Decreases in the relative frequency of reinforcement correlated with S2 resulted in increases in the distribution shift of responses away from S2 during generalization testing.—*Journal abstract.*

6914. Eaton, Newell K.; Crowell, Charles R. & Brown, Judson S. (U Oregon, Medical School) **Acquisition and extinction of runway performance under escape, avoidance, and partial-avoidance procedures.** *Animal Learning & Behavior*, 1974(Nov), Vol 2(4), 293-297.—The acquisition and extinction of locomotor responses of 60 female Sprague-Dawley albino rats in a straight alley were examined for groups trained under escape, partial-avoidance, and avoidance procedures. During acquisition, 1 group (escape) received a 0-sec delay between being dropped into the alley and the onset of shock; 2 groups (partial avoidance) had .5- and 1-sec delays; and 2 groups (avoidance) had delays of 2 and 4 sec. On the final day of acquisition, the partial-avoidance Ss displayed higher running speeds than either the escape- or avoidance-trained Ss. The 4-sec avoidance group was consistently slower than either the escape- or avoidance-trained Ss. The 4-sec avoidance group was consistently slower than all other groups. Speeds for all groups decreased during extinction, with rate of decline showing some relation to terminal acquisition level. Relative group performance levels proved to be consistent with a simple arithmetic model on the assumption that changes in running speeds affect the aversiveness of the situation by altering unconditioned stimulus (UCS) duration, conditioned stimulus duration, and effective UCS length.—*Journal abstract.*

6915. Eiserer, Leonard A. & Hoffman, Howard S. (Bryn Mawr Coll) **Acquisition of behavioral control by the auditory features of an imprinting object.** *Animal Learning & Behavior*, 1974(Nov), Vol 2(4), 275-277.—Presentations of a visible moving object immediately suppressed ongoing distress vocalization in 8 newly hatched Khaki Campbell ducklings, but presentations of only the auditory features of the object initially had no effect. However, as the Ss received more and more exposure to the visible moving object, the object's auditory features gradually acquired the ability to suppress distress calls themselves. These auditory features failed to develop suppressive properties in Ss which received prolonged exposure to those features but never saw the object in motion. The gradual acquisition of behavioral control by the auditory features of a moving object is taken to represent the essence of the imprinting process.—*Journal abstract.*

6916. Follick, Michael J. & Knutson, John F. (U Iowa) **Shock source and intensity: Variables in shock-induced fighting.** *Behavior Research Methods & Instrumentation*, 1974(Sep), Vol 6(5), 477-480.—Compared AC, DC, and rectified AC shock at 4 shock intensities to assess differential influences on shock-induced fighting in 72 pairs of male hooded rats. At higher shock intensities, the data paralleled B. A. Campbell and F. A. Master-son's (1969) equal aversion function, but at lower shock intensities, differences among shock types with respect to frequencies of shock-induced fighting were obtained. Results suggest that, at lower shock intensities, shock type is a variable in shock-induced aggression research with rats. (24 ref)—*Journal abstract.*

6917. Gonzalez, Fernando A. (New England Regional Primate Research Ctr, Southborough, MA) **Effects of varying the percentage of key illuminations paired with food in a positive automaintenance procedure.** *Journal of the Experimental Analysis of Behavior*, 1974(Nov), Vol 22(3), 483-489.—Exposed 3 male White Carneaux pigeons to a positive automaintenance procedure in which each trial began with a brief tone followed by the transillumination of a small central area of the response key for 10 sec. Key illumination was followed by food on 100, 50, 25, 12.5, and 0% of the trials. The effects depended on the dependent variable observed. The mean rate of responding during key illumination rapidly increased and then decreased slightly as the percentage of key illuminations paired with food increased. The number of key illuminations during which at least 1 response occurred increased as a negatively accelerating function of the percentage of key illuminations paired with food, and the mean latency to the 1st response during the key illuminations decreased as a negatively decelerating function of the percentage condition. The mean rate of sustained responding during key illumination was not systematically affected by changes in the percentage condition. (19 ref)—*Journal abstract.*

6918. Halliday, M. S. & Boakes, R. A. (U Sussex, Brighton, England) **Behavioral contrast without response-rate reduction.** *Journal of the Experimental Analysis of Behavior*, 1974(Nov), Vol 22(3), 453-462.—Behavioral contrast was obtained in 2 experiments, which both employed a standard free-operant successive discrimination (a multiple variable-interval extinction schedule), without the occurrence of reductions of response rate in the extinction component. In Exp I, a group of 4 male homing pigeons was trained on a multiple schedule in which 1 stimulus was associated with a variable-interval schedule and the 2nd stimulus with response-independent reinforcement on a free variable-interval schedule. Though by the end of this training 3 Ss were responding very little to the 2nd stimulus, when this stimulus was associated with extinction all Ss showed a contrast effect. In Exp II, 8 male homing pigeons were trained extensively to respond to a single stimulus on a variable-interval schedule, before a 2nd stimulus associated with extinction was introduced. This 2nd stimulus was dissimilar to the initial stimulus and 5 Ss never responded in its presence. Nevertheless, all Ss showed a contrast effect and there was no evidence that the effect was smaller in errorless Ss or smaller than in a subsequent discrimination where all Ss made many

errors. Both experiments suggest that response reduction in one component of a multiple schedule is not a necessary condition for the occurrence of contrast. (15 ref)—*Journal abstract*.

6919. Hamilton, Thomas C.; Thompson, Jeffrey M. & Eisenstein, E. M. (U Texas, Austin) **Quantitative analysis of ciliary and contractile responses during habituation training in *Spirostomum ambiguum*.** *Behavioral Biology*, 1974(Nov), Vol 12(3), 393-407.—Gave 10 min of repetitive stimulation (.1 Hz) to 40 *Spirostomum*. Retention stimuli were given at 2, 5, and 10 min after the end of the stimulation period. Several behavioral modifications were observed: (a) A change over time occurred in the probability with which contractions were elicited, such that Ss with a low initial probability of contraction facilitated (increased in contraction probability), while those with a high initial probability habituated. (b) "High" responders remained more responsive than the "low" responders throughout the 10-min stimulation period. (c) The magnitude of contraction decreased by 10% after S contracted to several consecutive stimuli. (d) The magnitude of avoidance reactions decreased over trials. Differences observed in the rate of change for several of the simultaneously occurring behaviors may indicate different underlying mechanisms. (30 ref)—*Journal abstract*.

6920. Hovancik, John R. & Capaldi, Elizabeth D. (Purdue U) **Predictive value of nonrewarded goal-box placements and resistance to extinction.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 550.—Investigated whether M. J. Homzie and J. W. Rudy's (1971) finding, that reduction in reward predictive value of a goal-box placement cue results in less resistance to extinction trials preceded by the placement stimulus, was due to variation in the number of placement cue-reward pairings. In the present study with male albino rats, the number of placement pairings was held constant, and the previous results were replicated.—A. Olson.

6921. Jackson, Donald E. & Delprato, Dennis J. (Eastern Michigan U) **Aversive CSs suppress lever pressing for food but not the eating of free food.** *Learning & Motivation*, 1974(Nov), Vol 5(4), 448-458.—In 2 experiments a total of 40 male albino rats received conditioned emotional response (CER) acquisition, half "on the baseline" (response lever present) and half "off the baseline." During initial CER extinction, Ss received (a) normal CER extinction (lever available), (b) free food during conditioned stimuli (CSs) only (no lever), (c) free food during non-CSs only (no lever), or (d) free food during both CS and non-CS periods (no lever). While normal extinction Ss were highly suppressed in the presence of the CS, all free-food groups readily ate but did not differ in eating latencies. On subsequent CER extinction trials on the baseline, those Ss which received free food during the CSs were no less suppressed than other Ss. Data offer no support for W. K. Estes's (1969) reciprocal inhibition explanation of CER and punishment, nor do they support a fear interpretation of CER.—*Journal abstract*.

6922. Jones, R. B. & Nowell, N. W. (U Hull, England) **Latency of approach to food in male mice: Effects of clean and soiled sawdust substrates.** *Behavioral Biology*, 1974(Nov), Vol 12(3), 409-412.—Studied the effects of

clean and soiled sawdust substrates on the latency to food approach using 24 male albino mice. Results show that the use of home cage sawdust as a test substrate resulted in the lowest latency of approach to the food pellet, whereas significant increases were shown when clean sawdust or sawdust soiled by a foreign male conspecific were used, respectively, the clean sawdust affording an intermediate reading. Findings are discussed in terms of exploration and aversion.—*Journal abstract*.

6923. Katsev, Richard D. & Mills, Susan K. (Reed Coll) **Classical conditioning of skeletal avoidance responses in two strains of rats.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 355-360.—Reports that anticipatory skeletal responses can be directly elicited during classical aversive conditioning in the shuttlebox. Under the classical conditioned stimulus-unconditioned stimulus contingency 18 female albino Long-Evans rats shuttled at moderate rates, while 18 female albino Fischer, rats displayed high rates of anticipatory responding, even though the instrumental avoidance contingency was absent. The classical contingency was also exceedingly important in determining the differences between these strains, as well as their initial and terminal rates of anticipatory responding, when the avoidance contingency was present.—*Journal abstract*.

6924. King, Glen D. (Auburn U) **Wheel running in the rat induced by a fixed-time presentation of water.** *Animal Learning & Behavior*, 1974(Nov), Vol 2(4), 325-328.—4 female water-deprived Dublin SDD/DR albino rats were given free access to a running wheel and food in baseline sessions with water present for the 1st 375 sec of each daily 100-min session. In experimental sessions, water was presented intermittently according to a fixed-time 2-min schedule, which delivered water on a periodic basis independently of the S's behavior, resulting in 50 7.5-sec presentations of the water tube. Food consumption did not vary as a function of the experimental condition, whereas running increased for all Ss during the schedule conditions. Increases in running appeared to be the result of increases in both initiations of running and run-burst lengths.—*Journal abstract*.

6925. Klinger, Eric; Barta, Steven G. & Kemble, Ernest D. (U Minnesota, Morris) **Cyclic activity changes during extinction in rats: A potential model of depression.** *Animal Learning & Behavior*, 1974(Nov), Vol 2(4), 313-316.—40 male hooded rats' open-field activity immediately following extinction trials in a runway rose sharply from baseline, then dropped below baseline, and finally recovered. There was no discernible relationship between activity levels and runway performance during acquisition or extinction. Data confirm a theory that a sequence of invigoration, depression, and recovery of noninstrumental locomotor activity (an "incentive-disengagement cycle") may regularly accompany incentive loss, including experimental extinction.—*Journal abstract*.

6926. Lea, S. E. (U Cambridge, England) **The non-occurrence of a stimulus as a signal.** *Quarterly Journal of Experimental Psychology*, 1974(Nov), Vol 26(4), 616-621.—2 groups of 8 female hooded rats each were rewarded for pressing a panel following a varying number of barpresses; a signal following the barpress

indicated whether or not a panel press would be rewarded if made before the next barpress. For 1 group, the signal indicating reward was a flash of light; for the other it was the nonoccurrence of the flash (in the latter case the flash thus signaled nonreward). The 1st group learned to withhold panel presses except when reward was signaled, but the 2nd group did not. This result is related to the "feature positive effect" of H. Jenkins and R. Sainsbury (1970), in which pigeons failed to withhold pecks at a negative stimulus display when it was the same as the positive display except for the addition of a distinctive feature.—*Journal abstract.*

6927. Libby, Myrna E. & Church, Russell M. (Ohio State U) **Timing of avoidance responses by rats.** *Journal of the Experimental Analysis of Behavior*, 1974(Nov), Vol 22(3), 513-517.—Trained 3 male albino Norway rats on an unsignaled shuttlebox-avoidance task under 3 response-shock intervals (10, 20, and 40 sec). Under all conditions, Ss developed excellent temporal gradients of avoidance, i.e., response rate was an increasing function of time since last response. Although the response rate at any given interval of time after the previous response was inversely related to the response-shock interval, there was an underlying similarity in the temporal gradients for the 3 intervals. In all cases, response rate relative to the maximum response rate was approximately equal to the proportion of the interval that had elapsed. It is suggested that rats in unsignaled avoidance estimate time from response completion, and that the units of the estimate are proportional parts of the response-shock interval.—*Journal abstract.*

6928. Linden, David R. (U Nebraska, Lincoln) **Transfer of approach responding between punishment, frustrative nonreward, and the combination of punishment and nonreward.** *Learning & Motivation*, 1974(Nov), Vol 5(4), 498-510.—96 Nebraska rats were trained to make an approach response with either partial reward, intermittent punishment, or a combination of partial reward and intermittent punishment, and then were tested for persistence to extinction, punishment with reward, or punishment during extinction. Partial reward, alone or with punishment, produced greatest resistance to extinction, while intermittent punishment, alone or with partial reward, produced greatest persistence to punishment with reward. Transfer of persistence from partial reward to punishment with reward and intermittent punishment to extinction was also demonstrated. However, partial reward alone did not increase persistence to punishment during extinction, whereas intermittent punishment and partial reward combined with intermittent punishment did increase such persistence. Results are interpreted in A. Amsel's (see PA, Vol 33:7687 and 38:2017) conditioning-model theory by extending the hypothesized similarity of frustrative nonreward and punishment.—*Journal abstract.*

6929. Lowe, C. Fergus; Davey, Graham C. & Harzem, Peter. (U Wales, Cardiff) **Effects of reinforcement magnitude on interval and ratio schedules.** *Journal of the Experimental Analysis of Behavior*, 1974(Nov), Vol 22(3), 553-560.—Conducted 3 experiments to study the leverpressing behavior of a total of 9 male albino rats on 3 schedules of reinforcement—fixed interval (FI), response-initiated fixed interval, and fixed ratio (FR). In

testing, concentration of the milk reinforcer was varied within each session. On all schedules, duration of the postreinforcement pause was an increasing function of the concentration of the preceding reinforcer. Results indicate that the running rate (response rate calculated by excluding the postreinforcement pauses) increased linearly as a function of the preceding magnitude of reinforcement on FI, showed slight increases for 2 of the 3 Ss on response-initiated fixed interval, and did not change systematically on FR. In all cases, the overall response rate either declined or showed no effect of concentration. The major effect of increasing the reinforcement magnitude was in determining the duration of the following postreinforcement pause, and changes in the response rate reflected this main effect. (25 ref)—*Journal abstract.*

6930. Lydersen, Tore & Crossman, E. K. (Utah State U) **Fixed-ratio discrimination: Effects of response-produced blackouts.** *Journal of the Experimental Analysis of Behavior*, 1974(Nov), Vol 22(3), 547-551.—Studied A. J. Neuringer and B. A. Schneider's technique (see PA, Vol 43:12647) of using response produced blackouts to control the real time to complete ratios in a fixed ratio (FR) discrimination procedure. For 3 White King pigeons, reinforcement depended upon a left side-key response after execution of an FR-10 on the center key, and upon a right side-key response after FR-20. Each response during the FR produced a .5-sec blackout. The time between the 1st and last response in FR-10 was then equated with the time between the 1st and last response in FR-20 by increasing the blackout duration. The accuracy of side-key choice was disrupted, thereby suggesting that time, rather than number of responses, controlled choice responding. When the time between the 1st and last response was equated during both ratios, asymptotic accuracy was approximately equal to (for 2 birds) or somewhat higher than (1 bird) that obtained previously. The results of probes with intermediate FRs and blackouts suggests that control of side-key choice had transferred from the time between the first and last response in ratios to blackout duration.—*Journal abstract.*

6931. Mackay, Barry. (Memorial U Newfoundland, St John's, Canada) **Conditioned food aversion produced by toxicosis in Atlantic cod.** *Behavioral Biology*, 1974(Nov), Vol 12(3), 347-355.—In 2 experiments, the ability of codfish ( $N = 22$ ) to associate ingestion of a food with toxicosis was studied. After preliminary training to feed consistently, cod ate food which was followed by a single injection of lithium chloride. Preferences for "safe" nonconditioned food and the conditioned food were tested. Results of Exp I show a greater aversion to the conditioned food compared to nonconditioned food. Though consumption of nonconditioned food was depressed during initial testing, the consumption of conditioned food was significantly less for 6 of 8 test sessions. The drop in consumption of nonconditioned food was attributed in Exp II to incomplete recovery from the drug. An aversion to familiar food was initially weaker compared to novel food and extinguished more rapidly. (18 ref)—*Journal abstract.*

6932. Medin, Douglas L. (Rockefeller U, New York, NY) **Reward pretraining and discrimination learning**

set. *Animal Learning & Behavior*, 1974(Nov), Vol 2(4), 305-308.—8 pigtailed monkeys were trained on discrimination problems involving objects that had been previously paired with reward or nonreward, or objects not associated with any pretraining. In 2 separate studies, no differences on these various problem formats were observed, but performance improved considerably with practice. Results are contrary to the theories for learning set formation of K. W. Spence and of D. L. Medin.—*Journal abstract*.

6933. Meltzer, Donald & Niebuhr, Bruce R. (Southern Illinois U) **Additive and suppressive response summation with a chain schedule.** *Journal of the Experimental Analysis of Behavior*, 1974(Nov), Vol 22(3), 519-524.—Conducted 2 experiments with a total of 12 male rats to investigate summation using a 2-segment (variable-interval variable interval) chain schedule. In Exp I, 3 Ss had either clicker, light, or clicker plus light as terminal-segment stimuli. All 3 responded at the highest rate when clicker plus light were present, thus showing additive summation. For 3 other Ss initial-segment stimuli were either clicker, light, or clicker plus light. 2 Ss responded at the lowest rate when clicker plus light were present, thus showing suppressive summation. In Exp II 3 Ss had either clicker, light, or neither clicker nor light as terminal-segment stimuli. None of these Ss showed reliable additive summation. 3 other Ss had clicker, light, or neither as the initial-segment stimulus, and all 3 showed suppressive summation. It is suggested that additive and suppressive summation both can be demonstrated with chain schedules, but stimulus parameters may be major variables in producing the effect.—*Journal abstract*.

6934. Miller, Ralph R.; Daniel, David & Berk, Alvin M. (Brooklyn Coll, City U New York) **Successive reversals of a discriminated preference for signaled tailshock.** *Animal Learning & Behavior*, 1974(Nov), Vol 2(4), 271-274.—3 male Sprague-Dawley rats received unmodifiable tailshock at random intervals in a shuttlebox. In a continuous-choice situation, Ss could choose between an auditory signal immediately preceding or immediately following the tailshock. Over repeated daily 3-hr sessions, each S acquired a spatial discrimination indicating a strong preference for the signal preceding tailshock. This preference continued undiminished through 2 successive reversals of the position associated with signaled shock. This demonstration precludes explanations of the preference-for-signaled-shock phenomenon based upon primary reinforcement value or acquired value of the signal, position preferences, and overt modification of the aversiveness of the reinforcer through such means as postural adjustments. An explanation of recent failures to obtain the preference-for-signaled-shock effect is offered. (15 ref)—*Journal abstract*.

6935. Morris, R. G. (U Durham, England) **Pavlovian conditioned inhibition of fear during shuttlebox avoidance behavior.** *Learning & Motivation*, 1974(Nov), Vol 5(4), 424-447.—Conducted 3 experiments with a total of 48 female Lister hooded rats and 104 male and female RHA rats to explore the development and function of conditioned inhibition of fear during the acquisition and maintenance of shuttlebox avoidance behavior. The

development of inhibition to an exteroceptive feedback stimulus was a function of the number of successive avoidance responses to which S had been trained and of the duration of the intertrial interval, a parameter shown also to affect the rate of acquisition of avoidance learning. Master Ss who learned the instrumental avoidance response, and yoked Ss who did not, showed equivalent inhibitory fear conditioning in each experiment. Results of 1 experiment suggest that conditioned inhibition plays no important role in "protecting" fear conditioned to the discrete warning signal during avoidance maintenance. Data indicate that feedback stimuli develop their inhibitory properties by a Pavlovian process and that certain aspects of their function may, therefore, be readily understood within the framework of mediational 2-process learning theory. (53 ref)—*Journal abstract*.

6936. Mueller, Helmut C. (U North Carolina, Chapel Hill) **The development of prey recognition and predatory behaviour in the American kestrel *Falco sparverius*.** *Behaviour*, 1974, Vol 49(3-4), 313-324.—Exposed 9 hand-reared American kestrels (sparrow hawks) to a series of objects, stationary and moving, ranging from a tissue-paper ball, a crude tissue-paper mouse, stuffed and dead mice, and live mice. Only 1 bird responded consistently to paper models, and all attacked live mice, including 5 that had not responded to models or dead mice. 2 of 5 inexperienced birds attacked their 1st live mouse in less than 10 sec. 8 of 9 birds attacked their 1st mouse (live, dead, or stuffed) expertly and all 9 birds achieved consistent, expert performance in less than 6 trials. The inference is drawn that individual experience plays a minor role in the development of recognition, capturing, and killing of mice by kestrels. (German summary) (29 ref)—*Journal summary*.

6937. Patten, Richard L. & Latta, R. Michael. (Bernidji State Coll) **Frustration effect in discrimination: Effect of extended training.** *Journal of Experimental Psychology*, 1974(Nov), Vol 103(5), 831-836.—Investigated A. Amsel and J. Ward's finding (see PA, Vol 39:9344) that the frustration effect (FE) in the 2nd runway of a double runway disappeared during prolonged discrimination training in the 1st runway. Using 16 male hooded rats and 16 male albino Wistar rats, conditions preventing the dissipation of frustration in the 1st runway were employed along with the usual dissipation-possible conditions. Measures of activity in the 1st goal box and locomotion in the 2nd runway indicate that FE did not decline over extended discrimination training when frustration-dissipation in the nonreward or reduced reward discriminandum was prevented. The results are interpreted as consistent with a frustration theory of discrimination performance.—*Journal abstract*.

6938. Poley, Wayne. (U Alberta, Edmonton, Canada) **Emotionality related to maternal cannibalism in BALB and C57BL mice.** *Animal Learning & Behavior*, 1974(Nov), Vol 2(4), 241-244.—12 BALB and 12 C57BL female inbred-strain mice were tested for emotional behavior. Half of the Ss had successfully raised their 1st litter to weaning, while the other half had eaten their 1st litter. Cannibalistic females of both strains were found to be more prone to auditory stress than controls. However, the relationship between emotional defecation and

cannibalism interacted with strain, suggesting an optimum level of arousal.—*Journal abstract.*

6939. Prokasy, William F. (U Utah) **Discriminated avoidance vs classical conditioning: A two-phase model analysis.** *Animal Learning & Behavior*, 1974(Nov), Vol 2(4), 257-261.—The acquisition of discriminated avoidance and classically conditioned leg flexions in 28 dogs and of discriminated avoidance leg flexion in 16 cats was examined via a 2-phase model of conditioning. Classically conditioned Ss uniformly required 2 operators during Phase 2, with the limit of the conditioned response (CR) operator being greater than that of the CR operator. Not all avoidance-trained Ss required 2 operators during Phase 2, but those who did also had a higher CR than CR operator limit. The CR operator limit was higher for avoidance than for classical training, while the change rate was greater for classical training. The avoidance behavior of cats paralleled that of the dogs. It is concluded that the data generally conform to views of E. R. Hilgard and D. G. Marquis (1940) and, more recently, of R. C. Bolles et al (1966), but were contrary to what would be expected from 2-factor theory. (21 ref) —*Journal abstract.*

6940. Russell, Alan & Glow, Peter H. (Flinders U, School of Social Sciences, Bedford Park, SA, Australia) **Some effects of short-term immediate prior exposure to light change on responding for light change.** *Animal Learning & Behavior*, 1974(Nov), Vol 2(4), 262-266.—Tested the prediction that short-term immediate prior exposure to one light change will reduce not only the reward value of that light change but also a light change in the opposite direction. The prediction arises from explanations of sensory reinforcement in terms of a single general need for stimulus change. Each 20-min LCBP (light-contingent barpressing) session was divided into halves (exposure and test periods, respectively). 80 female Wistar hooded rats received either light onset or light offset as the reinforcer in the 2 halves. The prediction was confirmed for the 1st 10 of 15 LCBP sessions, but thereafter exposure to one direction of light change had little or no effect on responding for light change in the other direction. Results are interpreted in terms of (a) an increase across sessions in the level of novelty and change the Ss were capable of accommodating and (b) separate reinforcing effects for different sensory changes. (25 ref)—*Journal abstract.*

6941. Shimp, Charles P. & Moffitt, Marilynne. (U Utah) **Short-term memory in the pigeon: Stimulus-response associations.** *Journal of the Experimental Analysis of Behavior*, 1974(Nov), Vol 22(3), 507-512.—Conducted 2 experiments to develop a method of studying short-term memory for stimulus-response associations in 3 White Carneaux pigeons; both experiments used a study and a test phase. The study phase in Exp I consisted of 2 stimulus-response pairs presented successively. Each pair consisted of the illumination of a left or right key (the stimulus) and a peck on the lighted side key (the response). The study phase in Exp II consisted of 3 such pairs presented successively. A retention interval, varied between .1 and 4.0 sec, separated the study phase from the test phase. The test phase of a trial began with the illumination of the center key, by 1 of 2 (Exp I) or 3 (Exp II) colors. This color was

the same as the stimulus element of 1 of the pairs in the study phase. A reinforcer was presented if an S then emitted the response element of the indicated stimulus-response pair. Results provide information on the conditions that enable a pigeon to remember the responses most recently emitted in the presence of various stimuli. Results suggest an account of the maintenance of behavior that is temporally noncontiguous with reinforcement.—*Journal abstract.*

6942. Shumake, Stephen A. & Caudill, Charles J. (Denver Wildlife Research Ctr, CO) **Operant conditioning of licking in vampire bats, *Desmodus rotundus*.** *Behavior Research Methods & Instrumentation*, 1974(Sep), Vol 6(5), 467-470.—4 adult female vampire bats were autoshaped to keypress to obtain .5-ml quantities of defibrinated cattle blood reinforcer. Keypressing required 7 g of force, and response rates were moderately low (500-600 presses/hr). Because of the force requirements, the apparatus was then modified so that licking from a tube would deliver the blood reinforcer. Ss were trained on variable-ratio, fixed-ratio, variable-interval, and fixed-interval schedules. Some of the schedules produced lick-response rates averaging 60/min. With conditioned suppression (light stimulus paired with brief electric footshock), Ss learned within 15 sessions to completely suppress operant licking while the light was on.—*Journal abstract.*

6943. Speelman, Roger D. & Gollub, Lewis R. (U Maryland) **Behavioral interactions in multiple variable-interval schedules.** *Journal of the Experimental Analysis of Behavior*, 1974(Nov), Vol 22(3), 471-481.—Conducted 2 experiments to investigate the relationship between the magnitude of response rate changes and the frequency of reinforcement. In Exp I, 2 groups of 4 White Carneaux pigeons each were exposed to multiple schedules in which 1 component was always a variable-interval schedule with a mean interreinforcement interval of 30 or 180 sec. The other component was either an equal variable-interval schedule or extinction. Response rates in the unchanged component always increased when reinforcement was no longer scheduled in the changed component, and decreased in 7 of 8 cases when the variable-interval schedule was reintroduced. The percent rate change in the unchanged component was inversely related to the frequency of reinforcement and to the ongoing response rate in the unchanged component. Rate changes in the unchanged component were not consistently correlated with changes in any single feature of the relative-frequency interresponse-time distributions. In Exp II, the same Ss were exposed to variable-interval schedules and multiple variable-interval variable-interval schedules with equal mean interreinforcement intervals. Response rates were similar under both conditions. (18 ref)—*Journal abstract.*

6944. Starr, Bettie C. & Staddon, J. E. (Duke U) **Temporal control on periodic schedules: Signal properties of reinforcement and blackout.** *Journal of the Experimental Analysis of Behavior*, 1974(Nov), Vol 22(3), 535-545.—Conducted 3 experiments with a total of 16 White Carneaux pigeons to investigate the effects on the pattern of keypecking of sequential probability of reinforcement, interval duration, and time to reinforcement opportunity. Ss were exposed to periodic food

reinforcements in which intervals ended with equal probability in either reinforcement or brief blackout. Results show that (a) at short absolute interval durations, time to reinforcement opportunity determined both postreinforcement and postblackout pause (time to 1st keypeck within an interval); (b) at long intervals, postblackout pause was consistently shorter than postreinforcement pause, even if both events signaled the same time to the next reinforcement opportunity (omission effect); and (c) when reinforcement and blackout signaled different times to the next reinforcement opportunity, within the same experiment, there was some evidence for interactions analogous to behavioral contrast. (26 ref)—*Journal abstract*.

6945. Stiers, Michael & Silberberg, Alan. (American U) **Lever-contact responses in rats: Automaintenance with and without a negative response-reinforcer dependency.** *Journal of the Experimental Analysis of Behavior*, 1974(Nov), Vol 22(3), 497-506.—Conducted 2 experiments with a total of 14 male hooded rats to (a) replicate G. Peterson et al's (see PA, Vol 49:6305) demonstration of positively automaintained responding in rats; and (b) determine whether Ss would persist in responding during a negative automaintenance version of the G. Peterson et al paradigm. Results show that cuing-lever contacts on the positive automaintenance procedure occurred on a higher proportion of trials and at higher rates when contacts occurred than on the negative automaintenance procedure. Instances of the cuing lever's failure to support responding were more frequent on the negative than the positive automaintenance procedure. The topography and median contact duration of positively automaintained responding differed from negatively automaintained responding. These findings agree substantially with the automaintenance literature on pigeons, suggesting that similar processes may characterize automaintained responding in both pigeons and rats. (16 ref)—*Journal abstract*.

6946. Tarpy, Roger M. & Sawabini, Frederick L. (Bucknell U) **Reinforcement delay: A selective review of the last decade.** *Psychological Bulletin*, 1974(Dec), Vol 81(12), 984-997.—Presents a review of data and theories on delay of primary reinforcement in discrete trial instrumental learning. The major areas of investigation that are reviewed include delay of negative reinforcement; measurements of delay effects; cue utilization in acquisition and extinction; resistance to extinction as a function of constant delay, partial delay, and patterns of partial delay; contrast; and discrimination learning. (3 p ref)—*Journal abstract*.

6947. Tarte, Robert D. (U Nevada, Las Vegas) **Extinction of rats' barpressing in the presence of free food.** *Animal Learning & Behavior*, 1974(Nov), Vol 2(4), 289-292.—In 2 experiments, a total of 28 hungry male Wistar rats received 4 extinction sessions in the presence of free food. When the free food was removed for 8 subsequent extinction sessions, the Ss made significantly fewer responses than did control groups which received no intervening sessions. Results are contrary to those of S. Enkema et al (see PA, Vol 48:8694). From the results of groups of Ss which received 4 intervening sessions of free food only, empty chamber, or time in home cage, it

is concluded that the presence of free food caused the diminution in extinction responding.—*Journal abstract*.

6948. Thomas, David R. & Wheatley, Kimbal L. (U Colorado) **Effects of interdimensional training on stimulus generalization: An extension.** *Journal of Experimental Psychology*, 1974(Dec), Vol 103(6), 1080-1085.—32 domestic pigeons were trained to peck a 555-nm stimulus and then were tested for wavelength generalization. Ss then received either discrimination training with 555 nm (reinforced) and a white vertical line (extinguished), 1 of 2 types of nondifferential training with the above 2 stimuli, or continued single-stimulus training. A 2nd generalization test indicated that the intervening discrimination training had sharpened the gradients whereas the nondifferential training had flattened them. The 2 types of nondifferential training differed in reinforcement density yet their Test-2 gradients were similar, suggesting that generalization slope differences between nondifferential and other training procedures are not a consequence of variations in reinforcement density. The gradients of the single-stimulus group showed no change between the 2 tests, indicating that the aforementioned effects of discrimination and nondifferential training were not an artifact of the repeated testing procedure.—*Journal abstract*.

6949. Thomas, Timothy R. (Alma Coll) **Retention of environmental habituation in rats as a function of the environment during the retention interval.** *Animal Learning & Behavior*, 1974(Nov), Vol 2(4), 267-270.—The time course of 30 female Sprague-Dawley rats' habituation to familiar test environments was measured with a resident-intruder paradigm. A resident was permitted 0, 2, 5, 10, or 30 min of environmental adaptation prior to introduction of an intruder, and a dominance test was then conducted in which both Ss were allowed to compete for drops of water. The degree of dominance which the resident attained was a function of the duration of adaptation, reaching a maximum after 5 min. The retention of this habituation was investigated as a function of the type of retention environment and the duration of the retention interval. Retention intervals of 5 or 25 min in unfamiliar environments produced significant loss of habituation, while the same intervals in familiar environments did not produce habituation loss. The degree of similarity between habituated and retention environments did not appear to be an important variable affecting retention. When the retention interval was extended to 25 hrs in a familiar retention environment, no environmental habituation was retained.—*Journal abstract*.

6950. Tyler, Dolores M.; Waag, Wayne L. & Darnall, Joe W. (Texas Tech U) **Acquisition performance as a function of predeprivation running wheel activity.** *Journal of General Psychology*, 1974(Oct), Vol 91(2), 259-263.—Recorded predeprivation activity wheel scores for 16 albino rats over a 7-day period. Ss were then placed on 22-hr food deprivation, followed 3 days later by acquisition training procedures in the straight alley runway. During acquisition each S received 8 trials/day for 5 days. On the basis of their activity wheel scores, Ss were equally divided into high and low activity groups. Significant differences in runway performance were found, indicating that the high activity group

produced both quicker start latencies and faster running times.—*Journal abstract.*

6951. Uhl, Charles N. & Homer, Andrew L. (U Utah) **Omission training compared with yoked controls and extinction in multiple-schedule discrimination learning.** *Animal Learning & Behavior*, 1974(Nov), Vol 2(4), 317-324.—After 24 male albino rats were trained on a multiple schedule with variable interval 30-sec reinforcement in both stimulus components, omission, yoked, and extinction procedures were applied in response elimination (S-) while the variable interval continued in response acquisition (S+). In S-, omission training reduced response rate faster and to a lower terminal level than either response-independent yoked reinforcement or extinction, which were approximately equivalent. In S+, the extinction group exhibited elevated response rates representing behavioral contrast, while the omission and yoked groups showed reduced response rates. Results attest to the effectiveness of omission training as a response elimination method. They also contradict theories which posit reduction of response rate in S- to be necessary and sufficient for behavioral contrast. (24 ref)—*Journal abstract.*

6952. Uhl, Charles N. (U Utah) **Response elimination in rats with schedules of omission training, including yoked and response-independent reinforcement comparisons.** *Learning & Motivation*, 1974(Nov), Vol 5(4), 511-531.—After a total of 48 male albino rats were trained to leverpress, response elimination began with factorial combinations of fixed vs variable and adjusting vs constant omission training schedules. A variable time (VT) response-independent reinforcement schedule followed response elimination to test the durability of response cessation. Exp I included groups whose reinforcement was yoked to that received by the omission schedule groups. Rate of response elimination was faster with an adjusting than a constant schedule and slightly faster with a variable than a fixed schedule. Shorter delay of reinforcement tended to increase rate of response elimination. In the subsequent VT durability test all groups displayed near-zero response rates. In Exp II adjusting fixed and variable omission schedules, including yoked groups, were compared with fixed time (FT) and VT reinforcement schedules. Response elimination was slower in the FT and VT groups, and they responded more in a subsequent VT durability test. It is concluded that differential reinforcement of other behavior fails to account for these omission training effects, and suggestions are made for an analysis based on the correlation between response and reinforcement rate. (32 ref)—*Journal abstract.*

6953. Vanderweele, Dennis A. (Occidental Coll) **The effects of taste adulteration, hypertonic, and hyperoncotic solutions on water ingestion in the gerbil.** *Animal Learning & Behavior*, 1974(Nov), Vol 2(4), 309-312.—68 Mongolian gerbils (*Meriones unguiculatus*) were examined for components of thirst in 2 laboratory experiments. The gerbil, reputed to be a desert-adapted rodent, was tested for its response to quinine adulterations of water, hypertonic solutions (1 M sodium chloride, NaCl), and hyperoncotic solutions (40% W/V polyethylene glycol in isotonic saline, PG). Both NaCl and PG were administered intraperitoneally. Ss accepted quinine when

it was the only solution available and food was ad lib, but preferred distilled water to quinine if both were available. Both PG and NaCl produced increased water intakes within the 1st 2 hrs postinjection. PG, however, produced the most reliable and largest increase in water consumption, illustrating that extracellular dehydration is probably a more significant thirst stimulus in gerbils.—*Journal abstract.*

6954. Waller, T. Gary. (U Waterloo, Ontario, Canada) **Constant and variable irrelevant cues during intra- and extradimensional transfer.** *Animal Learning & Behavior*, 1974(Nov), Vol 2(4), 298-304.—Exp I with 48 male Holtzman albino rats compared constant irrelevant (CI), variable-between irrelevant (VBI), and variable-within irrelevant (VWI) cues during an extradimensional (ED) shift discrimination. Performance was better for CI than for VBI and better for VBI than for VWI. Exp II with 48 additional Ss combined CI, VBI, and VWI cues with ED or intradimensional (ID) shifts. Irrelevant-cue conditions did not affect ID performance but did affect ED performance. The typical superiority of ID shifts compared to ED shifts was observed in the VWI condition but not in the CI condition. Implications for mediating-response (i.e., attention or observing-response) theories are indicated. (20 ref)—*Journal abstract.*

6955. Wasserman, Edward A. & Anderson, Patricia A. (U Iowa) **Differential autoshaping to common and distinctive elements of positive and negative discriminative stimuli.** *Journal of the Experimental Analysis of Behavior*, 1974(Nov), Vol 22(3), 491-496.—Conducted a study of 12 hungry homing pigeons to investigate Ss' learning of a discrimination between 2 successively presented compound visual stimuli using a 2-key autoshaping procedure. Common and distinctive stimulus elements were simultaneously presented on separate keys and either followed by food delivery (positive stimulus, S+), or not followed by food delivery (negative stimulus, S-). Results show that Ss acquired both between-trial and within-trial discriminations. On S+ trials, Ss pecked the distinctive stimulus more than the common stimulus; before responding ceased on S- trials, they pecked the common stimulus more than the distinctive one. Mastery of the within-display discrimination during S+ trials preceded mastery of the between-trials discrimination. These findings extend H. Jenkins and R. Sainsbury's (1969) analysis of discriminations based on a single distinguishing feature to discriminations in which common and distinctive elements are associated with both the positive and negative discriminative stimuli. The similarity of these findings to other effects found in autoshaping—approach to signals that forecast reinforcement and withdrawal from signals that forecast nonreinforcement—is also discussed. (21 ref)—*Journal abstract.*

6956. Weiss, Stanley J. & Van Ost, Susan L. (American U) **Response discriminative and reinforcement factors in stimulus control of performance on multiple and chained schedules of reinforcement.** *Learning & Motivation*, 1974(Nov), Vol 5(4), 459-472.—Discriminative control of the response rates of 2 groups of 4 male hooded rats each was equated by training them to cease barpressing in light-out no-tone (T + L) and to respond during tone and light. Multiple-

schedule Ss received food at the same rate for responding during tone or light as for nonresponding in T + L. For the chained-schedule Ss, responding in tone or light only produced T + L where food was received for nonresponding. In extinction tests multiple-schedule Ss emitted approximately twice the responses to tone-plus-light as to tone or light presented individually (additive summation). Ss trained on the chained schedule, in which the tone and light each controlled substantial response rates but were never paired with food, showed no summation when the tone and light were presented together. Results indicate that discriminative control of response rates and reinforcement differences between schedule components determine stimulus control. (15 ref)—*Journal abstract*.

### Social & Sexual Behavior

6957. Altmann, Jeanne. (U Chicago, Allee Lab of Animal Behavior) **Observational study of behavior: Sampling methods.** *Behaviour*, 1974, Vol 49(3-4), 227-267.—Discusses the advantages and limitations of 7 major behavioral sampling techniques used in social situations: ad lib, sociometric matrix completion, focal-animal, all occurrences of some behaviors, sequence, 1-zero, and instantaneous and scan. Information is also given on whether the different techniques sample events or states, on intrinsic and secondary bias, and on recommended uses. (German summary) (84 ref)—S. R. Goldstein.

6958. Bentley, David & Hoy, Ronald R. (U California, Berkeley) **The neurobiology of cricket song.** *Scientific American*, 1974(Aug), Vol 231(2), 34-44.—Describes the structure and development of the neuronal network mediating the generation of cricket songs. Evidence suggests that information specifying song patterns is genetically encoded and that environmental information is not utilized in the determination of song patterns. Preferences of female crickets for calling songs of males of their own species are based on genetically shared information. Studies of specific neural features under genetic control and the role of single genes are described. —P. Tolin.

6959. Denenberg, Victor H. (U Connecticut) **The communication of affect among rodents through mother-young interactions.** In L. Krames, P. Pliner & T. Alloway (Eds), *Nonverbal communication*. New York, NY: Plenum Press, 1974. x, 212 p. \$14.95.—Reviews research on mice and rats concerning infantile experiences and mother-young interactions. It is concluded that clear evidence exists of communication of affective behavior between the mother and her natural or foster offspring. Parallel research by experimenters on animal and human Ss is suggested as a means of understanding the influence of early experience and developmental processes. (23 ref)

6960. Dodd, W. P. & Jones, E. (U Birmingham, Computer Ctr, England) **A program for the analysis of intragroup interaction based on spatial dynamics.** *Behavior Research Methods & Instrumentation*, 1974(Sep), Vol 6(5), 497-503.—Describes the salient features of a computer program used in the analysis of the activity of a group of long-tail macaques, and adaptable to any enclosed group of Ss. The principal feature concerns the

time variation of the separation of selected dyads, although individual activity is also summarized.

6961. Drickamer, Lee C. (North Carolina Dept of Mental Health, Research Div, Raleigh) **A ten-year summary of reproductive data for free-ranging *Macaca mulatta*.** *Folia Primatologica*, 1974, Vol 21(1), 61-80.—Investigated reproduction and population of a provisioned colony of rhesus monkeys on an island off Puerto Rico. Population ranged from 106 to 364, with a mean annual increment of 13.4%. Bands consisted of 20-100 monkeys. 60-69% of mature females gave birth each year, and over 60% of births took place in May and June. Mean age of females first giving birth was 4 yrs. With increasing age a greater proportion of females gave birth, doing so earlier in the season than younger females. Dominance rank was positively correlated with the probability both of giving birth and, among India-born females, of producing an infant which survived 1 yr. There was a 1:1 sex ratio at birth, but after 4 yrs the mortality rate of males was greater than that of females: 26% of males and 60% of females survived 8 yrs. Higher levels of both aggression and group transfer, and occasionally a solitary way of life, were associated with the higher male mortality rate. It is suggested that 2-4 yr old males are the best animals to remove from a colony for laboratory or research purposes. (32 ref)—W. K. Redican.

6962. Dunbar, R. I. (U Bristol, England) **Observations on the ecology and social organization of the green monkey, *Cercopithecus sabaeus*, in Senegal.** *Primates*, 1974(Dec), Vol 15(4), 341-350.—Reports observations made of the green monkey in its natural habitat in West Africa during a 3-mo study. Green monkeys live in multimale groups averaging some 12 individuals. Information is given on home range size, use of habitat, daily activity patterns, diet, and birth seasonality. Social organization is discussed, and data are given on the relationships between age-sex classes, aggression, and leadership. Intergroup relations are discussed, and it is suggested that groups defend their ranges as territories. The ecology and social organization of green monkeys are compared with that of populations of *C. aethiops* studied in East Africa, and they are found to be similar. —*Journal abstract*.

6963. Goosen, G. (Primate Ctr TNO, Rijswijk, Netherlands) **Some causal factors in autogrooming behaviour of adult stump-tailed macaques (*Macaca arctoides*).** *Behaviour*, 1974, Vol 49(1-2), 111-129.—Conducted a series of experiments to test the hypothesis that staying close to another animal and reduction in locomotion are causal factors for autogrooming in stump-tailed monkeys. Individual females served as test Ss while individual males served as stimulus monkeys during 15-min observation periods, in which interanimal distance and contact could be controlled. The presence of the stimulus animal reduced the distance between monkeys, increased autogrooming, and decreased locomotion. The increment in autogrooming varied with distance and time spent close by. A hypothesis about the interaction of causal factors in autogrooming was formulated on the basis of the empirical findings. (German summary)—S. R. Goldstein.

6964. Guyot, Y. [Nonverbal exchanges among animals.] (Fren) *Bulletin de Psychologie*, 1973-1974, Vol 27(13-14), 778-786.—Discusses concepts of animal communication, with reference to the literature, and communication between animals and humans. (23 ref)
6965. Hanby, Jeannette P. & Brown, Conrad E. (MRC Unit on the Development & Integration of Behaviour, Cambridge, England) *The development of sociosexual behaviours in Japanese macaques Macaca fuscata. Behaviour*, 1974, Vol 49(1-2), 152-196.—Studied the development and adult expression of mounting, thrusting, presenting, and ejaculation in a troop of 100 Japanese macaques caught as a unit and released into a 2-acre corral at the Oregon Regional Primate Research Center. At 6 mo old, males oriented to a partner's buttocks and used a double-foot-clasp posture on most mounts. Mount frequency peaked at 4½ yrs but the most efficient and stable patterns were observed in males over 7 yrs old. Females showed early thrusting movements and low mounting frequencies, the latter occurring during play or fighting. Marked seasonal variations in sociosexual activities were also observed. These results are integrated with other research. It is concluded that the mother is the most important element for sociosexual behavior and that factors inhibiting acquisition of intromission delay the development of the young male's ability to distinguish correctly between postures, partners, and situations. (French summary) (64 ref)—S. R. Goldstein.
6966. Hayashi, Susumu & Kimura, Takeji. (U Tokyo, Coll of General Education, Japan) *Sex-attractant emitted by female mice. Physiology & Behavior*, 1974(Oct), Vol 13(4), 563-567.—4 experiments were conducted with a total of 96 male and 6 female ICR-JCL mice to examine the effects of sex-attractant on male mating behavior. Results show that sexually experienced males preferred the odor of estrous females to that of diestrous females, while sexually naive males showed no preference. Further preference tests using urine and several genital organs as odor sources showed that the vaginal smear or vaginal tissue from estrous females contained attractant(s) for experienced males. Smearing of vaginal discharge on the perigenital skin of diestrous females enhanced mounting behavior of experienced males. (20 ref)—*Journal abstract*.
6967. Hazlett, Brian A. & Estabrook, George F. (U Michigan) *Examination of agonistic behavior by character analysis: II. Hermit crabs. Behaviour*, 1974, Vol 49(1-2), 88-110.—Studied the temporal structure of the fighting behavior of hermit crabs (*Paguristes grayi* and *Pagurus marshi*) by the method of character analysis. For each character analysis run, the information content of each act, information in common between acts, and the percent uncertainty reduction about 1 act of knowledge of the previous act, was calculated. The amount of information transmitted was low at the beginning of a fight, higher in the middle, while at the end the absolute values decreased as the relative levels of uncertainty reduction increased. Fight initiators that eventually won altered their behavior more than eventual losers during all phases of aggressive interactions. Methodological and behavioral aspects of character analysis are discussed. (German summary) (16 ref)—S. R. Goldstein.
6968. Kummer, H.; Götz, W. & Angst, W. (Delta Regional Primate Research Ctr, Covington, LA) *Triadic differentiation: An inhibitory process protecting pair bonds in baboons. Behaviour*, 1974, Vol 49(1-2), 62-87.—Conducted enclosure experiments to test the hypothesis that social inhibition prevents male hamadryas baboons from encroaching on each other's females in triadic situations. Simultaneous presentation of an unfamiliar female to 2 males resulted in acquisition of the female by defeat or withdrawal of 1 male. However, no fights and no disruption of the pair bond occurred when an intruder male first watched a male-female troopmate interaction. Alternatively, powerful males from different troops attacked weaker males and took over their females. Possible mechanisms involved in "triadic differentiation" are discussed. (German summary) (17 ref)—S. R. Goldstein.
6969. Larsson, Knut et al. *Delayed onset of sexual activity of male rats subjected to pre- and postnatal malnutrition. Göteborg Psychological Reports*, 1974, Vol 4(2), 10 p.—Male Sprague-Dawley rats were subjected to pre- and postnatal undernutrition and their sexual and locomotive behavior was studied. The underfed Ss were slower in initiating sexual behavior than the intact ones, and some of the Ss never showed any mounting behavior during the period of testing. Occurrence of spermatozoa in a penile smear was delayed in the underfed Ss. The Ss subjected to restricted food consumption showed increased locomotive activity in an open field situation, but habituation occurred at a normal rate.—*Journal abstract*.
6970. LeBoeuf, Burney J. (U California, Santa Cruz) *The hectic life of the alpha bull: Elephant seal as fighter and lover. Psychology Today*, 1974(Oct), Vol 8(5), 104-108.—Describes the dominance struggles and mating practices of the elephant seals. The most successful bull mates with more females than any other bull. In rookeries containing 40 females the dominant bull may do all the copulating. Only the fittest bulls pass on their genes.
6971. Lubin, Y. D. (Smithsonian Tropical Research Inst, Balboa, Canal Zone) *Adaptive advantages and the evolution of colony formation in Cyrtophora (Araneae: Araneidae). Zoological Journal of the Linnean Society*, 1974(Jun), Vol 54(4), 321-339.—Observations of 5 species of spiders, particularly *C. moluccensis* which is the only 1 of the 5 to exhibit a communal level of sociality, suggest that low-level aggressive interactions during prey capture and during web repair and renewal are characteristic of this communal organization. The functions of these interactions as a spacing mechanism to ensure an adequate food supply and as an instance of reciprocal altruism among related colony members are examined. (27 ref)
6972. Phillips, R. R. (State University Coll New York, Oneonta) *The relationship between social behavior and the use of space in the benthic fish Chasmodes bosquianus lacepede (Teleostei, Blenniidae): III. The interaction between attraction/repulsion and prior social experience. Behaviour*, 1974, Vol 49(3-4), 205-226.—Attempted to determine whether male blennies (benthic fish) were attracted to or repulsed by neighboring prior residents. A test fish and stimulus fish were separated by

a transparent barrier and the test male's choice of a nesting enclosure near to, or out of sight of, the stimulus fish was recorded. In addition, enclosure choice was also evaluated with respect to previous dominant-subordinate experience in agonistic encounters. Dominant fish approached the stimulus fish but showed no preference for enclosure site. Subordinate fish exhibited no consistent approach-withdrawal tendency but did exhibit a preference for the far enclosure. It is suggested that male fish may be attracted to each other and still maintain a small territory around their nesting enclosure. (German summary) (22 ref)—S. R. Goldstein.

6973. Smith, James N. (U British Columbia, Vancouver, Canada) **The food searching behaviour of two European thrushes: II. The adaptiveness of the search patterns.** *Behaviour*, 1974, Vol 49(1-2), 1-61.—Studied the adaptiveness of temporal-spatial aspects of the food searching behavior of thrushes in an open meadow. Natural and artificial prey were presented in random, regular, and aggregated distributions at low and high densities. Prey capture was followed by a net change in turn patterning resulting in concentrated search in a prey-rich area. The distribution of the search path matched the distribution of artificial food population and capture rates were roughly proportional to differences in prey density. It is suggested that although predators can adjust their search to match the distribution and density of prey, the basic "unpredictability" of the environment sets limits on optimal search and capture behavior. (German summary) (66 ref)—S. R. Goldstein.

6974. Suomi, Stephen J. (U Wisconsin, Primate Lab, Madison) **Social interactions of monkeys reared in a nuclear family environment versus monkeys reared with mothers and peers.** *Primates*, 1974(Dec), Vol 15(4), 311-320.—4 male and 2 female 4-yr-old laboratory-born rhesus monkeys that had been reared in a nuclear family social environment consisting of mothers, fathers, siblings, peers, and other adults of both sexes were permitted to interact in various combinations with equal-aged monkeys that had been reared in an environment consisting of only mothers and peers. It was found that in most interaction sessions nuclear family Ss exhibited significantly higher levels of dominance and activity behaviors and significantly lower levels of submissive and passive behaviors than the mother-peer-reared Ss. These differences were not evident when Ss were tested within their own rearing groups. The significance of the results with respect to previous and future studies of social development in differential social environments is discussed. (23 ref)—*Journal abstract*.

6975. von Frisch, Karl. **Decoding the language of the bee.** *Science*, 1974(Aug), Vol 185(4152), 663-668.—Presents an English translation of the author's acceptance speech upon receiving the Nobel Prize for Physiology or Medicine at Stockholm, Sweden, December 12, 1973. The development of research in this area is outlined.

6976. Wechkin, Stanley & Breuer, Leslie F. (State University Coll New York, Brockport) **Effects of isolation on aggression in the Mongolian gerbil.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 415-421.—Conducted 2 experiments to determine the effects of prior isolation upon aggression when male

gerbils ( $N = 142$ ) were introduced into the cages of conspecifics. In Exp I isolation sharply increased aggression, and in Exp II olfaction was a critical stimulus dimension accounting for this finding. It is concluded that it was probably the odor of isolates rather than their behavior which was responsible.—*Journal abstract*.

6977. Willott, James F. & McDaniel, Jennifer. (U California, Davis) **Changes in the behavior of laboratory-reared rhesus monkeys following the threat of separation.** *Primates*, 1974(Dec), Vol 15(4), 321-326.—4 heterosexual pairs of 3-yr-old rhesus monkeys were either repeatedly separated from each other for 30-min or not separated. Prior to each separation, a transfer cage was displayed at the front of the cage to serve as a cue that the pair would be separated. After only a few trials, the Ss displayed disturbance, particularly in the form of stereotyped pacing prior to the separation. Practical considerations related to laboratory methodology, a theoretical discussion concerning the fear of separation in monkeys and man, and the need for attention to individual differences in response to separation are emphasized.—*Journal abstract*.

6978. Zayan, René C. (U Louvain, Ctr of Experimental & Comparative Psychology, Belgium) **The role of individual recognition in the stability of hierarchical relations in *Xiphophorus* (Pisces, Poeciliidae).** (Fren) *Behaviour*, 1974, Vol 49(3-4), 268-312.—Tested the hypothesis that individual recognition between fish of the genus *Xiphophorus* is a determinant of the stability of dominance-subordination relationships in male-male pairs. In Phase I of the experiment, 45 individual pairs were allowed to form dominance-subordination relationships during a 24-hr period. This resulted in the formation of 4 test groups; a dominant group subdivided into experimental and control groups, and a subordinate group similarly subdivided. In Phase 2, the original dominant-subordinate pairs were rematched in a new tank in the experimental condition, while dominant and subordinate stranger fish were matched in the control condition. Dominant fish from familiar pairs exhibited a greater tendency, by all measures, to engage in aggressive behavior than dominant fish in unfamiliar pairs. Conversely, submissive fish in unfamiliar pairs showed greater tendencies to engage in aggressive behavior than submissive fish in familiar pairs. Response measures were also more consistent between the 2 phases of the study for the familiar than the unfamiliar pairs, suggesting that individuals of a dominant-subordinate pair recognize each other. The function of individual recognition in regulating aggressive behavior and social hierarchy is discussed. (English summary) (78 ref)—S. R. Goldstein.

6979. Zippelius, Hanna M. (U Bonn, Zoological Inst, W Germany) **Ultrasonic sounds of nestling mice.** (Germ) *Behaviour*, 1974, Vol 49(3-4), 197-204.—Studied the physical characteristics and behavioral consequences of distress calls of the common vole (*Microtus arvalis*), of house mouse (*Mus musculus*), bank voles (*Clethrionomys* sp.), the yellow-necked field mouse (*Apodemus flavicollis*), and the harvest mouse (*Micromys minutus*). The call of *Micromys minutus* was audible to the human ear while the remaining species emitted calls in the ultrasonic range. Frequency, duration, and pattern of

calls were species-specific. Calls were emitted when the young were away from the nest or were exposed to aversive stimulation. Alarm calls engender searching and pup retrieval in the female, who will also respond, while lactating, to the calls of other species. (English summary) —S. R. Goldstein.

### Sensory Processes

6980. Ades, H. W.; Trahiotis, C.; Kokko-Cunningham, A. & Averbuch, A. (U Illinois) **Comparison of hearing thresholds and morphological changes in the chinchilla after exposure to 4 kHz tones.** *Acta Oto-Laryngologica*, 1974(Sep-Oct), Vol 78(3-4), 192-206.—Investigated behavioral, anatomical, and histochemical effects of acoustic overstimulation produced by a 4-kHz tone in 5 monaural chinchillas. In each S, high frequency hearing loss was produced which was related to locus and extent of hair cell loss. Masked audiograms were fairly consistent with those obtained in quiet and with the anatomical data on presence or absence of hair cells. Histochemical and electron microscope examination of selected portions of the cochlear partition revealed a series of changes in hair cells which may or may not influence their functional properties. (German summary) —Journal abstract.

6981. Blake, Randolph; Cool, Steven J. & Crawford, M. L. (U Texas, Graduate School of Biomedical Sciences, Sensory Sciences Ctr, Houston) **Visual resolution in the cat.** *Vision Research*, 1974(Nov), Vol 14(11), 1211-1217.—The ability of 3 adult cats to resolve spatial detail was determined behaviorally by conditioning the Ss to suppress a food-rewarded response in the presence of a grating pattern. By varying spatial frequency it was found that the acuity of the Ss approached 6 c/deg. Contrast thresholds were determined for a number of spatial frequencies covering a 5-octave range. The resulting contrast sensitivity function displayed the high- and low-frequency attenuation which characterizes the human function, although peak sensitivity for the Ss occurred at a lower spatial frequency. These behavioral results compare favorably with indirect estimates of the cat's resolving power, based on electrophysiology. (French, German, & Russian summaries) (27 ref) —Journal abstract.

6982. Campbell, Fergus W. & Maffei, Lamberto. (U Cambridge, England) **Contrast and spatial frequency.** *Scientific American*, 1974(Nov), Vol 231(5), 106-114.—Behavioral and electrophysiological indices suggest that the human visual system is maximally sensitive to low contrast with simple sine wave gratings that have a spatial frequency of about 3 cycles per degree. Maximal sensitivity for cats is approximately .3 cycles per degree. Differences in the visual worlds of humans and cats are suggested.

6983. Ellins, Stuart R. & Masterson, Fred A. (San Bernardino State Coll) **Brightness discrimination thresholds in the bat, *Eptesicus fuscus*.** *Brain, Behavior & Evolution*, 1974, Vol 9(4), 248-263.—Trained 4 echolocating bats in 2 experiments on a brightness discrimination task. It was found that the ability of these Ss to discriminate luminance differences at a fixed dim ambient illumination compared to that of rats and mice. The mean Weber ratio for 4 different standard-compari-

son stimulus sets was .85. When tested under varying conditions of ambient illumination, it was found that brightness discrimination sensitivity was optimal at about 10.44 lx. Sensitivity for distinct luminance differences remained good under conditions of very dim ambient illumination, indicating that echolocating bats may utilize visual cues in their night flight. (21 ref) —Journal abstract.

6984. Gerhardt, H. Carl. (U Missouri, Div of Biological Science) **The vocalization of some hybrid treefrogs: Acoustic and behavioral analyses.** *Behaviour*, 1974, Vol 49(1-2), 130-151.—Compared the physical characteristics of the vocalizations of 3 naturally occurring treefrog hybrids (*Hyla avivoca* × *H. chrysocelis*, *H. femoralis* × *H. chrysocelis*, and *H. cinerea* × *H. gratiosa*) with the vocalization of the parental species and tested the hybrids' auditory discriminative capacity. Sound spectrographs were made of tape-recorded vocalizations and discrimination was tested by the female's initial response to separate loudspeakers simultaneously broadcasting distinct male mating calls. Hybrid calls were composed of features intermediate with respect to the parents, features similar to the parents, and features which were unique. Nonhybrid females preferred conspecific to hybrid calls but responded to the latter when conspecific calls were unavailable. The relation of particular signal features to conspecific recognition is discussed. (French summary) (20 ref)—S. R. Goldstein.

6985. Jacobs, Gerald H. (U California, Santa Barbara) **Spectral sensitivity of the short wavelength mechanism in the squirrel monkey visual system.** *Vision Research*, 1974(Nov), Vol 14(11), 1271-1273.—Results of examining lateral geniculate nucleus cells in the squirrel monkey under chromatic and achromatic adaptation indicate that the spectral sensitivity of the short-wavelength mechanism in the squirrel monkey's visual system is not greatly different from that of other primates' visual systems.

6986. Janssen, Thomas A. & Swenson, Betty. (Virginia Polytechnic Inst & State U) **An ecological correlate of critical flicker-fusion frequencies for some *Anolis* lizards.** *Vision Research*, 1974(Oct), Vol 14(10), 965-970.—Determined the maximum critical flicker-fusion frequency (CFF) for 7 species of anoline lizards. The congeners showed a wide range of CFF values from 26 to 42 which correlated with the general level of insolation in each species' microhabitat—the brighter the habitat, the higher the CFF. (French, German, & Russian summaries) (18 ref)

6987. Kien, J. (Technischen Hochschule, Darmstadt, W Germany) **Sensory integration in the locust optomotor system: I. Behavioural analysis.** *Vision Research*, 1974(Nov), Vol 14(11), 1245-1254.—From study of the optomotor responses of female adult Australian plague locusts, a simple model is formulated for the sensory inputs to the directional neurons. The model provides a basis for an electrophysiological analysis of locust optomotor system. (French, German, & Russian summaries) (26 ref)

6988. Nuttall, A. L. (U Michigan, Medical School, Kresge Hearing Research Inst) **Comparison of cochlear microphonic potentials from albino and pigmented guinea pigs.** *Acta Oto-Laryngologica*, 1974(Sep-Oct), Vol

78(3-4), 187-191.—Recent behavioral tests would seem to indicate that auditory thresholds of albino guinea pigs are significantly lower than the thresholds of pigmented guinea pigs. In the present study, cochlear microphonic  $10\mu\text{V}$  isopotential (CM sensitivity) functions were recorded from the round windows of 6 pigmented and 6 albino anesthetized guinea pigs (*Cavia procellus*) as one measure of the inner ear performance. For 15 of 20 tested frequencies (between 70 and 7,000 Hz), the mean CM sensitivities of albino Ss were not significantly different from the mean CM sensitivities of pigmented Ss. The maximum cochlear potential magnitudes obtainable at 3 frequencies (100, 1,000, and 4,000 Hz) from the 2 groups were also statistically alike. It is concluded that there is no difference between the tested guinea pig strains with regard to the measured parameters of the cochlear microphonic potential. (German summary) (15 ref)—*Journal abstract*.

6989. Rose, L.; Yinon, U. & Belkin, M. (Hadassah U Hosp & Medical School, Jerusalem, Israel) **Myopia induced in cats deprived of distance vision during development.** *Vision Research*, 1974(Oct), Vol 14(10), 1029-1032.—Measured the refraction of the eyes of 12 street cats and of 11 caged cats by retinoscopy and measured the anteroposterior (axial) length of the eyeball by ultrasound. While 87.5% of eyes in street cats were hypermetropic, among cats caged for periods of 8.5-14.0 mo under conditions of near vision, 68.2% were myopic. The anteroposterior length of the eyeball was practically equal in both groups; it was also practically equal for myopic and hypermetropic eyes. The site of the refractive changes is discussed. (French, German, & Russian summaries) (20 ref)—*Journal abstract*.

6990. Thinus-Blanc, Catherine. (CNRS, Inst de Neurophysiologie et Psychophysiologie, Marseille, France) [The spatial behavior of the hamster in structured fields with curved boundaries.] (Fren) *Cahiers de Psychologie*, 1973, Vol 16(1), 73-78.—Reports the 3rd of 3 studies (see PA, Vol 48:10944) concerning the hamster's knowledge of space as shown by behavior with respect to differences in the size and shape of corona-shaped fields. Experiments were designed to deal schematically with 2 components of behavior in space: (a) immediate and half-mechanical reactions to characteristics of the environment—angles, curves, projections, odor and warmth, among others; (b) functions entering into the knowledge of space, including memorization and synthesis of indices to the space comprehended. Results, analyzed in terms of contacts with concave and convex, internal and external boundaries varying in size and degree of curve are seen as interpretable only in terms, however implicit, of certain processes of a true comprehension of space. Ss showed a tendency to make more contacts with concave and external walls. The curvature factor appeared to predominate when the degree was pronounced, the external-internal factor when the curvature was slight. A sufficiently high degree of relationship between size and shape appeared necessary for an S to effect an integration of spatial indices. References for the 2 prior experiments are given.—E. E. Brown.

6991. von Fieandt, K.; Vuorinen, R. & Liljeqvist, Raija. (U Helsinki, Inst of Psychology, Experimental Research

Lab, Finland) [The behaviour of rats in choice situations with chromatic differences in the respective lighting systems.] (Germ) *Psychologische Beiträge*, 1973, Vol 15(3), 375-386.—Conducted a series of forced-choice experiments with 40 3-mo-old albino rats and 8 controls to study their choices between 2 chromatic alternatives while trying to avoid strong white light. Ss were tested in a T maze consisting of a starting chamber illuminated by strong white light and 2 chromatic light chambers. 4 groups of 10 Ss each were tested with 4 chromatic color combinations: Group 1, red and yellow; Group 2, red and green; Group 3, green and yellow; and Group 4, yellow and blue. Each S received about 30 tests. No stimulus or reward system was used; however, the starting chamber had to be converted into an open field in order to make the Ss react more promptly. Results indicate (a) a preference of Ss for the sectors of long light-waves, (b) a tendency to prefer turns to the right, and (c) the least pronounced preference for color in Group 2. (English & French summaries)—T. Fisher.

6992. Yager, Dean. (State U New York, State Coll of Optometry, New York) **Effects of chromatic adaptation on saturation discrimination in goldfish.** *Vision Research*, 1974(Nov), Vol 14(11), 1089-1094.—Investigated saturation discrimination functions in goldfish, following short-wave and long-wave adaptation. Results show that saturation discrimination was better at short wavelengths with short-wavelength adaptation and at long wavelengths with long-wavelength adaptation. Findings are accounted for by a model of color vision that predicts the appearance of the diluting light for different states of adaptation. The analysis also accounts for the results from a color-normal human male tested in the same procedure. (French, German, & Russian summaries)—*Journal abstract*.

## DEVELOPMENTAL PSYCHOLOGY

6993. Bakwin, Harry. **Erotic feelings in infants and young children.** *Medical Aspects of Human Sexuality*, 1974(Oct), Vol 8(10), 200-215.—Describes 3 cases of masturbation in female infants under 1 yr of age. Masturbation was accomplished by friction of the thighs, rubbing the body against an object, or manipulation. These behaviors were accompanied by grunting or flushing and progressed to what appeared to be an orgasm, followed by general relaxation, sweating, or a deep sleep. Masturbation in male infants culminating in orgasm is discussed, as well as various views on eroticism in young children and in primate infants.—*Journal abstract*.

6994. Berlin, Charles I.; Hughes, Larry F.; Lowe-Bell, Sena S. & Berlin, Harriet L. (South Louisiana State U, Medical Ctr, Kresge Hearing Research Lab) **Dichotic right ear advantage in children 5 to 13.** *Cortex*, 1973(Dec), Vol 9(4), 394-402.—Studied 3 aspects of right ear advantage in young children: (a) the magnitude of ear advantage as a function of age and sex, (b) the right ear advantage as a function of age and sex, (c) the nature of the phonetic confusions made by children of various ages, and (d) the total information processed by the children. Findings indicate that dichotically presented nonsense syllables, with strict acoustic and

phonetic control of the stimuli, generate a right ear advantage that is essentially fixed by 5 yrs of age. What seemed to change with age in the sample studied was total accuracy, phonetic content and nature of the errors, and something which might be called the "capacity" of the hypothesized left hemisphere speech processor.—R. Gunter.

6995. Bernbaum, Marcia; Goodnow, Jacqueline & Lehman, Elyse. (George Washington U) **Relationships among perceptual-motor tasks: Tracing and copying.** *Journal of Educational Psychology*, 1974(Oct), Vol 66(5), 731-735.—Asked 39 kindergartners, 16 1st graders, 38 2nd graders, 16 4th graders, and 20 undergraduates to copy, trace, or point to the beginning of a set of shapes. The aim was to determine the extent to which sequential behavior (starting points and stroke progressions) was consistent across tasks. With one notable exception, behavior was consistent. The exception was the extent to which children started at the left rather than the right, a behavior that was far less frequent when tracing or pointing to the beginning of a shape than when copying. Results point to the feasibility of using sequential analyses to explore questions of generality and transfer on graphic tasks.—*Journal abstract*.

6996. Braga, Joseph D. & Braga, Laurie L. **Child development and early childhood education.** Chicago, IL: Model Cities—Chicago Committee on Urban Opportunity, 1973. 121 p.—Presents a guide for parents and teachers for understanding the development and needs of children from birth to age 5. Topics include learning, physical and motor development, language acquisition, cognitive growth, socioemotional development, suggestions for choosing books for children, and resources for additional information about children.

6997. Caldwell, Bettye M. & Richmond, Julius B. **The impact of theories of child development.** In F. Rebusky & L. Dornon (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Reviews theories and theoretical systems about child development. Discussion focuses on 3 systems said to have been major influences on American parents: behavioristic (or social learning), maturational, and psychoanalytic. Their impact on child care in the US is examined.

6998. Dansky, Jeffrey L. & Silverman, Irwin W. (Bowling Green State U) **Play: A general facilitator of associative fluency.** *Developmental Psychology*, 1975(Jan), Vol 11(1), 104.—Tested the hypothesis that children's play can have a general facilitating effect on associative responding. Data from 36 middle-class preschool Ss show that those in the play condition produced significantly more standard and more nonstandard uses for a variety of materials than Ss in either imitation or intellectual task (i.e., verbal cues) conditions.

6999. Eckerman, Carol O.; Rheingold, Harriet L. & Helwig, Richard A. **A laboratory for developmental psychologists.** In F. Rebusky & L. Dornon (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Describes the floor plan, facilities, and other main features of the laboratories for the study of the behavior of young organisms at Chapel Hill, N.C. It is noted that the rooms are

adaptable to many experimental procedures and types of Ss. The information is intended to serve as a guide for investigators planning similar laboratories.

7000. Flament, F. (U Paris X—Nanterre, France) **[Practical intelligence and laterality: A genetic study of synergy and of hand preference in the neonate.]** (Fren) *Bulletin de Psychologie*, 1973-1974, Vol 27(13-14), 681-684.—Summarizes a study of the structuring role of sensory-motor intelligence in hand coordination and in lateralization in 3-12 mo old Ss. The theoretical bases for the study were derived principally from A. Gesell and J. Piaget. Results point to a reorganization of certain manual responses as a function of 2 components of the structure of tasks, cognitive difficulty and perceptual motor properties.—Z. M. Cantwell.

7001. Formanek, Ruth. (Hofstra U) **When children ask about death.** *Elementary School Journal*, 1974(Nov), Vol 75(2), 92-97.—Discusses the child's reaction to the death of a person to whom he has become attached. The young child may interpret death as merely "sleep" from which the person can awaken. The child's reaction illustrates J. Piaget's "ego centrism," by which the youngster fails to comprehend the phenomenon of death in adult terms. In a study of about 300 children less than 7 yrs old, of whom 32% had adequate criteria for distinguishing between the animate and inanimate, only 6% had an adequate understanding of the state of death. Of children 7-9 yrs old, 20% had attained a mature concept of death as universal and final. It is suggested that an adult should deal with the child's view of death by exploring what that finality means to the child.—A. J. Ter Keurst.

7002. Frazier, James R. (North Carolina Memorial Hosp, Child Development Inst, Chapel Hill) **Overshooting of the FR requirement by children under delayed reinforcement.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 610.—Using 7-9 yr olds, an attempt was made to replicate the author's 1973 finding that adults can use the number of responses required in a short fixed ratio (FR) schedule as a discriminative stimulus (counting) for reward. The children overshoot the FR requirement under both delayed and no reinforcement. Attentional factors may account for discrepant results.

7003. Matsumura, Shigeharu. (Tokyo U of Education, Japan) **[Cognition of embedded figures and its relation to difficulties of training-figures in children.]** (Japn) *Japanese Journal of Educational Psychology*, 1973(Dec), Vol 21(4), 205-214.—Studied the effect of previous visual perception of embedded figures on later identification of similar figures. 4 age groups of 72 3-7 yr olds were asked in the pretest to identify simple embedded figures of 3 difficulty levels. The posttest performance of all groups showed significant improvement ( $p < .01$ ), and experimental groups given training performed significantly better than control groups ( $p < .01$ ). The older age groups showed more improvement in posttest performance than the younger groups ( $p < .01$ ). (English summary)—S. Choe.

7004. Offer, Daniel & Offer, Judith. (Michael Reese Hosp & Medical Ctr, Inst for Psychosomatic & Psychiatric Research & Training, Chicago, IL) **Normal adolescent males: The high school and college years.** *Journal of the American College Health Association*, 1974(Feb),

Vol 22(3), 209-215.—Conducted an 8-yr, longitudinal study of 73 normal, white, middle-class adolescent males beginning in freshman year of high school. Ss were tested psychologically and periodically evaluated by psychiatrists and teachers. Most demonstrated an ability to experience affects flexibly, to resolve conflicts, and to cope with anxiety, depression, shame, guilt, and anger. Peer relationships were good and adolescents related well to adults. Various psychosocial and behavioral variables evidenced over the study period are reported. Psychoanalytic thought concerning the "turmoil" theory of adolescence is reviewed. It is noted that the study of normal adolescent behavior has relevance to the treatment of adolescent patients. The psychiatric rating scale and the teacher rating scale are appended. (15 ref)—*A. de la Haba.*

7005. Porter, Carol S. (Indiana U, Medical Ctr, James Whitcomb Riley Hosp for Children) **Grade school children's perceptions of their internal body parts.** *Nursing Research*, 1974(Sep-Oct), Vol 23(5), 384-391.—Used a projective technique, involving a body outline drawing, with 144 1st, 3rd, and 5th graders to determine their perceptions of internal bodily content. Results show that the children knew considerably more about their internal body parts than previous studies had indicated. The parts most frequently named were the heart, brain, and bones. The 3 body systems most frequently represented were the cardiovascular, gastrointestinal, and musculoskeletal. Boys named more parts than girls, contrary to findings of other studies.—*Journal abstract.*

7006. Pringle, Mia K. (National Children's Bureau, London, England) **Born illegitimate—born at risk.** *Journal of Psychosomatic Research*, 1974(Aug), Vol 18(4), 229-231.—Compares a national group of illegitimate children, born in 1958, with adopted and legitimate children born in the same week. By the age of 7 most of the illegitimately born were living in some kind of 2-parent situation but only 1 in 4 lived with both their natural parents. 3 times as many illegitimate as legitimate children were placed in day care centers and 5 times as many experienced separation from home. The illegitimate had slower development of intellectual abilities. Nearly twice as many illegitimate children had behavior and adjustment problems in school. (23 ref)—*W. G. Shipman.*

7007. Rebellsky, Freda & Dorman, Lynn (Eds.). (Boston U) **Child development and behavior.** (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.

7008. Tennes, Katherine; Emde, Robert; Kisley, Anthony & Metcalf, David. (U Colorado, Medical School, Denver) **The stimulus barrier in early infancy: An exploration of some formulations of John Benjamin.** *Psychoanalysis & Contemporary Science*, 1972, Vol 1, 206-234.—Discusses Benjamin's stimulus barrier theory, which postulates that infants experience a vulnerable period (approximately between the ages of 3-8 wks) during which they have inadequate neural mechanisms to protect them from environmental stimuli. An investigation of the relationships between levels of irritability, responsivity to stimuli, and measures of neurophysiological maturation was performed using data collected from 12 healthy infants from birth to age 16 wks. Factors studied included fussiness, visual and auditory responsiv-

ity, smiling, Babkin and tonic-neck responses, and mothering ability. Some correlation was found between increased irritability and responsivity to external stimuli. It is suggested that the irritability of the vulnerable period is relieved by the infant's development of positive, pleasurable responses to stimuli, rather than by the development of a neurophysiological barrier to stimuli. It is concluded that the findings are generally consistent with Benjamin's hypothesized schedule of neuromaturation. (2 p ref)—*J. Kelly.*

7009. Webb, James T. & Mayers, Barbara S. (Ohio U) **Developmental aspects of temporal orientation in adolescents.** *Journal of Clinical Psychology*, 1974(Oct), Vol 30(4), 504-507.—Investigated whether the development of temporal perspective is continuous or discontinuous and whether its development is sex-related with respect to age levels during adolescence. The Time Reference Inventory, which measures Future Extension, Past Extension, and Mean Age Focus minus Chronological Age, was administered to 20 males and 20 females from each of 5th, 8th, and 11th grade and college freshman groups. Results show that sex differences in temporal orientation were minimal at different adolescent age levels and were significant only in the 8th graders. The 2 younger groups projected their thoughts farther into the future than the 2 older groups, whereas the latter were much more concerned with the present. It was demonstrated that 5th graders had a more reliable grasp on the concept of future extension than has been evident in other studies. (22 ref)—*B. McLean.*

7010. Winett, Richard A.; Moffatt, Sarah A.; Fuchs, William L. & McFarland, Dennis. (U Kentucky) **A preschool screener test for child care and related evaluation research.** *Developmental Psychology*, 1975(Jan), Vol 11(1), 110.—Presents reliability and validity data for the Preschool Screener which was developed to tap school-related skills in children 3-5.5 yrs of age. The 15 items on the test are described, and data from its administration to 124 children are presented which show that the screener is significantly related to more complex, standardized instruments (e.g., Peabody Picture Vocabulary Test) and to the child's age.

7011. Winnicott, D. W. **Playing and reality.** Harmondsworth, England: Penguin, 1971. xiv, 194 p.—Based on the idea that the transient and often neglected phase between subjective infancy and the more objective perceptions of childhood may be the source of later attitudes, dreaming, creativity, cultural experience, and the hidden rivalries between male and female elements are discussed in terms of their connection to the objects of childhood (e.g., teddy bears). Case histories are presented to illustrate these relationships.

7012. Wolff, Peter. (U Wisconsin, Madison) **Autonomous systems in human behavior and development.** *Human Development*, 1974, Vol 17(4), 281-291.—Argues that psychologists tend to regard the relationship between process and activity as arbitrary; a process is thought of as a unitary construct, independent of the behavior from which it is inferred. Research is reviewed which demonstrates that responses from different behavior systems (e.g., autonomic, reflex, voluntary motor, and verbal) to a given stimulus situation may be far from perfectly correlated with each other. These systems

appear to be autonomous, although they interact considerably in the ongoing activity of the organism. The phylogenetic and ontogenetic development of these systems is discussed. It is suggested that the evolutionary task of a species and the developmental task of an individual may consist in bringing these systems into mutual correspondence. (28 ref)—*Journal abstract*.

### Cognitive & Physical Development

7013. Ambron, Sueann R. & Irwin, D. Michelle. (Stanford U, School of Education) **Role taking and moral judgment in five- and seven-year-olds.** *Developmental Psychology*, 1975(Jan), Vol 11(1), 102.—Studied 3 dimensions of role taking (perceptual, cognitive, and affective) and 2 dimensions of moral judgment (intentionality and restitution) in 34 kindergartners and 38 2nd graders. Results show that there was a significant correlation between moral judgment and role taking and indicate the need for precise definitions of these concepts and the use of common instruments if research in this area is to make any progress.

7014. Berman, Phyllis W. & Golab, Paul. (Florida State U) **Children's reconstructions of the horizontal, vertical, and oblique in the absence of a rectangular frame.** *Developmental Psychology*, 1975(Jan), Vol 11(1), 117.—Tested the generality of the P. W. Berman et al findings (1974) which reported that children who were able to construct the horizontal and vertical had difficulty with the oblique when using a rectangular frame apparatus. Data from 24 nursery school children who produced horizontal, vertical, and oblique settings on a rod apparatus show that the comparative difficulty of the 3 settings were the same after observing the initial setting and after E spun the rod to rest at a random setting.

7015. Berzonsky, Michael D. (State University Coll New York, Cortland) **Component abilities of children's causal reasoning.** *Developmental Psychology*, 1975(Jan), Vol 11(1), 111.—Determined, using scalogram analysis, whether there is a constant order in which 84 1st graders mastered skills (e.g., explaining remote and familiar objects) related to 4 component abilities of causal reasoning. Results support a predictable developmental progression in the ability to give naturalistic explanations of remote causal phenomena and suggest that experiences with familiar objects may be necessary before a child can appreciate the role of chance or coincidental factors.

7016. Blank, Marion & Rose, Susan A. (Rutgers State U, Medical School, Piscataway) **Some effects of testing methodology on children's cross-modal performance.** *Developmental Psychology*, 1975(Jan), Vol 11(1), 120.—Tested 40 41-57 mo old children on the number of trials they took to learn the identical form-discrimination problem given in either visual or tactual modalities in either "held" (E gave S the reward) or "platform" (S himself picked up the reward) conditions. It appears that when testing methodology is equated in the 2 modalities, cross-modal transfer of a simple form discrimination is not asymmetrical, but rather is equivalent to the transfer from the tactual to the visual modality.

7017. Bradbury, Hinton. (U Winnipeg, Manitoba, Canada) **Consistency of children's inconsistent prefer-**

**ences attributable to novelty.** *Developmental Psychology*, 1975(Jan), Vol 11(1), 79-86.—Extended the analysis of logical and antilogical influences on preference made by H. Bradbury and T. M. Nelson (see PA, Vol 51:10805) to a consideration of choices by 720 preschool, Grade 4, and Grade 8 children. Further conclusions are drawn concerning the dependence of intransitive preference on the collative variable of novelty in choice context. Using a repetition of a 3-pair exhaustive paired comparison task (i.e., xy, xz, yz, xy, xz, yz), it was shown that contextual influences conducive to the more prevalent of the 2 possible intransitive choices (i.e.,  $x > y$ ,  $x < z$ ,  $y > z$ ) were also responsible for the repetition of that especially inconsistent response shown most frequently by younger children. A high degree of consistency in inconsistent preference attributable to novelty was thus demonstrated.—*Journal abstract*.

7018. Bruner, Jerome S. (U Oxford, Inst of Experimental Psychology, England) **The organisation of early skilled action.** In M. P. Richards (Ed), *The integration of a child into a social world*. London, England: Cambridge University Press, 1974. 316 p. \$15.50.—Examines the development of manipulatory skills during the first year of life. It is suggested that the use of the hands for solving problems is a key issue in the study of the evolution of the hominids and the emergence of man. (66 ref)

7019. Buss, Allan R. & Royce, Joseph R. (U Alberta, Ctr for Advanced Study in Theoretical Psychology, Edmonton, Canada) **Ontogenetic changes in cognitive structure from a multivariate perspective.** *Developmental Psychology*, 1975(Jan), Vol 11(1), 87-101.—Outlines 3 prototype factor relation types—divergence, convergence, and parallelism. Additional growth properties considered include major vs minor factor relation types and cumulation vs noncumulation of factors over time. The comprehensive taxonomy of types of change in cognitive structure provide the framework for considering the ontogeny of higher order factors. Several organismic developmental properties and concepts are considered and are seen to be quite compatible with a multivariate developmental approach. It is concluded that the multivariate model is potentially quite powerful for addressing developmental questions. (2 p ref)—*Journal abstract*.

7020. Case, Robbie. (U California, Inst of Human Learning, Berkeley) **Structures and strictures: Some functional limitations on the course of cognitive growth.** *Cognitive Psychology*, 1974(Oct), Vol 6(4), 544-574.—Presents a functional theory of intellectual development that is used to generate specific performance models for Piagetian tasks involving the control of variables. On the basis of these models, it is concluded that intelligent, field independent 7- and 8-yr-olds should be able to acquire the control of variables scheme, even though they have not yet acquired either conservation of weight or the combinatorial system. Preliminary data from 52 6-8 yr olds are presented to support this conclusion. The data are discussed with regard to Piaget's formal theory of intellectual development and the functional limitations of development on learning. (43 ref)—*Journal abstract*.

7021. Collison, G. Omani. (U Ghana, Cape Coast) **Concept formation in a second language: A study of Ghanaian school children.** *Harvard Educational Review*, 1974(Aug), Vol 44(3), 441-457.—A colonial heritage has led many developing nations to use a European language as the primary means of instruction in elementary school. Diverse theories have been developed to account for the inferior attachment of bilinguals. Lansdown's approach to Vygotsky's theory of language and concept development was used as the basis for a comparison of the conceptual level Ghanaian children express in their native languages (Ga or Twi) and in their school language (English). 85 6th graders 12-14 yrs old, who had studied English for about 6 yrs, were trained to manipulate manually and then discuss specially chosen science materials. The untutored statements of the children were then scored and counted. It is concluded that these children functioned at higher conceptual levels in their vernacular than in English. Implications for educational policies in these countries are discussed.—C. M. Franks.

7022. Cummins, J. & Gulutsan, M. (St Patrick's Coll, Ottawa, Ontario, Canada) **Bilingual education and cognition.** *Alberta Journal of Educational Research*, 1974(Sep), Vol 20(3), 259-269.—Examined E. Peal and W. Lambert's (1962) findings that balanced bilinguals performed at a higher level both on verbal and nonverbal measures of intelligence. 61 6th-grade balanced bilinguals drawn from a French-English bilingual program were found to perform at a significantly higher level than 61 unilinguals, matched for sex, socioeconomic status, and age, on several measures of reasoning and divergent thinking. The performance of children in the bilingual program from French-speaking homes, English homes, and homes where both French and English were spoken was also examined. The French group, despite being most balanced in French and English linguistic skills, performed at a significantly lower level than the other 2 bilingual groups (but not the unilinguals) on a measure of verbal reasoning. (20 ref)—*Journal abstract*.

7023. Curcio, Frank; Robbins, Owen & Ela, Susan S. **The role of body parts and readiness in acquisition of number conservation.** In F. Rebsky & L. Dorman (Eds), *Child development and behavior*. (2nd ed) New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Tested 167 preschoolers on 2 number conservation tasks, 1 for fingers and 1 for external objects. Results show that the 1st task was mastered before the 2nd. Ss then trained to generalize their number conservation ability with fingers to external objects were more successful than Ss lacking this ability who received counting or addition-subtraction training. A flaw in methodology and additional training efforts are discussed.

7024. Dolle, J.-M.; Bataillard, C. & Guyon, J. (U Paris XIII, France) **[Construction of space (volume) by the child: Contribution to the study of the genesis of perspective: I. The cube.]** (Fren) *Bulletin de Psychologie*, 1973-1974, Vol 27(10-12), 578-589.—Attempted to discover the stages in the development of the concept of volumetric space in children, and to identify the characteristics of these stages. Ss were 56 youngsters 6-15 yrs old. They were shown a translucent box containing a number of cubes and were asked to describe

the visible and nonvisible aspects of the cubes and to draw the cubes. Analysis of responses indicated 3 stages in the development of the concept of "cube" in children: (a) absence of perspective, 6-9 yrs; (b) empirical perspective, 9-12 yrs; and (c) access to perspective (including 3 substages), over 12 yrs. Behavioral characteristics are detailed for each of the 3 stages, and sample drawings of cubes characteristic of each level are presented.—Z. M. Cantwell.

7025. Dore, John. (Bernard M. Baruch Coll, City U New York) **A pragmatic description of early language development.** *Journal of Psycholinguistic Research*, 1974(Oct), Vol 3(4), 343-350.—Describes a study of children's uses of single-word utterances and analyzes data in terms of "primitive speech acts."

7026. Glusker, Peter. (U Oklahoma, Health Sciences Ctr, Oklahoma City) **The development of cognition and language: A new model of intelligence.** *Biological Psychology Bulletin*, 1972(Sep), Vol 2(1), 6-26.—Critically considers theories of cognitive processes and the development of cognitive function and language. A model is expounded based on the processes of discrimination, memory, and integration.

7027. Katada, Yayoi. (Morioka Junior Coll, Japan) **[The development of life-concept in children: I. The clues and the changes that children use for identifying life.]** (Japn) *Japanese Journal of Educational Psychology*, 1974(Mar), Vol 22(1), 31-39.—Asked 154 children 5-11 yrs old to give clues for their identification of living and nonliving objects. Responses were classified in terms of a set of objective criteria for identifying life used in modern biology. Results show that the clues such as movement, food and water intake, and morphological characteristics appeared at 5 yrs of age, and the clues of growth and development at 9 yrs of age. It is concluded that criteria such as movement, change, and function often lead younger children to confuse lifeless objects with living objects, and as they grow older these clues are replaced by more valid ones such as spontaneous movement, food intake, morphological characteristics, and development. (English summary)—S. Choe.

7028. Kavanaugh, James F. (National Inst of Child Health & Human Development, Growth & Development Program, Bethesda, MD) **Issues and needs in research.** *Language, Speech & Hearing Services in Schools*, 1974(Oct), Vol 5(4), 258-262.—Suggests several areas of the language development that need more research. The major topics include language acquisition and language development in children, prevention of communicative disorders, and language of adolescence.

7029. Keen, Ernest. (Bucknell U) **A five-year-old changes her mind: A phenomenological analysis.** *Journal of Phenomenological Psychology*, 1973(Spring), Vol 3(2), 161-171.—Describes 3 stages in the behavior of a child in a real-life situation. Change of mind is explained in terms of a shift from anticipation to memory as the in terms of the meaning of present events. Differences between the ways in which the child and the adult characteristically structure their experience are related to the behavior of the child.

7030. Kodroff, Judith K. & Roberge, James J. (Temple U) **Developmental analysis of the conditional reasoning abilities of primary-grade children.** *Developmental Psy-*

*chology*, 1975(Jan), Vol 11(1), 21-28.—Administered a conditional reasoning test to 36 1st-3rd graders. Each child was tested individually with a concrete and a verbal presentation of the test items. After his response to each test item, the child was asked to explain the reason for his response. An analysis of variance of the number of correct judgments showed significant main effects for Grade Level, Mode of Presentation, and Principle, and a significant Grade Level  $\times$  Principle interaction. An examination of the explanations for correct judgments revealed that children's problem-solving behaviors varied according to both testing session and principle of inference. (20 ref)—*Journal abstract*.

7031. Kramer, Pamela E.; Koff, Elissa & Luria, Zella. **The development of competence in an exceptional language structure in older children and young adults.** In F. Rebsky & L. Dorman (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Tested 8-20 yr old Ss in 2 studies for competence on an exception to a grammatical rule, the minimal distance principle. No age group tested was found with all Ss competent. Older groups had 2 competent Ss for every S who lacked competence. Stages found by C. Chomsky (see PA, Vol 44:18332) for Ss below 8 were duplicated above age 8. A 2-yr follow-up retest is also reported. (20 ref)

7032. Meacham, John A. (State U New York, Buffalo) **Patterns of memory abilities in two cultures.** *Developmental Psychology*, 1975(Jan), Vol 11(1), 50-53.—Presents evidence that patterns of abilities, rather than absolute differences along a single dimension, are the best cross-cultural evidence for the effects of environment and culture upon memory development. An object and place recall task was administered to 96 5- and 7-yr-old Ss in the US and in a village in Guatemala. Actual vs verbal presentation of the objects and places to be remembered was varied. Place recall was better than object recall in the Guatemalan but not in the American children. Results suggest that environment and culture can contribute to the differential development of various mnemonic abilities. Soviet suggestions regarding the role of external mediators were also supported.—*Journal abstract*.

7033. Mervis, Carolyn B.; Catlin, Jack & Rosch, Eleanor. (Cornell U) **Development of the structure of color categories.** *Developmental Psychology*, 1975(Jan), Vol 11(1), 54-60.—Previous investigators have argued that basic color categories are structured in terms of a universal focal area with varying boundaries. In the present study 2 developmental implications were investigated: (a) that foci for color categories become established and are stabilized earlier than boundaries and (b) that focal judgments are always more stable than boundary judgments. A total of 20 kindergartners, 40 3rd graders, and 40 adults served in 3 color designation experiments modeled after those of B. Berlin and P. Kay (1969). Means and variances of focal and boundary judgments for the 8 basic chromatic terms were determined for the 3 groups. In general, both hypotheses were supported.—*Journal abstract*.

7034. Mounoud, P. (U Genève, Ecole de Psychologie et des Sciences de l'Éducation, Switzerland) **[Physical conservation in the infant.]** (Fren) *Bulletin de Psycholo-*

*gie*, 1973-1974, Vol 27(13-14), 722-728.—Conducted an experiment to assess the applicability of Piagetian concepts which account for the invariants elaborated for the 6-10 yr old child by reference to the conduct of the 6-18 mo old infant. The conservation of weight was experimentally defined at the sensory-motor level as the infant's ability to reproduce a state of contraction of arm muscles adapted to the weight of an object, independent of transformations of the object's form. Ss were 30 infants 6-16 mo old. Each S performed 3 experimental tasks. Conclusions concerning conservation of weight and its genesis at the sensory-motor level were as follows: (a) Weights of objects translated themselves initially for the infant through a property of his original action. (b) Through resistance raised following the action of objects, the infant was able to objectify the property "weight" (or, to identify a given object by its weight). (c) Through a developing accommodation, this property (weight) was differentiated and integrated in a system of transformations and displacements. (d) The infant succeeded in correlating the proprioceptive indices relative to the weights of objects with relative visual indices, regulating the force of his prehension through visual indices and reproducing a definite contraction as a function of transformations of form of a given object.—Z. M. Cantwell.

7035. Newman, Murray A. (Southwest Educational Development Lab, Austin, TX) **A developmental investigation of the priority effect.** *Developmental Psychology*, 1975(Jan), Vol 11(1), 106.—Studied the priority effect in free-recall learning from a developmental standpoint using proper controls for serial position bias. Data from 160 preschool, 2nd-grade, 6th-grade, and adult Ss, which show the absence of the priority effect at the preschool level and the presence of it at elementary and adult levels, strengthen the position that the priority effect reflects the use of a relatively sophisticated learning strategy and that it is not a product of serial position bias.

7036. Palermo, David S. & Molfese, Dennis L. **Language acquisition from age five onward.** In F. Rebsky & L. Dorman (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Reviews data on development in language from age 5 to adolescence. It is suggested that this period is relatively neglected, especially in phonological development. Research on phonology, syntax, and semantics is discussed in detail. (3 p ref)

7037. Papandropoulou, Ioanna & Sinclair, Hermine. (U Geneva, Switzerland) **What is a word? Experimental study of children's ideas on grammar.** *Human Development*, 1974, Vol 17(4), 241-258.—To test the hypothesis that "metalinguistic competence" (i.e., the capacity to think about language as an object of knowledge rather than just using it to express knowledge) develops along with general cognitive structuration as described by Piaget, the concept of "the word" was studied with 102 4-10 yr olds. Results show a slow development of this concept from an initial indifferenciation between words and things (at the level of metalinguistic thought and not at the level of know-how) towards the capacity of conceiving the word both as a meaningful constituent

element of larger units and as a unit which is itself built up from smaller elements.—*Journal abstract.*

7038. Peatling, John H. **Cognitive development in pupils in Grades four through twelve: The incidence of concrete and religious thinking.** *Character Potential*, 1974(Oct), Vol 7(1), 52-61.—Studied chronological age, mental age, and grade level in relation to the incidence of concrete and abstract religious thinking. 1,994 students from a 7% random sample of the National Association of Episcopal Schools, grades 4-12, were administered an untimed, criterion-referenced multiple-choice test entitled "Thinking About the Bible." Results generally support the findings of J. Piaget and R. Goldman. The statistical procedures employed demonstrated periods of growth and plateaus (or intermediate periods). In this American sample, abstract religious thinking appeared to begin in Grades 8 and 9, not becoming dominant until Grades 10-12 because of a plateau period. Results for all 3 factors were significant, but grade level gave the clearest indications of change. Implications for religious educators and for needed further research are discussed.—L. W. Barber.

7039. Pizzamiglio, Caterina L. & Pizzamiglio, Luigi. (U Aquila, Italy) **[Psychometric data of some tests of field dependence related to an Italian population of children four and a half to ten and a half years old.]** (Ital) *Archivio di Psicologia Neurologia e Psichiatria*, 1974(Apr-Jun), Vol 35(2), 127-143.—Presents normative and developmental data by children's age, sex, and socio-economic status for visual, tactual, and acoustic embedded figures, and for the Sophistication of Body Scheme developed by Witkin and his coworkers to measure the development of cognitive styles and differentiation.

7040. Price-Williams, Douglass R. & Levine, Robert A. (U California, Los Angeles) **Left-right orientation among Hausa children: A methodological note.** *Journal of Cross-Cultural Psychology*, 1974(Sep), Vol 5(3), 356-363.—Assessed methods of investigating left-right orientation. 53 Hausa (Nigerian) 4-11 yr olds were administered 2 sets of left-right orientation tests: (a) identification of left and right hands on the S's own body and on the body of an investigator facing him; and (b) subtraction from a group composed of a large middle doll with 2 smaller dolls each side of it, 1st the middle and the smaller on the right, and then the middle and the smaller on the left. In both cases the S was asked to identify which doll was the left and which was the right. Results of the "hands" test are presented in terms of the ages at which the left-right identification was attained, using the criterion of 75%, while results of the "dolls" test are reported in terms of the percentages correctly identifying left and right at different ages. The results and methods are compared with studies using a similar approach. Data show how minor variations in method of assessment can produce significant differences in results.—*Journal abstract.*

7041. Rattan, M. S. (Red Deer Coll, Alberta, Canada) **The role of language, manipulation and demonstration in the acquisition, retention, and transfer of conservation.** *Alberta Journal of Educational Research*, 1974(Sep), Vol 20(3), 217-225.—Conducted a study of 90 1st-grade nonconservers on tasks including 2-dimensional space,

number, substance, continuous quantity, weight, discontinuous quantity, area, and length. Data show that (a) the concept of conservation was not only acquired by nonconservers, but was also retained over 5-wk periods and was transferred to other conservation tasks; (b) direct activity and observation learning were equally effective for inducing cognitive changes leading to the criteria; and (c) a high degree of verbalization was significantly better than a low degree of verbalization under both direct activity and observation learning. (35 ref)—*Journal abstract.*

7042. Rimoldi, H. J. (Consejo Nacional de Investigaciones Cientificas y Tecnicas, Buenos Aires, Argentina) **[Language and thought processes.]** (Span) *Revista de Psicologia General y Aplicada*, 1974(May-Jun), Vol 29(128), 499-514.—Discusses changes that occur in thought processes during problem solving. With increasing age, children use different logical approaches to problems. (English summary) (25 ref)

7043. Roberts, Gail C. & Black, Kathryn N. **The effect of naming and object permanence on toy preferences.** In F. Reber & L. Dorman (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—40 18-22 mo old children were presented with 8 named and 8 unnamed toys, one at a time. Timed preference choices between named and unnamed pairs were then obtained. Stage of object permanence also was assessed. It was found that if Ss had achieved the stage of object permanence where they could follow an object through a sequence of invisible displacements, they manipulated named toys more than unnamed toys. Results are interpreted as being consistent with formulations by both A. R. Luria and Piaget.

7044. Roll, Samuel & Irwin, Marc H. (U New Mexico) **[Manipulation of subject involvement and its effects on the conservation of number and liquid.]** (Span) *Revista Latinoamericana de Psicologia*, 1974, Vol 6(2), 157-160.—Tested 38 2nd graders for conservation of number and liquid. The 15 Ss in the experimental condition were given instructions designed to stimulate a high level of S involvement by making desirable stimuli (quarters and lemonade) even more desirable. The 23 control Ss were tested using conventional stimuli and instructions. The hypothesis that increased involvement would result in fewer conservation responses was confirmed for conservation of both number and liquid.—*English summary.*

7045. Ryan, Joanna. (U Cambridge, Unit for Research on the Medical Applications of Psychology, England) **Early language development: Towards a communicational analysis.** In M. P. Richards (Ed), *The integration of a child into a social world*. London, England: Cambridge University Press, 1974. 316 p. \$15.50.

7046. Sameroff, Arnold J. **Can conditioned responses be established in the newborn infant: 1971?** In F. Reber & L. Dorman (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Evaluates 2 hypotheses to explain difficulties in conditioning the newborn: (a) The newborn is unable to respond to stimulus change. (b) The newborn is able to respond to a general change but not to specific differences in stimulation. A theory is proposed of a progression in cognitive structure based on

differentiation and hierarchic integration of schemas. (3 p ref)

7047. Shannon, Lael. (Rutgers State U, New Brunswick) **Development of time perspective in three cultural groups: A cultural difference or an expectancy interpretation.** *Developmental Psychology*, 1975(Jan), Vol 11(1), 114-115.—Administered T. J. Cottle and J. Peck's Lines Test to 120 10-12 and 14-17 yr old Anglo-American, Indian-American, and Mexican-American boys. Significant main effects for cultural group, age level, and Group  $\times$  Age interactions support an expectancy interpretation of time perspective.

7048. Shatz, Marilyn & Gelman, Rochel. (U Pennsylvania) **The development of communication skills: Modifications in the speech of young children as a function of listener.** *Monographs of the Society for Research in Child Development*, 1973, Vol 38(5, Serial No 152), 1-37.—Reports 3 studies of the 4-yr-old's ability to adjust to a listener. In Study 1 16 Ss were asked to tell first an adult and then a 2-yr-old about a toy. 8 Ss who had 2-yr-old siblings were run on the toy task once in an adult-sibling session, and once in an adult-nonsibling session. Tapes were made of spontaneous conversations between the Ss and their mothers. Ss adjusted their speech production to their listeners: speech to 2-yr-olds contained more short, simple utterances and more attentional utterances. All children adjusted their speech whether or not they had younger siblings. In Study 2, tapes of uncontrolled conversations of 5 4-yr-olds each talking to a 2-yr-old and an adult revealed speech adjustments like those of Study 1. In Study 3 tapes of 8 4-yr-olds talking to peers were compared with the conversations with their mothers taped in Study 1. Analyses of the peer-directed vs adult-directed speech showed that, with respect to utterance length, the use of various constructions, and attentional utterances, peers were treated like adults. These results, combined with those of Study 1, indicate that the 4-yr-old adjusts his speech to the capacities of different aged listeners. Results are discussed with regard to previous work on the preschooler's communication, and the implications of speech-listener interaction for the process of language acquisition are considered.—A. Barclay.

7049. Smothergill, Daniel W.; Hughes, Fergus P.; Timmons, Stephen A. & Hutko, Paul. (Syracuse U) **Spatial visualizing in children.** *Developmental Psychology*, 1975(Jan), Vol 11(1), 4-13.—Conducted 4 experiments on visualization of space in 108 2nd and 11th graders and undergraduates, 102 4-5, 6-7, and 9-10 yr olds, and 30 kindergartners and 3rd and 6th graders. Exp 1 used a localization task, and evidence was found that both children and adults spontaneously visualize their unseen hand when it is touched. In the remaining 3 experiments, S was required to manipulate spatial information mentally. Results show that (a) preelementary school children did not carry out such manipulations and responded instead to the topological properties of the problem; (b) elementary school children were increasingly more skilled at mental manipulation with age; and (c) the ability to manipulate spatial images correlated with performance on a test of spatial visualization, particularly in older elementary school children. (22 ref)—*Journal abstract*.

7050. Stacey, John T. & Ross, Bruce M. (Catholic U of America, Boys Town Ctr for the Study of Youth Development) **Schema and schema in children's memory of their own drawings.** *Developmental Psychology*, 1975(Jan), Vol 11(1), 37-41.—4 groups of 78 6-yr-old children made drawings of 6 themes. One month later new drawings of the same themes were made by the same Ss under 4 conditions: free drawing, memory of the 1st drawing, making a copy of the 1st drawing, making a drawing that appeared different from the 1st one. A week later the Ss were tested for recognition of their own drawings and identification as to when they had been drawn. Recognition of 2nd-session drawings was about equal among the 4 conditions, even though order identification varied significantly and adults found perceptual matches of drawings from the same S much easier with the copy than with the different condition. Results support Piaget's scheme-schema memory distinction in that a basic operative scheme lies behind alternative figural representations.—*Journal abstract*.

7051. Sticht, Thomas G. et al. (Human Resources Research Organization, Alexandria, VA) **Auditing and reading: A developmental model.** *US AFHRL Technical Report*, 1974(Jul), No 74-36, 116 p.—Presents a classification scheme for the development of reading and auditing skills which considers basic adaptive processes, "linguaging" precursors, and linguaging processes. 4 hypotheses consistent with the model are derived: (a) the ability to comprehend language by auditing will surpass ability to comprehend language by reading during early school years until reading skill is acquired—following which time the ability to comprehend by auditing and reading will become equal; (b) performance on measures of ability to comprehend language by auditing will be predictive of performance on measures of ability to comprehend language by reading after reading skill is acquired; (c) performance on measures of reading rate and auditing rate will be comparable after reading decoding skill has been developed; and (d) training in comprehending by auditing will transfer to reading after reading skill is acquired. An extensive literature review of empirical data bearing on the model supports the hypotheses. It is concluded that reading is based upon the same concepts and linguaging competencies as used in auditing and that reading skills can be improved through training in linguaging using "oracy" skills. (16 p ref)—*Journal abstract*.

7052. Tanaka, Toshiaki. (Fukuoka U of Education, Japan) **[Relevant dimension and subproblem analysis in discrimination shift learning.]** (Japn) *Japanese Journal of Educational Psychology*, 1973(Dec), Vol 21(4), 237-241.—Simultaneous discrimination learning tasks, consisting of forms and equally divided areas as relevant dimensions, and circles and rectangles divided into 4 or 6 equal areas as stimulus values, were given to 3 groups of Ss: 67 kindergartners, 55 2nd graders, and 37 adults. Results indicate that reversal and nonreversal shift learning depended on relevant dimensions in such a way that younger children tended to be inefficient when equally divided areas were used as relevant dimensions.—S. Choe.

7053. Tanner, J. M. **The regulation of human growth.** In F. Rebelsky & L. Dormon (Eds), *Child development*

and behavior. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Develops a model to explain the regulation of "catch-up" or compensatory growth that occurs after a child's normal growth pattern is temporarily interrupted. Examples are presented of how the model represents known events of catch-up growth, of chronic starvation, and of precocious puberty. (24 ref)

7054. Terman, Lewis M. & Merrill, Maude E. **Sample items from Stanford-Binet Scale.** In F. Rebelsky & L. Dorman (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Presents and briefly discusses sample items from different age levels of the Stanford-Binet.

7055. Trehub, Sandra E. (U Toronto, Ontario, Canada) **The problem of state in infant speech discrimination studies.** *Developmental Psychology*, 1975(Jan), Vol 11(1), 116.—Argues that, because of the complexity of the relation between stimulus and state, and present gaps in understanding the questionable similarities between infant and adult states, current state selection procedures in infant speech discrimination studies seem unwarranted, or at least premature. Researchers should be required to justify their use of state criteria in future studies.

7056. Wall, Carol. (U California, Davis) **Predication: A study of its development.** The Hague, Netherlands: Mouton, 1974. 258 p.—Based on the protocols of 7 male and 7 female 18–30 mo old children, the development and elaboration of predication in children's speech is examined. Methodological considerations, analysis and categorization of utterances, the complexity of predication, and the importance of situational factors in predication are discussed. (42 ref)

7057. Webb, Roger A. (Johns Hopkins U) **Concrete and formal operations in very bright 6- to 11-year-olds.** *Human Development*, 1974, Vol 17(4), 292–300.—18 male and 7 female 6–11 yr olds with IQs in excess of 160 were given 3 Piagetian tests of advanced concrete operations and 2 tests of formal operations. All children passed all concrete operations problems, but only 4 of the oldest boys passed the formal operations tasks. Findings support the reality of Piaget's stage structures but suggest that the speed with which tasks within a stage are mastered (*horizontal decalage*) is a function of intelligence in the psychometric sense. (21 ref)—*Journal abstract*.

7058. Wishner, Julius; Peastrel, August L. & Humphrey, Janet. (U Pennsylvania) **A developmental study of efficiency in differential galvanic skin response conditioning.** *Developmental Psychology*, 1975(Jan), Vol 11(1), 14–20.—Hypothesized that in a differential galvanic-skin-response (GSR) conditioning situation, differential sets would be increasingly effective with increasing age in producing differential rates of conditioning. The GSRs of 193 children from kindergarten and Grades 1, 2, 4, and 6 were conditioned under inhibiting and facilitating sets. Support for the hypothesis was found in a significant Grade  $\times$  Set interaction. Ability to verbalize the positive-conditioned-stimulus-unconditioned-stimulus relation was also a function of the Grade  $\times$  Set interaction, as well as the interaction of Grade  $\times$  Successful vs Unsuccessful Conditioning. Data also indicate the importance of cognitive factors in

classical conditioning paradigms with human Ss. (20 ref)—*Journal abstract*.

7059. Wulbert, Margaret; Inglis, Susan; Kriegsmann, Elinor & Mills, Barbara. (U Washington, Child Development & Mental Retardation Ctr) **Language delay and associated mother-child interactions.** *Developmental Psychology*, 1975(Jan), Vol 11(1), 61–70.—Assessed the home environments and mother-child interactions of a language-delayed group and a matched control group of normal preschool children using the Caldwell Inventory of Home Stimulation (CIHS). 20 language-delayed children were defined by a discrepancy between their Stanford-Binet, language-based, IQ score and their Leiter, non-language-based, IQ score, and by a language evaluation. Children in both groups were distributed across all socioeconomic strata. The language-delayed group had significantly lower scores in 5 of the 6 subcategories of the CIHS. Greatest differences were found in the involvement and responsiveness of the mother and in her avoidance of restriction and punishment. Low CIHS scores were found through the socioeconomic strata, indicating that language delay had a stronger influence on mother-child relationships than did socioeconomic factors. (39 ref)—*Journal abstract*.

### Emotional & Personality Development

7060. Blackburn, Joe M. & Summerlin, Curtis G. (Mississippi State U) **Need occurrence in disadvantaged and non-disadvantaged.** *Adolescence*, 1974(Sum), Vol 9(34), 233–236.—Administered the Depoyster Need Assessment Scale to 300 disadvantaged (D) and 300 nondisadvantaged (ND) students in Grades 6, 9, and 12. D students experienced higher occurrence of physiological needs than ND students in each grade level. ND students experienced higher occurrence of love and belonging needs at all grade levels, and higher esteem needs at Grade 12 level. In general, D students functioned at a lower level on the need hierarchy. Grade 12 students scored at a higher level than the other students, both D and ND, indicating that student perception of needs is a function of development as well as of their socioeconomic status.—A. Krichev.

7061. Dranoff, Steven M. **Masturbation and the male adolescent.** *Adolescence*, 1974(Sum), Vol 9(34), 169–176.—Reviews literature on adolescent male masturbation. The need for a healthier outlook on masturbation to promote normal growth and development is stressed. It is concluded that (a) masturbation is not harmful in moderation, (b) some control must be exerted by parents and others to avoid overindulgence, and (c) the adolescent must be assured that his experimentation is normal. (26 ref)—A. Krichev.

7062. Dubos, René **Of human diversity.** Worcester, MA: Clark University Press, 1974. 64 p. \$5.95.—Discusses the idea of individualism as it applies to nations and individual men and to the development of personality. Factors that shape human life—genetic codes of species, environmental variations, and the power of adaptation—are also examined. (43 ref)

7063. Jordan, Lawrence A. (Graduate School & University Ctr, City U New York) **Use of canonical analysis in Copley's "A five-year longitudinal study of the validity of creativity tests."** *Developmental Psychol-*

gy, 1975(Jan), Vol 11(1), 1-3.—A reanalysis of A. J. Cropley's (see PA, Vol 48:996) data contradicts his conclusion that creativity tests have long-range predictive validity. The canonical correlations between a criterion set of 4 indices of high school achievement in art, drama, literature, and music, and a predictor set of 6 scores on creativity tests taken 5 yrs earlier—.52 for boys and .46 for girls—are not significantly different from zero. A novel procedure used by Cropley to assess the "predictive validity" of the creativity tests, which involves dichotomizing scores on canonical variates, is shown to be questionable.—*Journal abstract*.

7064. Kagan, Jerome. **Attention and psychological change in the young child.** In F. Reber & L. Dornon (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Proposes that better understanding of the forces that control selectivity and duration of attention should provide insights into the nature of psychological growth. Studies are reported in which infants were tested on familiar and discrepant stimuli. Fixation time is viewed as the most significant variable.

7065. Kagan, Spencer & Carlson, Helena. (U California, Riverside) **Development of adaptive assertiveness in Mexican and United States children.** *Developmental Psychology*, 1975(Jan), Vol 11(1), 71-78.—Used a novel behavioral task, the assertiveness pull scale, and unobtrusive measures (e.g., number of questions asked of E) to assess the development of assertiveness of 154 boys and girls of 3 age groups (5-6, 7-9 and 10-12 yrs) in 4 populations. Urban middle-class Anglo-American children were significantly more assertive than semirural poor Anglo-American and Mexican-American children, who did not differ from each other but who were both significantly more assertive than rural poor Mexican children. Assertiveness increased with age for all groups, but at a slower rate among rural Mexican than among US children. No significant effects due to sex were observed. Results parallel population and age findings of previous studies of competitiveness. (26 ref)—*Journal abstract*.

7066. Kessen, William. **Research in the psychological development of infants: An overview.** In F. Reber & L. Dornon (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Sets forth a series of propositions about babies and studies of babies and discusses them in terms of recent research and speculation. It is concluded that there has been a shift in viewpoint from considering the child as a simple passive receptacle to viewing him as a complex organism interacting with his environment. (32 ref)

7067. Lisi, Filippa. (U Messina, Inst di Psicologia, Italy) **[Sophistication of body scheme from 6 to 10 years: Reliability indices.]** (Ital) *Archivio di Psicologia Neurologia e Psichiatria*, 1974(Apr-Jun), Vol 35(2), 209-214.—Longitudinal data on 120 Ss tested 8 times from the 1st to the 5th grade suggest that each child establishes his own body scheme at a relatively early age, a tendency that persists with time in spite of its interaction with environmental factors.

7068. McClelland, David. **Excerpts from Personality.** In F. Reber & L. Dornon (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf,

1973. xxiii, 470 p.—Examines theoretical reasons why early childhood experiences should be relatively more important than later ones in personality development. The factors of primacy, underdeveloped symbolic processes, repetition of experience in early childhood, and the conditions for forgetting are discussed. It is concluded that data on learning and forgetting processes support the psychoanalytic position.

7069. McGeorge, Colin. (U Canterbury, Christchurch, New Zealand) **Susceptibility to faking of the Defining Issues Test of moral development.** *Developmental Psychology*, 1975(Jan), Vol 11(1), 108.—Administered the Defining Issues Test (DIT) by J. Rest et al to 146 student teachers on 2 occasions with instructions to either fake bad, fake good, or record their own views (standard instructions). Results support the general theory of a sequence of cognitive stages of moral judgment in which Ss recognize stages they have passed through as immature and can respond appropriately when asked to fake low, while stages higher than the S's own are unattainable thus preventing faking upwards.

7070. Meddock, Terry D.; Parsons, Joseph A. & Hill, Kennedy T. **Effects of an adult's presence and praise of young children's performance.** In F. Reber & L. Dornon (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Studied 32 4-yr-old children of each sex to examine the separate effects of praise from an adult and the presence of that adult on preschool children's performance rate change at a simple motor task. Ss were divided into 4 experimental groups. The major finding was that performance increased under both adult praise and adult presence, with the effects being additive. (29 ref)

7071. Murphy, Lois B. (George Washington U) **Some mutual contributions of psychoanalysis and child development.** *Psychoanalysis & Contemporary Science*, 1973, Vol 2, 99-123.—Discusses the contributions of psychoanalysis and child development to the understanding of ego development. Topics surveyed include physiological factors related to ego functioning, separation and deprivation, plasticity and integration of ego functions, and the role of frustration and aggression in development. It is suggested that the application of concepts drawn from psychoanalysis and child development to the analysis of detailed records of child behavior could lead to a more comprehensive theory of motivation. It is concluded that collaboration between the disciplines of psychoanalysis and child development can not only validate and deepen the approaches of both, but also can lead to new concepts for understanding personality development. (4½ p ref)—*J. Kelly*.

7072. Nesselroade, John R. & Baltes, Paul B. (Pennsylvania State U) **Adolescent personality development and historical change: 1970-1972.** *Monographs of the Society for Research in Child Development*, 1974, Vol 39(1, Serial No 154), 1-79.—Reports a longitudinal study of ontogenetic and sociocultural change in adolescent personality and ability development. In addition the study attempted to make a contribution to design considerations in developmental research. 1,800 male and female Ss, from 32 public school systems having a total of approximately 20,000 students, were measured in 1970, 1971, and 1972. A random sample of retest control

Ss was measured in 1972 only. All Ss were measured with Cattell's High School Personality Questionnaire, Jackson's Personality Research Form, and Thurstones' Primary Mental Abilities Test. Findings indicate that developmental change was more influenced by the cultural moment than by age sequences: e.g., adolescents as a whole were shown to decrease in superego strength, social-emotional anxiety, and achievement during the 1970-1972 period independent of their age level, and to increase in independence during the same period. The outcome further shows that traditional, simple cross-sectional or longitudinal designs are not adequate for describing developmental change and that, in addition to the use of sequential strategies, it is mandatory to employ various control groups. Findings are interpreted as suggesting the need for a rapprochement between ontogenetic and evolutionary models of development on the one hand, and psychological and cultural-historical ones on the other.—A. Barclay.

7073. Polsby, Gail K. **Unmarried parenthood: Potential for growth.** *Adolescence*, 1974(Sum), Vol 9(34), 273-284.—Unmarried pregnancy and motherhood is a life crisis that offers a girl the option of growing, reworking old problems, and assuming greater maturity, particularly when given help in making her own decisions during the pregnancy and early motherhood. Her apathy must be met by insuring that her physical needs are cared for and that her feelings are listened to.

7074. Shotter, John. (U Nottingham, England) **The development of personal powers.** In M. P. Richards (Ed), *The integration of a child into a social world*. London, England: Cambridge University Press, 1974. 316 p. \$15.50.—Presents a conceptual framework within which the praxis of child development can be examined (i.e., what is empirically involved in the child's growth as an individual personality) and discusses criteria involved in distinguishing persons from things and recognizing human action. (47 ref)

7075. Simon, A. & Ward, L. O. (University Coll Swansea, Wales) **Variables influencing the sources, frequency and intensity of worry in secondary school pupils.** *British Journal of Social & Clinical Psychology*, 1974(Dec), Vol 13(4), 391-396.—Studied the main sources of worry among 672 12-14 yr old grammar and secondary school students, the extent to which the type of worry and its frequency vary with age, and the influence of the type of school attended—grammar or secondary modern—on the frequency and intensity of the type of worry. Data from 2 specially developed worry list questionnaires show that there was a general decrease with age in the frequency and intensity of worry. There were no significant worry differences between grammar and modern pupils, except for the 12-yr-old group, where the secondary modern pupils had more frequent and intense worries than the grammar Ss. The most frequent sources of worry were the family, social relationships, and school, and the least frequent were animals, economic concerns, and personal health concerns. Grammar school pupils reported significantly more frequent and intense economic and school worries, while secondary modern pupils reported significantly more imagination and health worries. The only significant difference between the sexes was the tendency for

grammar school girls to worry more frequently and intensely than grammar school boys.—*Journal abstract*.

7076. Sroufe, L. Alan & Wunsch, Jane P. **The development of laughter in the first year of life.** In F. Reblsky & L. Dorman (Eds), *Child development and behavior*. (2nd ed) New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Reports a series of observational studies based on more than 150 infants. Clear evidence of age changes in both amount of laughter and the nature of stimuli eliciting laughter was found. Results are discussed in terms of cognitive growth, the psychoanalytical notion of ambivalence, the role of stimulus context, and a possible adaptive function of laughter. (25 ref)

7077. Takahashi, Keiko. (Kunitachi Coll of Music, Tokyo, Japan) **[Development of dependency in female adolescents: Analysis of self-reported histories.]** (Japn) *Japanese Journal of Educational Psychology*, 1974(Mar), Vol 22(1), 1-10.—Asked 18 female college students, identified by questionnaire in a previous study as having a stable need for dependency, to write interpersonal histories with a semistructured frame of references. Analysis indicated that there are 2 types of dependency; family and nonfamily type; that the family type is passive and negative in social behavior, whereas the nonfamily type is active and positive; and that since dependency structures appear in early childhood, and are consistent during the developmental history, early prediction may be possible. (English summary)—S. Choe.

7078. Takahashi, Keiko. (National U of Music, Tachikawa, Japan) **[Dependent behavior in female adolescent twins.]** (Japn) *Japanese Journal of Educational Psychology*, 1973(Dec), Vol 21(4), 242-247.—Compared the dependence (defined as affectional tie) of 77 twins of high school age with that of nontwins. Ss rated parents, siblings, and friends in terms of affectional tie and personal respect, and described the psychological significance of these people to them. Results indicate that the need for dependence of twins was not different from that of nontwins; however, twins depended less on friends of the same sex and more on the other half of the pair. This supports the position that adolescent twins tend to have difficulties in the normal process of socialization because they depend too much on each other.—S. Choe.

7079. Watson, John S. **Smiling, cooing, and "The Game."** In F. Reblsky & L. Dorman (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Discusses an hypothesis termed "The Game" to explain the onset of vigorous smiling and cooing in early infancy. The important role of the face stimulus in this process is analyzed. Some competing hypotheses also are discussed. (27 ref)

### Social Behavior & Family Relations

7080. Ainsworth, Mary D.; Bell, Silvia M. & Stayton, Donelda F. (Johns Hopkins U) **Infant-mother attachment and social development: Socialization as a product of reciprocal responsiveness to signals.** In M. P. Richards (Ed), *The integration of a child into a social world*. London, England: Cambridge University Press, 1974. 316 p. \$15.50.

7081. Atkinson, Brian R. & Ogston, Donald G. (Providence Child Development Ctr, Calgary, Alberta, Canada) **The effect of father absence on male children in the home and school.** *Journal of School Psychology*, 1974(Fal), Vol 12(3), 213-221.—Compared the behavior of 70 male children, ages 8-16 yrs, from homes without fathers to 30 children from intact homes. The children's behavior in the home, school, and away from these institutions was assessed by means of questionnaires completed by their mothers, teachers, and the children themselves. Differences in moral values, as reflected in the reasons for and the severity of punishment, and responsibilities in and away from the home were reported by the children and their mothers. Teachers reported no difference in academic and extracurricular participation and performance. It is concluded that, in general, the behavior of children with and without fathers in not appreciably different except that parental disciplinary behavior may vary as a function of the father's absence.—*Journal abstract.*

7082. Bearison, David J. & Cassel, Thomas Z. (Graduate School & University Ctr, City U New York) **Cognitive decentration and social codes: Communicative effectiveness in young children from differing family contexts.** *Developmental Psychology*, 1975(Jan), Vol 11(1), 29-36.—Studied the effectiveness of verbal communication among 37 6-yr-old middle-class children from families exemplifying a person or a position social code. Families' social code was the percentage of person-oriented regulatory appeal statements made by mothers in response to questions concerning how they would attempt to regulate their children's behavior. On each of 5 measures comparing the form and content of messages to sighted and blindfolded listeners, children from person-oriented families showed greater evidence of accommodating their communication to the listener's perspective than did children from position-oriented families. (15 ref)—*Journal abstract.*

7083. Bell, Silvia M. & Ainsworth, Mary D. **Infant crying and maternal responsiveness.** In F. Rebellsky & L. Dornon (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Conducted a naturalistic, longitudinal study of 26 infant-mother pairs. Results show that consistency and promptness of maternal response is associated with decline in frequency and duration of infant crying. Findings are discussed in an evolutionary context and with reference to the popular belief that responding to a baby's cries "spoils" him. (22 ref)

7084. Bernal, Judith. (U Cambridge, Unit for Research on the Medical Applications of Psychology, England) **Attachment: Some problems and possibilities.** In M. P. Richards (Ed), *The integration of a child into a social world*. London, England: Cambridge University Press, 1974. 316 p. \$15.50.—Discusses (a) the problems inherent in defining and measuring the affectional bonds between the child and those to whom he becomes attached and (b) how the child's relationship with his mother or chief attachment figure differs from his relationship with others. (32 ref)

7085. Blurton Jones, N. G. (U London, Inst of Child Health, England) **Ethology and early socialisation.** In M. P. Richards (Ed), *The integration of a child into a social*

*world*. London, England: Cambridge University Press, 1974. 316 p. \$15.50.—Discusses various features of the ethological method and illustrates the possible roles of evolutionary theory in the study of the development of social behavior. (6 p ref)

7086. Clarke-Stewart, K. Alison. (Yale U) **Interactions between mothers and their young children: Characteristics and consequences.** *Monographs of the Society for Research in Child Development*, 1973, Vol 38(6-7, Serial No 153), 1-108.—Carried out observations for 9 mo of 36 mothers and their firstborn children (9-18 mo old) as they interacted at home, spontaneously and in structured situations. Ratings, frequencies, and measures of contingencies between sequential maternal and child behaviors were based on these observations. A highly significant linear relation was found between children's competence and mothers' care. Within this broad pattern, specific relations were found between children's language development and mothers' verbal stimulation, children's skill with objects and mothers' presentation of play materials, and mothers' and children's positive social behavior toward each other. Maternal restrictiveness was related to the child's involvement with objects, maternal effectiveness to the child's irritability, and maternal cuddling to the child's physical attachment to the mother. Nonlinear relations between the mother's behavior and the quality of the child's attachment were demonstrated. Children's development was related differentially to maternal stimulation, responsiveness, and appropriateness; children's activities to the mothers' preferred mode of interaction. The analysis of relations over time suggested that stimulating, responsive maternal behavior influenced the child's intellectual development, whereas in social relations the child's behavior influenced the mother.—*A. Barclay.*

7087. Cook, Harold & Stingle, Sandra. (Teachers Coll, Columbia U) **Cooperative behavior in children.** *Psychological Bulletin*, 1974(Dec), Vol 81(12), 918-933.—Reviews the theoretical and empirical literature relevant to cooperative behavior in children. An attempt is made to delineate theoretical viewpoints, to discuss definitions of behavior, and to summarize research in terms of age, sex, cultural and subcultural variables, and social interaction. In addition, some factors influencing the learning of cooperation are discussed. Methodological problems and inconsistent findings that limit generalizations concerning the processes thought to relate to cooperative behavior in children are described. (3 p ref)—*Journal abstract.*

7088. Coon, Robert C.; Lane, Irving M. & Lichtman, Robert J. (Louisiana State U) **Sufficiency of reward and allocation behavior: A developmental study.** *Human Development*, 1974, Vol 17(4), 301-313.—Investigated the effect of sufficiency of reward on the principles that elementary school children employ to allocate rewards to others. Ss were a total of 322 children in kindergarten and Grades 2, 4, and 6. Results indicate that children allocated a smaller proportion of reward to the winner of a game when they were distributing insufficient and oversufficient quantities of reward than when they were distributing a sufficient quantity of reward. Kindergarten children allocated significantly less reward to the winner than did older children. These results are interpreted as

indicating that no single norm can explain the reward allocation behavior of children. However, the results reaffirm past findings that the norm of equity is the most important determinant of children's reward allocation behavior.—*Journal abstract.*

7089. Coxon, A. P. (U Edinburgh, Scotland) **The mapping of family-composition preferences: A scaling analysis.** *Social Science Research*, 1974(Sep), Vol 3(3), 191-210.—When Ss express preference for one type of family composition over another, their judgments can be referred to the "objective" characteristics defining the stimuli. Pair comparison preference data from L. Delbeke's 1968 study were "internally" analyzed according to the J. D. Carroll and J. J. Chang 1970 "points of view" vector model and C. H. Coombs's 1964 unfolding (distance) model. The distance model was found to give a better fit. The models were also compared within the framework of Carroll's preference mapping hierarchy of models, referring the data to the "objective" structure underlying the stimuli. The simple distance model was found to give a much better fit. (27 ref)—*Journal abstract.*

7090. Deutsch, Francine. (Pennsylvania State U) **Effects of sex of subject and story character on preschoolers' perceptions of affective responses and intrapersonal behavior in story sequences.** *Developmental Psychology*, 1975(Jan), Vol 11(1), 112-113.—Data from 32 white, lower-class 3- and 4-yr-old children indicate that the ability to accurately identify affective and intrapersonal responses did not significantly vary with Ss' age or sex, or with sex of story character, and that children performed better on same-sex rather than on cross-sex stories regardless of age and mental ability.

7091. Dien, Dora S. (California State U, Hayward) **Parental Machiavellianism and children's cheating in Japan.** *Journal of Cross-Cultural Psychology*, 1974(Sep), Vol 5(3), 259-270.—Attempted to clarify the developmental aspect of Machiavellianism. Ss were 67 males and 60 females (mean age = 59 mo) in a Japanese nursery-kindergarten. Nachamie's Mach scale and a parental child-training questionnaire were administered to 218 mothers and 3 mo later to 109 of their husbands. 2 types of social learning were considered, one involving "competition," the other "transmission" via modeling and teaching. Cheating in a game was a measure of the preschooler's manipulative tendency. The 2 hypotheses tested were confirmed: (a) First and only children of low-Mach mothers from simple nuclear families cheated more than those of high-Mach mothers. (b) First and only children of parents who were both high Machs in simple nuclear families showed the least amount of cheating.—*Journal abstract.*

7092. Eckerman, Carol O.; Whatley, Judith L. & Kutz, Stuart L. (Duke U) **Growth of social play with peers during the second year of life.** *Developmental Psychology*, 1975(Jan), Vol 11(1), 42-49.—To assess the social interactions between unfamiliar peers, 30 pairs of home-reared children—10 pairs in each of 3 age groups, 10-12, 16-18, and 22-24 mo of age—were observed in an unfamiliar play setting with their mothers. The children contacted their mothers little and interacted more with toys and one another, exchanging smiles, vocalizations, and toys and imitating each other's actions. Contact with

the same objects and involvement in the peer's activities with objects increased reliably with age. By 2 yrs of age, social play exceeded solitary play and the social partner was most often the peer. Results suggest that children generalize to peers' behaviors developed through child-adult interaction, but that peers provide stimulation differing from that of familiar adults.—*Journal abstract.*

7093. Edwards, J. B. **A developmental study of the acquisition of some moral concepts in children aged 7 to 15.** *Educational Research*, 1974(Feb), Vol 16(2), 83-93.—Studied 350 boys and 350 girls 7-15 yrs old to determine how they define certain moral concepts, how they decide whether an action was right or wrong, and what influenced their acquisition of moral concepts. Older girls were better in defining moral concepts. There were no significant social class differences. Mothers had had greater influence than peer groups in children's acquiring moral concepts, and teachers had also contributed significantly during early school years. (31 ref)—J. B. Francis.

7094. Etaugh, Claire & Brown, Barry. (Bradley U) **Perceiving the causes of success and failure of male and female performers.** *Developmental Psychology*, 1975(Jan), Vol 11(1), 103.—Studied sex differences in attributions of ability, effort, task difficulty, or luck given by 320 Ss at 4 grade levels (5th, 8th, and 11th grades and college) to the outcomes of 4 masculine tasks performed by either male or female actors. Results suggest that differential perceptions of male and female performances appear to be well established in both boys and girls by the 5th grade.

7095. Frueh, Terry & McGhee, Paul E. (U Missouri) **Traditional sex role development and amount of time spent watching television.** *Developmental Psychology*, 1975(Jan), Vol 11(1), 109.—Tested the hypothesis that the amount of time spent watching TV is significantly related to the strength of traditional sex-role development. Data from 80 kindergartners and 2nd, 4th, and 6th graders support the hypothesis and suggest that this relationship holds equally for both sexes and does not change with increasing age.

7096. Girgus, Joan S. & Wolf, Joan. (City Coll, City U New York) **Age changes in the ability to encode social cues.** *Developmental Psychology*, 1975(Jan), Vol 11(1), 118.—Studied the accuracy with which 48 Ss (mean ages = 5.5, 7.4, 9.5, and 20.5 yrs) could encode cues commonly found in social interactions (e.g., facial expression, vocal intonation, and movements). Data suggest that younger Ss perceived many everyday social interactions as essentially identical and responded accordingly.

7097. Goldberg, Susan. **Infant care and growth in urban Zambia.** In F. Reblsky & L. Dormon (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Observed 38 infants from the age of 4 mo through 12 mo in a high density suburb. Several assessment scales were employed to study the mother-infant relationship and its influence on structuring the infant's world. The effects on the infant's motor, cognitive, and social development due to the Zambian mother's practice of carrying her infant in close physical contact in a back-sling are discussed. (29 ref)

7098. Halverson, Charles F. & Waldrop, Mary F. **Maternal behavior toward own and other preschool children: The problem of "ownness."** In F. Rebellsky & L. Dornon (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p. —Explored interactions between mothers and their own and other children (23 male and 19 female 2½-yr-olds) to identify maternal behaviors consistent across children and those closely tied to individual children. Data were obtained on mother-child interactions through a structured interaction session. Results indicate that mothers used significantly more positive statements with other children and significantly more negative sanctions with their own.
7099. Harper, Lawrence V. & Sanders, Karen M. (U California, Davis) **Preschool children's use of space: Sex differences in outdoor play.** *Developmental Psychology*, 1975(Jan), Vol 11(1), 119.—Observed 3-5 yr old children's free-play activities over a 2-yr period. Boys played outdoors consistently more than did girls, and girls spent more time indoors at craft tables and in the kitchen.
7100. Harper, Lawrence V. **The young as a source of stimuli controlling caretaker behavior.** In F. Rebellsky & L. Dornon (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p. —Reviews the literature on the effects of mammalian offspring on their caretakers. A general classification system is presented in which the offspring are seen as providing exogenous stimuli which facilitate (trigger, sensitize, orient) or inhibit (check, desensitize, disorient) caretaker behavior. Examples of general offspring stimulus effects are given from comparative studies. It is suggested that the same behavior analysis could be fruitfully applied to human parent-offspring relations. (5½ p ref)
7101. Harré, Rom. (U Oxford, England) **The conditions for a social psychology of childhood.** In M. P. Richards (Ed), *The integration of a child into a social world*. London, England: Cambridge University Press, 1974. 316 p. \$15.50.
7102. Heinrich, Hanns Ch. [Scales for evaluating parental reinforcement of girls.] (Germ) *Zeitschrift für Experimentelle und Angewandte Psychologie*, 1974, Vol 21(2), 226-249.—Presented to 372 girls in Grades 4-8 a 4-part questionnaire which inquired about encouraging and punishing behavior of the mother and the father. Reliability of the 4 parts ranged between .802 and .910. Socioeconomic background of an S distinguished parental behavior most decisively; fathers of the more affluent strata were judged to be less strict and more helpful. (English & French summaries) (15 ref)—W. J. Koppitz.
7103. Hoffman, Martin L. **Father absence and conscience development.** In F. Rebellsky & L. Dornon (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Studied 28 female and 25 male father-absent 7th grade white children and a control group of equal size. Ss were compared on 7 moral attributes and overt aggression. Father-absent boys obtained lower scores for all the moral indexes and were rated by teachers as significantly more aggressive than father-present boys. No differences between father absence and father presence were found for girls. (23 ref)
7104. Hubert, Jane. (London School of Economics, England) **Belief and reality: Social factors in pregnancy and childbirth.** In M. P. Richards (Ed), *The integration of a child into a social world*. London, England: Cambridge University Press, 1974. 316 p. \$15.50.
7105. Ingleby, David. (MRC Unit on Environmental Factors in Mental and Physical Illness; London School of Economics, England) **The psychology of child psychology.** In M. P. Richards (Ed), *The integration of a child into a social world*. London, England: Cambridge University Press, 1974. 316 p. \$15.50.—Attempts to develop the thesis that practically every act in relation to a child, from his birth and before, reflects constraints dictated by that child's place in the political system.
7106. Katz, Phyllis A. & Zalk, Sue R. (Graduate School & University Ctr, City U New York) **Doll preferences: An index of racial attitudes?** *Journal of Educational Psychology*, 1974(Oct), Vol 66(5), 663-668.—Administered a doll choice task to 96 white and 96 black nursery and kindergarten children by same- and other-race Es. In contrast to earlier studies, male and female dolls were presented which differed in skin color, not hair or eye color. The strong preference for white dolls found by previous investigators was not obtained. Young children exhibited a slight preference for other-race dolls, although gender cues were more significant determinants of choice behavior than were skin color cues. Children's responses were, in part, a function of E's race. Stronger preferences for same-race dolls were exhibited in the presence of a same-race E.—*Journal abstract*.
7107. Kelley, Eleanor; Good, Evelyn & Walter, Sarah. (Louisiana State U, Baton Rouge) **Working-class adolescents' perceptions of the role of clothing in occupational life.** *Adolescence*, 1974(Sum), Vol 9(34), 185-198.—Administered to 10th and 12th graders (196 white males, 259 white females, and 136 black females) a questionnaire which measured their occupational aspirations, their awareness of requirements for entering the occupation, and their perception of the role clothing plays in occupations. Most Ss had white-collar and upward aspirations toward white-collar occupations, and perceived the academic requirements accurately. Black females had higher aspirations than white females, and more whites than blacks had aspirations lower than their parent's current status. Most Ss recognized that clothing is functional in the occupational world and can also be manipulated to create an impression and influence others. (19 ref)—A. Krichev.
7108. Kniveton, Bromley H. (Loughborough U, England) **The very young and television violence.** *Journal of Psychosomatic Research*, 1974(Aug), Vol 18(4), 233-237.—Children of middle-class and working-class homes were exposed on 2 occasions to different aggressive films. There was a highly significant positive correlation between a child's imitative response to the 2 films. Aggression increased consistently over and above the initial tendency to behave in that way. In working-class children the effect of an aggressive film was long lasting. Children with less ability to develop their own interests are considered more likely to be influenced by

filmed aggression. It is stressed that the relationship is not between filmed aggression and imitation of aggression, but between the degree of deprivation of life satisfactions and the child's increased tendency to imitate.—W. G. Shipman.

7109. **Leifer, A. D.; Leiderman, P. H.; Barnett, C. R. & Williams, J. A.** Effects of mother-infant separation on maternal attachment behavior. In F. Rebellsky & L. Dornon (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Compared attachment behavior observed in 3 groups of mothers (22 separated from infants, 22 contact pairs, and 24 full-term mother-infant dyads) prior to, and 1 and 4 wks after, discharge of the infant from the hospital. Results suggest that maternal behavior results from many factors which are not all equally influential at any given time or over a period of time. The role of any 1 variable could not be isolated. (26 ref)

7110. **Liebert, Robert M. & Baron, Robert A.** Some immediate effects of televised violence on children's behavior. In F. Rebellsky & L. Dornon (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Studied influences of televised violence using a  $2 \times 2 \times 2$  factorial design (sex, 5-6 or 8-9 yrs old, observation of aggressive or nonaggressive TV sequences). Following TV viewing, Ss were given an opportunity to aggress against a peer, then placed in a free play situation where frequency of aggressive responses was observed. Ss viewing aggressive TV scenes engaged in longer attacks against ostensible "victims" and engaged in a higher level of aggressive play. (27 ref)

7111. **Moyer, K. E.** (Carnegie-Mellon U) *You and your child: A primer for parents*. Chicago, IL: Nelson-Hall, 1974. ix, 213 p. \$9.95.—Presents a practical guide for teachers and parents on ways to deal with the problems of child raising, helping the child to adjust to school, methods of discipline, handling emotions, habits, and minor behavior problems, and use of psychological principles to help children grow and develop.

7112. **Mueller, Edward.** The maintenance of verbal exchanges between young children. In F. Rebellsky & L. Dornon (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Examined spontaneous verbal interaction among 24 pairs of  $3\frac{1}{2}$ - $5\frac{1}{2}$  yr old preschool children. Maintenance of verbal interaction was found to be multidetermined; however, when many causative factors operated in 1 direction, the outcome was perfectly predictable. The 2 most powerful predictors of a message receiving a reply were its technical quality and the visual attention of the listener at its beginning.

7113. **Rebellsky, Freda & Hanks, Cheryl.** Fathers' verbal interaction with infants in the first three months of life. In F. Rebellsky & L. Dornon (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Recorded fathers' verbal interactions with their infants (7 male and 3 female normal, full-term babies) by means of a microphone attached to the infant for a 24-hr period every 2 wks. The data show that fathers spend little time vocalizing to their infants and that the number of

interactions varies by time of day, age and sex of infant, and the kind of activity occurring.

7114. **Rebellsky, Freda G.** Infancy in two cultures. In F. Rebellsky & L. Dornon (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Reports a pilot study of environmental differences during early infancy of 10 Dutch and 10 American babies during the 1st 3 mo of life. Systematic observations were made for 3 hrs every 2 wks for 6 times. Tentative results indicate that Dutch and American babies have very different experiences in the 1st 3 mo. Differences in physical environment and caretaking are described.

7115. **Rebellsky, Freda.** First discussant's comments: Cross-cultural studies of mother-infant interaction. In F. Rebellsky & L. Dornon (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Suggests that the differing needs of societies cause developmental processes to be different from culture to culture. A personal study comparing development of Dutch and US children during the 1st 2 yrs of life is cited to illustrate differing results which cannot be termed "better" or "worse." It is concluded that our present understanding of development does not explain cross-cultural phenomena.

7116. **Rebellsky, Freda; Conover, Cheryl & Chafetz, Patricia.** The development of political attitudes in young children. In F. Rebellsky & L. Dornon (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Administered an open-ended questionnaire to 146 male and 146 female 2-13 yr olds to study their knowledge of and attitudes toward issues in the 1968 Presidential election. Accuracy scores, attitude items, and qualitative data were obtained. Findings indicate that information increased with age but that children under 6 responded very differently than older children.

7117. **Rheingold, Harriet L. & Eckerman, Carol O.** The infant separates himself from his mother. In F. Rebellsky & L. Dornon (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Proposes that study of infant detachment behavior has received insufficient attention, perhaps due to a preoccupation with attachment behavior. The biological and psychological consequences of the infant's separation from his mother are viewed as important, and the behavior is considered a challenging field for investigation.

7118. **Richards, Martin P. (Ed.).** (U Cambridge. Unit for Research on the Medical Applications of Psychology, England) *The integration of a child into a social world*. London, England: Cambridge University Press, 1974. 316 p. \$15.50.

7119. **Richards, Martin P.** (U Cambridge. Unit for Research on the Medical Applications of Psychology, England) *First steps in becoming social*. In M. P. Richards (Ed), *The integration of a child into a social world*. London, England: Cambridge University Press, 1974. 316 p. \$15.50.—Discusses various aspects of the child's relationships with adults and some of the ways these relationships are linked with the social context of development. (38 ref)

7120. Saffady, William. (Wayne State U) **The effects of childhood bereavement and parental remarriage in sixteenth-century England: The case of Thomas More.** *History of Childhood Quarterly: Journal of Psychohistory*, 1973(Fal), Vol 1(2), 310-336.—Discusses 3 effects of the death of a mother on 16th century children: (a) pathological reactions to early object loss that persisted in later life, (b) developmental consequences of early object loss, and (c) the effects of parental remarriage. (12 p ref)

7121. Santrock, John W. **Relation of type and onset of father absence to cognitive development.** In F. Rebellsky & L. Dormon (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Compared 3rd and 6th grade IQ and achievement scores for 286 father-absent and 57 father-present white, predominantly lower-class children. Father absence was analyzed by age of onset, type, or presence of a stepfather. Father absence due to divorce, desertion, or separation had the most negative influence in the 1st 2 yrs of life; father absence due to death was most detrimental in the 6-9 yr old age bracket. Results of testing 7 hypotheses are reported. (15 ref)

7122. Schaefer, Charles E. (Children's Village, Dobbs Ferry, NY) **An exploratory study of basic attitudes and philosophies of child care staff.** *Devereaux Forum*, 1974(Win), Vol 9(1), 21-26.—Compared child-rearing attitudes and the general philosophy of human nature in the general population and in a sample of residential treatment parents. It was found that the attitudes of home parents tended to be less strict and more protective than those of people in general. Other findings and their interpretations are discussed.

7123. Stein, Edward V. (San Francisco Theological Seminary, San Anselmo, CA) **Fathering: Fact or fable?** *Journal of Pastoral Care*, 1974(Mar), Vol 28(1), 23-35.—Presents case histories of defective father relationships which caused psychological harm. The need for psychological fathering is supported by data concerning male homosexuals, by primate studies and studies of myth, and by observing situations where fatherlessness is systematically imposed. Psychological fathering is discussed in terms of affection, protection, and contact. Psychoanalytical concepts of the father-child relationship are considered.—B. Smith.

7124. Wauty-Dancot, M. C.; Rucquoy, G. & Descy, J. **[Context, methodology and results of a preliminary inquiry on the degree of sexual education in a Belgian population.]** (Fren) *Acta Psychiatrica Belgica*, 1973(Nov), Vol 73(6), 747-761.—Describes the method and preliminary results of a pilot study done in preparation for a large-scale investigation of sexual knowledge among Belgian adolescents. A questionnaire developed and administered to 100 youths yielded data on the extent of misinformation in this area among the Ss. Plans for the larger study are presented. (English, Dutch, German, Italian & Spanish summaries)—E. Coché

7125. Wendt, Hans W. **Early circannual rhythms and adult human behavior: Components of a chronobehavioural theory, and critique of persistent artifacts.** *International Journal of Chronobiology*, 1974, Vol 2, 57-86.—Mother-infant interactions in from 21 to 51 families observed over 2 24-hr spans exhibited

circannual trends. Adolescents showed higher "risk verifying" scores when, from mothers' records, critical phases had coincided with high-variability spring months. Relationships decreased when group means were substituted for individually accessible age data, but the remaining lag correlation suggested procedures for testing the model where exact coincidence is inaccessible. Several such studies are summarized using least square cosine fits and other statistics ( $N = 8-375$  Ss). Relevant behavior was operationalized by type of linguistic frameworks, imagery content, and factored correlation matrices based on several kinds of social and political behavior. Factors related to preverbal circannual phenomena accounted for from 11 to 64% of the variance in certain adult behaviors. Persisting notions about supposedly perinatal influences on later behavior are examined. 6 types of artifacts are explored which could account for several of the effects reported in the literature. (3 p ref) —Journal abstract.

### Adult Development & Aging

7126. Birren, James E. (U Southern California, Andrus Gerontology Ctr) **Translations in gerontology: From lab to life: Psychophysiology and speed of response.** *American Psychologist*, 1974(Nov), Vol 29(11), 808-815.—Reviews the literature in the areas of perception, memory, learning, motor skills, intelligence, neural activity, and personality. General support is given to the proposition that advancing age is accompanied by a decrease in the speed with which the central nervous system processes information. This principle is considered manifest in the observation that individuals tend to show a slowness in response as they become older. It is argued that whereas speed of behavior in the young adult may be regarded as a performance-related dependent variable, in the case of the aging individual it should be regarded as an independent variable with which to interpret all phenomena considered important in behavior. Factors which qualify the principle are discussed, together with its implications for accident-prone behavior in the aged. (27 ref)—B. Lindsey.

7127. Jackson, D. W. (Ohio State U) **Relationship of residence, education, and socialization to cognitive tasks in normal people of advanced old age.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 423-426.—Tested 40 aged residents of a dependent care facility on a series of cognitive conservation tasks. A decrement toward lowered levels of cognitive functioning was noted but specific psychosocial factors were related to this decline. Length of residence in dependent context and involvement in socialization and leisure activities were significantly related to level of cognitive functioning and were independent of sex. However, attained educational level was positively related to cognitive conservation for females but not for males.—Journal abstract.

7128. Kogan, Nathan. (New School for Social Research) **Judgments of chronological age: Adult age and sex differences.** *Developmental Psychology*, 1975(Jan), Vol 11(1), 107.—62 male and 137 female undergraduates and 76 male and 93 female Ss (mean age = 71.3 and 71.6 yrs, respectively) judged the ages of males and females portrayed in sets of 27 photographs. Results demonstrate the operation of judgmental assimilation

and contrast principles in determinations of chronological age, with females exhibiting greater extremity of judgments than males.

7129. Labouvie-Vief, Gisela; Hoyer, William J.; Baltes, Margret M. & Baltes, Paul B. (U Wisconsin, Madison) **Operant analysis of intellectual behavior in old age.** *Human Development*, 1974, Vol 17(4), 259-272. —A review of recent research on adult intellectual development indicates that there is little justification for the notion of marked intellectual decrement in the aged. Rather, the aged person appears to exhibit a pronounced degree of plasticity in intellectual performance, suggesting that it is necessary to explore environmental variables related to cognitive proficiency. An operant framework is proposed for the analysis of environment-intelligence interactions in old age, and intellectual decrement is interpreted to reflect the lack of supportive environmental contingencies. It is argued that such a framework demands the implementation of research aimed at examining the range of modifiability of intellectual performance in the elderly. (50 ref)—*Journal abstract*.

7130. Managan, Dorothy et al. (DuPage County Health Dept, Nursing Div, Wheaton, IL) **Older adults: A community survey of health needs.** *Nursing Research*, 1974(Sep-Oct), Vol 23(5), 426-432.—Determined selected health needs of noninstitutionalized persons 65 yrs and older. 5 health-related areas were assessed: health condition, physical functioning, accessibility of medical care, social isolation, and service needs. 1,466 Ss were interviewed in their homes. Functional impairment, lack of family doctor, and social isolation were major problems. Persons who lived with others had more health problems and were more socially isolated than those living alone. Findings indicate the need for intensive casefinding and well-adult conferences staffed by family nurse practitioners and friendly visitors.—*Journal abstract*.

7131. Meichenbaum, Donald. (U Waterloo, Ontario, Canada) **Self-instructional strategy training: A cognitive prothesis for the aged.** *Human Development*, 1974, Vol 17(4), 273-280.—A brief review of the literature on problem-solving with children and the elderly reveals a similar pattern of results, implicating the role of comprehension, production, and mediation deficiencies. It is proposed that a self-instructional strategy training procedure, which is designed to explicitly teach the use of heuristic processes and mediational devices, can be employed to compensate for age-associated deficits such as poor problem-solving. The format for such a self-instructional procedure, which was derived from the developmental research of the Soviet psychologists C. Vygotsky (1962) and A. R. Luria (1961), is presented. (36 ref)—*Journal abstract*.

7132. Poitrenaud, J. & Moreaux, C. (INSERM, Unité de Recherches Gérologiques, Paris, France) **[Psychometric norms for geriatric subjects.]** (Fren) *Revue de Psychologie Appliquée*, 1974, Vol 24(3), 149-158.—Reports results of administering a battery of 4 tests to 361 males and 127 females 60-85 yrs old, subdivided according to sex, age, and cultural levels. Information is provided on the suitability of the Binois and Pichot Test

of Vocabulary, the Benton Visual Retention Test, the Clement Code Test, and the Wechsler Memory Scale.

7133. Schaie, K. Warner. (U Southern California, Gerontology Ctr) **Translations in gerontology: From lab to life: Intellectual functioning.** *American Psychologist*, 1974(Nov), Vol 29(11), 802-807.—Examines research evidence of intellectual change as a function of age and concludes that the notion of a universal decline in adult intelligence is not supported. Qualitative differences in the approach of old adults to intellectual performance are attributed to motivational factors and inappropriately designed tasks. Social policy implications of these findings for the programing of adult education specified. It is suggested (a) that specific educational programs be designed to provide the sociocultural skills which today's aged have missed, (b) that variable retirement policies be adopted, and (c) that segregation based on age cohorts be reduced. (34 ref)—*B. Lindsey*.

7134. Schonfield, David. (U Calgary, Alberta, Canada) **Translations in gerontology: From lab to life: Utilizing information.** *American Psychologist*, 1974(Nov), Vol 29(11), 796-801.—Discusses methodological issues in the drawing of implications from laboratory research which are relevant to the real-life problems of the aged. 6 examples of one approach to extrapolating experimental findings to analogous practical situations are given. The findings are considered to illustrate a general principle to the effect that integrated psychological functioning from about the age of 50 yrs depends upon an increased control and selectivity of attention. (16 ref)—*B. Lindsey*.

## CULTURAL INFLUENCES AND SOCIAL ISSUES

7135. Hegeman, Elizabeth & Kooperman, Leonard. (John Jay Coll of Criminal Justice, City U New York) **Anthropology and community action.** New York, NY: Doubleday, 1974. 240 p. \$1.95.—Presents a collection of 18 papers which attempt to view problems of cultural communication, community integration, mental health, and paternalism in an anthropological perspective. Cultural field studies and discussion papers are included to emphasize special issues involved in industrialization, cultural diversity, cultural assimilation, and bureaucratic centralization. (31 ref)

### Culture & Ethnology & Race Relations & Religion

7136. Binion, Rudolph. (Brandeis U) **Hitler's concept of Lebensraum: The psychological basis.** *History of Childhood Quarterly: Journal of Psychohistory*, 1973(Fal), Vol 1(2), 187-215.—Discusses 2 aspects of Hitler's Vol 1(2), 187-215.—Discusses 2 aspects of Hitler's politics, one (anti-Semitism) deriving from a trauma of Hitler's young manhood, the other ("Lebensraum") from a German national trauma—i.e., a shock suffered by the German people collectively. The former expressed the Germans' abreactive need, which the latter then supplied. Hitler's relationship to Germany went back to his infancy, but the trauma behind his politics terminated the infantile material that connected with it. (6 p ref)—*Journal summary*.

7137. Bloom, Leonard. **Some values and attitudes of young Zambians, studied through spontaneous**

**autobiographies.** *African Social Research*, 1972(Dec), No 14, 288-300.—Describes a study based on autobiographies written by 64 secondary and university students from the small elite African middle class and with above average education. The content of the autobiographies suggests that the attitudes and values of young Zambians are changing as their society changes and that persons of both urban and rural backgrounds are equally affected. The young people often experienced social psychological problems which apparently resulted from rapid socioeconomic changes. Graphic examples are excerpted from the students' autobiographies.—*D. Berliner.*

7138. Carss, Brian W. & Whitrod, R. M. (U Queensland, St Lucia, Australia) **A study of the relative seriousness of criminal offences as viewed by selected groups in Australia and Papua-New Guinea.** *Australian & New Zealand Journal of Sociology*, 1974(Jun), Vol 10(2), 96-100.—Conducted a study to determine whether any consensus exists among selected groups of people in Papua-New Guinea and Australia as to how they rank different forms of unlawful behavior. The Papua-New Guinea sample consisted of 356 Ss from the military and colleges, and the Australian sample consisted of 297 Ss from the police force, military training school, and universities. Results show that subgroups in the 2 countries differed as to the seriousness of certain offenses, and that on some crimes—e.g., compounded stealing, violence, and disorders—there were national differences also.—*Journal summary.*

7139. Chakrabarti, Tridib K. (U Calcutta, India) **Attitudes reflected in matrimonial advertisements.** *Australian & New Zealand Journal of Sociology*, 1974(Jun), Vol 10(2), 142-143.—Notes that the appearance of matrimonial advertisements in Indian newspapers is a departure from the traditional pattern of partner selection, which depends upon information gained personally. Content analysis was performed on a random sample of matrimonial advertisements (200 male, 200 female) appearing in a leading Bengali daily newspaper. The advertisers belonged to the urban middle classes, were generally highly educated, and enjoyed high social status. Caste was mentioned by 92% of both sexes, physical beauty by 91% of the females but only 10% of the males. Since content analysis indicated a typically conservative orientation on the part of the advertisers, it is concluded that they were not free of traditional beliefs.—*R. Brislin.*

7140. Deregowski, Jan B. & Munro, Don. (U Aberdeen, Scotland) **An analysis of "polyphasic pictorial perception."** *Journal of Cross-Cultural Psychology*, 1974(Sep), Vol 5(3), 329-343.—Assessed the tendency to interpret pictures as representing a sequence of events, and the extent to which such tendency is fostered by background cues and arrangement of figures. Ss were a total of 306 white Canadian 6th and 7th graders and 834 African primary school children and tradesmen. Ss were administered a test using 9 drawings randomly distributed, with instructions for each S to write an interpretation of what was happening in the picture he received. Results show that interpretations representing a sequence of events were more common in the African sample. Results also suggest that it is probably erroneous to describe the phenomenon as perceptual, since the

responses appeared to be affected by the extent to which S's interpretation was "stimulus-bound." Only the background cues were found to affect Ss' responses.—*Journal abstract.*

7141. Dodrill, Carl B. (U Washington, Medical School) **Personality characteristics of students not identifying with their parents' denominations at entrance into a Christian college.** *Journal of Psychology & Theology*, 1974(Sum), Vol 2(3), 216-222.—Investigated (a) the degree to which students did not identify with their parents' denominations at entrance into a Christian college and (b) the differences between the personalities of students who did identify with their parents' denominations and those who did not. Ss were 344 students who had taken the Guilford-Zimmerman Temperament Survey at the time of entrance. Results show that (a) 5 out of 6 Ss identified with their parents' denominations and (b) those who did not identify had greater tendencies than those who did toward independent thinking, social ascendance, introspectiveness, and reflectiveness. Results suggest that personality factors may be important in certain aspects of religious behavior.—*Journal abstract.*

7142. Evans, Robert H. (U Virginia) **Parish priests, political power, and decision-making: An Italian case.** *American Behavioral Scientist*, 1974(Jul-Aug), Vol 17(6), 813-826.—A case study of an archpriest in a small Italian village, illustrating how his power rests on interpersonal relationships, patronage, and religious tradition.

7143. Goldschmidt, Walter. (U California, Los Angeles) **Guilt and pollution in Sebei mortuary rituals.** *Ethos*, 1973(Spring), Vol 1(1), 75-105.—Examines rituals surrounding death among the Sebei of Uganda as they relate to structural societal characteristics and intrapsychic tensions. It is postulated that rituals mediate between psychological tensions and needs and public demands. (2 p ref)

7144. Goodich, Michael. (U Haifa, Israel) **Childhood and adolescence among the thirteenth century saints.** *History of Childhood Quarterly: Journal of Psychohistory*, 1973(Fal), Vol 1(2), 285-309.—Links the childhood experience of 13th century saints with their adolescent rebellion. (5 p ref)

7145. Graves, Theodore D. (U California, Los Angeles) **The Navajo urban migrant and his psychological situation.** *Ethos*, 1973(Fal), Vol 1(3), 321-342.—Studied the relationships between psychosocial variables and the rate of return to reservations and drinking behavior among Navajo migrants to Denver. The attitudes of 259 male Navajo migrants and former migrants toward unemployment and low wages and their expectations of future economic status were assessed. Comparisons between Ss' reported perceptions and objective measures of economic status revealed that many migrants had a distorted image of their economic situation. It was found that migrants who had a sense of personal efficacy and who believed in the possibility of economic improvement exhibited relatively low rates of return to the reservation and of arrest for drunkenness. It is concluded that psychological distortion and interpretation of personal situations have considerable influence on the objective behavior of Indian urban migrants. (25 ref)—*J. Kelly.*

7146. Guthrie, Robert V. (U Pittsburgh) **White racism and its impact on black and white behavior.** *Journal of Non-White Concerns in Personnel & Guidance*, 1973(Apr), Vol 1(3), 144-149.—Discusses some sources of racism in the US and some of the survival techniques that have been used by blacks. Strategies and techniques to effect change are offered and include studying racism from a sociopsychological perspective, improving social science scholarship, having blacks initiate the research done on blacks, and legislating and prosecuting acts of racism as a crime in the US.

7147. Harper, J. (La Trobe U, Bundoora, Vic, Australia) **Educated women in Niugini.** *Australian & New Zealand Journal of Sociology*, 1974(Jun), Vol 10(2), 90-95.—Attempted to determine how Niuginian women in Papua and New Guinea define themselves, in a survey of 94 women who attended Busu Girl's School. Questionnaires and informal interviews were used to establish behavior, perception, and attitudes. Results are reported regarding occupational sex roles, work-force participation, family roles, sexual stereotypes, and liberation. The defining role of the colonial government is discussed.—R. Brislin.

7148. Hart, Geraldine; Ames, Kenneth A. & Sawyer, Robert N. (Pope John XXIII School, Portland, OR) **Philosophical positions of nuns and former nuns: A discriminant analysis.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 675-678.—24 nuns and 28 former nuns were given the Ames Philosophical Belief Inventory, and a discriminant-function was calculated along with the Generalized Mahalanobis D<sup>2</sup>. The statistically significant discriminant function suggests the Ames inventory can be employed as a screening device when selecting members of a religious community and also as a point of departure in the discussion of the implications of the decision to stay or to leave a religious order.—*Journal abstract*.

7149. Hicks, R. E. & Larsen, R. J. (Dept of the Public Service Board, Psychological Services, Branch, Papua New Guinea) **A note on personality testing among Papua New Guinea teacher trainees.** *New Guinea Psychologist*, 1974(Apr), Vol 6(1), 36-39.—Reports scores of 115 1st-yr teacher trainees in Papua New Guinea on the Junior Eysenck Personality Inventory (JEPI) and the Australian Self-Description Inventory (SDI). Mean scores on the SDI were much higher than those usually felt to indicate poor adjustment. Personal observations indicated that factors contributing to the artificially high scores include lack of reading comprehension and cultural differences. JEPI scores showed similar patterns to mean scores in the United Kingdom, although there were significant differences ( $p = .01$ ) on 3 scales. The JEPI is seen to be more desirable for use in Papua New Guinea than the SDI, and the need for caution in interpreting all foreign test instruments is noted.—C. Wright.

7150. Jarvis, Peter. **Religious socialization in the junior school.** *Educational Research*, 1974(Feb), Vol 16(2), 100-106.—Surveyed 238 junior school teachers regarding the content of their religious education lessons and the overall religious subcultures of classroom and schools to determine by what process religious socialization takes place. It is concluded that religious education

lessons do not respond to the child's cognitive level and are thus likely to confuse, whereas the religious life of classroom and school leads to an emotive affinity with Christianity. Ambivalence toward the Christian religion is thus produced in the child.—J. B. Francis.

7151. Joyce, J. T. (Dept of the Public Service Board, Psychological Services Branch, Papua New Guinea) **A preliminary study of cultural differences in values influencing western education in the Enga district: I. Personal and clan values.** *New Guinea Psychologist*, 1974(Apr), Vol 6(1), 9-16.—Administered a multidimensional questionnaire developed by the author to 250 high school students (mean age = 13 yrs) from 2 different areas of Papua New Guinea. One group was culturally homogenous and more isolated; the other was culturally mixed and had more exposure to Western influence. The questionnaire investigated cultural, cognitive, moral development, and democratic factors. Significant differences ( $p = .001$ ) were found between the 2 groups on questions related to the nature of friendship, the value of a nonclansman's life, and fear of the father's spirit. Factors contributing to these differences are discussed as they relate to the adjustment of these groups to Western civilization and law. The questionnaire is appended.—C. Wright.

7152. Loomis, Charles P. (U Houston) **A backward glance at self-identification of blacks and Chicanos.** *Rural Sociology*, 1974(Spr), Vol 39(1), 96.—Compared results of 1963 and 1970 studies which used the Twenty Statements Test to ascertain respondent's perceived identity. For both Mexican-Americans and blacks emphasis on ethnicity in self-identification has greatly increased in the last decade.

7153. Marsella, Anthony J.; Murray, Michael D. & Godlen, Charles. (U Hawaii) **Ethnic variations in the phenomenology of emotions: I. Shame.** *Journal of Cross-Cultural Psychology*, 1974(Sep), Vol 5(3), 312-328.—Investigated ethnic variations in the connotative meaning of emotions, using as Ss 324 American college students of Japanese, Chinese, and European ancestry. Ss were administered a 20-scale semantic differential for various emotions including shame. Results were factor analyzed and yielded the following dimensions: Evaluative, Dynamism, Synesthesia, Awareness, Arousal, and Intensity. Results show ethnic group differences in the endorsement pattern of the different scales and in the factorial structures. The concept of "shame" is discussed and related to the cultural traditions of the ethnic groups studied. Implications for ethnopsychiatry are noted. (37 ref)—*Journal abstract*.

7154. Milner, David. (U Bristol, England) **Racial identification and preference in "black" British children.** *European Journal of Social Psychology*, 1973, Vol 3(3), 281-295.—Attempted to discover whether the pattern of outgroup-oriented racial attitudes among black American children might also be found among the children of black immigrants to Britain. Measures of racial identification, preference, stereotyping, and social aspirations were administered to West Indian and Asian elementary school children and to a comparison group of native English children. While English Ss showed consistent ingroup attitudes, both Asian and West Indian children evidenced marked prowhite attitudes,

identifying with the white outgroup. The phenomenon of misidentification is discussed, and explanations are suggested in terms of differing cultural backgrounds, aspirations to integration, and relationship to the host community. (37 ref)—*M. K. Phifer*.

7155. **Munroe, Robert L.; Munroe, Ruth H. & Whiting, John W.** (Pitzer Coll) **The couvade: A psychological analysis.** *Ethos*, 1973(Spring), Vol 1(1), 30-74.—Formulated hypotheses related to the practice of couvade on the basis of a crosscultural survey of data from 22 societies. Hypotheses were then tested with 40 Black Carib men and 21 women as Ss. Men were divided into groups of those who did and did not practice couvade, and later into intensive and nonintensive couvade groups. These groups were compared on measures of language usage, behavioral evaluation by peers, histories provided by kinsmen, etc. Results support the hypothesis that the level of adult male salience experienced in childhood is a significant determinant of whether a man will practice couvade as an adult. Both psychological and sociocultural explanations are posited as necessary in any explanation of this practice. (4 p ref)—*C. Wright*.

7156. **Narramore, S. Bruce.** (Rosemead Graduate School of Psychology, CA) **Guilt: Christian motivation or neurotic masochism?** *Journal of Psychology & Theology*, 1974(Sum), Vol 2(3), 182-189.—Theorizes that (a) according to the Bible, guilt motivation is never used by God to motivate the Christian, and (b) guilt feelings in the experience of Christians are always self-destructive. Some of the major defenses utilized in attempting to combat guilt are discussed, and it is suggested that guilt feelings are one of the primary factors in all psychogenic pathology.—*Journal abstract*.

7157. **Newson, John & Newson, Elizabeth.** (U Nottingham, Child Development Research Unit, England) **Cultural aspects of childrearing in the English-speaking world.** In M. P. Richards (Ed), *The integration of a child into a social world*. London, England: Cambridge University Press, 1974. 316 p. \$15.50.

7158. **Pederson, John E.** (Rosemead Graduate School of Psychology, CA) **Some thoughts on a biblical view of anger.** *Journal of Psychology & Theology*, 1974(Sum), Vol 2(3), 210-215.—Discusses anger as a part of God's image in man and, as such, a key in the understanding of human anger.

7159. **Piker, Steven.** (Swarthmore Coll) **Comments on the integration of Thai religion.** *Ethos*, 1973(Fal), Vol 1(3), 298-320.—Examines the role of the Thai religious system as a projective institution which organizes and expresses the diverse psychological traits of subgroups within Thai culture. Some correspondence was found between personality dispositions leading to specific religious practices and variations in childrearing practices. (22 ref)

7160. **Pratt, Henry J.** (Wayne State U) **Organizational stress and adaptation to changing political status: The case of the National Council of Churches of Christ in the United States.** *American Behavioral Scientist*, 1974(Jul-Aug), Vol 17(6), 865-883.—Presents a historical dissertation on how changes in the social and political strategy of the National Council of Churches have been related to a long-term alteration in Protestantism's general status in society. The adoption of these new

strategies has required an emphasis on techniques designed to minimize the danger of member body defections. (32 ref)

7161. **Sappington, A. A.** (U Alabama, Birmingham) **Behavior of biased and non-biased whites towards blacks in a simulated interaction.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 487-493.—Examined differences between biased and nonbiased whites in their behavior towards blacks in a simulated interaction situation. 12 biased and 10 nonbiased white female undergraduates were selected on the basis of scores on a 7-point rating scale. Behaviors involving various levels of interaction (i.e., description, choice of a hypothetical interaction partner, and actual verbal exchanges) were examined. The biased and nonbiased whites differed, and these differences became more apparent as actual interaction was more closely approximated. Although no openly antiblack remarks occurred, biased whites talked less to blacks than to whites, expressed more negative affect as reflected in nonimmediacy of their remarks to blacks, and chose black partners less often. Biased whites described blacks as favorably as did nonbiased whites. Possible explanations are discussed.—*Journal abstract*.

7162. **Schuman, Howard.** (Michigan U) **Racial attitude change: Are whites really more liberal? Blacks aren't impressed.** *Psychology Today*, 1974(Sep), Vol 8(4), 82-86.—Contrasts the increasingly liberal racial attitudes of whites with the view of the white majority held by blacks. Since 1958 and even 1965, polls in Detroit indicate that white citizens have adopted attitudes more accepting of school, neighborhood, and even marital integration. Blacks, however, are increasingly impatient with the remaining prejudicial attitudes and with the fact that racial equality is not of high priority for most whites.—*E. J. Posavac*.

7163. **Spiro, Melford E.** (U California, San Diego) **Social change and functional analysis: A study in Burmese psychocultural history.** *Ethos*, 1973(Fal), Vol 1(3), 263-297.—Presents an historical examination of the effects of British colonialism on social aggression in Burma. It is suggested that changing patterns of social aggression resulted from psychological deprivation due to colonial suppression of traditional Burmese institutions through which hostility had been expressed in culturally approved and socially adaptive ways. (2 p ref)

7164. **Strunk, Orlo & Larsen, John A.** (Boston U, School of Theology, Albert V. Danielson Pastoral Counseling Ctr) **Variability within the theological concept of behavior of the Beliefs-About-Behavior Inventory.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 432-434.—Shaw's Beliefs-About-Behavior Inventory, designed to identify 3 concepts about behavior as the theological, illness, and psychological, was administered to 116 religious professionals, including Protestant seminarians, Roman Catholic priests and nuns, and pastoral counselors. Wide variability was discovered within these theological groups and between these groups and the original criterion groups. When groups were combined and then divided in terms of liberal-conservative categories the theological scale differentiated better, suggesting that the theological scale may be biased toward a particular type of theological way of thinking (conservative) rather than a general theological cognitive

style per se. Several possible explanations for the variability are suggested.—*Journal abstract.*

7165. Tallman, Irving & Wilson, Lance. (U Minnesota) **Simulating social structures: The use of a simulation game in cross-national research.** *Simulation & Games*, 1974(Jun), Vol 5(2), 147-167.—Describes the design of a study which explored the interplay between intrafamily behavior and social structure variables in influencing a child's capacity to adapt to social change. Blue- and white-collar families in Minnesota and central Mexico as well as rural Mexican peasants were compared on a modified version of the Life Career game called SIMCAR (Simulating Career Choice Patterns). SIMCAR was constructed on the basis of an economic consumption model. In considering the cross-cultural validity of the game 4 common types of validity were used: face validity (assessed via a simple questionnaire on the game's realism), rule consistency (audio tapes were made during actual playing sessions and reviewed after all data had been collected), predictive validity (interview data on such issues as occupational aspirations, attitudes toward marriage, etc.), and utility. Data suggest that the game does elicit the kind of behavior it was designed to elicit, and that the data produced by the game are sensitive to critical differences between and within societies.—D. E. Anderson.

7166. Todd, Judy L. & Shapira, Ariella. (U London, England) **US and British self-disclosure, anxiety, empathy, and attitudes to psychotherapy.** *Journal of Cross-Cultural Psychology*, 1974(Sep), Vol 5(3), 364-369.—A total of 152 US and British 18-55 yr old adults were administered the Self-Disclosure Questionnaire, the Taylor Manifest Anxiety scale, Hogan's Empathy Scale, and Fischer and Turner's Attitudes to Psychotherapy scale. It was predicted that (a) US Ss would be more self-disclosing and more positive to psychotherapy than the British; and (b) high self-disclosure would relate to low anxiety and high empathy for US but not for British Ss, and to positive attitudes to psychotherapy. Results show that US Ss were more self-disclosing, empathic, and favorable to psychotherapy than the British. Predicted interactions between nationality and self-disclosure were not confirmed.—*Journal abstract.*

7167. Tulkin, Steven R. **An analysis of the concept of cultural deprivation.** In F. Reberly & L. Dormon (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Suggests that there are serious limitations to the validity of the concept of "cultural deprivation" since it ignores cultural relativism and neglects political realities. Relevant literature is reviewed and the implications for research presented. (58 ref)

#### Social Issues & Social Processes

7168. ———. **The value system of Filipino college students.** *Philippine Journal of Child-Youth Development*, 1968(Jan), Vol 2(1), 1-52.—Studied the relationships between demographic characteristics of 4,000 Filipino college students and their moral and spiritual values. Results show that these values were stronger in females than males and that they were also correlated significantly with the factors of age, socio-economic status, education, and urban or rural background.

7169. Ashmore, Richard D. & McConahay, John B. (Rutgers State U, Livingston Coll) **Psychology and America's urban dilemmas.** New York, NY: McGraw-Hill, 1975. ix, 180 p. \$4.95.—Presents an overview of (a) the social and psychological aspects of urban life; (b) the problems in achieving equality in urban educational and judicial systems; (c) the scarcity of resources, and the concomitant problem of allocating them properly; (d) the relationship between race relations, poverty, and urban issues; and (e) the effects of crowding and pollution. (14 p ref)

7170. Bakare, Christopher G. (U Ibadan, Behavioural Sciences Research Unit, Nigeria) **An appraisal of psychology research in family planning.** *Professional Psychology*, 1974(Aug), Vol 5(3), 346-352.—Examines psychology's contribution to the multidisciplinary field of population growth. Topics appropriate for psychological study fall into 2 groups: (a) identifying variables that are predictive of behavior under study and (b) measuring these variables accurately. The need for relevance in research topics is cited, and relevant variables within topics can be identified by (a) practitioners in the field, (b) building sound theoretical models, and (c) using factor analytic techniques.—C. Wright.

7171. Barr, Norman I. & Zunin, Leonard. (Inst for Reality Therapy, Los Angeles, CA) **Campus prisons, community prisons, and judicial administration.** In L. M. Irvine & T. B. Brelje (Eds), *Law, psychiatry and the mentally disordered offender: II*. Springfield, IL: Charles C Thomas, 1973. xv, 132 p. \$9.75.—Discusses the ideas of community-based prisons, locating prisons on university campuses, and the control of the correctional system by the judiciary rather than by the executive branch of government, as potential successful solutions to the problem of administering justice in the US. Historical precedents for these suggestions are described, and the need for public support in any major change in corrections is stressed.

7172. Baxter, Sam. (St Bartholomew's Hosp Medical Coll, Hackney Hosp, London, England) **Labour and orgasm in primiparae.** *Journal of Psychosomatic Research*, 1974(Jun), Vol 18(3), 209-216.—Interviewed 54 women 12 wks postpartum about sociological, physical, and psychological data pertaining to the prepregnancy, pregnancy, and postpartum periods. Current psychiatric status was assessed with the Present State Examination. Women with a long 2nd stage of labor (violent pelvic activity) had a subsequent increase in percentage of intercourse leading to orgasm and fewer psychiatric symptoms. Those with a decreased percentage of orgasm had attempted breast feeding, had a later return of menstruation and more psychiatric symptoms. (15 ref) —W. G. Shipman.

7173. Becker, Howard S. (Northwestern U) **Consciousness, power and drug effects.** *Journal of Psychedelic Drugs*, 1974(Jan), Vol 6(1), 67-76.—Discusses the social context of drug experiences by considering the amount and kind of knowledge available about the drug to the user. Information control in 3 drug-use settings is examined: illegal use, medically prescribed, and involuntary use through chemical warfare. The impact of dosage, main and side effects, and pharmaceutical research and communication structures are considered.

The physician's need for professional dominance over patients is discussed, along with a review of the physician's drug information system. The physician's often incomplete knowledge of pharmaceutical research is noted. (17 ref)—*R. Tomasko.*

7174. **Berger, Peter L.; Berger, Brigitte & Kellner, Hansfried.** (Rutgers State U) **The homeless mind: Modernization and consciousness.** Harmondsworth, England: Penguin, 1973. 232 p. 50 p.—Presents the views of 3 sociologists on the effects of modernization, industrialization, urbanization, and technology on man's attitudes, beliefs and behaviors. The relationships between elements of modern consciousness and various institutional processes, the effects of modernization of the "3rd world," and types of protests against modernization are discussed.

7175. **Bermant, Gordon; McGuire, Mary; McKinley, William & Salo, Chris.** (Battelle Seattle Research Ctr, WA) **The logic of simulation in jury research.** *Criminal Justice & Behavior*, 1974(Sep), Vol 1(3), 224-233.—Contents that for both substantive and methodological reasons, laboratory research into the functioning of mock jurors and juries may not be a useful foundation for the practical understanding of actual jury functioning. Data from undergraduates are provided to demonstrate that changes in the structural verisimilitude ("realism") of a simulated trial can produce systematic changes in juror response. However, the modal verdict in the most realistic simulation was not the verdict in the actual trial upon which the simulation was based. It is concluded that, in general, researchers should make all efforts to maximize the applicability of their findings by tailoring their methods and means of S selection more closely to the realities of courtroom practice.—*Journal abstract.*

7176. **Blum, Stuart H. & Blum, Lucille H.** (Brooklyn Coll, City U New York) **Do's and don'ts: An informal study of some prevailing superstitions.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 567-571.—To demonstrate the prevalence and relationship to specific background variables of prevailing superstitions, a questionnaire containing 24 superstitious beliefs or practices was independently completed by 132 adults. Each superstition was rated as to whether it had strong, partial, or no influence for the individual, and a total score was obtained. The mean total superstition score for women was significantly higher than for men ( $P = .05$ ). A moderately substantial negative correlation was found between superstitious belief and amount of formal education. It is suggested that, particularly in current times, the sense of control inherent in superstitious belief and practice has a therapeutic value in the reduction of anxiety. This value may account for the survival of common superstitions in spite of centuries of advance in scientific knowledge.—*Journal abstract.*

7177. **Bridges, William P. & Berk, Richard A.** (Northwestern U) **Determinants of white collar income: An evaluation of equal pay for equal work.** *Social Science Research*, 1974(Sep), Vol 3(3), 211-233.—Studied determinants of earnings among 1,308 urban white collar workers. Findings suggest that the type of work performed by an individual is of minor importance in determining earnings. Most of the explained variance

can be accounted for by other factors such as sex and marital status. (21 ref)

7178. **Bronfenbrenner, Urie.** (Cornell U) **The origins of alienation.** *Scientific American*, 1974(Aug), Vol 231(2), 53-61.—Suggests that alienation of young people—currently at a new high—is rooted in social institutions, most importantly the family. Factors responsible for increased alienation are changes in family structure, poverty, lack of infant and maternal care, isolation of the child and family from others, and the separation of children from adults in the world of work. It is recommended that social institutions become more responsive to human needs; e.g., by offering more day care, better education, and improved neighborhoods.—*P. Tolin.*

7179. **Bronfenbrenner, Urie.** **Who cares for America's children?** In F. Rebellsky & L. Dorman (Eds), *Child development and behavior.* (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Proposes that America's neglect of its children is a serious national problem. Steps are suggested to put adults and children in touch with each other.

7180. **Brown, George H.** **Drug usage rates as related to method of data acquisition.** *HumRRO Technical Report*, 1974(Aug), No 74-20, 46 p.—Reports 2 studies, conducted in 1972, concerned with the effect upon obtained drug-usage rates of various methods of data acquisition. Study 1 compared the anonymous questionnaire and the personal interview administered to 419 US Army enlisted personnel. Study 2, with 499 Ss, compared 5 different types of questionnaire administrators. In both studies, the obtained drug-usage rates, by a variety of criteria, did not differ for modes of data collection.—*Journal abstract.*

7181. **Busfield, Joan.** (U Essex, England) **Ideologies and reproduction.** In M. P. Richards (Ed), *The integration of a child into a social world.* London, England: Cambridge University Press, 1974. 316 p. \$15.50.—Contrasts the beliefs surrounding fertility in present-day England with those of different times and places. Emphasis is placed on those beliefs that are generally accepted throughout the society rather than on those which differentiate individuals and social groups. (42 ref)

7182. **Camilleri, Carmel & Tapia, Claude.** (U Paris V, France) **[French youth and social groups after May 1968: Surveys of university and school populations of Paris and province.]** (Fren) *Monographies Française de Psychologie*, 1974, No 27, 181 p.—Surveys and analyzes the attitudes and problems of French students which led to 1968 student unrest, and the implications of the events. Values of young people, characteristics and conflicts of generations, power of various groups, and areas of confrontation and cooperation are examined in the context of industrial society.

7183. **Candee, Dan.** (Harvard U, Lab of Human Development) **Ego developmental aspects of New Left ideology.** *Journal of Personality & Social Psychology*, 1974(Nov), Vol 30(5), 620-630.—Investigated the relationship of J. Loewinger's (1969) measure of ego development to the structure of political reasoning in a sample of student leftists ( $N = 76$ ). Results show that lower stage Ss tended to see politics in terms of the physical or emotional effects of politics on themselves,

while higher stage Ss evidenced both a perception of political complexity and the positive assertion of human development and mature justice as political values. (23 ref)—*Journal abstract*.

7184. Chobot, Donna S.; Goldberg, Philip A.; Abramson, Linda M. & Abramson, Paul R. (Connecticut Coll) **Prejudice against women: A replication and extension.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 478.—In a previous study, P. A. Goldberg (1968) found that college women were more critical and negative toward articles purportedly written by women than toward the same articles supposedly written by men. The present study with both male and female college students does not support this result.

7185. Christianson, Scott. (State U New York, School of Criminal Justice, Albany) **The war model in criminal justice: No substitute for victory.** *Criminal Justice & Behavior*, 1974(Sep), Vol 1(3), 247-277.—Contends that the criminal justice system operates on a war model. War mentality pervades the entire criminal justice process, determining to an important extent how criminal "enemies" are treated. The war model is characterized by identification of enemies and heroes, estimate of the enemy's strengths and weaknesses, development of strategy, development of military weapons and resources, utilization of dishonest language, and establishment of goals and objectives which are designed to produce "victory." It is argued that the system's distasteful emphasis on force, physical courage, weapons, and the twin concepts of "enemies" and "heroes" must be eliminated. (46 ref)—*Journal abstract*.

7186. Coelho, George V.; Hamburg, David A. & Adams, John E. (Eds.). (NIMH, Rockville, MD) **Coping and adaptation.** New York, NY: Basic Books, 1974. xxv, 454 p. \$17.50.—Presents a collection of 13 discussion papers on social interaction and motivation in adaptive behavior, coping tasks and strategies in the development of competence, coping with real-life crises, assessment of coping functions, and biological and social perspectives of coping and adaptation.

7187. Cunningham, Isabella C. & Green, Robert T. (U Texas, School of Communications, Austin) **Purchasing roles in the U.S. family, 1955 and 1973.** *Journal of Marketing*, 1974(Oct), Vol 38(4), 61-64.—Explored changes in the roles of husbands and wives in purchase decision making, comparing a 1955 study of 727 Detroit housewives with a 1973 study of 248 Houston housewives. Significant differences in 5 of 6 decision areas suggest that it would be a mistake to base marketing action on information about general role shifts; product-specific information is needed.

7188. de Sitter, L. U. (Technische Hogeschool, Eindhoven, Netherlands) **[Socio-technique.]** (Duth) *Mens en Onderneming*, 1974(Mar-Apr), Vol 28(2), 65-83.—Contrasts sociotechnique with sociology and social psychology, which are viewed as having several deficiencies (e.g., anachronistic generalizations, static viewpoints, and tautological conclusions). Sociotechnique is a study of the means by which technical instrumentation, division of labor, and specialization, operate in mutual dependence for productive purposes. The relationship of sociotechnique to business democracy is characterized

by changes in the division of labor, particularly the control functions.

7189. Delaporte, Yves & Roué, Michèle. (U René Descartes, Paris, France) **[Premarital relations, faithfulness, suicide: Sexual conduct in a group of nomadic Lapps.]** (Fren) *Anthropologica*, 1973, NS Vol 15(2), 155-166.—Describes the sexual mores of a group of Lapps in northern Norway engaged in reindeer culture and relatively untouched by outside influences. The pattern in this limited community included a period of sexual freedom among the young prior to marriage (15-25 yrs) and a stable ensuing marriage—good relationship, fidelity, and no divorce. Factors suggested as contributing to stability are the economic base of marriage (the merging of 2 reindeer herds) and the value attached to children, whether conceived through premarital relations or through a previous relationship of husband or wife. Young women exercise notable freedom in choosing premarital sexual partners and in selecting a husband, and have equal status with the husband after marriage. While killing for passion is unknown, suicide of a rejected male is not considered aberrant. (English summary)—E. E. Brown.

7190. Djakić, Mara. (Vojnomedicinska Akademija, Inst za mentalno zdravlje i zdravstveno prosvetivanje, Yugoslavia) **[Problems of the modern marriage and family.]** (Srer) *Vojnosanitetski Pregled*, 1974(Jul-Aug), Vol 31(4), 263-266.—Reviews literature on classification and types of marriages and factors responsible for different types of marital adjustment, and briefly discusses these within the framework of local conditions.

7191. Doctor, Ronald M. & Sklov, Monny. (San Fernando Valley State Coll) **A cross-cultural study of attitudes about marijuana smokers.** *British Journal of Addiction*, 1973(Jun), Vol 68(2), 111-115.—Administered an attitude questionnaire to 158 American and 149 British students to determine the nature of British and American attitudes about marihuana smokers. It was hypothesized that British citizens would tend to be more tolerant of the marihuana user, would be less socially rejecting, and more inclined to view their behavior as a medical problem with physical determinants than American citizens. Results indicate that attitudes about marihuana smokers are a function of whether the respondent was a user or nonuser rather than his country of origin. In general, users and nonusers agreed that marihuana use was a personal decision, the determinants of which were psychological and social. There were clearcut differences between the 2 subgroups. Nonusers perceived the smoker as having many interpersonally aversive characteristics and a definite psychological problem; users denied having any psychological problems, were more positive in their interpersonal perceptions of smokers, and considered the smoker as more autonomous in his personal and social functioning.—*Journal abstract*.

7192. Fawcett, James T. (East-West Ctr, East-West Population Inst, Honolulu, HI) **Psychological research on family size and family planning in the United States.** *Professional Psychology*, 1974(Aug), Vol 5(3), 334-344.—Reviews the development of the field of population psychology in the U.S. A preponderance of available research deals with the attitudes, values, personality

factors, and patterns of decision making involved in the areas of family planning and family size. Research on the consequences of family planning and of population density is just beginning. The involvement of psychologists in the field of population is increasing, and mutual benefits are predicted for the fields of psychology and demography. (2 p ref)—C. Wright.

7193. **Feinman, Saul.** (U Wyoming) **Approval of cross-sex-role behavior.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 643-648.—Previous research has indicated that sex-role preferences of boys were more clearly masculine than girls' preferences were feminine. To provide a partial explanation of this phenomenon, the responses of 40 male and 67 female college students to descriptions of cross-sex-role behavior of young boys and girls were investigated in the present study. Ss rated 10 one-sentence descriptions of cross-sex-role behavior on an approval-disapproval dimension. Both male and female Ss indicated greater disapproval of cross-sex-role behavior of boys than of girls. The relationship of these findings to previous research is discussed. (17 ref)—*Journal abstract*.

7194. **Fejer, Dianne & Smart, Reginald G.** (Addiction Research Foundation, Toronto, Ontario, Canada) **The supposed drug information and attitude gap between teachers and students.** *Journal of Drug Issues*, 1974(Spr), Vol 4(2), 107-116.—Studied the knowledge about and attitudes toward drugs of elementary teachers, secondary teachers, and high school students. The responses of 363 teachers to questionnaires covering social and demographic characteristics, knowledge of drug facts, and attitudes toward drug use and legalization of marihuana were compared with data collected from high school students in 2 previous studies. It was found that high school teachers were more knowledgeable about drugs and more favorable toward legalization of marihuana than were elementary teachers or high school students. It is suggested that the results contradict the opinion expressed in current drug education literature that there is a generation gap between students and teachers with regard to drug information and attitudes.—J. Kelly.

7195. **Fisher, Gary.** (Cedars-Sinai Medical Ctr, Los Angeles, CA) **Milieu of marihuana use.** *International Journal of Social Psychiatry*, 1974(Spr-Sum), Vol 20(1-2), 45-55.—Surveyed 530 marihuana users and 73 nonusers. Results relate 6 categories of frequency of use to (a) age, sex, and marital status; (b) education; (c) friendship acquisition and satisfaction depending upon other's use; (d) perceived community approval of use; (e) social setting of use; (f) proselytizing patterns; (g) duration and satisfaction of use; (h) source and ease of supply; and (i) political position. Among the many findings reported, increased frequency of use was said to be accompanied by (a) greater satisfaction and frequency of friendship with other users, (b) exclusion of nonusers from friendship, (c) greater perceived community approval, (d) increased variety of use settings, and (e) more frequent introduction of others to marihuana use.—W. R. Street.

7196. **Forer, Lois G.** **The rights of children.** In F. Reblsky & L. Dorman (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Discusses the lack of laws protecting children's rights and explores the psychological and

sociological reasons for this situation. Suggestions are made for formulating a juvenile jurisprudence.

7197. **Frenkel, Sinai I.; Robinson, James A. & Flinan, Byron G.** (Walter Reed Army Medical Ctr, Washington, DC) **Drug use: Demography and attitudes in a junior and senior high school population.** *Journal of Drug Education*, 1974(Sum), Vol 4(2), 179-186.—Analyzed the responses of 2,004 students in Grades 7-12 to a multiple-choice drug attitude survey. The myriad of adjustment problems associated with drug use suggests that treatment and research should concentrate efforts on individual psychological problems rather than on drug use only, and that further studies are needed in the direction of causality of drug use and related psychological problems. (22 ref)—*Journal abstract*.

7198. **Friedman, Herbert L.** (American Inst for Research, Transnational Family Research Inst, Geneva, Switzerland) **Psychosocial research on family planning in Europe.** *Professional Psychology*, 1974(Aug), Vol 5(3), 326-334.—Reviews family planning research in Europe, noting a dearth of well-designed studies. Existing research includes 2 studies of physicians' attitudes toward abortion, 3 sterilization studies, and work in progress on women purchasing pregnancy tests in 2 different cultures. The majority of available studies deal with women who are seeking or have had abortions. A trend is hypothesized toward greater focus on decision-making processes in family planning, and an increasing interest in the field of population in Europe is reported.—C. Wright.

7199. **Friedman, Herbert L.** (American Inst for Research, Transnational Family Research Inst, Geneva, Switzerland) **Fertility choice behavior: Some recommendations for research design.** *Family Planning Perspectives*, 1974(Sum), Vol 6(3), 184-185.—Recommends 12 guidelines to facilitate research into fertility choice behavior.

7200. **Galli, Nicholas.** (Herbert H. Lehman Coll, City U New York) **Patterns of student drug use.** *Journal of Drug Education*, 1974(Sum), Vol 4(2), 237-248.—Explored the extent and nature of drug use among a total of 517 elementary, junior, and senior high school students. Findings indicate that while drug usage began to increase in the 7th grade, substantial increases occurred after this grade level. For all substances, drug use peaked in the 9th or 10th grade with dramatic decreases occurring in the 12th grade. The implications of these and other findings are discussed.—*Journal abstract*.

7201. **Green, Dorothy E. & Nemzer, Daniel E.** (National Clearinghouse for Smoking & Health, Ctr for Disease Control, Bethesda, MD) **Changes in cigarette smoking by women: An analysis, 1966 and 1970.** *Health Services Reports*, 1973(Aug), Vol 88(7), 631-636.—Examines the success of adult women nationwide in giving up cigarettes. About one of every five male cigarette smokers stopped smoking 1966-1970. Among females the trend was less pronounced. The smoking behavior of women varies according to marital status, occupation, and educational level. Smoking is highest among divorced or separated women, lowest among widows, and higher among single women than among the married. The smaller decrease in smoking by women is ascribed to a time lag in the smoking habits of women

during the brief history of smoking in America.—R. S. Albin.

7202. Harrison, J. D. (Summer Inst of Linguistics, Ukarumpa, Eastern Highlands District, New Guinea) **The Kluckhohn value-orientation research instrument used in Papua New Guinea.** *New Guinea Psychologist*, 1974(Apr), Vol 6(1), 3-8.—Investigated the use of a value orientation research instrument developed by F. Kluckhohn. The scale measures the interaction of cognitive, affective, and directive elements, with an emphasis on intracultural regularity and intercultural variability. Adapted and translated versions were administered in Pidgin English or local dialect to 225 representatives of 3 groups with varying levels of sophistication, either via interview or in written form. A summary of the groups' value profiles is presented, and it is suggested that this instrument is acceptable for research on comparative values in preliterate societies. The Pidgin English version is appended.—C. Wright.

7203. Hart, Larry. (Boston City Hosp, MA) **The effect of noxious subliminal stimuli on the modification of attitudes toward alcoholism: A pilot study.** *British Journal of Addiction*, 1973(Jun), Vol 68(2), 87-90.—Exposed 6 female junior college students to a subliminal stimulus consisting of a 35-mm color slide of a whiskey bottle with a champagne glass partially filled with liquor and the word "poison" printed in capital black letters on the top of the bottle. An alcoholism questionnaire given to Ss and 16 controls on 2 separate occasions indicates that programed exposure of a noxious subliminal stimulus significantly modified attitudes toward alcoholism for the experimental Ss. Findings suggest that stimuli which are not consciously perceived or directly experienced can influence attitudes.—M. E. Pounsel.

7204. Heath, Dwight B. (Brown U) **[Sociocultural perspectives of alcohol in Latin America.]** (Span) *Acta Psiquiátrica y Psicológica de América Latina*, 1974(Apr), Vol 20(2), 99-111.—Reviews the literature dealing with alcohol in Latin America in sociocultural perspective; i.e., the ideological, economic, political, religious, and other social and cultural aspects that differentiate human populations. In some minority populations (e.g., certain religious groups), it has been found that not only do patterns of ingestion and use of alcohol vary, but also that the various forms, meanings, functions, and interpretations of alcohol are intimately related to other aspects of the culture—social organization, philosophy, psychology, folklore, and even witchcraft. (6 p ref) —English summary.

7205. Hemminki, Elina; Rissanen, Aila & Mattila, Antti. (U Helsinki) **Drug use among schoolchildren in Helsinki 1970.** *British Journal of Addiction*, 1973(Jun), Vol 68(2), 159-165.—Surveyed a total of 2,702 17-, 15-, and 14-yr-olds to determine differences between drug and nondrug users in Helsinki. Questionnaire results indicate that (a) 25% of all Ss had taken drugs, with hashish being used most frequently; (b) the social background of drug-takers and nontakers did not differ greatly; (c) and drug-takers had lower school achievement, were more extroverted and impulsive, had more friends, and were more rebellious and alienated. Ss also indicated that the most important reason leading to drug-taking was curiosity. It is suggested that different

problems and social pressures lead to drug-taking among youth in general. (21 ref)—*Journal abstract*.

7206. Hempel, Donald J. (U Connecticut) **Family buying decisions: A cross-cultural perspective.** *Journal of Marketing Research*, 1974(Aug), Vol 11(3), 295-302.—Presents cross-cultural comparisons of husband-wife interactions in 5 specific house-buying decisions. Data were obtained from surveys of 206 families in the eastern US and 317 families in northwest England. Using interviews and questionnaires, 2 measures of husband-wife roles were assessed: the husband was asked to identify who was "mainly responsible" for decisions, while the wife indicated the "relative influence" of each partner in the 5 decisions (choice of neighborhood, style of house, when to buy, acceptable price, and mortgage source). Family role structure was classified into 1 of 4 categories (husband dominant, wife dominant, syncratic, or autonomic) depending on who made the decisions most often. Overall data show that perceived role varies more by sex of respondent and by stage in the decision process than by the cultural context of the purchase, and that the extent of husband-wife agreement is related to family size, stage in life cycle, attitudes toward previous residence, and life-style. (39 ref)—L. Gorsey.

7207. Herman, C. Peter. (Northwestern U) **External and internal cues as determinants of the smoking behavior of light and heavy smokers.** *Journal of Personality & Social Psychology*, 1974(Nov), Vol 30(5), 664-672.—Studied 108 light and heavy smokers (male undergraduates) to assess the role of external and internal smoking cues as determinants of smoking behavior, as an analogy to S. Schachter's (1971) model of eating behavior. It was predicted that light smokers would be more affected by the manipulation of external cues and heavy smokers more affected by the manipulation of internal cues. For heavy smokers, internal cues were of major importance; for light smokers, both external and internal cues were influential. A number of models are proposed to account for the data.—*Journal abstract*.

7208. Holmes, Kay A. **Reflections by gaslight: Prostitution in another age.** *Issues in Criminology*, 1972(Win), Vol 7(1), 83-101.—Discusses the evolution of public awareness of prostitution and indignation regarding it between 1897 and 1920, resulting in the codification of laws that are still in effect. 2 attitudes were dominant: that of the humanitarians, who advocated compassion for women forced into prostitution by environmental and class realities; and that of the control group, who saw the prostitute as a decadent, feeble-minded nonperson who should be treated as a demented criminal and severely punished. It is contended that the latter attitude remains legally in force today.—J. E. Bassett.

7209. Hood, Ralph W. (U Tennessee, Chattanooga) **Cognitive and affective rejection of mentally ill persons as a function of dogmatism.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 543-549.—Studied cognitive and affective attitudes toward the mentally ill in 83 introductory social psychology students categorized on the basis of their Rokeach Dogmatism Scale scores. On a purely cognitive level, high-dogmatic Ss held more stereotypical attitudes toward the mentally ill than low-

dogmatic Ss. After a series of regularly scheduled lectures on the social psychology of deviance in a normal classroom situation, high-dogmatic Ss significantly decreased their stereotypical attitudes toward the mentally ill. However, on semantic-differential scales to measure affective attitudes toward the mentally ill high-dogmatic Ss increased their affective rejection of the mentally ill after this series of regularly scheduled lectures. There was no difference between high- and low-dogmatic Ss on an objective test measuring learning with respect to the lectures on deviance. The implications of these data for dogmatism theory are discussed, especially in terms of the relationship between dogmatism, anxiety, and the cognitive and affective rejection of others. (31 ref) —*Journal abstract.*

7210. Insel, Paul M. & Moos, Rudolf H. (Eds.). (Stanford U) **Health and the social environment.** Lexington, MA: D. C. Heath, 1974. xv, 460 p. \$16. —Presents a collection of 30 research and discussion articles which cover basic theories, research strategies, issues, and conclusions about the impact of the psychosocial environment on health and illness. Topics include psychosomatic disorders and environmental stimuli, social correlates of heart disease, social dimensions in obesity, and drugs and their social consequences.

7211. Irvine, Lynn M. & Brelje, Terry B. (Eds.). (Illinois Security Hosp, Chester) **Law, psychiatry and the mentally disordered offender: II.** Springfield, IL: Charles C Thomas, 1973. xv, 132 p. \$9.75.

7212. Janisse, M. P.; Perlman, D. & Perry, R. P. **Water-resource management: A psychological perspective.** In *The allocative conflicts in water-resource management.* Winnipeg, Canada: University of Manitoba, Agassiz Center for Water Studies, 1974. —Reviews psychological literature related to water, focusing on fluoridation, attitudes about water pollution, changing attitudes, and combating pollution via operant techniques. (84 ref)

7213. Johnson, Clara J. (U Georgia, School of Social Work, Regional Inst of Social Welfare Research) **Attitudes toward premarital sex and family planning for single-never-pregnant teenage girls.** *Adolescence*, 1974(Sum), Vol 9(34), 255-262. —A questionnaire covering attitudes toward premarital sex and family planning was administered to 50 black mothers (18 single, 16 married, and 16 separated or widowed). Results indicate a direct relationship between age and conservative attitudes toward premarital sex, but not when marriage status was controlled. All Ss disapproved of premarital sex without contraceptive measures and all but 4 approved of family planning for unmarried, never-pregnant teenagers. (17 ref) —*A. Krichev.*

7214. Juhasz, Anne M. (Loyola U, Chicago) **The unmarried adolescent parent.** *Adolescence*, 1974(Sum), Vol 9(34), 263-272. —Discusses the extent of illegitimacy, factors influencing it, and demographic findings about unwed mothers and fathers. Problems arising from such pregnancies are numerous, particularly if the child is carried to birth. More comprehensive sex education, wider knowledge and acceptance of contraception, and better understanding of the unwed-family constellation should make it possible to decrease the number of unwanted children. (22 ref) —*A. Krichev.*

7215. Kaiser, Fred M. & Lilly, J. Robert. (U Pittsburgh) **Partisanship, realignment, and intensity among voter registrants at a small college.** *New Scholar*, 1974(Spr), Vol 4(2), 223-243. —Conducted a questionnaire survey of 362 students to determine factors contributing to voting patterns. Attitudinal differences among those registering for different parties, reinforcing relationships, transfers from partisan heritages, and the influence of transfers between parties were examined. It is suggested that the finding of little congruence among attitudes may explain the lack of strong partisan loyalties, increased split-ticket voting, vote switching between elections, and low turnout rates. (31 ref) —*Journal summary.*

7216. Kilpatrick, William. (Boston Coll, School of Education) **Identity: Continuity, fidelity and future shock.** *Adolescence*, 1974(Sum), Vol 9(34), 285-288. —Draws attention to the wide discrepancy between the requirements of identity formation and the demands of rapid social and technological changes.

7217. Lerner, Steven E.; Linder, Ronald L. & Drolet, Judy C. (Haight-Ashbury Free Medical Clinic, San Francisco, CA) **Drugs in the high school.** *Journal of Drug Education*, 1974(Sum), Vol 4(2), 187-195. —Observation of 616 high school students indicates that (a) an upward trend of psychoactive drug use was apparent within the lower grade levels; (b) while patterns of drug use existed between parochial and public high school sophomores, by their junior year the 2 groups were similar; and (c) over half of the public school students claimed they took drugs either "for kicks" or "for curiosity." —*Journal abstract.*

7218. Lerner, Steven E.; Linder, Ronald L. & Burke, Elaine M. (Haight-Ashbury Free Medical Clinic, San Francisco, CA) **Drugs in the junior high school: II.** *Journal of Psychedelic Drugs*, 1974(Jan), Vol 6(1), 51-56. —Administered a questionnaire on drug use patterns to 310 previously studied 7th graders now in 8th grade at a suburban San Francisco junior high school (see PA, Vol 53:Issue 4). Ss' use patterns and their perceptions of their parents' use of selected drugs were recorded. This 1-yr longitudinal study indicated greater experimental and regular use of hard liquor, tobacco, marijuana, heroin, LSD, and codeine. Marijuana use increased by 16.35%, hard liquor use by 9.95%, and tranquilizers by 4.82%. Ss perceived their fathers as using less amphetamines than did students and their mothers and using more tobacco, beer-wine, and hard liquor than did their mothers. They saw their mothers as greater users of amphetamines, barbiturates, and tranquilizers. Drug use is indicated to increase by grade level and students are provided role models for drug use by their parents. —*R. Tomasko.*

7219. Lifton, Robert J. & Olson, Eric. (Yale U) **Living and dying.** New York, NY: Praeger, 1974. 156 p. \$6.50. —Examines the psychological and cultural significance of death and suggests that death is the kind of problem for our culture that sex was for the Victorians. The concept of the "pornography of death" is introduced, and ideas on death and the life cycle, death in history, and symbolic immortality are discussed. (2 p ref)

7220. Linder, Ronald L.; Lerner, Steven E. & Burke, Elaine M. (California State U, San Francisco) **Drugs in the junior high school: I.** *Journal of Psychedelic Drugs*.

1974(Jan), Vol 6(1), 43-49.—Administered a questionnaire on use of psychoactive drugs by sex and grade, reasons for drug use, and drug cost to 776 7th and 8th grade students at a suburban San Francisco junior high school. Results indicate a greater usage of alcohol, tobacco, marihuana, amphetamines, barbiturates, and LSD as the students advanced in grades. Males concentrated on depressants; females used a wider variety of drugs. At the 7th grade level, females most likely used tobacco and inhalants; males used alcohol. In 8th grade, females used amphetamines, tranquilizers, and LSD to a greater extent; males continued to dominate in alcohol use. Ss attributed their use of drugs to peer pressure, curiosity, and for "kicks."—R. Tomasko.

7221. Lipowski, Z. J. (Dartmouth Coll, Medical School) **Sensory overloads, information overloads and behavior.** In H. Musaph (Ed), *Proceedings of the 2nd Congress of the International College of Psychosomatic Medicine, Amsterdam, 1973: Mechanisms in Symptom Formation*. New York, NY: S. Karger, 1974. vii, 303 p.

7222. Lobenthal, Joseph S. (New School for Social Research) **A lawyer views mental health personnel.** In L. M. Irvine & T. B. Brelje (Eds), *Law, psychiatry and the mentally disordered offender: II*. Springfield, IL: Charles C Thomas, 1973. xv, 132 p. \$9.75.—Discusses the differing roles of the mental health professional and the lawyer in terms of their goals and procedures and the needs of the system, client, and professional. Suggestions about the proper role of the psychiatrist in the courtroom and how to make his opinions more meaningful are presented.

7223. Lykken, David T. (U Minnesota, Mayo Hosp) **Psychology and the lie detector industry.** *American Psychologist*, 1974(Oct), Vol 29(10), 725-739.—Indicates that although the lie detector industry is already a major area of applied psychology, few professional polygraphers have psychological training and few psychologists know enough about the industry to monitor its practices. The theory and methods of polygraphic interrogation are analyzed. It is argued that although it is unlikely that the polygraphic lie detector could have the claimed near-perfect validity, there should be greater and more skillful use of the polygraph in criminal investigation. Some of the limitations of the instrument in employee screening are discussed. (17 ref)—*Author abstract*.

7224. Madron, Thomas Wm.; Nelsen, Hart M. & Yokley, Raytha L. (Western Kentucky U) **Religion as a determinant of militancy and political participation among black Americans.** *American Behavioral Scientist*, 1974(Jul-Aug), Vol 17(6), 783-797.—Analyzed data from a stratified systematic sample of 405 black and white adults. Dependent variables were militancy and political participation. Religious independent variables were orthodoxy and devotionism. Nonreligious independent variables were education, powerlessness, sense of citizen duty, self-esteem, and political socialization. Black orthodoxy was inversely related to participation (in the first canonical structure only) and positively related to militancy (in both structures). White orthodoxy was an important inverse predictor of militancy (or receptivity to civil rights). Findings support the argument that some of the problems in analyzing black political

behavior stem from applying "white" concepts to black respondents. (42 ref)—J. J. Parnicky.

7225. Malpass, Roy S. & Symonds, John D. (State University Coll New York, Plattsburgh) **Value preferences associated with social class, sex, and race.** *Journal of Cross-Cultural Psychology*, 1974(Sep), Vol 5(3), 282-300.—Measured, in 10 groups of Ss in 2 separate and geographically distinct settings in the US, preferences for 92 values. Groups consisted of a total of 118 black and 288 white high school students, undergraduates, and unemployed adults of lower- and middle-class status. Factor analysis showed 5 shared value composites: (1) the good life, (2) pleasant working companions, (3) balance and adjustment, (4) artistic creativity, and (5) religiousness. Class differentiated groups more than race or sex on composites 1-4. Middle-class groups showed lower preference for the 1st 2 and higher for the 3rd value composite, as compared with lower-class groups. Black groups showed higher preference than whites for the 5th. Results show that the greatest differentiation of groups occurred when they were combined on the basis of social class. (34 ref)—*Journal abstract*.

7226. Marinoff, Stanley C. & Fiedler, Dolores E. (Group Health Assn, Washington, DC) **Some factors affecting staff attitudes toward offering intrauterine devices for adolescent patients.** *Public Health Reports*, 1974(Jul-Aug), Vol 89(4), 372-376.—Studied the contraceptive methods prescribed at 2 clinics for girls under 17. At one clinic, 70% (98) of the girls were prescribed an intrauterine device (IUD) and 16% (23) the pill. At the 2nd clinic, 4% (10) were prescribed an IUD while 79% (215) were prescribed the pill. It was found that the attitude of the clinic staff toward inserting an IUD in nulliparous patients was a major factor in the choice of contraceptive method.—S. Blackman.

7227. Marshman, Joan A. (Ed.). **Street drug analysis and its social and clinical implications.** Toronto, Canada: Alcoholism & Drug Addiction Research Foundation, 1974. v, 120 p.—Presents a collection of 8 symposium papers on methods, procedures, and implications of street drug analysis. Topics include the evolution of counterculture drug analysis programs, gas chromatographic mass spectrometric analysis of street drugs in the body fluids of overdose victims, and street drug information for health care personnel.

7228. McCleary, Roland D. **Child alcoholism as seen by the school in Illinois.** *International Journal of Offender Therapy & Comparative Criminology*, 1974, Vol 18(2), 182-186.—Explores various attitudes surrounding the use of drugs in general, and alcohol in particular, in the US. Possible factors in the use of alcohol are discussed.

7229. Merklin, Lewis. **They chose honor: The problem of conscience in custody.** New York, NY: Harper & Row, 1974. xxvi, 325 p. \$8.95.—Presents descriptions of the experiences of 6 war and draft resisters who chose to go to prison instead of escaping to Canada. Various aspects of life in a federal penitentiary, attitudes of the prison officials and guards toward the men, and issues involved in granting amnesty to men who never considered themselves criminals are discussed.

7230. Mersereau, Guy. (Erie County Dept of Mental Health, Forensic Psychiatry Service, Buffalo, NY) **The**

**talking criminal: A biological and political phenomenon.** In L. M. Irvine & T. B. Brelje (Eds), *Law, psychiatry and the mentally disordered offender: II*. Springfield, IL: Charles C Thomas, 1973. xv, 132 p. \$9.75.—Discusses the need for communication between the criminal justice and mental health systems. The interactions between criminal and "counter-criminal" systems, and implications for staff training, therapeutic procedures, and the relationships between large social systems are discussed.

7231. Midlarsky, Manus I. (U Colorado) **Power, uncertainty, and the onset of international violence.** *Journal of Conflict Resolution*, 1974(Sep), Vol 18(3), 395-431.—Attempts to explain the onset of international warfare by defining power as a capability to effect a reduction of environmental uncertainty, while the exercise of power for the benefit of an actor is the actual reduction of that uncertainty. 8 types of power configuration are specified, including, among others, control, subservience, constraint, and inversion. Based on an analysis of historical data, the conditions of power loss in alliance systems and power constraint in the form of geographical frontiers were related to the frequency of war for central power nations. An alternative approach stemming from theories of international stability yields the same functional relationship as does the initial power framework. Additionally, a logarithmic relationship between the number of international poles existing in the period 1815-1945 and the frequency of war was obtained. (36 ref)—*Journal abstract*.

7232. Monsour, Karem & Stone, Beth. (Claremont Coll) **The Hawaiian trip: A study of a segment of American youth.** *Psychiatric Annals*, 1974(Jun), Vol 4(6), 6-53.—Interviewed and administered the Omnibus Personality Inventory (OPI) to 15 male and 15 female American adolescents from the US mainland who were living in Maui, Hawaii. Ss were Caucasian and middle class, with a disproportionate number of Catholics. The OPI indicated active emotional lives and an emphasis on experiential learning. Attitudes expressed in interviews confirmed this impression, revealing a "here and now" orientation. Drug use, which had been prevalent in Ss' histories, was reduced to the use of marihuana. It is noted that only 1 S came from a truly disorganized family background; most were from mutually accepting, intact homes. This group is seen to be typical of American youth who have well-formed identities that conflict with societal norms and expectations.—C. Wright.

7233. Munsinger, Harry. (U California, San Diego) **Human quality control: The breeding and feeding of genius.** Pacific Palisades, CA: Goodyear, 1972. x, 128 p.

7234. Muramatsu, Minoru. (Inst of Public Health, Section of Public Health Demography, Tokyo, Japan) **Psychological research in family planning: A view from Asia.** *Professional Psychology*, 1974(Aug), Vol 5(3), 344-346.—Provides a brief overview of research on family planning in Asia, pointing out the lack of studies on socioeconomic, cultural, and psychological factors. A questionnaire study in Japan investigating the desire for more children among couples with 2 or 3 children is reported. Results indicate that a majority of these individuals did not want more children and that the

influence of sexual preference on childbearing attitudes in Japan is decreasing.—C. Wright.

7235. Mylonas, Anastassios D. **Perception of police power: A study in four cities.** *Criminal Law Education & Research Center, Monograph Series*, 1973, Vol 8, 131 p.—Attempted to determine whether working concepts of criminal procedure can be transplanted from one country to another, where they might form the basis for modifying the criminal justice system for greater effectiveness and popularity. This phase of the study was concerned with the identification and attribution of police power in the police phase of the criminal procedure, as they reveal themselves in the conceptions of divergent population groups.—R. Gunter.

7236. National Clearinghouse for Drug Abuse Information. (Rockville, MD) **National Clearinghouse for Drug Abuse Information briefing report.** *National Clearinghouse for Drug Information, Report Series*, 1972(Jul), Ser 9(2), 11 p.—Describes the purposes and services of the National Clearinghouse for Drug Abuse Information: distribution of general information on drug abuse—publications, films, records, plays, and posters; response to public inquiries; a computerized information-retrieval system; and a communications network system.

7237. Nelson, Daniel J. & Reed, Margaret L. (Auburn U) **The use of simulation in interracial and interinstitutional programs in international relations.** *Simulation & Games*, 1974(Jun), Vol 5(2), 212-218.—Night school students from 2 racially homogeneous Southern universities (37 white and 20 black students) participated in a simulation exercise—Inter-Nation Simulation—for 4 wks. All 10 prototype nations in the game were of mixed racial composition. The only significant differences between blacks and whites were on questions evaluating simulation as a learning device (with white students rating the exercise much higher). No differences between blacks and whites were found on other variables, including approval or disapproval of the interracial nature of the simulation and the value of the simulation as a device for improving racial understanding.—D. E. Anderson.

7238. Newmeyer, John A. (Haight-Ashbury Free Medical Clinic, San Francisco, CA) **Five years after: Drug use and exposure to heroin among the Haight-Ashbury Free Medical Clinic clientele.** *Journal of Psychedelic Drugs*, 1974(Jan), Vol 6(1), 61-65.—Administered a 25-item questionnaire on drug use to 81 clients of Haight-Ashbury Free Medical Clinic. Responses were compared to a similar 1967 survey taken at the same facility. Comparison indicates a sharp drop in the use of psychedelics, a moderate drop in the use of marihuana and amphetamines, a sharp rise in heroin use, and a possible rise in barbiturate use. Special attention was given to heroin use, which was noted to be more extensive for males and persons of lower socioeconomic class. It directly correlated to other drug use and appeared mediated more by friends than pushers. It is suggested that barriers to the growth of the heroin epidemic can be enhanced by the presence of a certain number of addicts in the community serving as negative role models.—R. Tomasko.

7239. Nicholi, A. M. (Harvard U, Medical School, Boston) **Emotional determinants of LSD ingestion.** *Journal of the American College Health Association*, 1974(Feb), Vol 22(3), 223-225.—Explored some of the psychological reasons for ingestion of LSD by interviewing 37 Harvard and Radcliffe undergraduates. Many of those interviewed were seen as patients in the university health services. Reasons for initial use were given as follows: (a) poor relationships with other people and a desire to improve them; (b) extreme dissatisfaction with self, characterized by high expectations and poor performance; (c) alienation from and hostility to the adult world; (d) feelings of inadequacy; and (e) a strong sense of moral worthlessness and a desire to feel some religious experience. The majority of the Ss discontinued use of the drug after relatively few experiences with it, mainly because of the failure of LSD to meet their expectations and its inconsistency in providing the desired mood alteration. Frequently students later turned to other types of drugs, primarily marihuana and "downers."—A. de la Haba.

7240. Nolan, Seneca H. (Metropolitan Police Dept, St Louis, MO) **The law enforcement officer and the mentally disordered offender.** In L. M. Irvine & T. B. Brelje (Eds), *Law, psychiatry and the mentally disordered offender: II*. Springfield, IL: Charles C Thomas, 1973. xv, 132 p. \$9.75.

7241. Oswalt, Robert M. (Skidmore Coll) **Sexual and contraceptive behavior of college females.** *Journal of the American College Health Association*, 1974(Jun), Vol 22(5), 392-394.—Surveyed 10% ( $N = 180$ ) of the females at 1 college, with 90% of this sample responding, to obtain current scientific information on sexual and contraceptive behavior. Comparisons are made with earlier studies. Results indicate that the percentage of females engaging in sexual intercourse increased substantially in the last few years, but there was not a concomitant increase in promiscuity. A certain disregard for the possibility of pregnancy was evidenced with data showing only 40% of the sexually active students protected all the time. 5% of the entire student body had been pregnant, which was a surprising finding considering the socioeconomic and education level.—A. de la Haba.

7242. Pandey, Rajendra. (U Gorakhpur, India) **An overview of sociology of students unrest.** *Indian Journal of Psychiatric Social Work*, 1973(Jul), Vol 2(1), 29-34.—Discusses, in broad terms, student unrest, protest, disruption, and violence. Their historic origins, present nature, suspected causes, suggested remedies, and specific obstacles to corrective action are examined. Some emphasis is placed on peculiarities of the situation in India. Behavior patterns are stressed, along with similarities of student conduct in different countries. Positive as well as negative aspects of student rebellion are considered. (18 ref)—D. Berliner.

7243. Penn, J. Roger. (Oregon State U, Ctr for Research on Student Life & Development) **College student life-style and frequency of alcohol usage.** *Journal of the American College Health Association*, 1974(Feb), Vol 22(3), 220-222.—Gathered questionnaire data from 1,294 university students concerning their alcohol usage and its relation to their selected life styles.

95% of the Ss admitted alcohol consumption; of these 68% drank hard liquor and 76% drank wine or beer. Greater numbers of the drinking group lived in fraternities and in off-campus situations rather than in dormitories and co-operatives where the social pressure to drink was less evident. Frequency of consumption was higher than anticipated. Nearly half the sample had used marihuana and 38% believed that it was less harmful than alcohol.—A. de la Haba.

7244. Phillips, Warren R. & Lorimer, Theron. (Ohio State U) **The impact of crisis upon the behavior of nations in the 1960's.** *Multivariate Behavioral Research*, 1974(Oct), Vol 9(4), 423-445.—Investigated conflicting aspects of interacting dyads, involving international crises which occurred between June 1962 and July 1968, to discern the conflictual dimensions of national behavior in crises. In addition, conflict behavior was examined for those periods immediately prior to and immediately following crisis situations. This resulted in dimensions of conflict behavior for pre-, during-, and postcrisis periods. The periods were contrasted with one another to gain a better conception of the behavior exhibited. Results show that the dimensions of behavior changed in predictable ways in the shift from one period to another. The behavior of individual dyads shifted in ways which were not predictable by simple linear technique.—*Journal abstract.*

7245. Puska, Pekka. (U Turku, Suomi, Finland) **University students' health behavior.** *Journal of the American College Health Association*, 1974(Feb), Vol 22(3), 200-201.—Studied the health behavior of 250 students at the University of Turku, Finland, and of a control group of the nonstudent population with the same sex and age distribution. Results show that 83% of the students came from elsewhere while most of the control group had lived in the city for a longer time. The control group had more married people than the students. Students smoked less, and over a shorter time span, than controls. No differences were noted in frequency of using spirits. Students ate more irregularly and slept longer. The control group had more physical activity, aside from sports, than the students. In general there was little significant difference between the 2 groups.—A. de la Haba.

7246. Rossi, Peter H. et al. (Johns Hopkins U) **Measuring household social standing.** *Social Science Research*, 1974(Sep), Vol 3(3), 169-190.—Describes the use of the prestige concept to measure household social standing and to show that people recognize that households have social standings in the same way that occupations have social standings. A model of how a limited number of characteristics of adult household members (e.g., occupation and educational attainment) contribute to their household's overall standing is presented. Short descriptions of households (vignettes) were developed which were then presented to a probability sample of white adults over 18 in Baltimore who were asked to rate the social standing of the household. Findings support the conclusions that (a) it is possible to provide an operational definition to the concept of social standing as applied to households; (b) on the level of both collective and individual assessments, the same principles are applied in combining husbands' and wives'

occupational and educational achievements in deriving judgments of social standing of households; and (c) there is considerable consensus over the social standing and the principle of combining household members' characteristics.—*L. Gorsey.*

7247. Rouse, Beatrice A. & Ewing, John A. (U North Carolina, Medical School, Chapel Hill) **Student drug use, risk-taking, and alienation.** *Journal of the American College Health Association*, 1974(Feb), Vol 22(3), 226-230.—Conducted a study to determine whether drug use had increased in a college population studied 2 yrs previously, what kinds and levels of risks Ss associated with various drugs, and the extent of alienation of the marihuana groups. Frequency of use, and the reasons for it, drugs other than marihuana used, risks perceived, percentage of males who drove following use of marihuana or alcohol, and indicators of alienation are presented in tables. Findings show increased use, with the perception of arrest and punishment as the primary risk. Few significant associations were found between possible indicators of alienation and marihuana use. (18 ref)—*A. de la Haba.*

7248. Schmidt, Michael M. & Buys, Christian J. (New Mexico Inst of Mining & Technology) **Environmental attitudes of technological students.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 407-410.—Surveyed environmental attitudes of 47 students at a technical college. Attitudes assessed were (a) perceived severity, causes, and solutions of environmental problems; and (b) personal commitment to solutions. Ss who perceived environmental problems as severe were older, from larger families, and were more committed personally to the solutions. Similarly, Ss who perceived causes of problems as institutional were less religious, perceived the problem as severe, and were committed personally to solutions.—*Journal abstract.*

7249. Schulman, Robert E. (Menninger Clinic, Div of Law & Psychiatry, Topeka, KA) **Determination of competency: Burial at the crossroad.** In L. M. Irvine & T. B. Brelje (Eds.), *Law, psychiatry and the mentally disordered offender: II*. Springfield, IL: Charles C Thomas, 1973. xv, 132 p. \$9.75.—Discusses the clinical and legal issues in the determination of competency to stand trial. It is argued that competency to stand trial interferes with the goal of criminal law and that a potentially dangerous collaboration exists between the legal and medical establishments which may serve to violate the rights of the patient.

7250. Shaw, R. Paul. (U British Columbia, Resource Science Ctr, Vancouver, Canada) **A conceptual model of rural-urban transition and reproductive behavior.** *Rural Sociology*, 1974(Spr), Vol 39(1), 70-91.—Seeks to identify and interrelate determinants of reproductive performance in the context of rural-urban transition and accompanying socioeconomic development. Focus is on the integration of sociological, economic, demographic, and biological considerations as a means of understanding that reproductive behavior is largely an adjustment to the socioeconomic environment. Accordingly, exogenous intervention to modify reproductive behavior without modifying the socioeconomic context as well will probably be futile. Empirical results of a number of

regression studies are summarized in support of the proposed model.—*Journal abstract.*

7251. Sheth, Jagdish N. & Wright, Peter L. (Eds.). (U Illinois) **Marketing analysis for societal problems.** Urbana-Champaign, IL: University of Illinois, 1974. 270 p. \$5.75.—Presents a collection of 11 symposium papers on conceptual foundations of social marketing analysis and how various social problems can be viewed within a marketing framework. Topics include vertical market structure theory and the health care delivery system, persuasion theory in social marketing, education problems and marketing, and the effects of race and retail structure on consumer behavior.

7252. Shikier, Richard. (Colorado State U) **The perception of politicians and political issues: A multidimensional scaling approach.** *Multivariate Behavioral Research*, 1974(Oct), Vol 9(4), 461-477.—Undertook the multidimensional scaling (MDS) of attitude statements and political candidates in the same multidimensional space, proposing that (a) the position of the attitude statements would explicate the nature of the factorial structure of politicians; (b) the underlying dimensions would demonstrate whether candidates are perceived in terms of relevant political dimensions, and (c) the scaling would reveal the extent of individual differences, especially those based on political affiliation. 115 adults were recruited from various sources, including local campus political clubs. L. R. Tucker's (see PA, Vol 48:8104) 3-mode model of MDS was used to analyze the similarity judgments of these Ss. Results indicate that politicians were perceived in terms of the relevant issues and that Republicans and Democrats differed markedly in their perception of the political arena. (33 ref)—*Journal abstract.*

7253. Siassi, Iradj & Wesner, David O. (Rutgers State U, Medical School, Piscataway) **Women's liberation and the two adolescent movements.** *International Journal of Social Psychiatry*, 1974(Spr-Sum), Vol 20(1-2), 99-108.—Presents the thesis that women view women's liberation in the same way that adults view adolescence. The liberated state appears to have many of the idyllic qualities of adolescence and is currently enjoyed principally by men.—*W. R. Street.*

7254. Simon, William E. (Southampton Coll) **Psychological needs, academic achievement and marijuana consumption.** *Journal of Clinical Psychology*, 1974(Oct), Vol 30(4), 496-498.—44 undergraduate marihuana users were asked to complete the Edwards Personal Preference Schedule and to report their high school and college grade-point averages. Ss were compared to a control group of 44 undergraduates who never had used marihuana. Users scored significantly higher on the Change, and Aggression, while nonusers scored significantly higher on the needs for Achievement and Order. Nonusers also had significantly higher high school and college grade-point averages. (19 ref)—*Journal summary.*

7255. Sims, John H. & Baumann, Duane D. (Eds.). (George Williams Coll) **Human behavior and the environment: Interactions between man and his physical world.** Chicago, IL: Maaroufa Press, 1974. ix, 354 p.—Presents a collection of 18 papers on man and his environment and how they act as manipulators of each other. Topics include the historical and cultural roots of

the current ecological crisis, environmental coping styles, the role of values in social action, the experience of living in cities, a social-psychological model of crowding, and the social effects of the physical environment.

7256. **Sinnett, E. Robert; Arata, Christine L. & Bates, Rodney A.** (Kansas State U) **Methods of administration of street drugs: Stereotypes, actuality, and perceived dangers.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 535-542.—Interviewed 47 16-26 yr old multiple drug users and abusers to ascertain their methods of self-administration of street drugs. Results indicate that stereotypes associating a particular drug with a particular method of self-administration are of dubious value. They do not reflect the diversity of methods commonly employed by users. Both drug substance and method of administration had a marked influence on users' judgments of the danger of various drug experiences. (15 ref) —*Journal abstract.*

7257. **Smart, Reginald G. & Fejer, Dianne.** (Addiction Research Foundation, Toronto, Ontario, Canada) **Marihuana use among adults in Toronto.** *British Journal of Addiction*, 1973(Jun), Vol 68(2), 117-128.—Investigated (a) the extent of marihuana use among 1,200 Canadian adults, (b) the relationship between marihuana use and various social and demographic characteristics, (c) the relationship of personality traits, neuroticism, and extroversion to marihuana use, (d) the extent of various psychological problems among users and nonusers and the methods which they use for coping with them, and (e) multi-drug use among marihuana users. Results show that 12.2% of males and 5.5% of females aged 18 and over had used marihuana in the past yr; the frequencies rose to 41.5% and 20% respectively, in the under-25 group. Marihuana use was most common among males, single or divorced persons, and the better educated. However, social variables did not explain the variation in marihuana use frequency. Multi-drug use, including higher use of alcohol, characterized marihuana users. They were similar in extroversion and neuroticism to normals but higher in both than nonusers. (22 ref) —*Journal abstract.*

7258. **Stein, Robert M.** **The incest wound.** *Spring*, 1973, 133-141.—Suggests that the split between love and sex is a direct consequence of the incest wound. When the tension between the incest desire and prohibition is obliterated, fragmentation results, and the essential union of the masculine and feminine opposites is not possible. It is felt that the severity of the incest wound can be measured by the degree of fear about losing rational control, whether or not it is related to sexuality. It is suggested that when the repression of instincts becomes necessary in a culture, this is a sign something has gone wrong with societal institutions for regulating incest.—*A. Farrell.*

7259. **Stillwell, Rachel & Spencer, Christopher.** (U Sains Malaysia, School of Comparative Sciences, Minden, Penang) **Children's early preferences for other nations and their subsequent acquisition of knowledge about those nations.** *European Journal of Social Psychology*, 1973, Vol 3(3), 345-349.—Studied 22 male and female junior high school Ss in England to examine the hypothesis that Ss may have more information about liked and disliked nations than about those toward which

they are neutral. Ss were pretested on knowledge and preference toward 5 major nations and retested after acquiring information about these countries. Results show greater knowledge of liked and neutral countries than about disliked nations. There was also a significant increase in knowledge of all nations after a week of information, with the greatest increase in knowledge of disliked nations. Ss preferred nations which were near their own in cognitive space. It is concluded that preference for a nation depended on the amount of knowledge about the country and on the perceived similarity of that country to one's own.—*M. K. Phifer.*

7260. **Tietze, Christopher.** **The "problem" of repeat abortions.** *Family Planning Perspectives*, 1974(Sum), Vol 6(3), 148-150.—Presents estimates of expected repeat abortions. The statistics indicate that a significant incidence of repeat abortions can be expected within a year or 2 following 1st abortion or liberalization of abortion laws. Skillful counseling is recommended to increase postabortal use of contraception.

7261. **van Deusen, Edmund L.** **Contract cohabitation: An alternative to marriage.** New York, NY: Grove Press, 1974. vii, 149 p. \$6.95.—Describes the concept of contract cohabitation—a personal relationship similar to that between an employer and an employee, including all regular aspects of a job (e.g., vacations, salaries, regular hours, and set responsibilities). Procedures for setting up this type of contractual relationship and the author's own experiences with this alternative life-style are described.

7262. **Vanck, Joann.** (Queens Coll, City U New York) **Time spent in housework.** *Scientific American*, 1974(Nov), Vol 231(5), 116-120.—Contrary to expectation, women who are not in the labor force devote as much time to housework as women did 50 yrs ago, although the nature of the work has changed. Urban and rural women have spent about the same amount of time in housework throughout the last 50 yrs. Women in the labor force devote about half as much time to household tasks as nonemployed women. Factors giving rise to high expenditures of time in housework are discussed.—*P. Tolin.*

7263. **Vessey, Martin P.; Johnson, Bridget & Donnelly, James.** (Radcliffe Infirmary, Oxford, England) **Reliability of reporting by women taking part in a prospective contraceptive study.** *British Journal of Preventive & Social Medicine*, 1974(May), Vol 28(2), 104-107. Reports on a prospective study in progress at 17 family planning clinics to provide a balanced view of the beneficial and harmful effects of different methods of contraception. Data about pregnancies and their outcome, hospital visits, and changes in contraceptive practices have been collected from participants since 1968. In the present investigation, the reliability of this data was checked by comparing information obtained by the routine survey methods from 1,915 Ss attending 2 Scottish clinics with information obtained from maternity and hospital inpatient records. It was found that no births, miscarriages, terminations of pregnancy, or admissions for sterilization had been missed in the prospective study, while 90% of all other hospital admissions were reported. No evidence was obtained of any important variation in the reliability of reporting

between users of different methods of contraception or between different methods of collecting follow-up information.—*Journal abstract.*

7264. Weeks, Joseph L.; Mullins, Cecil J. & Vitola, Bart M. Prediction of drug abuse by the Life Values Questionnaire. *US AFHRL Technical Report*, 1974(Aug). No 74-60, 16 p.—Administered the Life Values Questionnaire (LVQ). Psychological Distance Questionnaire, and Assumed Similarity of Opposites Test to 1,682 male US Air Force basic trainees. The investigation was conducted to determine if the measures contributed significantly to the prediction of 7 drug abuse criteria when combined with available demographic and aptitude variables. Results indicate that only the LVQ added significantly to prediction. Although the validities yielded by the LVQ for the criteria were not high, it appears that its predictive variance is unique.—*Journal abstract.*

7265. Weijel, J. A. (U Amsterdam, Inst of Social Medicine, Netherlands) The influence of social security in an affluent society on illness behaviour. In H. Musaph (Ed), *Proceedings of the 2nd Congress of the International College of Psychosomatic Medicine, Amsterdam, 1973: Mechanisms in Symptom Formation*. New York, NY: S. Karger, 1974. vii, 303 p.

7266. Weisberg, Robert. (Skidmore Coll) Stylizing civilization: A brief history of Watergate. *Review of Existential Psychology & Psychiatry*, 1973, Vol 12(2), 129-140.—Discusses the role of American susceptibility to the media and advertising in the development of Watergate from an event of limited political importance to an aesthetically and psychologically significant national myth.

7267. Wellisch, David & Hays, J. Ray. (U Houston) A cross-cultural study of the prevalence and correlates of student drug use in the United States and Mexico. *Bulletin on Narcotics*, 1974(Jan-Mar), Vol 26(1), 31-42.—Compared information obtained from students in Monterrey, Mexico, and Houston, Texas. Alcohol and tobacco were the substances most frequently used, tobacco use being reported more often in Mexico. Use of marihuana and alcohol was equally prevalent in both samples, and appeared to be age-related. Male users outnumbered females for all substances except cough syrup. Opiates and cocaine were considered by drug users to be the most dangerous.—A. S. Kulkarni.

7268. Whittaker, James K. (U Washington) A further comment on Barnes and Kelman. *Child Care Quarterly*, 1974(Sum), Vol 3(2), 130-132.—Criticizes a new model for child care work by F. Barnes and S. Kelman on the following grounds: (a) lack of evidence indicating need for a new type of child care professional, (b) failure to develop the model sufficiently, and (c) no comparison of effectiveness with previous models. A rejoinder by Barnes follows.—J. H. Feldstein.

7269. Wildman, Robert W. II & Wildman, Robert W. (Georgia State U) Liberalism of college students and general public on the Thumin Conservatism-Liberalism Scale. *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 441-442.—Administered Thumin's Conservatism-Liberalism Scale to 30 college students and to 30 nonstudents. As in Thumin's original sample, the students obtained a mean score very close to the scale's absolute center.

However, the nonstudent group made significantly more conservative scores. These findings suggest that students are liberal on a relative basis and that identifying the center of the Thumin scale with the middle of the political spectrum may be unjustified.—*Journal abstract.*

7270. Winburn, G. Michael & Hays, J. Ray. Dropouts: A study of drug use. *Journal of Drug Education*, 1974(Sum), Vol 4(2), 249-254.—Surveyed a group of 144 high school dropouts to study the prevalence and correlates of their drug use as compared to that of 2,277 high school students. Tobacco (74%) and alcohol (71%) were reported to be the most used of 9 categories of substances included in the survey. Next highest categories of use were of marihuana (38%) and stimulants (31%). The category of drugs with the lowest overall reported use was opiates or cocaine, with 11.9% of the dropouts reporting use. Results are reported according to grade level, sex, and ethnicity.—*Journal abstract.*

7271. Wortzel, Lawrence H. & Frisbie, John M. (Boston U) Women's role portrayal preferences in advertisements: An empirical study. *Journal of Marketing*, 1974(Oct), Vol 38(4), 41-46.—Studied the reactions of 100 21-35 yr old women to advertising illustrations portraying women as housewives or as career women. Respondents selected illustrations for ads and were then given a scale measuring attitudes toward the Women's Liberation Movement. It is concluded that ads showing women may portray them in household roles if the roles are appropriate to the products. If the product is for personal use, nontraditional roles are preferred. Even among women with positive attitudes toward Women's Liberation, the product is more important than the movement in determining which role portrayal will most enhance product desirability.—D. Twedt.

7272. Young, John L. (U Notre Dame) Coping with student drug use. *Journal of Pastoral Care*, 1974(Mar), Vol 28(1), 40-50.—Provides basic information on specific drugs of abuse and general facts on drugs as biological chemicals. An account of a group discussion approach is given, and some of the likely underlying causes of student drug use are discussed. (20 ref)—*Journal abstract.*

7273. Zifferblatt, Steven M. & Hendricks, Carroll G. (Stanford U, Heart Disease Prevention Program) Applied behavioral analysis of societal problems: Population change, a case in point. *American Psychologist*, 1974(Oct), Vol 29(10), 750-761.—Suggests that current approaches to societal problems, such as population change, have resulted in inadequate solutions and that various methodological and conceptual biases exist which limit problem solution alternatives. Applied behavior analysis approaches employ strategies which have been successful in effecting behavior change in educational, clinical, and institutional contexts and should be carefully considered in approaching population change problems. Interdisciplinary contributions are suggested that facilitate identification of relevant behaviors and selection of appropriate behavioral intervention strategies. Training programs for family planning trainers and workers are currently feasible and are felt to provide a potentially effective response to the individual family's needs. (54 ref)—*Author abstract.*

## SOCIAL BEHAVIOR AND INTERPERSONAL PROCESSES

7274. Ammon, Gunter et al. (Deutsche Akademie für Psychoanalyse, Berlin, W Germany) **The structuring of congresses: An alternative: Preliminary results of congress dynamics research.** *Small Group Behavior*, 1974(May), Vol 5(2), 157-174.—Describes efforts to organize congresses or conventions with more scientific and personal value than those held at present. (32 ref)

7275. Billig, Michael. (U Bristol, England) **Normative communication in a minimal intergroup situation.** *European Journal of Social Psychology*, 1973, Vol 3(3), 339-343.—Investigated the effects of social categorization on intergroup relations. 80 high school students in England were divided into 2 groups on the basis of a trivial task. Ss in 1 group then awarded money to Ss in the other group according to prearranged payment matrices. Ss showed significant ingroup favoritism and used fairness as a significant strategy. The maximum joint effort was the 3rd strategy employed. S-S communication seemed to weaken the norms of the situation since there was no record of the 3 main strategies being communicated directly.—M. K. Phifer.

7276. Edney, Julian J. (Arizona State U) **Human territoriality.** *Psychological Bulletin*, 1974(Dec), Vol 81(12), 959-975.—Discusses a few seminal works on animal territoriality. A comparison of definitions of human territoriality demonstrates the variety in interpretations of the human expression. Theoretical work on human territoriality includes a small number of classificatory systems and conceptualizations, but no comprehensive theory. An evaluative review of research shows a collection of studies involving a variety of operational definitions, methods, and populations. Current developments show that work on this topic is expanding, and that it has relevance to environmental issues. However, research is still in a preparadigmatic stage and many issues are unresolved. (61 ref)—*Journal abstract*.

7277. Greer, Ann L. & Greer, Scott. (U Wisconsin, Milwaukee) **Understanding sociology.** Dubuque, IA: Wm. C. Brown, 1974. x, 63 p.—Presents a text which clarifies for students the meaning of the field of sociology. Among the topics included are designing research, participant observation and experimental design, research strategies, and the relationship between social science and social life.

7278. Harrison, Patrick R. (Hope Coll) **A technique for analyzing the distance between organisms in observational studies.** *Journal of General Psychology*, 1974(Oct), Vol 91(2), 269-271.—Discusses a technique for analyzing the distance maintenance relationships between organisms in studies such as those done by ethologists in natural environments. The technique requires superimposing a cartesian grid system over a photograph or scale drawing of the geographic area in question, coding grid positions over time for each organism, and then converting the grid positions for each pair of organisms into undirected distance. From this a parametric technique is used for further analysis. A correlation matrix is constructed and the data is then factor analyzed.—*Journal abstract*.

7279. Smith, M. Brewster. (U California, Santa Cruz) **Humanizing social psychology.** San Francisco, CA: Jossey-Bass, 1974. xii, 289 p. \$12.50.—Discusses the need for and proposes a version of social psychology that includes both humanistic and scientific elements by incorporating human freedom and dignity in addition to planning, problem-solving, and scientific perspectives. This humanistic perspective is applied to various topics within social psychology, including opinion theory, political attitudes and activism, alienation, and ethical issues in population control. (21 ref)

7280. Vitola, Bart M.; Mullins, Cecil J. & Weeks, Joseph L. **Characteristics of Women in the Air Force: 1970 through 1973.** *US AFHRL Technical Report*, 1974(Jul), No 74-59, 15 p.—The total input of US Women in the Air Force (WAF) enlistees for 1970 through 1973 ( $N = 20,988$ ) was compared with that of male enlistees for the same period ( $N = 324,935$ ). WAF Airman Qualifying Examination-A (AQE-A) and AQE-G scores in 1973 dropped less than those for males relative to 1970. WAF AQE-M and AQE-E scores in 1973 were higher than they were in 1970, whereas similar scores for males declined slightly. Educational level for males declined in the years 1970-1973, whereas for WAF it climbed somewhat. Racial mix for females was about the same as for males, but the contribution by the various recruiting areas to the total number of black women in the Air Force varied considerably from area to area. As with males, the younger females tended to have lower aptitude scores.—*Journal abstract*.

## Group Dynamics &amp; Interpersonal Communication

7281. Archer, Dane. (U California, Board of Sociology Coll V, Santa Cruz) **Ethical problems in small group observation.** *Small Group Behavior*, 1974(May), Vol 5(2), 222-243.—Discusses the ethical problems generated by the asymmetric role of the observer of small groups. This violation of the norm of reciprocity may produce emotional reactions in both group participants and observers. Ethical guidelines generally applied in social science research are of limited value in the group context. Since members cannot know what they will actually do or say in the group, informed consent is viewed as a *carte blanche* allowing observers to see whatever transpires. Suggestions are made for solving (a) problems of observer qualification and motivation, (b) problems of observer-member contact, and (c) other noncontact problems involving the process of observation itself.—G. R. Breed.

7282. Beier, Ernst G. (U Utah) **Nonverbal communication: How we send emotional messages.** *Psychology Today*, 1974(Oct), Vol 8(5), 52-56.—Interviewed and videotaped 50 newlywed couples in order to study body language cues indicating conflict and harmony. The conflicts that many of these couples described could be detected in their nonverbal behavior. Most Ss could successfully simulate only 2 of the 6 moods (anger, fear, seductivity, indifference, happiness, and sadness) they were asked to act out for the videotape. People send ambiguous messages, 1 intended verbal message and 1 unintentional nonverbal message, without being aware of it. The simplest explanation of such behavior is that people want to send discordant messages. However, the

motivation of the nonverbal message may well be unconscious.—E. J. Posavac.

7283. Brehmer, Berndt & Garpebring, Staffan. (Umea, Sweden) **Social pressure and policy change in the "lens model" interpersonal conflict paradigm.** *Scandinavian Journal of Psychology*, 1974, Vol 15(3), 191-196.—Investigated the effects of conflict and policy inaccuracy on change in 32 undergraduates. The amount of policy change for Ss who were paired with a stooge who did not change his policy even though it was incorrect was compared to the amount of policy change for Ss whose opponents changed their policies to reduce the inaccuracy of these policies. Results show that the amount of policy change was the same in both of these conditions, indicating that task adaptation was a more important goal to the Ss than conflict reduction.—*Journal abstract*.

7284. Cameron, J. L. et al. (Chestnut Lodge Research Inst, Rockville, MD) **Group process in an individualized learning situation.** *British Journal of Medical Psychology*, 1974(Sep), Vol 47(3), 265-272.—Describes an 18-month study of the interplay of group process in an environment in which 7-14 yr old children were working on tasks designed to suit their particular abilities, regardless of the activities of other children. Results show that the identification processes were such that the children tended to identify with various aspects of the group leader's activity at all times. When the activity remained within the highly specified areas of the technician's task, these identifications had a positive effect upon the children's performance and led to a rapid increment in learning behavior. When a specific technical posture was not assumed and another activity was encouraged, the group process took over in a way which was quite disruptive of the goals of the program.—M. E. Pounsel.

7285. Cantor, Gordon N. **Effects of familiarization on children's ratings of pictures of whites and blacks.** In F. Reblsky & L. Dornon (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—40 male and 40 female 9-11 yr old white children were exposed to 10-sec presentations of 3 pictures of white boys and 3 pictures of black boys. Ss rated these and another group of pictures viewed only once on a 5-point scale of degree of wanting to bring the boy home with them. Black boys were rated more highly than white boys. Familiarization enhanced ratings of blacks by both male and female Ss but not ratings of whites. Results are compared to findings in previous studies. (15 ref)

7286. Carment, D. W. (McMaster U, Hamilton, Ontario, Canada) **Effects of sex role in a maximizing difference game.** *Journal of Conflict Resolution*, 1974(Sep), Vol 18(3), 461-472.—Same- and mixed-sex dyads of 39 female and 53 male undergraduates played 100 trials of a maximizing difference game in a replication of an experiment in which S. P. McNeel et al (see PA, Vol 49:9065) used Flemish Ss. In contrast to the Belgian investigation, and in line with earlier experiments in the US which had used the Prisoner's Dilemma game, it was found that the like-sex female dyads were most competitive, followed by the like-sex male dyads. The males and females in the mixed-sex dyads were least competitive and not different from one another. Simply

being paired with a female had an immediate effect on the males, but the females appeared to be more affected by the response strategy of the males. It is argued that the most likely factor accounting for the results was the greater use of "tit-for-tat" responding by the males. (15 ref)—*Journal abstract*.

7287. Davis, John D. & Sloan, Margaret L. (U Sheffield, England) **The basis of interviewee matching of interviewer self-disclosure.** *British Journal of Social & Clinical Psychology*, 1974(Dec), Vol 13(4), 359-367.—Interviewed 16 male and 16 female undergraduates, inviting them to disclose information about themselves on a series of 10 high-intimacy topics presented in an individually randomized order. Ss were assigned to 1 of 4 treatments defined by the possible combinations, over 2 5-topic blocks, of disclosure or nondisclosure on the part of the interviewer. (Interviewer disclosure on a topic immediately preceded the corresponding disclosure by S.) 2 judges (one of whom was the interviewer) independently rated tape recordings of interviewees' presentations for disclosure and modeling of content. Interviewee disclosure was strongly facilitated by disclosure on the part of the interviewer, but was sustained at a high level only if the interviewer continued to disclose. Ss showed no clear preference for a disclosing interviewer. For given levels of interviewer disclosure their interview reactions were less favorable the more they had disclosed, suggesting that the "dispensation" of self-disclosure was costly.—*Journal abstract*.

7288. Eckhoff, Torstein. (U Oslo, Norway) **Justice: Its determinants in social interaction.** Rotterdam, Netherlands: Rotterdam University Press, 1974. xiv, 414 p.—Presents an analysis of justice in terms of the forms of human interaction where there is a "give and take" of positive or negative values (e.g., exchange, restitution, competition, revenge, and punishment) or where benefits or burdens are allocated among a number of recipients. Also discussed are the strategies and norms which regulate these types of interactions used to explain the development and use of the principles of justice. (7½ p ref)

7289. Fuller, Raymond G. & Sheehy-Skeffington, Alan. (Trinity Coll, Dublin, Ireland) **Effects of group laughter on responses to humorous material: A replication and extension.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 531-534.—Tested the validity of one interpretation of the concept of "social laughter," that the sound of others laughing increases the probability with which an individual will exhibit overt expressions of amusement. 15 undergraduates' responses were observed under conditions in which group laughter was dubbed onto or omitted from verbal material varying in humorous content. For items of both high and low humor the addition of dubbed laughter increased the frequency of Ss' overt expressions of amusement. However, under this condition Ss rated the items as more humorous. It was hypothesized that, although "social laughter" may represent some form of social facilitation, the laughter of others may act as a contextual cue directing the listener to search for a humorous interpretation of the stimulus material presented to him. Implications for the practice of using dubbed laughter in

commercial broadcasting are briefly discussed.—*Journal abstract.*

7290. Gormly, John. (Rutgers State U, New Brunswick) **A comparison of predictions from consistency and affect theories for arousal during interpersonal disagreement.** *Journal of Personality & Social Psychology*, 1974(Nov), Vol 30(5), 658-663.—Compared 2 psychological theories for their utility in predicting arousal during a situation in which there was interpersonal disagreement. 60 male Ss met an accomplice who presented himself in 1 of 3 ways: likable, neutral, or unlikable. Following this initial encounter, the S heard the accomplice state 12 social attitudes which either highly disagreed with or highly agreed with the S's opinions. The S's level of skin conductance was continuously recorded during the time he listened to the accomplice's attitudes. Skin conductance data support the affect theory ( $p < .025$ ) that level of arousal is influenced by the proportion of disagreements. Both the initial liking-disliking factor ( $p < .001$ ) and the proportion of disagreements factor ( $p < .001$ ) had a significant effect on the S's attraction toward the other person. (18 ref)—*Journal abstract.*

7291. Gruder, Charles L. (U Illinois, Chicago Circle) **Cost and dependency as determinants of helping and exploitation.** *Journal of Conflict Resolution*, 1974(Sep), Vol 18(3), 473-485.—Investigated the effects of the cost of helping and the dependency and need of a recipient on whether she was helped or exploited. There were 2 levels each (high and low) of cost, dependency, and need. 48 male Ss, 24 at each level of cost, interacted with each of 4 female experimental confederates who represented different combinations of levels of dependency and need. Ss role-played a job applicant, and each dyad bargained over an hourly wage agreement. The extent to which the S helped or exploited the confederate was defined as correlated with the wage at which he agreed to be hired: the higher his wage, the less the help or the greater the exploitation. A Cost  $\times$  Dependency interaction was the major result, which was primarily due to greater exploitation of the highly dependent other under high cost. (20 ref)—*Journal abstract.*

7292. Hunsaker, Phillip L. & Hunsaker, David M. (U Wisconsin, Milwaukee) **Luna I moon colony: An adapted format for analysis of group decision-making in a competitive setting.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 411-414.—An experimental simulation is described as a method for measuring and training decision-making by groups under complex conditions and intergroup competition. The method employs a simulation game including selection of goals, relevance of strategy, risk-taking, consistency, competition, and other potential components. Similarities to a previously described simulation as well as the additional dimensions of the adapted simulation-game are discussed.—*Journal abstract.*

7293. Jaspars, Joseph M. et al. (U Nijmegen, Netherlands) **Cognitive balance, self involvement and anticipation of interaction.** *Nederlands Tijdschrift voor de Psychologie en haar Grensgebieden*, 1974(Oct), Vol 29(7), 535-551.—Specifies the limits of F. Heider's balance theory (1948) in the operation of a triad, P, O, and X. Ss were 96 soldiers in a camp. Each S read a description of

a social situation which described a liking-disliking relationship between 2 persons and their agreement-disagreement on an unspecified topic. Half of the Ss worked on an imaginary condition and half on a real condition. Half were asked to observe a situation involving 2 other Ss, while half were asked to consider themselves directly involved. 6-point scales measured affection, willingness to participate in a discussion, and the expectation that change in agreement would follow discussion. Results indicate a significant relationship ( $p < .01$ ) between the mutual liking of P and O and the reality of the situation. A significant correlation ( $p < .10$ ) was found between the reality and tension of a real situation. A greater willingness to participate in a discussion occurred ( $p < .001$ ) when the relationship between P and O was positive. The challenge of disagreement between P and O was acceptable when the situation was imaginary. The positivity effect found for pleasantness was stronger for Ss who found liking stronger than agreement.—A. J. Ter Keurst.

7294. Jaspars, Joseph M.; van den Oever, Ton & van Gils, Jacques A. (U Nijmegen, Netherlands) **Cognitive balance and visual interaction.** *Nederlands Tijdschrift voor de Psychologie en haar Grensgebieden*, 1974(Oct), Vol 29(7), 557-568.—Tested the hypothesis that the different reactions in unbalanced situations between male and female Ss can be attributed to differences in sex composition of the dyads. Ss were 80 male and female college students. Each member of a pair tried to hit a mark on a rotating disc with a falling pellet. Ss then discussed their performances, while their eye-movements, unknown to them, were photographed to determine their visual interaction. Ss also rated themselves and indicated the expected ratings by their partners on P. Fielder's Least Preferred Coworker (LPG) Scale. The expected ratings by the partners were very comparable to the self-ratings. Significant ( $p < .01$ ) relationships were found between performance on the LPC scale and emotional and task-related traits. The leniency effect operated to give higher ratings to partners than they had expected to receive. There was a slight but nonsignificant tendency for same-sex dyads to react with less eye contact than unlike-sex dyads. The hypothesis was not confirmed.—A. J. Ter Keurst.

7295. Jones, Dorothy S. & Medvene, Arnold M. (U Maryland) **Self-actualization effects of a marathon growth group.** *Journal of Counseling Psychology*, 1975(Jan), Vol 22(1), 39-43.—Examined the effects of a marathon group experience on 34 female and 26 male undergraduates' level of self-actualization 2 days and 6 wks after the experience, and assessed the relationship between ego strength and extent of change in self-actualization during a marathon growth group. The Personal Orientation Inventory and the Barron Ego-Strength scale were given to all Ss. It was found that gains in self-actualization as a result of marathon group participation depended upon an individual's level of ego strength upon entering the group. (27 ref)—*Journal abstract.*

7296. Kleiven, Jo; Fraser, Colin & Gouge, Celia. (U Bergen, Psykologisk Inst, Norway) **Are individual and group decisions dependent on available information?** *Scandinavian Journal of Psychology*, 1974, Vol 15(3).

178-184.—Conducted a choice-shift experiment to explore the role of available information in individual and group decisions to 1 risky and 1 cautious problem. Individual prediscussion decisions to both problems by 152 undergraduates were related to the relative number of arguments favoring risky and cautious decisions known by each S. This information index was related to group decisions on the cautious problem only. Normative group influence, as well, seems to be involved in group decisions, and it is suggested that the relative importance of informational and normative processes for group decision may depend on the nature of the problem discussed. (21 ref)—*Journal abstract*.

7297. Lee, John A. (U Toronto, Ontario, Canada) **The styles of loving.** *Psychology Today*, 1974(Oct), Vol 8(5), 43-50.—Conceptualizes 3 primary styles of loving: *eros*, the search for the perfect lover; *ludus*, viewing love as a pleasant pastime; and *storge*, love that develops slowly and naturally. These basic styles can be paired to produce 3 equally important forms of love. The *manic* lover (a combination of *eros* and *ludus*) cannot get his lover out of his mind. The *pragma* approach to love (a combination of *ludus* and *storge*) involves an active systematic search for the best partner. Finally *agape* love (combining *eros* and *storge*) is altruistic and universalistic. The typology was initially tested in interviews with 112 English and Canadian Ss under 35 yrs old. American Ss subsequently tested include heterosexuals up to 65 yrs old and homosexual males.—E. J. Posavac.

7298. Lewis, Philip; Lissitz, Robert W. & Jones, Catherine L. (U Georgia) **Assessment of change in interpersonal perception in a T group using individual differences multidimensional scaling.** *Journal of Counseling Psychology*, 1975(Jan), Vol 22(1), 44-48.—Studied the nature and development of interpersonal perceptions in a college student T group, where group members rated one another for similarity following each of 13 group sessions. The similarity ratings were subjected to a multidimensional scaling analysis; the 3 dimensions of interpersonal judgment which emerged were described by correlating them with the group leader's interpersonal ratings. Results indicate that group members' perceptions were relatively complex and changed markedly over sessions in ways consistent with current theories of group development. The analysis permits a look at some of the interpersonal processes which occur in a T group free from biases which are usually forced upon Ss by having them use specific labeled rating scales.—*Journal abstract*.

7299. Pfeiffer, J. William & Jones, John E. (Eds.). **Structured experiences of human relations training: A reference guide.** Iowa City, IA: University Associates: 1974. 48 p.—Lists and categorizes by type (e.g., awareness expansion, communication, or problem-solving experiences) all structured experience guidelines published by University Associates in Volumes I, II, III, and IV of the *Handbooks of Structured Experiences for Human Relations Training* and in the 1972, 1973, and 1974 *Annual Handbooks for Group Facilitators*.

7300. Segal, Mady W. (U Maryland) **Alphabet and attraction: An unobtrusive measure of the effect of propinquity in a field setting.** *Journal of Personality & Social Psychology*, 1974(Nov), Vol 30(5), 654-657.

—Studied the relationship between propinquity and interpersonal attraction in 44 state police trainees. Place in alphabetical order was used as an unobtrusive (and conservative) measure of propinquity. The effect of proximity on friendship choice among Ss was found to be stronger than the effects of a wide variety of other characteristics that have been identified in the literature as determinants of interpersonal attraction.—*Journal abstract*.

7301. Sievers, Walter & Langthaler, Werner U. [Analysis of polylogue conversation sequences.] (Germ) *Zeitschrift für Experimentelle und Angewandte Psychologie*, 1974, Vol 21(2), 299-325.—Investigated the dynamics of communication within a group of people by recording the frequencies of transitions from 1 speaker to another in transition matrices. 6 such matrices gained from 3 different groups of 9 participants each were compared for dissimilarities and factor analyzed. The communication patterns gained from the factor analysis were compared with K. D. Mackenzie's model for decomposition of communication networks. (English & French summaries)—W. J. Koppitz.

7302. Svebak, Sven. (U Bergen, Psykologisk Inst, Norway) **Three attitude dimensions of sense of humor as predictors of laughter.** *Scandinavian Journal of Psychology*, 1974, Vol 15(3), 185-190.—Constructed an exploratory attitude test to investigate a theory of sense of humor which distinguishes between 3 dimensions of a comical situation and their personality equivalent—sensitivity to humorous messages (M), personal likings of comical situations (L), and need for emotional control (E). From a group of 96 undergraduates administered the questionnaire, 30 were selected for observation of the occurrence of laughter in an entertainment situation. The attitude dimensions were tested as predictors by a combined factorization and regression approach. No prediction was obtained for the total group. Laughter in males was, however, predicted by the L variable and in females by the E variable, as expected on the basis of an avowed sex difference in style of social behavior.—*Journal abstract*.

### Social Perception & Motivation & Attitudes

7303. Anderson, Norman H. & Butzin, Clifford A. (U California, San Diego) **Performance = Motivation × Ability: An integration-theoretical analysis.** *Journal of Personality & Social Psychology*, 1974(Nov), Vol 30(5), 598-604.—20 student Ss judged stimulus persons on 3 dimensions: performance, motivation, and ability. Each pair of dimensions was combined in a 4 × 4 design as cue information for judgments of the 3rd dimension. In accord with prediction, judgments of performance showed the bilinear form that characterizes the multiplying model: Performance = Motivation × Ability. Judgments of motivation and ability also exhibited a simple algebraic form, but this form was not mathematically consistent with the form of the performance equation. These data exhibit the parallelism property that characterizes an adding-type model and add further support to the concept of a general cognitive algebra of judgment, although this cognitive algebra is not a simple mirror of mathematical algebra. (21 ref)—*Journal abstract*.

7304. Bierhoff, H. W. (U Bonn, Psychologisches Inst, W Germany) [Attraction, helping behavior, verbal conditioning, and cooperation: An integration through exchange theory.] (Germ) *Zeitschrift für Sozialpsychologie*, 1974, Vol 5(2), 84-107.—Presents a discussion within a framework of a formalized exchange theory, with special attention to situational and motivational factors. Previous field and laboratory research is re-examined in the light of exchange theory, and seemingly contradictory results in helping behavior research are reconciled. The role of exchange theory as a general, integrative theory in social psychology is discussed, and proposals for testing it are given. (80 ref)—*English abstract*.

7305. Black, Harvey K. (State University Coll New York, New Paltz) **Physical attractiveness and similarity of attitude in interpersonal attraction.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 403-406.—In a  $2 \times 2$  design which manipulated physical attractiveness and similarity of attitude, 48 male undergraduates rated their desire to be a friend of and to date a female. They also rated her on intelligence and popularity. As hypothesized, both physical attractiveness and similarity of attitude had significant effects on desired friendship and desired dating. It was further hypothesized that based on the differential closeness of the relationships, an effect of similarity would be observed within the attractiveness conditions on desired dating, while no such effect would be observed on desired friendship. This prediction was confirmed only for the attractive condition. Physical attractiveness and similarity affected popularity as predicted. A significant interaction between similarity and attractiveness was observed on ratings of intelligence.—*Journal abstract*.

7306. Byrne, Donn; Rasche, Lois & Kelley, Kathryn. (Purdue U) **When "I like you" indicates disagreement: An experimental differentiation of information and affect.** *Journal of Research in Personality*, 1974(Oct), Vol 8(3), 207-217.—Hypothesized that the independent manipulation of the informational content and the affective meaning of personal evaluations would indicate that both informational judgments and attraction responses are a joint function of the 2 stimulus components. In a  $2 \times 2$  factorial design, each of 80 undergraduates was exposed to a videotape message from a stranger which was either affectively positive or negative and informationally positive or negative. Analysis of variance indicated that perceived similarity was influenced only by the informational variable ( $p < .0001$ ) while attraction was influenced by both information ( $p < .0001$ ) and affect ( $p < .002$ ). It is suggested that the most inclusive theories of person perception and attraction will necessarily encompass elements of both cognitive and reinforcement formulations. (34 ref)—*Journal abstract*.

7307. Cialdini, Robert B.; Braver, Sanford L. & Lewis, Stephen K. (Arizona State U) **Attributional bias and the easily persuaded other.** *Journal of Personality & Social Psychology*, 1974(Nov), Vol 30(5), 631-637.—Tested the hypothesis that a person positively biases his assessment of the intelligence of a person whom he is able to persuade easily. 38 male and 38 female undergraduate volunteers served as Ss. In 1 condition, persuaders and observers saw an S confederate easily convinced by the

persuaders' arguments. In 2 other conditions, the confederate either was not convinced by the persuaders' arguments or did not indicate how he was affected by the arguments. According to prediction, it was found that relative to observers of the influence attempts, persuaders attributed higher levels of intelligence to yielders than to nonyielders. This effect resulted from a tendency of persuaders to enhance, and observers to derogate, the intelligence of yielders. Findings are interpreted in terms of a desire to promote a sense of internal control. (19 ref)—*Journal abstract*.

7308. Clore, Gerald L. & Gormly, John B. (U Illinois) **Knowing, feeling, and liking: A psychophysiological study of attraction.** *Journal of Research in Personality*, 1974(Oct), Vol 8(3), 218-230.—Recorded the skin conductance and heart rate of 48 undergraduates during verbal exchanges in which Ss were either agreed or disagreed with on a variety of issues. The manipulation of attitude similarity had significant effects on interpersonal attraction, perceived competence, and skin conductance but not on heart rate. Disagreement produced higher skin conductance than agreement, and speaking was more arousing than listening. The correlations between arousal and attraction showed that heightened arousal was associated with both attraction toward agreeers and dislike toward disagreeers. As predicted, the linear relationship between attitude similarity and attraction increased in slope (.00, 3.75, 8.75) with increasing levels of conductance (low, medium, high). The failure of Ss to prefer agreeers to disagreeers under conditions of low arousal suggests that information without affect does not influence attraction. (37 ref)—*Journal abstract*.

7309. Codol, Jean-Paul. (U Provence, Lab de Psychologie Sociale, Aix-en-Provence, France) **[Concept of superior conformity of one's own group to accepted norms—Does such a phenomenon exist?]** (Fren) *Cahiers de Psychologie*, 1973, Vol 16(1), 25-30.—Sought to determine whether the phenomenon of perception of one's self as in greater conformity than others to group norms, considered established for individuals, applies also to the group to which an individual belongs. Ss were 25 13-14 yr old girls in 2 4th-grade secondary school classes. Specific norms for 4th-grade classes were derived from responses to a questionnaire in which the Ss indicated which of 14 adjectives best characterized all of the 6 4th-grade classes in the school. General norms were derived from ratings given each adjective on a 4-point value scale. Data specific to the problem under study were obtained by having the Ss state whether their own 4th-grade class possessed more or less of each characteristic than the other 4th-grade classes. Individuals tended to consider their own group more in conformity with the general norms than the other groups. For the general norms, intergroup comparison yielded an index of conformity very close to that for interindividual comparison. For the specific norms, the conformity index was perceptibly higher for the intergroup comparison.—*E. E. Brown*.

7310. Dengerink, H. A. & Bertilson, H. S. (Washington State U) **The reduction of attack instigated aggression.** *Journal of Research in Personality*, 1974(Oct), Vol 8(3), 254-262.—30 male undergraduates competed

with an opponent in a reaction-time task to avoid receiving shock. The opponent initially set only the highest possible intensity shock for the Ss. The opponent then adopted 1 of 3 strategies to reduce the intensity of shocks set by the Ss. In 1 condition the opponent set shock intensities which matched those set by the S. In a 2nd condition the opponent set shocks which were not contingent upon those set by the S but which were identical to those set by the opponent who matched the S's settings. The opponent in the 3rd condition suddenly reduced the intensity of his settings and chose only the least intense possible shock for the S. All 3 conditions resulted in reduced aggression. This decrement was greatest and most rapid among those Ss who were exposed to a precipitous decrease in the intensity of attack.—*Journal abstract.*

7311. Deschamps, J.-Cl. (Genève U, Ecole de Psychologie et des Sciences de l'Education, Switzerland) [Attribution, social categorization and intergroup representations.] (Fren) *Bulletin de Psychologie*, 1973-1974, Vol 27(13-14), 710-721.—Reviews the research on attribution, social categorization, and stereotyping, hoping to synthesize the findings and develop a theory of social attribution, i.e., an explanatory model emphasizing the social character of the attribution phenomenon. Attribution is defined as the "process of inferring causes (interactions, characteristics) from their effects (actions, behaviors,...)." The analysis focuses on (a) relations between groups, (b) the basis of the inferential behavior, (i.e., "objective" knowledge or understanding of the environment vs "social reality"), and (c) the role of social categories in the attribution process. It is concluded, on the basis of the review of research, that there is a tendency (a) to attribute characteristics to individuals based upon perception of the group of which they are members, and (b) to overvalue intergroup and minimize intragroup differences. Attribution of characteristics to other groups is made in a fashion that will preserve the social identity of one's own group and enhance its value. Such attributions are influenced by the type of relations between groups and their differences in social status. (45 ref)—Z. M. Cantwell.

7312. Eisenberger, Robert; Kaplan, Robert M. & Singer, Robert D. (State U New York, Albany) **Decremental and nondecremental effects of noncontingent social approval.** *Journal of Personality & Social Psychology*, 1974(Nov), Vol 30(5), 716-722.—Tested the J. Gewirtz and D. Baer (1958) assumption of a deprivation-satiation function for social approval against R. Cairns's (1967) view that noncontingent approval worsens subsequent approval-contingent performance by decreasing the discriminability of approval contingencies. A total of 136 2nd- and 3rd-grade girls served as Ss. In accord with Cairns's interpretation, noncontingent approval was found to worsen subsequent approval-contingent performance only among Ss not informed that approval would depend upon the adequacy of their performance. A 2nd experiment provided evidence against the interpretation that the contingency instruction operated simply by contributing to achievement motivation. The conceptual basis for the informational interpretation of the decremental effects of noncontingent approval is discussed. (25 ref)—*Journal abstract.*

7313. Endler, Norman S.; Minden, Harold A. & North, Corileen. (York U, Downsview, Ontario, Canada) **The effects of reinforcement and social approval on conforming behaviour.** *European Journal of Social Psychology*, 1973, Vol 3(3), 297-310.—Divided 72 male and 72 female college Ss into equal groups with high and low need for social approval. Each group was assigned to 1 of 3 experimental conformity conditions: (a) true-agree, (b) neutral, (c) true-disagree. The groups were tested with a social-conformity apparatus. Results show that (a) reinforcement for agreeing with a contrived group consensus (true-agree group) elicited more conformity than social pressure without reinforcement (neutral group), which in turn elicited more conformity than reinforcement for disagreeing with the consensus (true-disagree group); (b) females conformed more than males; and (c) Ss needing high social approval conformed more than those needing low social approval. Conformity is explained in terms of social learning, and it is suggested that the situational factor of reinforcement was a more important determinant of conformity than the motivational factor of social approval. (30 ref)—*Journal abstract.*

7314. Glouberman, Dina. (Kingston Polytechnic, Kingston-upon-Thames, England) **Person perception and scientific objectivity.** *European Journal of Social Psychology*, 1973, Vol 3(3), 241-253.—Argues that the perception of other people requires a different set of scientific assumptions than are used in traditional psychology. Mind-body dualism, subject-object dichotomy, and traditional notions of scientific causality are considered inapplicable to the perception of people, except when people are seen as objects. The "predict and control" model of psychology, and the "medical model" of psychiatry both involve the perception of people as objects. The "participant-observer" model is seen as the optimal one for the study of human beings. (17 ref)—*Journal abstract.*

7315. Jerdee, Thomas H. & Rosen, Benson. (U North Carolina, Chapel Hill) **Effects of opportunity to communicate and visibility of individual decisions on behavior in the common interest.** *Journal of Applied Psychology*, 1974(Dec), Vol 59(6), 712-716.—Conducted 2 experiments on the effects of opportunity to communicate and visibility of individual decisions on socially responsible behavior in group situations involving the "commons" problem. 280 undergraduates in a business administration course were assigned roles as firm representatives and assembled in groups of 5 to bid on contracts under various conditions. Opportunity to communicate resulted in more socially responsible bidding, but visibility of individual decisions had no effect. Opportunity to communicate also helped to sustain socially responsible bidding in the face of a persistently defecting group member.—*Journal abstract.*

7316. Johnson, David L. & Ridener, Larry R. (Baylor U) **Self-disclosure, participation, and perceived cohesiveness in small group interaction.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 361-362.—Found that in small, same-sex discussion groups containing a total of 23 undergraduates, self-disclosure (as measured by the Self-Disclosure Questionnaire) was associated significantly with perceived group cohesiveness, but not

participation. Only males' self-disclosure was associated with perceived cooperation, and only females' self-disclosure was associated significantly with perceived norms and influence. Contrary to expectation, participation was associated significantly only with males' perceived group cohesiveness including perceived cooperation, ideas, norms, liking, and influence.—*Journal abstract.*

7317. Kanfer, Frederick H.; Cox, Larry E.; Greiner, Jerry M. & Karoly, Paul. (U Illinois) **Contracts, demand characteristics, and self-control.** *Journal of Personality & Social Psychology*, 1974(Nov), Vol 30(5), 605-619.—Describes 3 experiments testing predictions from a conceptualization of self-control that separates commitment (contract) from execution. The cold pressor test provided the experimental procedure for all Ss. In Exp I, with 64 female undergraduates, ice water tolerance was greater with an explicit written contract than with oral instructions conveying the same content. After interpolated experience with the E, Ss who believed they had failed to meet contract conditions tolerated ice water longer than those who believed the E failed to meet conditions. In Exp II, 48 Ss anticipating reinforcement for contract fulfillment tolerated the ice water longer than Ss who were not reinforced or who received reinforcement contingent only on contract making. In Exp III with 96 Ss, examination of the magnitude of intention to tolerate ice water revealed that presence of the aversive cues associated with the task and high probability of demands to fulfill the contract significantly lowered commitments. Delay of onset of the task only weakly ( $p < .10$ ) affected commitment; short-delay eliciting reduced estimates of tolerance. Results are discussed in relation to demand characteristics and reconceptualization of self-control that stresses the importance of situational variables and Ss' commitments to future action. (35 ref)—*Journal abstract.*

7318. Kaplan, Kalman J.; Firestone, Ira J.; Degnore, Roberta & Moore, Michael. (Wayne State U) **Gradients of attraction as a function of disclosure probe intimacy and setting formality: On distinguishing attitude oscillation from attitude change—study one.** *Journal of Personality & Social Psychology*, 1974(Nov), Vol 30(5), 638-646.—Investigated the mediating effect of setting on the relationship between intimacy depth of disclosure probe and attraction toward the prober, using a repeated-measures design in 3 interview settings: business, psychotherapeutic, and sexual. 44 male undergraduates were assigned to each of the interview-setting conditions. In all settings interviewer attractiveness decreased with intimacy of questions, this effect being especially pronounced under the high-formality business setting. Analyses on component measures of attitude showed that this was primarily attributable to increased disliking rather than decreased liking. Examination of alternate blocks of intimate vs nonintimate questions shows the recoverability of earlier attraction values indicative of attitude oscillation rather than change. (26 ref)—*Journal abstract.*

7319. Kiesler, Charles A.; Roth, Thomas S. & Pallak, Michael S. (U Kansas) **Avoidance and reinterpretation of commitment and its implications.** *Journal of Personality & Social Psychology*, 1974(Nov), Vol 30(5), 705-715.

—It is suggested that people worry about potentially negative implications of attitudinally explicit behavior, especially when their commitment or perceived responsibility for the behavior is high. In 2 experiments with 76 and 121 undergraduates, respectively, Ss agreed to tape-record a public (high-commitment) or anonymous (low-commitment) speech advocating a position consistent with their own. Ss in Exp I chose 2 tasks to work on while waiting for the recording studio to become available. High-commitment Ss avoided the task which would have forced them to think about the implications of their commitment (how others would react to the content of the speech). In Exp II this effect was replicated; but in a different set of conditions, highly committed Ss (more than those less committed) chose a task which allowed them to reinterpret their prior behavioral commitment innocuously (as related to speech accents and not attitude). The implications for attribution theory and the process of inferring belief from behavior are discussed. (21 ref)—*Journal abstract.*

7320. Kuiken, Don; Rasmussen, R. V. & Cullen, Dallas. (U Alberta, Edmonton, Canada) **Some predictors of volunteer participation in human relations training groups.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 499-504.—27 college students who volunteered for participation in T groups and 141 who did not volunteer were compared on authoritarianism, reported history of self-disclosure, and a series of questions on social relations. Volunteers, especially males, were lower in authoritarianism, whereas no differences were obtained for histories of self-disclosure. Also, female volunteers reported that they were less satisfied with their abilities to relate to others and that they spent less time with others. It is suggested that males may make a choice to volunteer by considering the compatibility of their social and political attitudes and those implied by T groups. In contrast, females may make their choice by considering their personal social relationships. (15 ref)—*Journal abstract.*

7321. Kumpf, Martin & Götz-Marchand, Bettina. (U Mannheim, W Germany) **Reduction of cognitive dissonance as a function of magnitude of dissonance, differentiation, and self-esteem.** *European Journal of Social Psychology*, 1973, Vol 3(3), 255-270.—Tested several hypotheses concerning the interrelationship of dissonance reduction mechanisms in situations where response possibilities were relatively unconstrained. Engaged female Ss were invited to take part in a bogus "Marriage Expectancy Test" to predict marriage success. One wk later they received fictitious results differing negatively from their initial expectations of marriage success. The reactions measured were "conformity with the result," "derogation of source," "devaluation of the issue," and "underrecall." As predicted, avoidance responses increased steeply with discrepancy, while little increase was found for confrontation mechanisms. (22 ref)—*Journal abstract.*

7322. Lawson, E. D. & Giles, Howard. (State University Coll New York, Fredonia) **British semantic differential responses on world powers.** *European Journal of Social Psychology*, 1973, Vol 3(3), 233-240.—Investigated stereotypes associated with world powers, using 28 male and 28 female Ss at a British university who rated 24

world powers according to a semantic differential. Significance tests showed the relationship of the powers to concepts assumed to measure the Evaluative, Potency, and Activity factors. 3-dimensional models showed the relative positioning by men and women; in general, the sexes agreed. Results indicate that superpowers were close to Bad and Strong, and countries associated with war and strife were closer to Bad, Weak, and Passive. Findings are compared with those from an American sample.—*Journal abstract.*

7323. Lefebvre, Luc M. & Cunningham, John D. (U Leuven, Psychologisch Inst, Belgium) **Performers' anticipations of a supervisor's attribution for their changes in performances.** *Psychologica Belgica*, 1974, Vol 14(1), 19-29.—Studied performer's anticipations of a supervisor's attribution for their potential changes in performance as a function of (a) the supervisor's attribution for their present performance and (b) their future performance. 56 college students in 2 experiments completed a questionnaire in which they predicted the supervisor's attribution for future successful or failing performance. Attributions were limited to internal causes: effort and ability. The prediction that effort would be regarded as a more important cause of changes in performance than ability was supported. Unexpectedly, the ability anticipation for future success was higher after an ability than after an effort attribution for present performance. Some implications of attribution research in an interdependency context are discussed.—*Journal abstract.*

7324. Lerner, Richard M. & Frank, Phyllis. (Eastern Michigan U) **Laboratory analogue of field helping behavior.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 557-558.—Within the context of a balanced factorial design, 40 male and 40 female white college students individually viewed a videotape of a black or white, male or female, financially needy "cohort" performing an alphanumeric substitution task. Ss were instructed to award money for performance, which was identical in all conditions. Female Ss awarded more money than male Ss, but males were given as much money as females, and blacks were given as much as whites. Results were compared to field studies of the relation of race and sex to helping behavior.—*Journal abstract.*

7325. Maitland, Karen A. & Goldman, Jacquelin R. (U Florida) **Moral judgment as a function of peer group interaction.** *Journal of Personality & Social Psychology*, 1974(Nov), Vol 30(5), 699-704.—Used an instrument for assessing moral judgment to study the effects of 3 different levels of peer group interaction on the moral judgments of 36 male and female 11th- and 12th grade Ss. Discussion to consensus of issues of moral judgment produced greater increases on scores than did open-ended discussion or individual development of personal rationales. Both the consensus scores for the groups and the individual posttest scores of group members were found to exceed the individual pretest moral judgment levels. No differences were found between the group consensus and individual scores on posttest. Results are discussed in terms of social conflict resolution as a mechanism for inducing higher levels of moral judgment.—*Journal abstract.*

7326. Mikula, Gerold & Schwinger, Thomas. (U Graz, Inst for Psychology, Austria) **[Sympathy and the need**

**for social approval as determinants for the allocation of common rewards.]** (Germ) *Psychologische Beiträge*, 1973, Vol 15(3), 396-407.—Conducted experiments with 36 dyads to examine the extent to which the partner who distributes the common award earned by the dyad is influenced by the emotional relation between the 2 partners and by his desire for approval of his distribution procedure. It was expected that in dyads with a positive relationship the allocating partner would claim a smaller share but would strive for social acceptance and approval, while in dyads with a negative relationship he would claim a larger share and disregard social approval. Results confirmed the hypothesis. (20 ref) (English & French summaries)—*T. Fisher.*

7327. Mischel, Walter; Jeffery, Katharine M. & Patterson, Charlotte J. (Stanford U) **The layman's use of trait and behavioral information to predict behavior.** *Journal of Research in Personality*, 1974(Oct), Vol 8(3), 231-242.—Investigated the conditions that determine Ss' preferences for information about another person's traits vs his specific past behavior in order to predict his future behavior. The similarity-dissimilarity between the situation for which past behavior was available and the one to which predictions had to be made strongly influenced the choice of specific behavioral information vs more general trait information. As expected, behavioral information was preferred most by the 90 undergraduate Ss when the situation to which behavior had to be predicted was highly similar to the one for which the past behavioral data were available. On the other hand, more general trait information was preferred in predicting to situations that were not directly similar to those for which past behavioral information was available. The effect of the temporal span covered by available information was also explored. (15 ref)—*Journal abstract.*

7328. Peeters, Guido. (Catholic U, Lab for Experimental Social Psychology, Louvain, Belgium) **Patterns of information implied in interpersonal relations: A case in point on the convergence of social-cognitive schemata, formal causal inferences, and linguistic universals.** *Nederlands Tijdschrift voor de Psychologie en haar Grensgebieden*, 1974(Oct), Vol 29(7), 505-534.—Discusses the convergence of social-cognitive schemata with formal causal inferences and linguistic universals in the perception of interpersonal relationships. Social-cognitive schemata refer to general perceptual patterns, as indicated by F. Heider (1958). This is considered with reference to a set of empirically established schemata concerning the inference of traits from relationships involving personal likes and dislikes. 2 schemata are discussed: the causal-inference model (CIM) and the pronominal-categories model (PCM). According to the CIM, evaluative negativity (bad) would be closer to the negation of evaluative positivity (not good) than evaluative positivity (good) would be to the negation of evaluative negativity (not bad). Therefore (bad), (not good), and (not bad) are closely related. The PCM is an extension of the CIM by the use of linguistic universals, such as "I," "you," and "he." The convergence of the general perceptual concepts and the 2 models is interpreted in terms of a general cognitive consistency theory. (15 ref)—*A. J. Ter Keurst.*

7329. Powell, Graham E.; Tutton, S. Jane & Stewart, Robert A. (U London, Inst of Psychiatry, England) **The differential stereotyping of similar physiques.** *British Journal of Social & Clinical Psychology*, 1974(Dec), Vol 13(4), 421-423.—25 male and 25 female undergraduates ranked photographs of 6 female physiques on 15 concepts presented in random order (e.g., like least, like best, wife, young, successful, prudish, homosexual, and prostitute). The physiques were selected to form 3 pairs using W. H. Sheldon's somatotype numbers. Data from a mixed-model analysis of variance show that the Physique main effect was significant, indicating that Ss had differentiated clearly between the 2 body types in each pair. The Physiques  $\times$  Concepts interaction was significant for endomorphic and ectomorphic pairs, indicating they were seen as more or less different depending on the concept. Although main effects of Sex were not significant, the Physique  $\times$  Sex interaction was significant for the ectomorphic pair, suggesting that sex differences in stereotyping are confined to particular physiques as well as specific concepts. Findings support a social-expectational model of the relationship between overt behavior and physique rather than Sheldon's genetic model.—L. Gorsev.

7330. Roeder, Burkhard. [Reply to criticisms by Schmeltz and Schmidt of Roeder's procedure for measuring social status.] (Germ) *Zeitschrift für Experimentelle und Angewandte Psychologie*, 1974, Vol 21(2), 270-274.—Using the method of measuring social status, the author rejects the hypotheses formulated by C. Schmeltz and W. Schmidt (see PA, Vol 53:Issue 4). (English & French summaries)

7331. Schmeltz, Claus & Schmidt, Wolfgang. [Critical remarks on Roeder's procedure of measuring social status.] (Germ) *Zeitschrift für Experimentelle und Angewandte Psychologie*, 1974, Vol 21(2), 263-269.—Doubts the validity of B. Roeder's procedure for measuring social status (see PA, Vol 51:2926) which cannot be generalized to different samples of Ss. The method does not answer hypotheses derived from comparable social studies. (English & French summaries)

7332. Schümer, Rudolf. (U Mannheim, W Germany) **Context effects in impression formation as a function of the ambiguity of test traits.** *European Journal of Social Psychology*, 1973, Vol 3(3), 333-338.—Tested the following hypotheses of impression formation: (a) If context effects are attributable to changes in meaning, they should be greater for highly ambiguous test traits than for less ambiguous ones. (b) Increase in set size leads to an increase in context effects. (c) Context effects do not interact with the evaluative level of test traits. 32 Ss classified 190 trait adjectives on an ambiguity scale in order to select low and high ambiguity traits for testing purposes. Ss then rated 64 stimulus sets on a 9-point scale anchored by like and dislike, and on a 21-point scale of likability. Results show significant context traits and test traits as well as context by set size interaction, and set size by test interaction. Results do not support the theoretical formulations and confirm previous negative results regarding the meaning-change hypothesis. (15 ref)—M. K. Hifer.

7333. Shaw, Jerry I. & Skolnick, Paul. (California State U, Northridge) **An investigation of relative**

**preference for consistency motivation.** *European Journal of Social Psychology*, 1973, Vol 3(3), 271-280.—92 Ss rated their attraction to, identification with, and idealization of a hypothetical stimulus person who was represented as having fulfilled particular social motives such as approval, power, achievement, and consistency. Results confirm that Ss preferred persons who satisfied traditional needs more than those whose consistency desires were fulfilled. Implications for the role of consistency motivation in social behavior are considered.—Journal abstract.

7334. Singh, Ramadhar. (Indian Inst of Technology, Kanpur) **Reinforcement and attraction: Specifying the effects of affective states.** *Journal of Research in Personality*, 1974(Oct), Vol 8(3), 294-305.—Examined a multiplicative effect of magnitude and proportion of positive reinforcements on attraction and self-rated feelings. In Exp I 270 undergraduates rated their attraction toward persons associated with 1 of 3 reinforcement magnitudes (personality similarity, attitude similarity, and personal evaluations) and 1 of 6 proportions of positive reinforcements (.00, .20, .40, .60, .80, and 1.00). Results indicate that the slope of the linear attraction function increased and the Y-intercept decreased with increasing magnitude of reinforcement ( $p < .05$ ). A similar interaction effect was found on the feelings of 90 Ss in Exp II. Results are interpreted as added support for D. Byrne's (1971) reinforcement-affect model of interpersonal attraction. (26 ref)—Journal abstract.

7335. Spencer, Christopher; Williams, Marylin & Oldfield-Box, Hilary. (U Sheffield, England) **Age, group decisions on risk-related topics and the prediction of choice shifts.** *British Journal of Social & Clinical Psychology*, 1974(Dec), Vol 13(4), 375-381.—Tested assertions in the literature that the elderly are less willing to make decisions involving risk than are the young by comparing the decision-making of 36 undergraduates and 26 Ss aged 55-65. Neither on their initial decisions nor in their group discussions of Choice Dilemma Questionnaire items did the older differ from the younger sample. The predictive validity of J. A. Stoner's Value Ranking Instrument was tested with both samples and in neither was the instrument successful in indicating which items subsequently produced cautious shifts and which shifts to greater risk following group discussion. One reason for the inadequacy of Stoner's method of examining particular cultures' value for risk may lie in the abstractness of the instrument.—Journal abstract.

7336. Tanaka, Masako. (Tokyo U of Education, Japan) **The anisotropic structure of personal space.** *Japanese Journal of Educational Psychology*, 1973(Dec), Vol 21(4), 223-232.—Asked 56 male college students to signal as soon as they felt discomfort when they approached or were approached by another male student from 8 horizontal directions under light and dark illumination. 32 measures of the distance at which each S felt discomfort were obtained and analyzed. Results indicate that this distance decreased as the angle between the line of approach and the median plane of the body increased from front to rear; that darkness increased the distance when the approach was from the

rear; and that introverts required a greater distance for comfort than extraverts. (English summary)—*S. Choe.*

7337. van Krevel, D. & Menckeberg, H. W. (U Leyden, Netherlands) **Status congruency as a cognitive schema in dyad-learning.** *Nederlands Tijdschrift voor de Psychologie en haar Grensgebieden*, 1974(Oct), Vol 29(7), 583-599.—Studied the relationships of congruence/incongruence with dominance and abilities of dyad members. In Exp I, it was hypothesized that it is easier to learn that a person dominates and is more able than a female than that a person dominates and is more able than a male. Ss were 17 male and 17 female students. Each S learned 8 dyads of imaginary persons with combinations of sex, dominance, and ability by means of the paired-associates technique. The congruence effect had a strong significance ( $p < .001$ ). The correlation between homogeneity and sex of the dominating person was significant ( $p < .01$ ). The hypothesis that it is easier to learn that a female is dominated than a male was statistically supported. It is more difficult to learn the ability relationships in a mixed-sex male-dominated dyad than in an all-male dyad. In Exp II, the Ss were 16 male and 16 female students. The testing format was similar to that of Exp I, except that the S identified himself-herself with one member of a dyad. The congruency hypothesis was supported. Dominance relationships were more easily learned than ability relationships. (24 ref)—*A. J. Ter Keurst.*

7338. van Krevel, D. & Zuidgeest-van den Hoogen, T. (U Leyden, Netherlands) **The influence of self attitude on balance.** *Nederlands Tijdschrift voor de Psychologie en haar Grensgebieden*, 1974(Oct), Vol 29(7), 553-555.—Investigated 2 of F. Heider's applications of his balance theory, in which he postulated (a) reciprocal positive or negative sentiment in a dyad, and (b) homogeneity in the evaluation of a person, such as being uniformly positive or negative, or the halo phenomenon. As a result of peer and self-ratings by members of 50 discussion groups of 5 or 6 students each, meeting weekly, the 1st hypothesis was supported for most criterion combinations but the 2nd was confirmed only when positive sentiments between the members of a dyad were evident.—*A. J. Ter Keurst.*

7339. Westbrook, Mary. (Macquarie U, Sydney, NSW, Australia) **Judgement of emotion: Attention versus accuracy.** *British Journal of Social & Clinical Psychology*, 1974(Dec), Vol 13(4), 383-389.—Attempted to account for reported failures to find sex and related personality correlates of the ability to judge emotions accurately in terms of attention to emotional cues. It was hypothesized that attention to emotional cues is (a) independent of accuracy, (b) consistent across different types of cues, and (c) characterizes women and people who are (d) socially oriented and (e) field dependent. It was predicted that accuracy is related to (f) field independence and (g) intelligence. Data from 100 18-50 yr old Ss who completed the WAIS Vocabulary subtest, tests of attention to both visual and auditory cues of emotion, the Carlson Adjective Check List, and the Embedded Figures Test support hypotheses a, b, c, f and g. A canonical analysis revealed a cognitive style-intellectual factor relating accuracy to field independence and intelligence. (27 ref)—*Journal abstract.*

7340. White, James H. (U Guelph, Ontario, Canada) **Justice and generosity in social exchange: An experimental study of reactions to winning or losing a game.** *British Journal of Social & Clinical Psychology*, 1974(Dec), Vol 13(4), 369-373.—Predicted from exchange theory that distributive justice would be fulfilled in a game when a player with high investments defeated an opponent with low investments. Were the reverse to occur, the "low" winner should feel embarrassment and the "high" loser anger. 12-13 yr old unacquainted boys whose leadership status was high or low raced model cars, winning or losing being predetermined. After racing, the boys were separately asked to divide a sum of money between them, which provided a measure of their anger or embarrassment over the outcome. The boys behaved in accordance with predictions in that high-status boys who had lost to low-status boys were less generous than low-status boys who had lost to high-status boys. Parallel results were obtained among the winners.—*Journal abstract.*

7341. Zaleska, M. & Askevis-Leherpeux, F. (U Paris VII, Social Psychology Lab, France) **[The influence of unanimous group error on the response of the individual.]** (Fren) *Bulletin de Psychologie*, 1973-1974, Vol 27(10-12), 526-535.—Investigated the influence of group pressure on individual judgment (after S. E. Asch) particularly to determine (a) whether knowledge of the unanimous response of a group influenced individuals to question their initial responses to a stimulus and eventually to adopt the response, and (b) whether a link existed between the adoption of the majority response and the degree to which the "majority" was perceived as representing the total population from which the group was drawn. Ss were 84 female students in the last year of high school; 10 groups of 5 Ss each were experimental and 6 groups of 5 Ss and 1 of 4 Ss were control groups. The experimental task was in 3 steps. (a) All groups completed problems. (b) Ss reconsidered their solutions, with the experimental Ss given information about majority solution. (c) All groups discussed solutions, with correct responses given. Results of chi-square analysis indicate that significantly more experimental than control Ss changed their responses. Identification of "majority" with the parent population was significantly more frequent among Ss who changed to the majority response than among controls.—*Z. M. Cantwell.*

## COMMUNICATION AND LANGUAGE

7342. Bagozzi, Richard P. (Northwestern U, Graduate School of Management) **Marketing as an organized behavioral system of exchange.** *Journal of Marketing*, 1974(Oct), Vol 38(4), 77-81.—Defines core concepts in the paradigm of marketing as an exchange and introduces the exchange system as a conceptual framework for generating marketing theory. Marketing is considered as "the process of creating and resolving exchange relationships."

7343. Bakan, David. (York U, Downsview, Ontario, Canada) **Mind, matter and the separate reality of information.** *Philosophy of the Social Sciences*, 1974, No 4, 1-15.—Advances an argument that information is

substantially different from matter and energy, based on L. Szilard's work (1929) on the relationship between intelligence and thermodynamic systems. E. Schrödinger's hypothesis that living organisms maintain stability by consuming negative entropy or information is brought to bear. This organismic trait is named "negentrophagia." Implications about the nature of psychological and evolutionary processes are drawn.—*Author abstract.*

7344. Berlyne, D. E. (Ed.). (U Toronto, Ontario, Canada) *Studies in the new experimental aesthetics: Steps toward an objective psychology of aesthetic appreciation.* Washington, DC: Hemisphere, 1974. viii, 340 p. \$14.95.—Includes 14 papers which review and present new findings on reactions to art and the psychological processes which operate in aesthetic appreciation. Topics include verbal and exploratory responses to visual and auditory patterns varying in uncertainty level; the measurement of novelty, complexity, and interestingness; hedonic tone and reward value of exposure to paintings; and correlates of humor.

7345. Brown, Robert G. *Sales response to promotions and advertising.* *Journal of Advertising Research*, 1974(Aug), Vol 14(4), 33-39.—Classified 2,500 instant coffee users as "price" or "brand" buyers, and compared the behavior of these 2 types in buying instant coffee. Results indicate that (a) price promotion yields faster responses in sales than does advertising, (b) price promotions do not yield new long-term buyers (except for new products, where trial is important), (c) brand buyers are not likely to respond to price promotions, and (d) advertising appears to be capable of increasing the "prime franchise" of a brand. (15 ref)—*J. C. Franklin.*

7346. Callahan, Francis X. (California State U, Chico) *Advertising's influence on consumers.* *Journal of Advertising Research*, 1974(Jun), Vol 14(3), 45-48.—Conducted a survey of a sample of 1,200 consumers. Men and women were found to use advertising equally. Advertising is an important source of information when consumers buy hard goods, but other sources are much more important in actual decision-making. Length of search for information showed a positive correlation with price, and as price and brand preference increased, allegiance to store declined. The use of advertising information and prior thought increased with income.—*J. C. Franklin.*

7347. Carloni, G. & Nobili, D. (U Bologna, Inst de Psicologia, Italy) [Filicide: II. Filicide in myth and art.] (Ital) *Rivista Sperimentale di Freniatria e Medicina Legale delle Alienazioni Mentali*, 1972(Oct), Vol 96(5), 1337-1380.—The stories of numerous parents in mythology and fairy tale are brought into interpretive focus. A genealogy of classic Greek figures highlights Oedipus' parents, Medea and Iphigenia. Australian myths point out the universality of subconscious parental aggression, while popular fairy tales demonstrate variations on the mother figure. Freudian interpretations and the archetype concept are combined, and it is suggested that mythology and legend have much to offer in the study of both normal and pathological behavior. (19 ref)—*L. Klinkon.*

7348. Chase, Lawrence J. & Kneupper, Charles W. A literary analog to conflict theories: The potential for theory construction. *Speech Monographs*, 1974(Mar), Vol

41(1), 57-63.—Recommends the use of literature as case-study material for the verification and generation of conflict theories. Dostoevsky's novel *Crime and Punishment* is used as a case study to illustrate the frustration-aggression model, the decision-making or game-theoretic approach, and the instinctual aggression paradigm.—*C. A. Sherrard.*

7349. Choudhury, Pravat K. & Schmid, Lawrence S. (Howard U) *Black models in advertising to blacks.* *Journal of Advertising Research*, 1974(Jun), Vol 14(3), 19-22.—A recall experiment using control and experimental groups of whites and blacks supported the hypothesis that blacks are more likely to recall advertisements with black models than those with white models.

7350. Ciborowski, Tom & Choy, Stephen. (U Hawaii) *Nonstandard English and free recall.* *Journal of Cross-Cultural Psychology*, 1974(Sep), Vol 5(3), 271-281.—Presented orally to 2 groups of 12 5th graders 2 stories containing 8 embedded items that were later tested for recall. Ss were tested individually. One group was judged to possess competent verbal skills in standard English and extremely marginal (if any) verbal skills in Hawaiian Islands dialect; a 2nd group was judged to possess competent verbal skills in Hawaiian Islands dialect but with only marginal verbal skills in standard English. An unusual feature of the study was that the dialect speakers were not economically disadvantaged. The pattern of performance shows that the dialect speakers, despite schoolroom ratings, were in fact bidialectal, demonstrating verbal skills both in standard English and in Hawaiian Islands dialect. (17 ref)—*Journal abstract.*

7351. Corbin, Henry. *Mysticism and humour.* *Spring*, 1973, 24-34.—Attempts to clarify the link between humor and mysticism, asserting that humor itself cannot be accurately defined. It is suggested that humor demands an ability to create a certain distance between oneself and the world. From this vantage point, humor is seen as the safeguard of the mystic, protecting him from both subjective and objective dangers. Several stories from Islamic philosophy are presented to illustrate this view. These tales highlight the importance of symbolic language. An anecdote from contemporary French literature summarizes the interaction of humor, mysticism, and symbolic elements.—*A. Farrell.*

7352. Etzel, Michael J. & Walker, Bruce J. (U Kentucky) *Advertising strategy for foreign products.* *Journal of Advertising Research*, 1974(Jun), Vol 14(3), 41-44.—Compared general attitudes toward all products of a given country (US, Japan, and Germany) with attitudes toward individual products (e.g., autos, cameras, and toys). Results indicate that consumers see individual products from a given country differently. Generalizations about any nation's products are therefore inaccurate and misleading.—*J. C. Franklin.*

7353. Feyerherm, Pierre. [Theories concerning certain expressive movements: Self-contacting behaviors.] (Fren) *Revue de Psychologie et des Sciences de l'Education*, 1974, Vol 9(1), 89-113.—Nonverbal behaviors labelled as "autistic gestures," "body-focused movements" or "automanipulation" have been differently interpreted by psychoanalytic, clinical, semiological, and ethological theories. These behaviors seem to be unrelated to their context and they occur in conflictual or tense

situations. The ethological hypothesis that they are actually "displacement activities" is considered to be the most appropriate. It derives from a specific methodology and from an original position in biological and psychological disciplines. (French & English summaries) (52 ref) —*Journal summary.*

7354. Fillenbaum, Samuel. (U North Carolina, Chapel Hill) **Or: Some uses.** *Journal of Experimental Psychology*, 1974(Nov), Vol 103(5), 913-921.—Attempted to show that individuals are sensitive to differences in the use of the operator *or*. Results show that on a variety of tasks, Ss were sensitive to differences between *or* sentences malformed because there was no topical relation between the disjuncts and well-formed *or* sentences which satisfied the constraint of common topic. In the case of well-formed *or* sentences, Ss were sensitive to differences between the ordered or asymmetric use of *or*, as in threats, and its unordered or symmetric use, and in the latter case between its use as an exclusive and exhaustive term, as an exclusive term, and as a (possibly) inclusive term. Results suggest that any attempt to discover the unique conceptual representation of an operator such as *or* is misguided, and that the generalizability of any findings obtained by study or some particular use of *or* should be questioned.—*Journal abstract.*

7355. Fromkin, Victoria A. (Ed.). (U California, Los Angeles) **Speech errors as linguistic evidence.** The Hague, Netherlands: Mouton, 1973. 269 p.—Presents a collection of 15 papers representing different linguistic and psychological theories of speech based on empirical speech error data. Topics include Freud's analysis of slips of the tongue, errors of speech and their implications for understanding the strategy of language users, the detection and correction of slips of the tongue, and a theory of speech errors.

7356. Goldstein, Jan E. **The Woolfs' response to Freud: Water-spiders, singing canaries, and the second apple.** *Psychoanalytic Quarterly*, 1974, Vol 43(3), 438-476.—Discusses the relationship of the writer Virginia Woolf and her husband Leonard to Freudianism. Virginia Woolf never came to appreciate Freud as a healer nor did she utilize analysis for her mental ailments, but toward the end of her life she did paint an optimistic picture of the effects of Freudianism on future literature.

7357. Gragg, Robert L.; Nash, Jeffrey E. & Touhey, John C. (Phillips Petroleum, Bartlesville, OK) **Individual differences in ratings of words combined in sentences.** *Journal of Psycholinguistic Research*, 1974(Oct), Vol 3(4), 311-318.—Replicated D. Heise's study (see PA, Vol 43:8323) to examine the efficiency of regression-compounded group means as predictors of individual ratings of words combined in sentences; pre- and postcombination ratings were also obtained from the 124 undergraduate Ss. Heise's model efficiently predicted group ratings for words combined in sentences, but neither group-weighted nor individually weighted regression equations efficiently predicted the ratings of individual Ss. Results are consistent with several findings that question the applicability of widely studied models of attitude change to individual differences, and alternative approaches to this problem are discussed.—*Journal abstract.*

7358. Hamilton, James W. **Jensen's *Gradiva*: A further interpretation.** *American Imago*, 1973(Win), Vol 30(4), 380-411.—Interprets the novel *Gradiva* within the framework of ego psychology, noting the important influence on the 2 main characters of object loss in childhood. It is noted that the author of the book also experienced object loss (i.e., lost both parents) in adolescence. The hypothesis is proposed that *Gradiva* may have been the author's attempt at externalization resulting from incomplete mourning of his parents. This interpretation is seen to extend and supplement Freud's libidinally based analysis of the work.—C. Wright.

7359. Haroche, Claudine. (U Paris VII, Lab de Psychologie Sociale, France) **[Experimental study of the role of social influences on the perception of an ambiguous tense in French: The present.]** (Fren) *Bulletin du CERP*, 1972(Oct-Dec), Vol 21(4), 161-165.—Studied the ambiguity of the present tense in French, which can be used to denote either temporary or permanent states. 160 secondary school students judged 4 sentences consisting of a subject and a predicate. Ss readily identified each sentence as signifying either transience or permanence, but rarely as implying both. The influence of social context on the interpretation of the present tense in French is noted.—R. L. Cook.

7360. Harris, Richard J. (Kansas State U) **Effects of nonlinguistic knowledge on language production.** *Journal of Psycholinguistic Research*, 1974(Oct), Vol 3(4), 303-310.—Hypothesized that undergraduates' descriptions of cartoons would contain fewer words overall, more definite articles, and more pronouns and would mention fewer concrete objects if either a picture illustrating the same objects was seen previously or S assumed his reader was also looking at the picture. Results, which confirm the hypothesis, argue against linguistic-object theories and in favor of an interactive theory of higher mental processes. (19 ref)

7361. Hendon, Donald W. (Columbus Coll) **Mechano-content analysis as an aid to predicting effects of advertising microcommunications.** *Journal of Applied Psychology*, 1974(Dec), Vol 59(6), 773-775.—Performed a regression analysis of 204 posters to predict the percentage of respondents who remembered seeing an outdoor advertising message. The independent variables were 21 mechanical and 6 content elements; the dependent variables were recognition scores. The predictive validity of 20 equations was too low to be of value to advertising communicators. The correlations between predicted and actual scores were low (.30-.41,  $p < .05$ ) because the independent variables varied only slightly as a result of the outdoor medium's simplicity.—*Journal abstract.*

7362. Hoosain, Rumjahn. (U Illinois, Ctr for Comparative Psycholinguistics) **The processing and remembering of congruent and incongruent sentences.** *Journal of Psycholinguistic Research*, 1974(Oct), Vol 3(4), 319-332.—80 female undergraduate Ss conjoined, using either "and" or "but," complex sentences containing "while," "before," "after," "because," "in order to," and other presented clauses. Results indicate that congruent cases, in which Ss were expected to respond with "and," had shorter response latencies than incongruent cases, with expected "but" responses. It is suggested that this

indicated a semantic incongruence effect, but the latter were remembered better, indicating a motivational salience effect due to contradiction of expectation. Whether the main clause preceded or followed the subordinate clause was not significant, in terms of either response latencies or sentence memory. Sentences with "after" had faster response times than those with "before," although Ss used identical constituent clauses.—*Journal abstract.*

7363. Hough, Graham. (Darwin Coll, Cambridge, England) **Poetry and the anima.** *Spring*, 1973, 85-96.—Discusses ways in which the anima archetype manifests itself in English poetry. It is felt that the elaboration of a work of literary art encourages the appearance of unconscious elements. Thus, the literature of the most advanced civilizations offers much for psychological investigation. The Muse, the goddess, the anima figure is invoked by the poet as a guide to the realm of unconscious form. It is concluded that superior literature can serve psychology by providing evidence of real psychic development.—A. Farrell.

7364. Larsen, Steen F. & Hermann, Jesper. (U Aarhus, Inst of Psychology, Risskov, Denmark) **Social status and language comprehension.** *Scandinavian Journal of Psychology*, 1974, Vol 15(3), 161-168.—Investigated the comprehension of connected discourse by 116 adult Danes from 2 different socioeconomic status groups, high status (HS) and low status (LS). On a task at the lexical level of comprehension (choosing between alternatives to 2 words in each of 4 texts) there appeared to be no differences between HS and LS Ss. At the structural level a difference ( $p < .05$ ) was found in drawing conclusions from the texts, but the groups nevertheless agreed completely ( $p < .01$ ) in underlining important segments of the texts. Thus the symmetry between production and comprehension hypothesized by B. Bernstein did not appear. Results agree with a general model of language processing. It is suggested that in the future more attention should be paid to variables other than the purely sociological variable of social status or social class. (25 ref)—*Journal abstract.*

7365. Mabry, Edward A. (U Wisconsin, Milwaukee) **Dimensions of profanity.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 387-391.—Investigated the dimensions of profane language use by 283 college students. Responses to a questionnaire on personal use of "sexual vernacular" were submitted to factor analysis. Results of the factor analysis yielded 5 dimensions of profane language based upon predispositions to use such words. The 5 dimensions were labeled: Abrasive, Technical, Abrasive-Expletive, Latent, and Euphemistic. Results are discussed in terms of past and future research needs.—*Journal abstract.*

7366. Mackay, Donald G. (U California, Los Angeles) **Aspects of the syntax of behavior: Syllable structure and rate.** *Quarterly Journal of Experimental Psychology*, 1974(Nov), Vol 26(4), 642-657.—Conducted 2 experiments with a total of 20 university students to test the theory that maximal rate of speech varies as a function of syllable structure. Spectrographic analyses indicated that the difference in syllable duration was not confined to any 1 portion of the syllables—the vowel, the consonants, and the interval between syllable repetitions

was longer for vowel-consonant-consonant (VCC) syllables than for CVC and CCV syllables. These and other findings cannot be explained in terms of word frequency, transition frequency of adjacent phonemes, or coarticulation between segments. Number of phonemes was a poor predictor of maximal rate for a wide variety of syllable structures, since VCC structures were produced slower than phonemically longer CCCV structures, and V structures were produced no faster than phonemically longer CV structures. These findings cannot be explained by traditional models of speech production or articulatory difficulty but support a complexity metric derived from a recently proposed theory of the serial production of syllables. This theory is also consistent with the special status of CV syllables suggested by R. Jakobson (1966) as well as certain aspects of speech errors, tongue-twisters, and word games. (21 ref)—*Journal abstract.*

7367. March, Robert M. & Swinbourne, Donald W. (ASI Market Research, Tokyo, Japan) **What is "interest" in TV commercials?** *Journal of Advertising Research*, 1974(Aug), Vol 14(4), 17-22.—Examined the concept of "interest" in TV commercials, using 6 semantic dimensions and 2 types of interest: interest in product messages and interest in other things. Housewives' responses were measured for 5 commercials. Approximately 5 variables accounted for consumer interest in product message, predominantly the "relevance" dimension. As to consumer interest in other aspects of the commercials, no one variable was a good predictor.—J. C. Franklin.

7368. Mazzaro, Jerome. (State U New York, Buffalo) **John Berryman and the Yeatsian mask.** *Review of Existential Psychology & Psychiatry*, 1973, Vol 12(2), 141-162.—Discusses characterization in the poetry of John Berryman in terms of the Yeatsian concept of masks which both protect and reveal personality. Berryman's use of Freudian concepts of language is examined.

7369. Meyer, Bernard C. (Mt Sinai School of Medicine, City U New York) **Some reflections on the contribution of psychoanalysis to biography.** *Psychoanalysis & Contemporary Science*, 1972, Vol 1, 373-391.—Discusses some problems and benefits resulting from the application of psychoanalytic principles to biography. The precision and usefulness of psychoanalytically oriented biographies is seen as dependent on the aptitude, knowledge, and intelligence of the writer. The biographer should avoid dogmatism and must be aware of the influence of his emotional makeup on his attitude toward his subject. Psychoanalysis can contribute to an understanding of the creative process by applying the critical attention of the therapist to the materials available to the biographer for interpretation, and by providing explanations for vicissitudes in the quality and quantity of an artist's productions. The value of psychoanalytic principles to an understanding of the artistic personality is illustrated by a discussion of the influence of grief on the works of Samuel Johnson, Washington Irving, Alban Berg, and others. (37 ref)—J. Kelly.

7370. Meyer, Bernard C. **The Little Prince: Speculations on the disappearance of Antoine de Saint-Exupéry.** *Journal of the American Psychoanalytic Association*, 1974, Vol 22(1), 142-159.—Presents evidence

in support of the hypothesis that the mysterious disappearance of this celebrated airman-poet was the ultimate expression of a leitmotif that is recurrently discernible throughout his life and writings. Certain themes in his life led to his being identified with Christ, both in his own eyes and in those of some of his biographers. (26 ref)

7371. Miller, David. (Syracuse U) **Achelous and the butterfly: Toward an archetypal psychology of humor.** *Spring*, 1973, 1-23.—Discusses various facets of the nature and meaning of humor, delving broadly into literary sources. F. Nietzsche's view that laughter is holy is linked with Henry Miller's pronouncement that the smile is everything. Psychological themes underlying humor are examined in search of a collective fantasy regarding a sense of humor.—A. Farrell.

7372. Moss, A. E. (U Surrey, Guildford, England) **Shakespeare and role-construct therapy.** *British Journal of Medical Psychology*, 1974(Sep), Vol 47(3), 235-252.—Discusses several Shakespearean works as illustrations of his personal construct system, which is seen as a tightly knit group of ideas revolving around 2 incompatible emotions. It is suggested that the creative phase of Shakespeare's career reveals a pattern similar to that in "fixed role therapy." (26 ref)

7373. Moss, A. E. (U Surrey, Guildford, England) **Hamlet and role-construct theory.** *British Journal of Medical Psychology*, 1974(Sep), Vol 47(3), 253-264.—Uses *Hamlet* to illustrate G. Kelley's concepts of role theory and personal construct psychology. (15 ref)

7374. Nelson, Katherine & Benedict, Helen. (Yale U) **The comprehension of relative, absolute, and contrastive adjectives by young children.** *Journal of Psycholinguistic Research*, 1974(Oct), Vol 3(4), 333-342.—Presented relative, contrastive, and absolute adjectives in standard and comparative contrasts to 19 3 yrs 10 mo to 6 yrs 7 mo old preschoolers in a picture-choice paradigm. Proportion of errors in picture choices shows the predicted effect of greater difficulty for comparative than for standard terms. Latency data shows that the responses to comparative forms of absolute and contrastive adjectives were significantly slower than responses to their standard forms, and were also slower than responses to the comparative forms of the relative terms which did not differ from their standard forms. These data support the interpretation that the classes of relative, contrastive, and absolute adjectives are processed differently by young children. Factors of cognitive complexity that influence the order of difficulty are discussed.—*Journal abstract*.

7375. Perry, Michael & Perry, Arnon. (Haifa U, School of Management, Israel) **Brand recall in two Israeli media.** *Journal of Advertising Research*, 1974(Jun), Vol 14(3), 33-39.—Found that a combination of newspaper and radio advertising produced greater brand recall than was obtained using each medium separately.

7376. Rosenthal, Robert et al. (Harvard U) **Body talk and tone of voice: The language without words.** *Psychology Today*, 1974(Sep), Vol 8(4), 64-68.—Reports on the development of a 45-min film to measure sensitivity to nonverbal messages. A series of scenes made up of facial expression or physical postures, a few spoken phrases (altered to remove verbal content), or a

combination of visual and audio stimuli are presented, with 2 descriptions of what might be occurring in each scene. The viewer chooses one alternative as correct. After showing the film to more than 130 groups of Ss, it is concluded that women do better than men, high scorers function better than lower scorers, and IQ makes little difference.—E. J. Posavac.

7377. Sexton, Donald E. & Haberman, Phyllis. (Columbia U, Graduate School of Business) **Women in magazine advertisements.** *Journal of Advertising Research*, 1974(Aug), Vol 14(4), 41-46.—Analyzed 1,827 advertisements depicting women in 3 time periods: 1950-1951, 1960-1961, and 1970-1971. Results of a systematic rating procedure appeared to corroborate feminist charges that the roles for women shown in advertisements are limited: in 2 decades the trends did not appear to have moved very far from a narrow picture of women as social people in predictable environments.—J. C. Franklin.

7378. Seymour, Dorothy Z. **Black children, black speech.** In F. Reblsky & L. Dorman (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Discusses views of Black English as "sloppy talk" and as another dialect. The sounds and language structure of ghetto speech are analyzed, and the psychological effects of stigmatizing it are noted. A possible 2-language solution is suggested.

7379. Siddiqi, Jawaid A. & von Knoblauch zu Hatzbach, Ludwig. (Inst Psychologisches, Mainz, W Germany) [Cliff's law: Fact or artifact? A critique of methodology and theoretical analysis.] (Germ) *Zeitschrift für Experimentelle und Angewandte Psychologie*, 1974, Vol 21(2), 275-298.—Tested the hypothesis that N. Cliff's law of adverbs as multipliers derives from the experimental procedure used and lacks general validity. The material consisted of 6 adjectives and 7 adverbs to be judged on 6 polarities. 7 experimental groups of 25 students each judged only a single adverb paired with the 6 adjectives, while the control group of 50 students followed Cliff's procedure exactly and judged all 7 adverbs paired with all adjectives. Results indicate that Cliff's mathematical model fitted all experimental situations well; however, this fact contradicts Cliff's interpretation of the function of adverbs; for example, the intensity of "rather" turns out to be greater than the intensity of "very." Results support a theory of precision function for adverbs, for which a mathematical model is given. (English & French summaries) (25 ref)—W. J. Koppitz.

7380. Smart, Reginald G. & Fejer, Dianne. (Addiction Research Foundation, Toronto, Ontario, Canada) **The effects of high and low fear messages about drugs.** *Journal of Drug Education*, 1974(Sum), Vol 4(2), 225-235.—In 2 studies, investigated the effects of high and low fear messages about drugs in a total of 2,412 high school, university, and community college students. In Study 1, 3 levels of threat appeal about marihuana were used, and the interaction between the value of these messages and anxiety level was examined. Study 2 investigated attitudes toward a nonexistent drug—monoamyltripitate (MOT)—on the expectation that attitudes toward MOT would have few extraneous influences (outside the message itself). It was found that differences among the

persuasive messages were very small and insignificant. However, the effects of fear level for MOT were very large and indicate that high fear appeals are superior. Where a new drug is involved it would be expected that a high threat will discourage use more than a low threat. (15 ref)—*Journal abstract*.

7381. Stein, Murray. **Hephaistos: A pattern of introversion.** *Spring*, 1973, 35-51.—Discusses myths concerning the Greek god Hephaistos, tracing many of his relationships and activities. As the worker is viewed by Marxists to be the workhorse of industrial society, so is Hephaistos portrayed as the only Olympian god who works. Associations between this god and women and their mysteries is also explored. This archetypal background is related to an introverted psychological type of man closely attached to the world of women and mothers, his creativity dependent on his intimacy with the feminine world, yet posing a threat to natural feminine creativity. It is suggested that Marxists may respond to intimations of this image of original man.—A. Farrell.

7382. Takefuta, Yukio (Ed.). (Ohio State U) **Analysis of intonational signals by computer simulation of pitch-perception behavior in human listeners.** Columbus, OH: Ohio State University Research Foundation, TR 15, 1974. 23 p.—Describes computer methods for extracting physical parameters, comparing the relative efficiency of the parameters as an intonational signal, processing extracted data, and extracting and identifying pitch patterns. Pattern features and cardinal pitch patterns are defined.

7383. Vernon, McCay & Miller, William G. (Western Maryland Coll) **Language and nonverbal communication in cognitive and affective processes.** *Psychoanalysis & Contemporary Science*, 1973, Vol 2, 124-135.—Reviews research on the role of language and nonverbal communication in cognitive and affective process, with emphasis on studies involving deaf Ss. It has been found that deaf and nondeaf Ss have comparable problem solving abilities, which indicates that the mediating process of thought is not a system of verbal symbols. It is suggested that most deaf children develop into psychologically healthy adults because body language, not verbal language, plays the primary role in affective development. It is concluded that verbal language is not a relevant variable in cognition, and that paralinguistic phenomena such as body language and voice quality are more important than verbal language in the communication of feelings. (2 p ref)—J. Kelly.

7384. Wedin, Lage. **Evaluation of a three-dimensional model of emotional expression in music.** *Reports from the Psychological Laboratories, University of Stockholm*, 1972(May), No 349, 20 p.—Data from a previous experiment suggesting a 3-dimensional model of emotional expression in music were submitted to some complementary analyses. The cross-stimulus and cross-S generality was investigated—chiefly by rotating the different factor structures into a common space—with 44 psychology and 30 music students. In 4 additional experiments the validity of the preliminary results was investigated with a total of 47 music and 47 psychology students. An attempt was made to reproduce the structure by graphic ratings on each separate dimension

and by ratings on factor-typical scales. The original 3-dimensional model was essentially corroborated except that the 3rd dimension, Solemnity-Triviality, was bipolar like the 2 1st dimensions, Tension-Energy and Gaiety-Gloom. (16 ref)—*Journal abstract*.

7385. Wise, Gordon L.; King, Alan L. & Merenski, J. Paul. (Wright State U, Dayton) **Reactions to sexy ads vary with age.** *Journal of Advertising Research*, 1974(Aug), Vol 14(4), 11-16.—Reacting to the statement, "Advertisers make too much use of sex appeals in their advertisements," 1,200 respondents indicated very mild agreement. Far stronger agreement came from older groups, and females agreed more strongly than males. Race, income level, and educational level did not produce significant differences.

7386. Wittwer, J. (U Bordeaux II, France) **[Identifying deep structures by the method of syntactic cues.]** (Fren) *Bulletin de Psychologie*, 1973-1974, Vol 27(10-12), 590-600.—Describes a scheme of grammatical analysis based primarily on a study of syntactic cues. Examples of the application of the scheme are included. The relation of the scheme to the concepts of N. Chomsky and other psycholinguistic theories are discussed. (16 ref)

## PERSONALITY

7387. Ancona, L. & Scopetta, C. (Catholic U of the Sacred Heart, Faculty of Medicine, Inst of Psychology, Rome, Italy) **[Perception, projection, anxiety.]** (Fren) *Bulletin de Psychologie*, 1973-1974, Vol 27(10-12), 513-525.—Studied the effects of anxiety on perception and projection. Ss were 50 male 1st, 2nd, and 3rd yr medical students. They completed 2 tasks related to medical perception change, and measures of hidden, visual perceptual change, and measures of hidden, manifest, and total anxiety, introversion/extraversion, and reactive imagination. Results indicate that when the object of perception was physical reality, anxiety led to a heightened perceptual constancy (or denial of change) in the object; when the object of perception included physical structures and persons, anxiety led to a denial of physical change in persons and a deformation of physical structures; when the object included other persons and structures; when the object included other persons and self, anxiety led to a perceptual constancy in regard to self and a deformation of other persons. (26 ref)—Z. M. Cantwell.

7388. Bane, Mary J. & Jencks, Christopher. **Five myths about your IQ.** In F. Reber & L. Dorman (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Examines 5 propositions about IQ asserting that (a) IQ tests are the best measure of human intelligence; (b) poorness is related to low IQ, and the converse; (c) IQ is overwhelmingly determined by genetic endowment; (d) black children and poor white children have low IQ scores primarily because they have "bad" genes; and (e) improving the quality of schools will tend to wipe out differences in IQ and school achievement and hence in life chances.

7389. Bard, James A. (Cleveland State U) **Rational proselytizing.** *Rational Living*, 1973(Fal), Vol 8(2), 24-26.—Studied the effects of proselytizing rational living. The experimental group consisted of 10 college students, each

assigned to teach the principles of rational living to one or more friends. The group was matched to a group of volunteers on factors of sex, academic performance, rationality scale score, and a self-rating of personal happiness. Rationality scales administered to both groups before and after "teaching" show an increase in rationality scores for the experimental group after the teaching.—G. J. Frankel.

7390. **Bratfisch, Oswald.** [Experimental intellectual activity and perceived difficulty in intelligence tests.] (Span) *Revista de Psicología General y Aplicada*, 1974(May-Jun), Vol 29(128), 477-497.—22 Ss completed a battery of 10 intelligence tests, and compared 5 of the tests as to their perceived similarity of content and difficulty. A correlation of .48 was found between the 2 factors. Perceptual speed tests were considered the easiest and spatial ability tests were considered the most difficult. (English summary) (27 ref)—W. B. Haslam.

7391. **Bromberg, Walter & Hutchison, Sarah H.** Self image of the American Indian: A preliminary study. *International Journal of Social Psychiatry*, 1974(Spr-Sum), Vol 20(1-2), 39-44.—Administered the Draw-A-Person Test to 28 Indians and 25 whites, interpreting it as a measure of self-image. Indian drawings had larger bodies, larger heads, larger and more open eyes, and more hair than drawings by whites. A general discussion, incorporating these results, points out that the Indian's image of self and concept of the relations between self and environment have no representation in white psychology. An explanation of the Indian world-view is given, combining Gestalt concepts, nonverbal communication, animism, and phenomenism. (15 ref)—W. R. Street.

7392. **Burnengo Parodi, A.** (U Genoa, Inst of Psychology, Italy) [The Ka-Ro Test: A contribution to its application as a parallel form of the Rorschach Test.] (Ital) *Neuropsichiatria*, 1972(Jan), Vol 28(1-2), 37-46.—Compared the responses of 38 normal adults to the standard Rorschach test and a parallel series (Ka-Ro) introduced by Y. Kataguchi. Inkblots characterizing this series have more indented edges and more shades of color than the original. Ss were 19 males and 19 females 20-50 yrs old, with varied economic and educational backgrounds. Half were administered the Rorschach first; the Ka-Ro 4 mo later. Half received the Ka-Ro first, the Rorschach 4 mo later. Results show that  $R$ ,  $R$  + %,  $D$ %, and  $Dd$ % were greater for the Ka-Ro test. More movement and color responses were also noted. Results compared favorably with the original data reported by Kataguchi and with results of 3 similar studies in the literature. (English, French, & German summaries)—A. Felice.

7393. **Buss, Allan R.** (U Alberta, Ctr for Advanced Study in Theoretical Psychology, Edmonton, Canada) Regression, heritability, and race differences in IQ. *Developmental Psychology*, 1975(Jan), Vol 11(1), 105.—Suggests that there are 2 distinct sources (mean differences and regression coefficient differences) to be considered when interpreting between-race real regression differences in IQ. Although race differences in mean IQ producing differential regression effects alone are not evidence of clear genetic or environmental factors, between-race differences in real absolute regression

associated with differential regression coefficients are potentially suggestive of such interpretations.

7394. **Campo, Vera.** [The Rorschach as a minimal battery.] (Span) *Revista de Psicología General y Aplicada*, 1974(Mar-Apr), Vol 29(127), 275-287.—Discusses use of the Rorschach test as the principal method of obtaining clinical information.

7395. **Carlitz, Lucien.** (U de l'Etat de Mons, Belgium) [The TAT and psychoanalytic theories: Bibliographic insights.] (Fren) *Revue de Psychologie et des Sciences de l'Education*, 1973, Vol 8(4), 467-489.—Reviews the evolution of the theoretical foundations of the Thematic Apperception Test and emphasizes a close dependence on the American psychoanalytic school. 3 steps can be distinguished: (a) emphasis on the revelation of unconscious tendencies in story content; (b) owing to the influence of ego psychology, the story is now considered a pure cognitive product; (c) current efforts by Shentoub in France to synthesize the 2 approaches. Shentoub urges a return to orthodox Freudian concepts; the story is regarded as a compromise between the unconscious drives and ego control capacity. (Flemish & English summaries) (87 ref)—S. S. Marzolf.

7396. **Carter, John D.** (Rosemead Graduate School of Psychology, CA) Personality and Christian maturity: A process congruity model. *Journal of Psychology & Theology*, 1974(Sum), Vol 2(3), 190-201.—Maintains that C. Rogers's, E. Gendlin's, and Jung's theories of personality include the processes of actualization and congruence. The processes are seen as the basis of a model of personality and Christian maturity in which both spheres have the same processes but have different contents. The similarities and differences are discussed, and it is argued that genuine integration is only possible when some processes or principles are common to Christianity and psychology. (18 ref)—*Journal abstract*.

7397. **Chamorro Gundin, Fernando.** [Comparative experiences with the Rorschach psychodiagnostic test and the Szondi test.] (Span) *Revista de Psicología General y Aplicada*, 1974(Mar-Apr), Vol 29(127), 311-323.—Compares results obtained with both tests showing their many points of agreement.

7398. **Clouse, Bonnidell.** (Indiana State U) Ego and superego variables as related to moral behavior. *Journal of Psychology & Theology*, 1974(Sum), Vol 2(3), 223-235.—Discusses morality from a behavioral point of view, using ego and superego variables as the bases for defining the term. (22 ref)

7399. **Codol, Jean-Paul.** (U Provence, Lab de Psychologie Sociale, Aix-en-Provence, France) [The phenomenon of superior conformity of one's self to group norms in a situation requiring perceptual estimation of physical stimuli.] (Fren) *Cahiers de Psychologie*, 1973, Vol 16(1), 11-23.—Sought to verify the existence of the phenomenon of the self-image of superior conformity to group standards in a situation not previously studied. 18 groups of 4 secondary school pupils each, all in their final year, gave oral estimates of the lengths of 12 rods 33-182 cm long. In each group 1 S was naive, 1 pre-instructed S gave the correct estimate, and 2 Ss responded so as to produce a predetermined relationship between estimates. After 12 trials of 3 estimates each, the naive Ss rated their own performance and that of other

group members. They tended to greatly overestimate their own accuracy and to systematically devalue the performance of the S who gave the correct answers. Results are considered to support the hypothesis that the phenomenon exists where accuracy is taken as the norm.

—E. E. Brown.

7400. Conde Lopez, Valentin & de Estaban Chamorro, Tomas. (U Complutense, Facultad de Filosofia y Letras, Madrid, Spain) [A study of Zung's Self-rating Depression Scale (SDS) on a stratified sample from a normal population.] (Span) *Revista de Psicologia General y Aplicada*, 1974(May-Jun), Vol 29(128), 515-553.—250 Ss in Madrid 15-70 yrs old completed the SDS. Results were analyzed according to sex (females scored significantly higher than males), age, and marital status. (English summary)

7401. Defrenne, J.; Mertens, C. & Segers, M.-J. (U Louvain, Belgium) [Evaluation of anxiety in a professional setting using the Cattell test.] (Fren) *Bulletin du CERP*, 1972(Oct-Dec), Vol 21(4), 121-129.—Describes a study of Belgian postal workers who were administered the Anxiety Scale of the Institute for Personality and Ability Testing. All Ss (1,807 males and 846 females) had volunteered for a heart examination. Test results were interpretable only if sex, age, and profession were taken into account. While the test does appear to be a valid measure of anxiety it provides little etiological evidence about the trait. Such developmental information is important for understanding the functional significance of anxiety. (English & Spanish summaries)—R. L. Cook.

7402. Ekehammar, Bo. (U Stockholm, Sweden) **Interactionism in personality from a historical perspective.** *Psychological Bulletin*, 1974(Dec), Vol 81(12), 1026-1048.—Starting from a distinction between 3 different conceptions of human behavior (personologism, situationism, and interactionism) and between 2 different conceptions of the environment (physical vs psychological environment), the present article focuses on the interactionist position, which has been preferred in some recent conceptions of personality. By reviewing different classical theories of psychology, it is argued that the modern interactionist conceptualization is not new in personality psychology. It can be traced back to the works of J. R. Kantor and K. Lewin and is also advocated in many of the succeeding classical works. By reviewing the previous interactionists' conceptions of the environment, it is argued that their emphasis on the psychological environment in explaining person-situation interactions presents the same main thought as that found in the recent cognitively colored interactionism. By reviewing empirical strategies and results within the interactionist framework, it is argued that the inaptness of previous methods has impeded the development of interactionism and explains why it has not had an impact until now. (4 p ref)—*Journal abstract*.

7403. Ellison, Barbara A. (Albany State Coll) **Creativity in black artists: A comparison of selected creativity measures using judged creativity as a criterion.** *Journal of Non-White Concerns in Personnel & Guidance*, 1973(Apr), Vol 1(3), 150-157.—Based an investigation of creative expression among 38 black college students on the hypothesis that a positive relationship exists between (a) scores on 2 measures of creativity—the Remote

Associates Test (RAT) and the Barron-Welsh Art Scale of the Welsh Figure Preference Test (WFPT)—and (b) scores on creativity checks and judged creativity. Ss completed a pastel drawing that illustrated the concept "Freedom." These drawings were rated by art instructors on the basis of 6 qualities: aesthetic wholeness, color, composition, symbol, vitality, and perspective depth. Results indicate that a low and negative relationship exists between scores on the 2 creativity measures and judged creativity; these findings contradict results of similar studies.—M. E. Pounsel.

7404. Erlenmeier, N.; Mönikes, W. & Wirtz, R. (U Bonn, Psychologisches Inst, W Germany) [Rorschach organization and form level indices of intelligence.] (Germ) *Diagnostica*, 1974, Vol 20(3), 106-116.—Examines the relationship between 2 Rorschach indices of intelligence, Beck's (1967) organization activity Z, and Klopfer's (1954) form level FLR, and the total, verbal, and performance scores of the Hamburg-Wechsler-Intelligenztest (HAWIE). 2 raters scored the Rorschach protocols of 180 Ss 61-75 yrs old. Intrarater reliabilities between .80 and .97, interrater reliabilities between .64 and .69, and correlations of .38 and .31 between HAWIE total score and FLR and Z respectively are reported. The last *r* was .22 when the number of responses was partialled out.—M. Morf.

7405. Estes, W. K. (Rockefeller U, New York, NY) **Learning theory and intelligence.** *American Psychologist*, 1974(Oct), Vol 29(10), 740-749.—Proposes that the primary objective of intelligence testing be redirected from predicting to improving intellectual performance. In a number of instances, specific behaviors involved in responding to items on intelligence tests have been subjected to experimental analysis in laboratory studies. Results support the concept that different levels of test performance result from different combinations of processes and mechanisms of coding, hierarchical association, memory search, and cybernetic control of intellectual functioning. (20 ref)—*Author abstract*.

7406. Fernandez Ballesteros, Rocio. [Auxiliary plates on the Rorschach for precise determinants.] (Span) *Revista de Psicologia General y Aplicada*, 1974(Mar-Apr), Vol 29(127), 325-327.—Discusses materials that assist Rorschach Ss to define more clearly what determined their answers.

7407. Floyd, Joan & Viney, Linda L. **Ego identity and ego ideal in the unwed mother.** *British Journal of Medical Psychology*, 1974(Sep), Vol 47(3), 273-281.—Compared 32 primipara unwed mothers, 30 single nonpregnant women, and 15 primipara married mothers to test the hypotheses that unwed mothers would show (a) greater ambivalence about their ego identities, (b) less identification as an adequate feminine person, (c) a greater mother figure component in their ego ideals, and (d) greater expression of dependency needs. Findings support hypotheses (a) and (b). However, there were no significant differences found between groups for the "mother" component of ego ideals. Unwed mothers were also found to exhibit significantly greater dependency needs than their nonpregnant counterparts, but they did not differ from the married mothers whose dependency needs were equally great. The latter finding suggests the

vulnerability of the ego state generated by any pregnancy, in or out of marriage. (25 ref)—*Journal summary*.

7408. Forbes, Alan R.; Dexter, Wayne R. & Comrey, Andrew L. (U Otago, Dunedin, New Zealand) **A cross-cultural comparison of certain personality factors.** *Multivariate Behavioral Research*, 1974(Oct), Vol 9(4), 383-393.—Administered the 1970 version of the Comrey Personality Scales to 179 New Zealand university and teachers' college students. Factor analysis of the data confirmed that the basic structure of the scales was almost identical with that found in 641 representative cases from an American normative sample. It is suggested that further research is needed to explicate the relationship between the traits of orderliness and conformity. (26 ref)—*Journal abstract*.

7409. Galli, Giuseppe. (U Macerata, Lab of Experimental Psychology, Italy) **[Methodological principles for the study of the phenomenal self.]** (Germ) *Psychologische Beiträge*, 1973, Vol 15(4), 550-574.—Describes an experimental method for the exploration of the phenomenal self which is based on the Gestalt and contemporary interaction theories. Self-qualities are classified according to these parameters: isolation-participation in relation to the phenomenal environment; self-allo-centered view of qualities (direct self-image, reflected self-image); time perspective of experiencing self-qualities (actual-potential self); and subjective experience of self-qualities and positive vs negative tendencies (fear images, wish images). The method consists of a series of bipolar pictures—the profiles of the Ss and of relevant partners, presented to Ss in a correct and in distorted versions. The comments and reactions of Ss are recorded and analyzed. (English & French summaries) (2 p ref)—*T. Fisher*.

7410. Ginoux, Jean-Claude. (U Provence, UER de Psychologie, Aix-en-Provence, France) **[Problems of training in analysis and interpretation of the Rorschach test.]** (Fren) *Cahiers de Psychologie*, 1973, Vol 16(1), 57-71.—Discusses the difficulties of obtaining an adequate training in the analysis and interpretation of the Rorschach, emphasizing the difference between the 2 processes. Analysis is the work of examining "with a fine-tooth comb" all possible meanings of all the elements of the total protocol that the psychologist is in a position to isolate. Interpretation is the work of deciding which of all the possible meanings of all the evaluative criteria will contribute, when considered in juxtaposition, to the progressive understanding of the whole. Interpretation is presumably crystalized from a series of reflections and hypotheses; it is a continuing process, not a conclusion postponed until all other steps of the test have been completed. Training can thus be given in analysis, but not in interpretation. The trouble with most of the available learning aids—academic training, literature, manuals, interpretative schemata, and supervised and group practice—is that they present the learner with presolved problems. To reach a satisfactory level of competence, the trainee must become autonomous, accepting not only the hard task of acquiring the necessary background and knowledge but the always present risk of interpretation. (English summary) (16 ref)—*E. E. Brown*.

7411. Gonzalez, Arthur E. & Davis, Wallace M. (Princeton U) **Sex differences and cognitive consistency: A Greek and North American contrast.** *Journal of Cross-Cultural Psychology*, 1974(Sep), Vol 5(3), 301-311.—Conducted an experiment across 2 cultures, Greek and American, to test the disposition of Ss toward cognitive consistency. Ss were 16 American and 16 Greek male and female high school students. It was hypothesized that the balance effect would depend on sex, culture, and task variables. In a  $2 \times 2 \times 2$  factorial design, responses to 3 items on a 10-point bipolar adjectival scale were assessed before and after the introduction of discrepant information. Results show significant differences between Greek and US (Californian) Ss and between males and females in both cultures, differential across tasks. Some implications of the findings for consistency theory in general are discussed.—*Journal abstract*.

7412. Gough, Harrison G. (U California, Berkeley) **Estimation of locus-of-control scores from the California Psychological Inventory.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 343-348.—Correlated Rotter's Internal-External Control Scale with 18 standard and 4 new scales of the California Psychological Inventory (CPI) in samples of 141 male and 220 female college students. The directions of relationship were the same for 21 of the 22 scales. For all 361 Ss, CPI Tolerance, Good Impression, and Achievement via Conformance scores each correlated-.35 with locus of control; Anxiety had a coefficient of .24. A 5-scale regression equation was developed, including Dominance, Responsibility, Tolerance, and Good Impression weighted negatively, and Self-control weighted positively. In a new sample of 50 couples, locus-of-control scores estimated by means of this equation correlated .43 with actual locus of control for husbands and .44 with actual locus of control for wives. Descriptive implications of actual and estimated locus-of-control scores were more similar for wives than for husbands. (16 ref)—*Journal abstract*.

7413. Gray, David F. & Gaier, Eugene L. (State U New York, Buffalo) **The congruency of adolescent self-perceptions with those of parents and best friends.** *Adolescence*, 1974(Sum), Vol 9(34), 299-303.—7 female 12th graders rated 100 positive and negative traits as describing or not describing themselves. Each S's 2 best friends and parents were asked to rate each trait as they felt the S would see herself. Both parents and friends gave ratings which correlated significantly with those of the Ss. Friends were slightly more accurate but less consistent. The Ss came from social and religious backgrounds and were in a school which tended to minimize differences in values between the adolescents and their parents, and among the adolescents themselves.—*A. Krichew*.

7414. Greenhaus, Jeffrey H. & Badin, Irwin J. (Stevens Inst of Technology, Hoboken, NJ) **Self-esteem, performance, and satisfaction: Some tests of a theory.** *Journal of Applied Psychology*, 1974(Dec), Vol 59(6), 722-726.—Conducted 2 studies to investigate (a) the relationship between the 3 sources of self-esteem outlined in a 1970 study by A. K. Korman (see PA, Vol 44:5758)—chronic, task specific, and socially influenced—

and performance on an anagram task, and (b) the moderating effects of task-specific self-esteem on the relationship between performance and satisfaction. Ss were a total of 205 undergraduates, who completed the Self-Description Inventory, a 5-item measure of task-specific self-esteem, and the California F Scale. Task-specific self-esteem predicted performance for the total sample and socially influenced self-esteem predicted performance for high-authoritarian Ss. As predicted, performance tended to predict satisfaction only for high-self-esteem Ss.—*Journal abstract.*

7415. **Hamburg, David A.** (Stanford U, Medical School) **Coping behavior in life-threatening circumstances.** In H. Musaph (Ed), *Proceedings of the 2nd Congress of the International College of Psychosomatic Medicine, Amsterdam, 1973: Mechanisms in Symptom Formation.* New York, NY: S. Karger, 1974. vii, 303 p.

7416. **Hokanson, Jack E.** (Florida State U) **An escape-avoidance view of catharsis.** *Criminal Justice & Behavior*, 1974(Sep), Vol 1(3), 195-223.—Presents a conceptualization pertaining to the "arousal" reducing concomitants of aggression, along with supporting evidence. It is suggested that hostility catharsis, when observed, may only be a special case of a more general set of behavioral-emotional learning processes involving the escape-avoidance paradigm. The possible relationships among aggressive behavior, autonomic conditioning, and cognitive processes are discussed. Implications for the treatment and control of problems of aggression are suggested and compared with those emanating from the hydraulic model. (35 ref)—*Journal abstract.*

7417. **Holt, Robert R.** (New York U) **Freud's mechanistic and humanistic images of man.** *Psychoanalysis & Contemporary Science*, 1972, Vol 1, 3-24.—Contrasts the mechanistic view of man most commonly associated with Freud's theories with a conflicting humanistic image of man which can be inferred from his later speculative works, his letters, and his own life. The influence of these two images of man on psychoanalytic theories is discussed. It is suggested that mechanistic theories of man, which see him as devoid of freedom and responsibility, can have dangerous social and political consequences and can dehumanize psychotherapeutic treatment. The humanistic image of man, which has an inherent therapeutic orientation, is viewed as personally and socially constructive. The relations of humanistic and mechanistic psychoanalysis to scientific methodology are discussed. It is concluded that a comprehensive psychological theory—which could encompass the physiological, biochemical, social, cultural, and philosophical aspects of man—is needed. (2½ p ref)—*J. Kelly.*

7418. **Kiener, Franz.** (Technischen U Berlin, Inst für Psychologie, W Germany) **[Investigations of body image: II.]** (Germ) *Zeitschrift für Klinische Psychologie und Psychotherapie*, 1974, Vol 22(1), 45-66.—Reviews the literature covering primary investigations in the field of body image. Body image is dependent upon the ego and its relationship to the environment. It represents subjective and objective awareness, conscious and subconscious, structural and with unclear boundaries. It changes, but reflects the present ego picture, at times accepting reality and at times rejecting it. (80 ref)—*S. D. Babcock.*

7419. **King, Mark.** (Duquesne U) **Sex differences in self-actualization.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 602.—Contrary to previous findings, no significant sex differences were found when the Personal Orientation Inventory was given to married couples. Results suggest that self-actualizing people choose other self-actualizers as mates, lessening previously reported sex differences.

7420. **Klein, George S.** **The vital pleasures.** *Psychoanalysis & Contemporary Science*, 1972, Vol 1, 181-205.—Discusses sensual and nonsensual pleasures as ego experiences which contribute to identity development and to the structuring of motives and behavior patterns. Pleasure is seen as a positive ego experience, rather than as a mechanistic release of libido pressing for discharge. The prototypical conditions of pleasure are derived from infantile experiences but undergo cognitive and affective changes as the self develops. 6 prototypes of the pleasure experience, including reduction of unpleasant tension, sensual pleasure, pleasure in perceptual and cognitive functions, pleasure from experiencing the self as an effective agent, and aesthetic pleasure, are described. It is suggested that the capacity to experience different types of pleasure at appropriate points of development contributes to ego strength. (2 p ref)—*J. Kelly.*

7421. **Kubie, Lawrence S.** **The drive to become both sexes.** *Psychoanalytic Quarterly*, 1974, Vol 43(3), 349-426.—Argues that the assumption, whether tacit or overt, that any human being wants to be only one sex to the exclusion of the other is psychoanalytically naive and runs counter to all psychoanalytic experience. The concept an unconscious drive to become both sexes is further elaborated.

7422. **La Branche, Anthony.** (Loyola U, Chicago) **Neglected and unused things: A narrative encounter.** *Review of Existential Psychology & Psychiatry*, 1973, Vol 12(2), 163-168.—Discusses the use of ego-invented narratives to bring forgotten and unused objects into harmony with the autobiographical narrative of the self. It is suggested that invented histories of nonuse which concede a separate existence for neglected things indicate an imaginative continuity which orders thought and perception.

7423. **Laplanche, J.** **[Castration: Theoretical evolution and current status: A course in the curriculum of the U.E.R. Clinical Studies.]** (Fren) *Bulletin de Psychologie*, 1973-1974, Vol 27(13-14), 685-709.—Continues the discussion of the castration complex in a 2nd article (see PA, Vol 53:Issue 4) which examines the logic of the phallic phase, differences of the castration complex in boys and girls and in men and women, theoretical constructs of the castration complex, the effect of the castration complex in the oedipal situation, and the "taboo of virginity."—*Z. M. Cantwell.*

7424. **Laplanche, J.** **[Castration: Theoretical evolution and current status: A course in the curriculum of the U. E. R. Clinical Studies.]** (Fren) *Bulletin de Psychologie*, 1973-1974, Vol 27(10-12), 632-646.—Discusses the following theoretical aspects of a Freudian construct, the castration complex: the theory of the complex; the specificity of the complex in psychoanalysis; Freud and the castration complex; "Little Hans" and the theory of

infantile sexuality; and the role of the castration complex in the evolution of infantile sexuality.—Z. M. Cantwell.

7425. Marshall, Bernice (Ed.). *Experiences in being*. Belmont, CA: Brooks/Cole, 1971. 317 p.—Presents a collection of 29 articles and dialogues on current personal and social issues and how the perception of these can contribute of self-awareness. Topics include the interpretations of emerging, inner, reflected, and searching aspects of man's self-image and the experiences precipitated by these (e.g., freedom, conflict, or loneliness); how man's self-image reflects in his interpersonal relationships; and the application of methods of increasing self-knowledge to the educational process. (3 p ref)

7426. Muro, James J. & Drummond, Robert J. (U Maine, Orono) *A note on college level norms for the HIM-B. Small Group Behavior*, 1974(May), Vol 5(2), 145-156.—Norms for the Hill Interaction Matrix (HIM-B) are provided from responses by 337 female and 178 male freshmen from the University of Maine in Orono.

7427. Nakonečný, M. (U Karlova, Katedra psychologie a pedagogiky, Prague, Czechoslovakia) [Psychological function and structure of the "Jáství." (Czech) *Československá Psychiatrie*, 1973(Feb), Vol 69(1), 45-50.—Analyzes different meanings of the Czech term "jáství" which in English is akin to "ego," "self," or even "personality." Models of these concepts by P. A. Bertocci, G. W. Allport, H. B. English, E. R. Hilgard, and others are discussed. The term has empiric connotations and explains unity of mental life and consistency of external behavior. It refers to both structure and dynamic functioning, and is an important concept in psychiatry and clinical psychology. This does not mean that understanding behavior in terms of classical and instrumental conditioning is excluded, but that use of the concepts "self" or "ego" is psychologically more meaningful and appropriate. (21 ref)—V. Fischmann.

7428. Oakland, James A. (Fuller Theological Seminary, Graduate School of Psychology, Pasadena, CA) *Self-actualization and sanctification*. *Journal of Psychology & Theology*, 1974(Sum), Vol 2(3), 202-209.—Discusses the theological concept of sanctification from the reformed and Wesleyan perspective and equates that perspective with the psychological concept of self-actualization. Both concepts attempt to describe a long-term growth process in the individual whereby certain characteristics become increasingly prominent. Christ is set forth as the outstanding example of a self-actualizing person.—*Journal abstract*.

7429. Ogilvie, Bruce C. (California State U, Inst for the Study of Athletic Motivation, San Jose) *Stimulus addiction: The sweet psychic jolt of danger*. *Psychology Today*, 1974(Oct), Vol 8(5), 88-94.—Studied athletes of national or world caliber using the MMPI, the Edwards Personal Preference Schedule, the 16 PF, and interviews. These athletes have strong desires to achieve, are autonomous, self-assertive, and forthright. They showed low anxiety and a strong sense of reality. They differ from nonathletes in that they satisfy their human need for stimulation by exposing themselves to danger.—E. J. Posavac.

7430. Olivieri de Perdikidi, H. [Infantile mourning in projective techniques.] (Span) *Revista de Psicología*

*General y Aplicada*, 1974(Mar-Apr), Vol 29(127), 345-353.—Presents case study data showing responses to projective tests in children following the death of a parent.

7431. Orpen, Christopher. (U Cape Town, S Africa) *The susceptibility of the Quick Test to instructional sets*. *Journal of Clinical Psychology*, 1974(Oct), Vol 30(4), 508-509.—Administered the Ammons Quick Test to 135 2nd-yr and 126 senior-year male high school students under intelligence, achievement, and standard instructional sets. Analysis revealed a significant main effect for Instructional Set, indicating the susceptibility of the Quick Test to instructional sets.

7432. Peatling, John H. *The architecture for self as its own builder*. *Character Potential*, 1974(Oct), Vol 7(1), 28-36.—The papers by A. L. Miller-Tiedeman (see PA, Vol 53:Issue 3) and L. W. Barber (see PA, Vol 53:Issue 3) are related by architectural principles which serve to introduce the theoretical tools found in the personality model developed by J. H. Peatling and A. L. Miller-Tiedeman for the architecture for self as its own builder. This mathematical model allows for differentiation and integration. It is hierarchical and cumulative. It is also built on interactions of basic personality elements which, though complex, can model a way for an adult at a Piagetian level of formal operations to restructure self with awareness. This is the last of 4 papers in a symposium on career, choice, and the self (see PA, Vol 53:Issue 3).—L. W. Barber.

7433. Penner, Wes J.; Zingle, Harvey W.; Dyke, Ron & Truch, Steve. (Edmonton Public School System, Alberta, Canada) *Does an in-depth transcendental meditation course effect change in the personalities of the participants?* *Western Psychologist*, 1973, Vol 4(4), 104-111.—Studied how a course in transcendental meditation (TM) affected the responses of 50 male and 50 female Ss to the Omnibus Personality Inventory (OPI) and how these responses compared with those of the normative sample (NS). The OPI was administered before and after the 22-day course. The TM students considered themselves less tense and anxious than the NS before the course, and even more relaxed afterward. Before the course the TM participants were more prone to "acting out" their feelings, more interested in social activities, and more liberal in religious orientation, than the NS; after the course they responded more like the NS, especially on the religious orientation subscale. TM Ss differed markedly from the NS, and did not change during the course, in being more imaginative, free-thinking, intellectually oriented, self-determining, considerate of others, and feminine. On the thinking introversion, personal integration, and response bias subscales, TM Ss were like the NS before the course, but afterward had higher scores than the NS. The limitations of the study are discussed.—D. R. Evans.

7434. Ray, J. J. & Martin, J. (U New South Wales, Sydney, Australia) *How desirable is dogmatism?* *Australian & New Zealand Journal of Sociology*, 1974(Jun), Vol 10(2), 143-144.—Studied the relationship among scores on the Rokeach Dogmatism Scale, the Martin Social Desirability Scale, and the amount of university education. The 2 scales were administered to a total of 177 psychology students at Macquarie University who had 1,

2, and 3 or more yrs of contact with the university. Dogmatism decreased with the amount of university education but was unrelated to social desirability. The desirable and undesirable aspects of dogmatism are discussed.—*R. Brislin.*

7435. Ray, John J. (U New South Wales, Kensington, Australia) **Dogmatism in relation to sub-types of conservatism: Some Australian data.** *European Journal of Social Psychology*, 1973, Vol 3(3), 221-232.—Examined the relationship between authoritarianism and conservatism, using newly developed forms of the Dogmatism and Fascism scales to correlate with political, social, moral, and economic conservatism. Ss were 118 members of upper-, middle-, and working-class neighborhoods in Sydney, Australia. It is concluded that both new scales were equally good measures of general authoritarianism among supporters of Australian political parties. The new Dogmatism scale was significantly and positively correlated with the political, social, and moral conservatism scales, but negatively related with economic conservatism. (17 ref)—*Journal abstract.*

7436. Reitz, H. Joseph & Groff, Gene K. (Indiana U) **Economic development and belief in locus of control among factory workers in four countries.** *Journal of Cross-Cultural Psychology*, 1974(Sep), Vol 5(3), 344-355.—Investigated belief in locus of control among 1,140 factory workers from a developed Western country (the US), 716 from a developed oriental country (Japan), 469 from a developing Western country (Mexico), and 258 from a developing oriental country (Thailand). Ss were tested on Rotter's Internal-External Control Scale. Items were grouped for analysis into 4 categories proposed as meaningful in cross-cultural research: leadership and success; respect; politics; luck and fate. Comparisons were made of the percentage of external responses by category. Results show workers from the 2 developed countries were more internal on leadership and success than workers from the 2 developing countries, and workers from the 2 oriental countries were more external on respect than workers from the 2 Western countries. Other significant intercountry differences were found on the remaining categories.—*Journal abstract.*

7437. Romano, P. (Ospedale Neuropsichiatrico Provinciale di Treviso, Italy) [Some considerations on Jungian psychology as a topical question in the current cultural situation.] (Ital) *Rivista Sperimentale di Freniatria e Medicina Legale delle Alienazioni Mentali*, 1972(Oct), Vol 96(5), 1381-1389.—Discusses the respective roles of the personal and the collective unconscious in individual development. It is argued that analysis which focuses only on the personal unconscious leaves the individual in a state of infantile dependency on others, while analysis which takes into consideration the collective unconscious fosters a mature dependency. Thus, it is asserted that in a society that rewards infantile dependency and imposes limited motivational constructs Jungian psychology is of critical importance. (English summary) (17 ref)—*L. Klinkon.*

7438. Russon, Gordon W. **Interpersonal adequacy: A behavioural determinant.** *Canadian Journal of Criminology & Corrections*, 1974(Oct), Vol 16(4), 393-402.—Elaborates a concept of interpersonal adequacy, defined as the individual's assessment of self in

comparison with others, and notes that this assessment influences choice of interactional patterns. A continuum rather than a dominance/submission dichotomy is proposed, and 4 patterns of behavior with increasing adequacy are identified: submissive, decompensating, overcompensating, and cooperative. Personality types that fit these terms are described, and a checklist of 60 items proposed to relate to the categories is presented for evaluation purposes. It is suggested that the categorization may be of use in assessing and treating offenders. (French abstract)—*C. Wright.*

7439. Salay, Ference. **An application of verbal stimulus-response indicants to objective measurement of cathexis.** *Göteborg Psychological Reports*, 1974, Vol 4(10), 20 p.—In a preliminary step of establishing methods for measurement of cathexis, factor analysis was used to make specific a certain way of thinking about some verbal stimulus-response indicants of cathexis. Results are in fair overall agreement with expectations—valid application of such verbal stimulus-response media to problems of the measurement of cathexis. Some recent theoretical and empirical work by C. W. Ramey which inspired the present study is reviewed. (15 ref)—*Journal abstract.*

7440. Scarr-Salapatek, Sandra. **Unknowns in the IQ equation: A review of three monographs.** In F. Reber & L. Dorman (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Reviews and evaluates the theses of A. R. Jensen, H. J. Eysenck, and R. J. Herrnstein and other commentaries on the IQ controversy.

7441. Sheppard, Charles; Bates, Cindy; Fracchia, John & Mertis, Sidney. (Central Islip State Hosp, Demographic & Special Studies Unit, NY) **Psychological need structures of law enforcement officers.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 583-586.—Hypothesizing that a relationship exists between personality and occupational choice, the Edwards Personal Preference Schedule (EPPS) was employed to assess need differences for a sample of 33 metropolitan police officers. Responses were compared with those of the EPPS adult male and male college normative groups. Comparison with the adult male population showed that Ss scored higher on needs for Achievement, Exhibitionism, and Heterosexuality and lower on needs for Abasement, Affiliation, Deference, Endurance, Nurturance, and Order. Comparison with the male college normative population showed that Ss differed in having a lower Affiliation need. The common findings of the present and 2 previous studies suggest that compared to the male general population, police officers have higher needs for Exhibitionism and Heterosexuality and a lower need for Affiliation. Further studies are necessary for clarification.—*Journal abstract.*

7442. Simon Hernandez, M. E. [The clash of the green in the ZTT and the Rorschach.] (Span) *Revista de Psicología General y Aplicada*, 1974(Mar-Apr), Vol 29(127), 289-309.—Discusses the symbolism of green and reactions to it found with the ZTT (Zulliger Test) and the Rorschach.

7443. Sorrentino, Richard M. & Short, Judith-Ann. (U Western Ontario, London, Canada) **Effects of fear of success on women's performance at masculine versus**

**feminine tasks.** *Journal of Research in Personality*, 1974(Oct), Vol 8(3), 277-290.—Tested hypotheses derived from M. Horner's (1968) theory concerning the effect of the sex-role orientation of the performance situation on the arousal of the motive to avoid success in women. The study compared the performance of 164 female undergraduates high and low in the motive to avoid success in a male-oriented and a female-oriented situation. It was found that the Ss performed significantly better ( $p < .01$ ) in the male-oriented than in the female-oriented situation, with this difference between conditions being greater for those Ss scoring high rather than low in the motive to avoid success ( $p < .05$ ). Results are inconsistent with an inhibitory anxiety explanation of motive to avoid success. The possibility that the measure of this motive may in part be a measure of ability is discussed. (18 ref)—*Journal abstract*.

7444. **Stewin, L. & Anderson, C. C.** (U Alberta, Edmonton, Canada) **Cognitive complexity as a determinant of information processing.** *Alberta Journal of Educational Research*, 1974(Sep), Vol 20(3), 233-243.—Conducted a study of 107 11th-grade students to examine the relationships between cognitive complexity as defined by B. Tuckman's (1966) Interpersonal Topical Inventory (ITI) and O. Harvey's (1967) Conceptual Systems Test (CST). Generally, characteristics of impulsivity, flexibility, and conformity were associated with ITI functioning, whereas a number of religious orientations were found to be associated only with CST functioning. It is concluded that (a) the ITI and CST assessed conceptual systems functioning differently and (b) no necessary relationship existed between their domains of functioning. The latter conclusion suggests that a disparity rather than a difference exists between at least these 2 psychometric approaches to systems functioning. (40 ref)—*Journal abstract*.

7445. **Templer, Donald I.; Lester, David & Ruff, Carol F.** (Pleasant Grove Hosp, Anchorage, AK) **Fear of death and femininity.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 530.—Results of 2 studies with undergraduates demonstrate a positive but weak association between femininity and fear of death. This association may be partly a function, at least for females, of the positive association of these 2 variables with general activity.

7446. **Vanggaard, Thorkil. Phallós: A symbol and its history in the male world.** New York, NY: International Universities Press, 1974. 208 p. \$2.95.—Analyzes the history and significance of the phallus in different cultures, emphasizing the concept of the homosexual radical—the drive toward a temporary hierarchical relationship between a young man and an older teacher or advisor, both of whom are otherwise heterosexual. The manifestations of this impulse in ancient Greek and Roman, early Christian, and contemporary cultures are discussed.

7447. **Vondráček, V.** (U Karlova, Výzkumná psychiatrická laboratoř, Prague, Czechoslovakia) [Natural and pathological significance of anxiousness and fear.] (Czec) *Ceskoslovenská Psychiatrie*, 1973(Feb), Vol 69(1), 35-38.—Discusses the difference between anxiety and fear. Empirical findings are presented concerning the anatomico-pathological substrate of fear, its biochemistry, motivation, types, incidence in different syndromes,

and importance in everyday life. Phobias are described, analyzed, and classified and their relationships to obsessions, compulsions, and delusions are mentioned. (Russian & English summaries)

7448. **Wakefield, James A. et al.** (U Houston) **Eysenck's personality dimensions: A model for the MMPI.** *British Journal of Social & Clinical Psychology*, 1974(Dec), Vol 13(4), 413-420.—9 of the 10 clinical scales of the MMPI were considered as measures of the neuroticism, psychoticism, and extraversion personality dimensions of H. J. Eysenck. The correspondence between the conceptual placement of the subtests in Eysenck's 3-dimensional space and their empirical placement in factor space was tested for 205 married males and 205 married females. The correspondence was significant for both sexes but considerably stronger for the females than for the males. (27 ref)—*Journal abstract*.

7449. **Wardell, D.** (U Alberta, Edmonton, Canada) **Stimulus intensity and introversion-extraversion.** *British Journal of Social & Clinical Psychology*, 1974(Dec), Vol 13(4), 425-426.—Investigated the relationship between reactions to 4 levels of acid stimulation (5 drops of lemon juice at 4 pH levels—3.5–0.5) and extraversion-introversion as measured by the Eysenck Personality Inventory (EPI). Ss were 16 extraverts, 16 introverts, and 16 "ambiverts" selected from 315 undergraduates by EPI scores. Introverts salivated more than extraverts on only 1 stimulus level. Extraverts and ambiverts rated levels of the physical stimulus as increasingly stronger. Findings only partially support the hypothesis of "transmarginal inhibition" (i.e., a response decrease when the intensity of a stimulus is raised to a very high level).—*L. Gorsey*.

7450. **Warr, Peter & Rogers, Colin.** (MRC Social & Applied Psychology Unit, U Sheffield, England) **Some personality effects on extreme responding and on the relative weighting of items in combination.** *British Journal of Social & Clinical Psychology*, 1974(Dec), Vol 13(4), 347-357.—Examined variations in judgment associated with differences in ethnocentrism-authoritarianism. 106 undergraduates completed 2 scales measuring these personality traits (by P. B. Warr et al, and by R. E. Lee and P. B. Warr), in addition to recording their impressions of 12 different groups of people on 15 11-point bipolar scales. Ss then engaged in a series of irrelevant tasks before rating 10 compound stimuli composed of a nonrelevant cue from the 1st rating scale and a pro- or antiethnocentrism item. Results are consistent with the idea that the content of an ethnocentric belief system can generate significant relationships between ethnocentrism scores and frequency of extreme responding. It is cautioned, however, that although there are significant judgmental correlates of ethnocentrism scores, these arise primarily from the content of the beliefs held by different scale scorers. (15 ref)—*L. Gorsey*.

7451. **Zoch, Hans-Dieter.** (U Salzburg, Psychologisch-es Inst, Austria) **A study of the validity criteria of tests of social intelligence.** (Germ) *Diagnostica*, 1974, Vol 20(3), 95-106.—Administered to 104 high school students 1 measure of each of Guilford's 6 factors of behavioral cognition (social intelligence), a sociogram questionnaire, and the 9 subtests of R. Amthauer's Intelligence-Struktur-Test (IST) (1955). Correlations

between the behavioral cognition measures and 12 sociogram scores were, with a few exceptions, nonsignificant; and a factor analysis of the behavioral cognition measures, the number of positive and of negative choices of the sociogram, and the IST subtests did not yield a social intelligence factor. The behavioral cognition measures are stable and homogeneous, but statistics on items which could be deleted from them are presented.—*M. Morf.*

## PROFESSIONAL PERSONNEL

7452. ———. [The Fourth Japanese Neuropsychiatric Symposium, October, 1972: A comparative study of cultural, psychological and medical problems in Western Japan.] (Japn) *Kyushu Neuro-psychiatry*, 1972(Dec), Vol 18(3-4), 141-175.

7453. Aaron, Ruth. The analyst's emotional life during work. *Journal of the American Psychoanalytic Association*, 1974, Vol 22(1), 160-169.—Discusses 4 reports presented at the 1973 annual meeting of the American Psychoanalytic Association. The papers dealt with how the analyst experiences his inner life during his work; with empathy, countertransference, and the analyst's personal and professional development; with the effect on him of intercurrent events; and with his love, hate, and indifference toward the patient.

7454. Albuquerque, Manuel A. [Antipsychotherapy.] (Span) *Revista de Psiquiatria y Psicologia Medica*, 1973(Oct), Vol 11(4), 219-224.—Discusses the lack of confidence in therapists that is evident in some people. Since the therapist studies the behavior of the individual on the biological, psychological, and social level, and since it is difficult to understand behavior on all these levels, it is not surprising that the therapist sometimes exhibits professional insecurity. Psychiatrists are required to enact many difficult roles. These problems suggest that psychiatry has been the target of more accusations and suspicions than it deserves. (17 ref)—*W. B. Haslam.*

7455. Authier, Jerry & Gustafson, Kay. (U Nebraska, Medical Ctr, Psychiatric Inst, Omaha) Application of supervised and nonsupervised microcounseling paradigms in the training of paraprofessionals. *Journal of Counseling Psychology*, 1975(Jan), Vol 22(1), 74-78.—Studied the effect of supervision on the learning of basic clinical interviewing skills within the microcounseling format. Ss were 12 19-33 yr old paraprofessional counselors (4 women and 8 men) employed in the drug research center of a midwestern psychiatric institute. Each S was assigned randomly to either a supervised or a nonsupervised microcounseling training condition. Trained coders categorized 32 trainee utterances from each S's pre- and posttraining videotaped interviews as 1 or more of the microcounseling skills, 1 or more of the opposite skills, or a miscellaneous skill. Analysis revealed only 1 significant effect indicating more frequent use of microcounseling than opposite skills. No significant differences were found between training conditions or across time.—*Journal abstract.*

7456. Barraclough, Brian & Wace, Godfrey. Learning clinical psychiatry in a provincial mental hospital.

*British Journal of Psychiatry*, 1974(Sep), Vol 125, 303-309.—Used an "educational technology" approach to assess the clinical teaching of psychiatry to registrars in a provincial mental hospital. Teaching methods based on learning theory and which relate the academic aspects of training more closely to clinical work are considered likely to be more efficient than present methods.—*Journal summary.*

7457. Bellak, Leopold. (New York U, Albert Einstein Medical Inst) Careers in psychotherapy. *Dynamische Psychiatrie*, 1974, Vol 7(4), 242-247.—Describes the intellectual, emotional, financial, physical, and other aspects of careers in psychotherapy. Suggestions for keeping "a sound mind in a sound body" are included.

7458. Bok, Sissela. The ethics of giving placebos. *Scientific American*, 1974(Nov), Vol 231(5), 17-23.—Discusses the issues raised when a treatment is prescribed that, unknown to the patient, cannot have any specific effect on his condition. It is concluded that this widespread practice is often deceptive, and should be restricted.

7459. Boneau, C. Alan & Cuca, Janet M. (American Psychological Assn, Washington, DC) An overview of psychology's human resources: Characteristics and salaries from the 1972 APA survey. *American Psychologist*, 1974(Nov), Vol 29(11), 821-839.—Mailed an extensive questionnaire to the total American Psychological Association (APA) membership and to a sample of nonmembers to obtain information, in areas such as the availability of minority group members and the age distribution of current academicians, relevant to a subsequent restructuring of recruiting and training objectives. The responses of 27,371 members and of 7,990 nonmembers who were eligible for membership in the APA were analyzed in terms of level of highest academic degree, sex, subfield, employment setting, departmental setting in education, type of employer, work activity, years of experience, age, and racial-ethnic identity. A further breakdown of the APA membership data by degree level and by sex is presented, and information on employment status and salaries is evaluated. It is concluded that the APA is more representative of doctorate psychologists than of master's-level psychologists.—*B. Lindsey.*

7460. Crown, Sidney. (London Hosp, England) The "clinical" psychologist: Stigma, paradox and hope. *British Journal of Medical Psychology*, 1972(Sep), Vol 45(3), 199-202.—Discusses maladaptive behavior patterns among clinical psychologists due to the imperfections of their techniques and uncertainties about their roles. Syndromes of maladaptive behavior are characterized: e.g., the "perseverative psychometrician" or the "compulsive WAIS tester." Relatively recent adaptive behavior patterns are reviewed and their implications for future training are examined.—*R. Hall.*

7461. Dachs, Anne A.; Holland, George J. & Klotz, Addie L. (San Fernando Valley Health Consortium, Granada Hills, CA) A regional health manpower survey conducted by a community consortium. *Health Service Reports*, 1974(Jan-Feb), Vol 89(1), 71-76.—Distributed a regional health manpower questionnaire to 350 health care providers in California. Data were available from 220 respondents. Interviews were also conducted with 67

administrators. The overall employee vacancy rate was 1.6%. It is concluded that for 2 or 3 yrs existing training programs should not be expanded and new training programs should not be started.

7462. **Dauber, Bonnie.** *Profile of an abortion counselor.* *Family Planning Perspectives*, 1974(Sum), Vol 6(3), 185-187.—Mailed 350 questionnaires to 60 randomly selected institutions in the San Francisco area. Data are presented from the 1st 100 completed questionnaires. Counselors are described in terms of personal characteristics (including their use of contraceptives), training, experience, and activities they perform while on the job.

7463. **Dorsey, Richard.** (Merrill-National Lab, Cincinnati, OH) *Utilization review, cost control, and patient care in psychiatry.* *Psychiatric Annals*, 1974(Jun), Vol 4(6), 69-79.—Argues that the implementation of utilization review in medicine and psychiatry will result in (a) administrative constraints on clinical decisions, (b) compromises in confidentiality, and (c) more precise standards of diagnosis and treatment through statistical analysis. Such review may be useful to psychiatrists in patient care decisions. (36 ref)

7464. **Dörken, Herbert & Whiting, J. Frank.** (Langley Porter Neuropsychiatric Inst, San Francisco, CA) *Psychologists as health-service providers.* *Professional Psychology*, 1974(Aug), Vol 5(3), 309-319.—Analyzes data from the 1972 American Psychological Association manpower survey and reports results of a pilot fee practice survey that was sent to a stratified sample of these psychologists ( $N = 1,312$ ). Responses indicate that 75% were engaged in no fee-for-service activities, and that 21% and 4%, respectively, were engaged in part- and full-time fee-for-service activities. Data are analyzed for these 3 groups on variables of age of patients seen, hourly fees, annual income, insurance experience, etc. Hypotheses are proposed on the basis of these data relating to the most effective delivery of psychological and other health services. (18 ref)—C. Wright.

7465. **Epstein, Louis E. & Miller, Ted L.** (Indiana U) *The need for educational input in graduate training programs for school psychologists.* *School Psychologist*, 1974(Apr), Vol 28(4), 21-22.—Argues that knowledge of psychology must be augmented by a knowledge of educational practice in general if school psychologists are to give effective service. Hence graduate programs in school psychology should include in their curriculum exposure to educational practices.

7466. **Flomenhaft, Kalman & Carter, Ross E.** (Philadelphia Child Guidance Clinic, Inst for Teachers of Family Therapy, PA) *Family therapy training: A statewide program for mental health centers.* *Hospital & Community Psychiatry*, 1974(Dec), Vol 25(12), 789-791.—Reports on staff training programs in family therapy techniques conducted 1 day/wk for 5 mo at mental health centers throughout Pennsylvania. Since 1972 approximately 150 mental health professionals at 35 centers have participated. 67 staff members who had worked at least 1 yr since completing the program were asked to fill out a questionnaire. The 53 respondents (mean age = 35.7 yrs), who had worked as professionals an average of 7½ yrs, spent a greater portion of their direct-service time treating whole families. While the

overall gain was only 21%, comparison of individual changes in time spent treating families indicated a significant increase ( $p < .01$ ). Ss said they felt the program gave them new ways of looking at problems and new ideas about treatment.—*Journal abstract.*

7467. **Forman, James & Gold, Naomi.** (Temple U) *Student perspectives: A short history of Division 16, APA.* *School Psychologist*, 1974(Apr), Vol 28(4), 18-20.—Outlines the evolution of the School Psychology Division of the American Psychological Association since 1946. Changes in membership criteria and committee activities are discussed. It is concluded that the division has continually pursued its goals of excellence and professionalism.

7468. **Gadbois, C.** (Ecole Pratique des Hautes Etudes, Lab de Psychologie du Travail, Paris, France) *[Career orientation: Family and professional plans among young girls during their training.]* (Fren) *Bulletin de Psychologie*, 1973-1974, Vol 27(10-12), 622-628.—Conducted a questionnaire study of family and career plans of 196 student nurses at the beginning and end of training. Results indicate that the major determinant of professional plans at the end of training was the nature and duration of the professional activity of Ss' mothers. However, the caution is expressed that economic factors could be masking attitudes and motives of mothers who work. A more discriminating study is needed to verify this observation.—Z. M. Cantwell.

7469. **Goldman, Roy D. & Singer, Robert D.** (U California, Riverside) *How do mental health paraprofessionals form judgments about patients? The development of a patient evaluation scale.* *Community Mental Health Journal*, 1974(Fal), Vol 10(3), 319-331.—Explored the semantics of paraprofessionals' judgments about patients. Psychiatric technicians in a public mental hospital were asked to make evaluative judgments about 256 patients in their wards. They were also asked to rate the patients on a 22-item scale concerned with specific behaviors or first-order inferences about behavior. The pattern of correlations as well as regression weights between evaluations and behavioral ratings were used to infer the "meanings" of the paraprofessionals' evaluations of patients. Results indicate that most paraprofessionals tended to look for similar behaviors in making evaluations of patients.—*Journal abstract.*

7470. **Hale, B. John; Buchan, L. Gerald & Dickerson, Morgan.** (U Oregon, Medical School) *Use of transactional analysis and other tools in understanding drug activities.* *Journal of Drug Education*, 1974(Sum), Vol 4(2), 197-204.—This paper suggests ways for the drug treatment specialist to explore his attitudes toward drugs and drug use and serves as an aid in the treatment of drug users and their families.

7471. **Heikkinen, Charles A.** (Yale U) *Another look at teaching experience and closed-mindedness.* *Journal of Counseling Psychology*, 1975(Jan), Vol 22(1), 79-83.—Replicated a study by J. Wittmer and G. B. Webster (see PA, Vol 44:4216) in which significant relationships consistently appeared between teaching experience and closed-mindedness in counseling students as measured by the Rokeach Dogmatism Scale. The present sample consisted of 52 master's level students in counseling, 23 of whom had teaching experience. The analysis revealed

significant results in agreement with the findings of the earlier study when the present sample was combined with that of Wittmer and Webster. Age was also significantly related to closed-mindedness in both the present and combined samples. Recommendations are made for reducing levels of closed-mindedness among counselors in training and for a careful examination in terms of possible closed-mindedness of program applicants who are older and/or have teaching experience. The requirement of teaching experience for counseling practice is challenged. (15 ref)—*Journal abstract*.

7472. Hertz, Dan G. (Hebrew U, Hadassah Medical School, Jerusalem) **Problems and challenges of consultation psychiatry in gynecology and obstetrics.** In H. Musaph (Ed), *Proceedings of the 2nd Congress of the International College of Psychosomatic Medicine, Amsterdam, 1973: Mechanisms in Symptom Formation*. New York, NY: S. Karger, 1974. vii, 303 p.

7473. Johnson, Dorothy E. (U California, Los Angeles) **Development of theory: A requisite for nursing as a primary health profession.** *Nursing Research*, 1974(Sep-Oct), Vol 23(5), 372-377.—Discusses problems facing nurse scientists and educators in influencing the direction and progress of nursing as a profession and a scientific discipline. The lack of a scientific foundation of knowledge in nursing, especially an absence of systematic theoretical and conceptual schemes, can be partially attributed to the profession's status as an occupation or service which has not been considered as a particularly socially valuable one, and also partially to the problems involved in converting the theory systems of natural science to the practices of applied science. Alternative routes to theory development for nursing are identified and related to the various purposes of nursing as perceived by professionals. Criteria for evaluation of the body of nursing knowledge are also examined, including the social congruence, significance, and utility of conceptual models used to explain nursing practices. (26 ref)—*L. Gorsey*.

7474. Kawash, George & Fuchs, Alfred H. (U Guelph, Ontario, Canada) **A factor analysis of ratings of five schools of psychology on prescriptive dimensions.** *Journal of the History of the Behavioral Sciences*, 1974(Oct), Vol 10(4), 426-437.—A. H. Fuchs and G. Kawash (see PA, Vol 53:Issue 4) reported judges' ratings for 5 schools of psychology on Watson's prescriptive dimensions. These data were subjected to factor analysis and the 5 schools described are compared in terms of 7 factors pertaining to the relationships among the prescriptions as they function in the views of the 5 schools.—*C. M. Franks*.

7475. Keen, Sam. **Voices and visions.** New York, NY: Harper & Row, 1974. v, 218 p. \$6.95.—Presents a collection of interviews with 8 contemporary psychologists, anthropologists, biologists, and social theorists, including N. O. Brown, H. Marcuse, C. Castaneda, and R. Assagioli.

7476. Krakowski, Adam J. (Champlain Valley-Physicians Hosp, Plattsburgh, NY) **Consultation psychiatry, present global status: A survey.** In H. Musaph (Ed), *Proceedings of the 2nd Congress of the International College of Psychosomatic Medicine, Amsterdam, 1973:*

*Mechanisms in Symptom Formation*. New York, NY: S. Karger, 1974. vii, 303 p.

7477. Lansdown, Richard. (Hosp for Sick Children, London, England) **The educational psychologist as a clinician.** *AEP (Association of Educational Psychologists) Journal*, 1974(Spr), Vol 3(6), 17-23.—Examines the future of the educational psychologist as a clinician in England. Rather than dichotomizing work with children in schools or with adults in hospitals, a new 6-yr training program could produce a "general practitioner," allowing the psychologist to work in many spheres.

7478. Loevinger, Jane. (Washington U) **Ego development: Syllabus for a course.** *Psychoanalysis & Contemporary Science*, 1973, Vol 2, 77-98.—Presents a syllabus for a graduate level course on ego development. Emphasis is placed on the historical development of ego theory, and on similarities between the structures of psychological theories of personality development and T. Kuhn's concept of the nature of scientific paradigms. (3 p ref)

7479. Lowenstein, L. F. **Psychologists/social services: What are your tasks?** *Association of Educational Psychologists' Journal & Newsletter*, 1973(Win), Vol 3(3), 25-28.—Considers how psychologists and social workers, both paid and voluntary, can work more closely together on certain urgent problems. Among the tasks to be undertaken cooperatively are preventative, educational, and therapeutic work, research and surveys, and government action.

7480. Majumdar, S. K. (NCERT, National Science Talent Search, New Delhi, India) **Scientific creativity: A research project under the National Science Talent Search Scheme.** New Delhi, India: National Council of Educational Research & Training, 1973. 53 p.

7481. Neely, Charles R. **Rehabilitation counselor attitudes: A study to compare the attitudes of general and special counselors.** *Journal of Applied Rehabilitation Counseling*, 1974(Fal), Vol 5(3), 153-158.—Conducted a study of 97 counselors carrying general caseloads and 64 counselors carrying special caseloads to determine the opinions of these Ss toward their employment. Results indicate little overall difference between the attitudes of counselors regardless of the type of caseload carried.—*Journal abstract*.

7482. Núñez, Flavio O. (U Buenos Aires, Facultad de Medicina, Argentina) **[Some elements of epistemology for physicians, psychiatrists, and psychologists.]** (Span) *Acta Psiquiátrica y Psicológica de América Latina*, 1974(Jun), Vol 20(3), 168-172.—Outlines the implications of epistemology, in the general sense of a theory of the sciences, with special emphasis on the training of students.

7483. Okonogi, Keigo. (Keio U, Medical School, Tokyo, Japan) **The psychiatrist's role-diffusion as psychotherapist in Japan.** *Dynamische Psychiatrie*, 1974, Vol 7(4), 248-257.—Notes that there are only a few psychoanalytically trained psychiatrists in Japan, and they are facing two crises: one is specifically Japanese (conditions of psychiatric service and sociocultural conditions in Japan) and the other is similar to Western problems in the field; i.e., the current shift from German descriptive psychiatry to American dynamic psychiatry.

7484. Perkins, David V. & Thompson, John R. (Indiana U) **An assessment of physicians' attitudes**

toward community mental health. *Community Mental Health Journal*, 1974(Fal), Vol 10(3), 282-291.—A study of 21 physicians indicates that Ss had a range of activity in and attitudes toward community mental health; this variation was not found to be a function of medical specialty or geographic location. (29 ref)

7485. Pérez Morales, F. et al. (U Buenos Aires, Inst de Investigaciones Médicas, Argentina) [Ten years of teaching medical psychology.] (Span) *Acta Psiquiátrica y Psicológica de América Latina*, 1974(Jun), Vol 20(3), 201-206.—Reports the experience since 1964 of a teaching group in the Psychiatric and Psychosomatic Section of the Medical Research Institute of Buenos Aires University, Argentina, in training students of medical psychology.

7486. Pyke, S. W. This column is about women: Sex and the Ontario psychologist. *Ontario Psychologist*, 1974(Oct), Vol 6(4), 42-44.—Reports that women are underrepresented in all components of *The Ontario Psychologist*, given their current numbers in 2 major professional organizations in Ontario.

7487. Remer, Rory & Sease, William. (U Kentucky) The development of a criterion instrument for counselor selection. *Measurement & Evaluation in Guidance*, 1974(Oct), Vol 7(3), 181-187.—Describes the development of an instrument that can be used as a predictive measure of counseling competence based on performance criteria. An analysis of variance of the total test scores of 82 Ss indicates that the instrument possessed significant discriminating qualities, although the various modes of presentation did not differ in the quality of discrimination.

7488. Riedel, Robert G. (Southwest Minnesota State Coll) The current status of the history and systems of psychology courses in American colleges and universities. *Journal of the History of the Behavioral Sciences*, 1974(Oct), Vol 10(4), 410-412.—Surveys 393 American institutions of higher learning and concludes that history systems courses in psychology are flourishing.

7489. Rubin, Theodore I. Shrink. New York, NY: Popular Library, 1974. 237 p. \$1.50.—Presents an autobiographical account of the author's search for self-knowledge and self-fulfillment as a psychiatrist.

7490. Spielberger, Charles D. (U South Florida, Clinical Training Program) Case seminar of group mental health consultation. *Professional Psychology*, 1974(Aug), Vol 5(3), 303-308.—Reports a 2-day per month group mental health consultation effort involving individuals from a variety of "caretaking" professions. Consultees present cases of general interest, in seminars that progress through 4 identifiable phases: introductory, warm-up, problem-focused, and ending. The psychologist consultant serves simultaneously as teacher, group leader, clinician, and facilitator. Benefits for consultees include reduced feelings of isolation and inadequacy. Although those in the field agree on the effectiveness of group consultation, the need for objective evaluation is suggested.—C. Wright.

7491. Stahl, Robert J. & Casteel, J. Doyle. (P. K. Yonge Lab School, Gainesville, FL) The status of pre-college psychology in the State of Florida during 1970-71 and 1972-73: A comparative report. Gaines-

ville, FL: P. K. Yonge Laboratory School, Research Mono No 8, 1973. iii, 46 p.

7492. Stahl, Robert J. (Ed.). (P. K. Yonge Lab School, Gainesville, FL) High school psychology in the United States and Canada: An anthology of recent status reports. Gainesville, FL: University of Florida, Coll of Education, 1974. 41 p.

7493. Thompson, Vaida D. & Newman, Sidney H. Educating psychologists to work in the population field. *Professional Psychology*, 1974(Aug), Vol 5(3), 320-324.—Presents suggestions for the education of psychologists in the field of population, emphasizing an interdisciplinary approach at all levels of training. Possibilities for programs at the undergraduate, graduate, and postdoctoral levels are described, and it is suggested that postdoctoral training, either short- or long-term, may be the most expeditious method. The necessity for administrative interest and support for population education and the desirability of resources for work within the community are pointed out.—C. Wright.

7494. Tophoff, M. [From plastic toward realities: Fantasies by an anonymous personality.] (Duth) *Nederlands Tijdschrift voor de Psychologie en haar Grensgebieden*, 1974(Jul), Vol 29(5), 399-405.—Describes learning experiences in preparing for the profession of a therapist. The report by T. de Wever (see PA, Vol 53:Issue 4) is used to indicate how an S attains normality by learning that situations demand reactions that are not absolute but consist of elements from both ends of a continuum of qualities, ranging from bad to good.—A. J. Ter Keurst.

7495. True, John E.; Young, Carl E. & Packard, Mary E. (Johns Hopkins U, Medical School) An exploratory study of associate degree programs for mental health workers. *Public Health Reports*, 1974(Jul-Aug), Vol 89(4), 345-352.—Conducted a survey of mental health worker associate degree programs at seven colleges offering such programs. 27 graduates were also interviewed. Although the programs were "relatively healthy and viable," a number of problem areas were uncovered. There was a need to find more jobs for the graduates and the work settings needed to be more prepared for the workers' entry, needed to provide adequate supervision, measure the workers' progress, and provide career ladders.—S. Blackman.

7496. Van Strien, P. J. (U Groningen, Netherlands) [Professional practice and professional ethics of business psychologists.] (Duth) *Mens en Onderneming*, 1974(Mar-Apr), Vol 28(2), 115-129.—Summarizes responses to a questionnaire regarding professional ethics and practices, received from 62% of the business psychologists in the Netherlands. Results are discussed in terms of a multirelational model of a psychological consultant. The number of business psychologists has increased from 30 in 1952 to 300 in 1972, and the scope of their activities has widened. They are no longer concerned chiefly with personnel matters, but deal with the entire area of organizational psychology. Membership in the Netherlands Institute of Psychology has decreased, however; 90% of these psychologists belonged to the Institute in 1952, but only 65% in 1972. The reasons for this are discussed. It is felt that there is a clear need for business psychologists to become independent of management. Based on the questionnaire

returns, a new code of ethics for the profession is being formulated.—A. J. Ter Keurst.

7497. Welches, Lois J.; Dixon, F. A. & Stanford, Elinor D. (US Dept of Health, Education and Welfare, US Public Health Service, San Francisco, CA) **Typological prediction of staff nurse performance rating.** *Nursing Research*, 1974(Sep-Oct), Vol 23(5), 402-409. —Based on a cluster analysis of 650 staff nurses' California Psychological Inventory scores, 6 clusters of variables that influenced performances were identified: (C1) Age and Experience; (C2) Intelligence, Independent Achievement, Sensitivity, and Flexibility; (C3) Job Satisfaction and Opportunity for Professional Growth; (C4) Perception of Self-Performance; (C5) Social Image; (C6) Leadership Potential and Capacity for Status. All but 33 of the 650 staff nurses fell into 1 of 12 O-types—each individual in a group had similar profiles on the 6 dimensions. Variables most related to the head nurse's rating of the staff nurse were in clusters C2 and C4 and the shift she was working. Among younger nurses, those who were more conforming and less ambitious received higher ratings than those who were very ambitious and somewhat rebellious. The oldest nurses in the sample received low head-nurse ratings. (16 ref)—*Journal abstract*.

## PHYSICAL AND PSYCHOLOGICAL DISORDERS

7498. Ashwell, Margaret & Etchell, Lindsey. (Clinical Research Ctr, Harrow, England) **Attitude of the individual to his own body weight.** *British Journal of Preventive & Social Medicine*, 1974(May), Vol 28(2), 127-132.—A random height and weight survey of 1,059 people in a London borough showed that overweight people were most accurate in the assessment of their weight and underweight people were the least accurate. Overweight women were more aware of their size than overweight men. Overweight women had made more attempts to lose weight than overweight men. There were no significant differences between overweight women of different age or class groups. Men in higher social classes were more likely than men in other groups to have tried to lose weight. These results show that the high prevalence of overweight associated with older and lower social class women cannot be explained by the fact that they are unaware of their size and only partly explained by the fact that they have not made attempts to lose weight. Results of a 2nd survey conducted among 2,173 Consumers' Association members show that the weights considered as ideal by these people corresponded very well with the ideal weights given by life insurance tables.—*Journal abstract*.

7499. Gambi, D.; Pinto, F. & Vacchini, F. (U Cattolica del Sacro Cuore, Medical School, Clinica delle Malattie Nervose e Mentali, Italy) **[Enuresis in infancy: Study of the family constellation in 10 children.]** (Ital) *Archivio di Psicologia Neurologia e Psichiatria*, 1974(Apr-Jun), Vol 35(2), 215-238.—Conducted individual and group interviews with 10 families with enuretic children and found it possible to relate specific family dynamics to the onset and maintenance of the enuresis.

7500. Goldstein, Kenneth M. & Blackman, Sheldon. (North Richmond Community Mental Health Ctr, Research & Evaluation Div, Staten Island, NY) **Generalizations regarding deviant groups.** Staten Island, NY: North Richmond Community Mental Health Center, 1973. 20 p.—Investigated generalizations about 10 different population groups made by 81 undergraduates using the Katz and Braly adjective favorableness ranking procedure. Data indicate a positive cluster of Ideal Person, Yourself, and Physically Disabled, a neutral cluster of Americans, Mentally Retarded, Negroes, and Mentally Ill, and a negative cluster of Drug Addicts, Criminals, and Alcoholics. Generalizations emerging for each group are examined. (30 ref)

7501. Haft, Jay S.; Benjamin, H. B. & Zeit, Walter. (Medical Coll Wisconsin) **Foreign bodies in the female genitourinary tract: Some psychosexual aspects.** *Medical Aspects of Human Sexuality*, 1974(Oct), Vol 8(10), 54-78.—Discusses eroticism, masochism, sadism, enforced chastity, the vagina as a hiding place, attempted self-therapy, and birth control and abortion as possible motivations for the existence of foreign objects in the female urogenital tract. Different types of objects that are found, their use as either masturbatory devices or as a means of achieving complete sexual satisfaction, and the indications of psychological disturbances are discussed. The need for treating such patients with concern and tact and recognizing their possible strong embarrassment is stressed; many patients will deny knowledge of how the object was introduced or may fabricate an impossible story to explain their condition. Pathological consequences of object insertion are described. (55 ref)—L. Gorsey.

7502. Roe, A. Michael. **Maladjusted: The assumption of normality.** *AEP (Association of Educational Psychologists) Journal*, 1974(Spr), Vol 3(6), 23-28.—Recommends the avoidance of a disease model, and the assumption of normality in understanding the behavior of maladjusted children. To assume normality is to insist that all behavior, whether one approves of it or not, must be interpreted whenever possible according to a single set of psychological principles. Ultimately all that we need to know about maladjusted children must be based on our knowledge of normal development. (15 ref)—I. L. Zimmerman.

7503. Sander, Klaus & Lück, Helmut E. (U Köln, Psychologische Beratungsstelle für Studierende, W Germany) **[Development of a scale for measuring students' problems.]** (Germ) *Zeitschrift für Experimentelle und Angewandte Psychologie*, 1974, Vol 21(2), 250-262.—Constructed a 44-item questionnaire inquiring into physical and psychological problems. 504 male and female students seeking advice at the students' counseling center at the University of Cologne answered the questionnaire. A factor analysis of the results revealed 3 factors which indicate student problems in general: restricted capacity for studying, autonomic disturbances with depressive overtones, and social rejection. Short scales were developed for identifying potential problem students in group sessions. (English & French summaries)—W. J. Koppitz.

7504. Segers, Marie-Jeanne; Mertens, Charles & Jucquois, Luc. **[Professional activity, anxiety,**

**depression and cardiovascular risk.]** (Fren) *Bulletin du CERP*, 1972(Oct-Dec), Vol 21(4), 131-143.—Examined the relationship between mental and physical health in 1,669 male Belgian postal workers. Results suggest that specific psychological and clinical risks can be associated with certain occupational levels; this association varies with age, but risks were more linked to occupation than to sedentary habits. Better mental health in higher occupational levels appeared to compensate for the sedentary nature of the position. (Spanish summary) (25 ref)—*English summary*.

7505. **Semi, A. A.** (Servizi Psichiatrici di Venezia, Centro Storico, Italy) [**Considerations on the advantages of illness in a military milieu.**] (Ital) *Rivista Sperimentale di Freniatria e Medicina Legale delle Alienazioni Mentali*, 1972(Oct), Vol 96(5), 1481-1488.—Discusses the psychological significance of illness in the military. The institution manifests a schizo-paranoid refusal to acknowledge illness or unreason, preferring to see the mentally ill person as "sly," or to grant him rest periods and other special privileges. These attitudes facilitate the sick person's regression to a narcissistic childlike state and rationalization of his illness. It is felt that this could have relevance in other cultural arenas. (English summary)—*L. Klinkon*.

7506. **Uchimura, Hideyuki; Saito, Masashi; Mukai, Akira & Hazama, Hidebumi.** (Hizen National Mental Hosp, Saga, Japan) [**Lipid and fatty acid compositions in the brains of psychiatric patients: A case of senile dementia.**] (Japn) *Kyushu Neuro-psychiatry*, 1972(Apr), Vol 18(1), 26-33.—Reports the results of brain examinations of 5 Ss: 64-yr-old male, senile dementia (SD); 49-yr-old male, epileptic with chronic diphenylhydantoin intoxication (EP); 36-yr-old female, encephalopathy due to 1314 TH intoxication (En); 46-yr-old male, chronic schizophrenic (CS); and 63-yr-old male, control (Co). The SD's brain showed no change in the amount of total cholesterol or in the ganglioside pattern, but a slight increase in the relative lipid compositions in the gray matter, cerebroside and sphingomyelin, a decrease in the phosphatidyl-ethanolamine, and no change in the fatty acid composition of each lipid. Both the EP and the En showed similar changes in lipid and fatty acid compositions and the ganglioside pattern, suggesting that drug intoxication may cause common changes in the brain and that the drugs may affect the sphingolipid metabolism of the gray matter. The CS showed a slight decrease in the long-chain fatty acids of the sphingolipids in the gray matter, but no changes in lipid composition or ganglioside pattern. (English summary) (18 ref)—*S. Ashida*.

7507. **Wadsworth, Michael.** (MRC Unit on Environmental Factors in Mental & Physical Illness, London School of Economics, England) **Health and sickness: The choice of treatment.** *Journal of Psychosomatic Research*, 1974(Aug), Vol 18(4), 271-276.—Discusses the more complex theories of causation of illness, theories which have been developed in the light of the changing pattern of illness and of new ideas which take into account the patient's life style and his concept of the illness. Correct diagnosis is difficult because of the influence of the patient's attitude, but social scientists are

investigating how and why these patterns develop and how the physician can deal with them.—*W. G. Shipman*.

### Mental Disorders

7508. **Adam, A. & Bauduin, A.** (U Liège, Pediatric Service, Belgium) [**Failure of the neurotic defense mechanisms in a preadolescent girl.**] (Fren) *Acta Psychiatrica Belgica*, 1973(Sep), Vol 73(5), 568-580.—Presents the case of a neurotic 13-yr-old girl with various phobias who developed anorexia and a psychosis 1 yr after the death of a younger nephew. Psychoanalytic and ego-psychological implications of the case are discussed at length. (English, Dutch, German, Italian & Spanish summaries)

7509. **Arizumi, Noboru.** [**Regional psychiatric clinics: Statistics on outpatients.**] (Japn) *Kyushu Neuro-psychiatry*, 1972(Apr), Vol 18(1), 63-66.—Reports statistical analysis of 1,293 new patients admitted to the clinic during 1970 and of 1,081 patients readmitted during December, 1970. Patients are classified by age, sex, diagnosis, age and diagnosis, location of home, and resources for paying hospital bills.

7510. **Bachor, Dan G.** (Foothills School Div, High River, Alberta, Canada) **The effects of stress, task structure and intellect on situational anxiety.** *Western Psychologist*, 1973, Vol 4(4), 98-103.—Studied the effects of stress, cognitive style, and trait anxiety on the state anxiety produced by a computer simulation game. 80 Ss were selected from 146 8th- and 9th-grade students on the basis of their scores on a divergent(D)-convergent(C) thinking test battery. They were assigned to 4 groups (C- D-, C+ D-, C- D+, and C+ D+), and within groups to a stress-no-stress treatment. Measures of state anxiety were taken at the beginning and end of the simulation game. The stress-no-stress effect was significant, but the convergent-divergent effect was not. The effect of trait anxiety was significant but the effect of nonverbal intelligence was not. Results are interpreted as consistent with the trait-state anxiety theory.—*D. R. Evans*.

7511. **Bash, K. W. & Bash-Liechti, J.** (Psychiatrische Universitätsklinik, Bern, Switzerland) **Studies on the epidemiology of neuropsychiatric disorders among the population of the City of Shiraz, Iran.** *Social Psychiatry*, 1974(Oct), Vol 9(4), 163-171.—Reports data from psychological evaluations of residents in low and middle socioeconomic status areas. Findings from 928 Ss show that 16.6% had significant psychiatric disorders and that the total prevalence rate was not significantly different from that in rural areas of Iran, although the rate was higher among the poor than among middle-class Ss.

7512. **Beck, Aaron T.** (U Pennsylvania, Medical School) **The development of depression: A cognitive model.** In R. J. Friedman & M. M. Katz (Eds), *The psychology of depression: Contemporary theory and research*. New York, NY: John Wiley & Sons, 1974. xvii, 318 p. \$15.

7513. **Beck, Samuel J.** (U Chicago) **Bimodality in schizophrenia: An adaptation to ambiguous communication.** *British Journal of Medical Psychology*, 1972(Sep), Vol 45(3), 221-232.—Examines the phenomenon of mutually contradictory attitudes and behaviors in the context of families of schizophrenic patients. The influence of family environment on development of

schizophrenia is discussed. Family research data are reviewed. Attempted adaptation to the contradictory messages of society by the family is concluded to be the mechanism that breeds schizophrenia. (21 ref)—*R. Hall.*

7514. **Beech, H. R. & Liddell, Andrée.** (Withington Hosp, Manchester, England) **Decision-making, mood states and ritualistic behavior among obsessional patients.** In H. R. Beech (Ed), *Obsessional states*, London, England: Methuen & Co, 1974. viii, 352 p. 45.

7515. **Beech, H. R. & Perigault, J.** (Withington Hosp, Manchester, England) **Toward a theory of obsessional disorder.** In H. R. Beech (Ed), *Obsessional states*, London, England: Methuen & Co, 1974. viii, 352 p. 45.

7516. **Beech, H. R. (Ed).** (Withington Hosp, Manchester, England) **Obsessional states.** London, England: Methuen & Co, 1974. viii, 352 p. £5.

7517. **Beech, H. R.** (Withington Hosp, Manchester, England) **Approaches to understanding obsessional states.** In H. R. Beech (Ed), *Obsessional states*, London, England: Methuen & Co, 1974. viii, 352 p. 45.

7518. **Beeckmans-Balle, M.** (Saint-Pierre Hosp, Children's Medical Service, Brussels, Belgium) **[Early infantile autism: Tentative considerations on factors of early diagnosis.]** (Fren) *Acta Psychiatrica Belgica*, 1973(Sep), Vol 73(5), 537-555.—Reports a longitudinal study of 27 children with early infantile autism. The severity of the affliction appears to depend on 2 major factors: (a) the intellectual potentialities of these children, which have often been overestimated; and (b) the disturbance of perceptive integration. (English, Dutch, German, Italian & Spanish summaries) (18 ref)—*E. Coché*

7519. **Bennet, Glin.** (U Bristol, England) **Psychological breakdown at sea: Hazards of singlehanded ocean sailing.** *British Journal of Medical Psychology*, 1974(Sep), Vol 47(3), 189-210.—Reconstructed the story of a singlehanded ocean voyage to illustrate the processes by which an individual can be overwhelmed by events and some ways of reacting to threats. The case sample was based on a sailor's logbooks, tape recordings, and film.

7520. **Bergeret, J.** (U Lyon II, France) **[Character and structure: Reflection from psychoanalytic psychopathology.]** (Fren) *Bulletin de Psychologie*, 1973-1974, Vol 27(10-12), 656-661.—Examines the relationships between structure, character, and symptomatology. All structural organization can be perceived in the form of elements of character or, in the case of sickness or maladaptation, in the form of syndromes or symptoms. Topics covered include theories of character, problems dealing with structure basic to the psychic personality, the concept of structure, psychotic and neurotic structure, astructurations, character traits, and pathologies of character.—*Z. M. Cantwell.*

7521. **Black, Alan.** (Long Grove Hosp, Epsom, England) **The natural history of obsessional neurosis.** In H. R. Beech (Ed), *Obsessional states*, London, England: Methuen & Co, 1974. viii, 352 p. 45.

7522. **Bleuler, Manfred.** **The long-term course of the schizophrenic psychoses.** *Psychological Medicine*, 1974(Aug), Vol 4(3), 244-254.—Discusses results of the author's studies of a large number of long-standing schizophrenic illnesses. On an average, schizophrenia showed no further change for the worse after a duration of 5 yrs, but rather a tendency to improve. The success

and limitations of modern therapy were statistically determined. Many recovered schizophrenics continued to do well even without medication and social care. As a rule, schizophrenics had no endocrine pathology and endocrine patients were not schizophrenic. Neither a broken home in childhood nor an upbringing by a schizophrenic parent resulted in any important association with schizophrenia. However, a disturbed relationship with relatives and loved persons was more frequent in the anamnesis of schizophrenic women than of schizophrenic men. Most schizophrenics who had been schizoid before their psychosis had lived in miserable familial conditions.—*Journal abstract.*

7523. **Bodlakova, V.; Hemsley, D. R. & Mumford, S. J.** (Brunel U, London, England) **Psychological variables and flattening of affect.** *British Journal of Medical Psychology*, 1974(Sep), Vol 47(3), 227-234.—Studied 34 Ss in schizophrenic and other diagnostic categories to investigate the relationship between ratings of flatness of affect and various psychological variables. These variables included the use of psychological constructs in discriminating between photographs and in discriminating between people known to the S; vocabulary level; social withdrawal; and various indices of chronicity. Results confirm a significant relationship between clinical ratings of affective flattening and the use of psychological constructs. This was true both for the description of photographs and for describing differences between known people. There was also a significant relationship between affective flattening and both hospitalization and social withdrawal. (19 ref)—*Journal summary.*

7524. **Breakey, William R.; Goodell, Helen; Lorenz, Patrick C. & McHugh, Paul R.** (Christian Medical Coll, Ludhiana, India) **Hallucinogenic drugs as precipitants of schizophrenia.** *Psychological Medicine*, 1974(Aug), Vol 4(3), 255-261.—Examined the drug-taking histories of 46 schizophrenics and 46 matched controls. It was found that the schizophrenics on the average used a wider variety of drugs, in greater amounts. Schizophrenics who had used drugs experienced the onset of symptoms 4 yrs earlier than nonusers and were also admitted to hospital 4 yrs earlier on the average. Those schizophrenics who had used drugs had had better premorbid personalities than the non-drug-users. These results are indicative of some precipitating role of drug abuse in the onset of schizophrenia.—*Journal abstract.*

7525. **Brockman, Lois M.** (U Manitoba, Winnipeg, Canada) **The reading factor in measuring security in children.** *Alberta Journal of Educational Research*, 1974(Sep), Vol 20(3), 244-250.—Investigated the influence of reading comprehension on security as measured by the Institute of Child Study Security Test (The Jimmy Story). 25 4th-8th grade boys diagnosed as emotionally disturbed (assumed to be insecure) were individually matched on age, grade placement, nonlanguage IQ and socioeconomic status with boys rated secure by their teachers. The ICS Security Test and Dominion Achievement Test in Silent Reading were administered to both groups. Analysis of security scores with reading scores as a covariate indicate that reading comprehension did not invalidate the security measure.—*Journal abstract.*

7526. **Burton-Bradley, B. G.** (Dept of Mental Health, Boroko, Papua New Guinea) **Social change and psychosomatic response in Papua New Guinea.** In H. Musaph (Ed), *Proceedings of the 2nd Congress of the International College of Psychosomatic Medicine, Amsterdam, 1973: Mechanisms in Symptom Formation.* New York, NY: S. Karger, 1974. vii, 303 p.

7527. **Büchele-Karrer, Brigitte.** [A comparative study of the Three Trees Test and other projective tests.] (Germ) *Praxis der Kinderpsychologie und Kinderpsychiatrie*, 1974(Jul), Vol 23(5), 166-181.—Administered the Three Trees Test by R. J. Corboz to 50 children 5-15 yrs old in a child psychiatric assessment clinic. Results for various child psychiatric groups are given and explained. The test is considered to have special value as a method of assessing the child in relation to its environment, especially when the test is combined with other diagnostic procedures. (18 ref)—H. A. Euler.

7528. **Cancro, Robert.** (U Connecticut, Health Ctr) **An overview of the schizophrenic syndrome.** In R. Cancro, N. Fox & L. E. Shapiro (Eds), *Strategic intervention in schizophrenia: Current developments in treatment.* New York, NY: Behavioral Publications, 1974. xviii, 326 p.

7529. **Cancro, Robert.** **The rehabilitation of chronic schizophrenics: Genetic and environmental considerations.** *International Journal of Social Psychiatry*, 1974(Spring-Summer), Vol 20(1-2), 68-71.—Notes that the occurrence of schizophrenia is determined by genetic and environmental factors, while rehabilitation depends solely upon environmental manipulation. The unreliability of such treatments is taken to indicate that genetic factors determine each patient's reaction to various therapies. It is suggested that an effort should be made to expose patients to several treatment methods to determine the most promising one. Ethical considerations in rehabilitating schizophrenics are discussed.—W. R. Street.

7530. **Canegalli, R.; Dispari, V. & Sforzini, D.** (Neuropsychiatric Hosp, Voghera, Italy) **[The presence and meaning of the "bar reaction" in schizophrenia.]** (Ital) *Neuropsychiatria*, 1972(Jan), Vol 28(1-2), 47-52.—Observed the incidence of a positive neurological sign, called the "bar reaction" by G. G. Giordano, in 50 female and 40 male schizophrenics 19-62 yrs old. The sign, first identified in cases of neo-plastic lesions in the prefrontal cortex, consists of the movement in the same direction of the opposite limb when one of the lower limbs is gradually moved 10-20 cm toward the exterior by the examiner, as the patient is lying relaxed in supine position. The sign was present in 21% of the Ss. Results are interpreted as a further suggestion of the existence of a neurological symptomatology in schizophrenia. (French & English summaries)—A. Felice.

7531. **Chapman, Loren J.; Chapman, Jean P. & Daut, Randall L.** (U Wisconsin, Madison) **Schizophrenic response to affectivity in word definition.** *Journal of Abnormal Psychology*, 1974(Dec), Vol 83(6), 616-622.—120 drug-free schizophrenics and 167 nonpsychotic Ss were given affect-laden and affectively neutral free-response vocabulary items. The 2 subtests were matched on psychometric characteristics that affect the power of the subtest to discriminate among ability levels of nonpsychotic Ss. These characteristics (coefficient alpha,

mean and standard deviation of test score, standard deviation of item difficulty, and shape of the distribution of item difficulty) were matched using nonpsychotic Ss with the same sum of the subtest scores as the schizophrenics. Both chronic and newly admitted schizophrenics were no less accurate on the affective subtest than on the neutral subtest. It is concluded that most published findings on schizophrenic response to affective stimuli appear to be artifacts of unmatched tests. (33 ref)—*Journal abstract.*

7532. **Chartier, George M. & Ainley, Caryl.** (Arizona State U) **Effects of model warmth on imitation learning in adult chronic psychotics.** *Journal of Abnormal Psychology*, 1974(Dec), Vol 83(6), 680-682.—Tested predictions derived from social learning research with children, employing experimental dyads. In a factorial design, 18 male and 18 female adult chronic psychotic inpatients either (a) interacted with an adult model who was noncontingently warm and rewarding, (b) interacted with a neutral and nonrewarding model, or (c) were not exposed to a model. In a 2nd phase, the model displayed task responses and novel behaviors incidental to the task, and the S's subsequent imitation of the model was recorded. Findings support the hypotheses that adult chronic psychotics can acquire new behaviors through observation of a model without contingent reward to either party, and that a previously positive relationship with a model facilitates such learning.—*Journal abstract.*

7533. **Chodoff, Paul.** (George Washington U, Medical School) **The depressive personality: A critical review.** In R. J. Friedman & M. M. Katz (Eds), *The psychology of depression: Contemporary theory and research.* New York, NY: John Wiley & Sons, 1974. xvii, 318 p. \$15.

7534. **Cogorno, A. & Maioli, B.** (Genoa Province Mental Hygiene Service, Italy) **[Effects of environmental factors on the course of mental illness.]** (Ital) *Neuropsychiatria*, 1972(Jan), Vol 28(1-2), 135-148.—Evaluated the effects of family conditions, economic status, and societal attitudes on the course of mental illness through a follow-up study of 362 patients who received aftercare for at least 5 yrs after discharge. Family harmony, integration of the patient within the family, and continued aftercare were found to be important, interrelated factors. Findings suggest that the nuclear family is more supportive of mental patients than society in general. (English, French, & German summaries)—A. Felice.

7535. **Cormane, R. H.** (U Amsterdam, Netherlands) **A molecular explanation of stress dermatitis.** In H. Musaph (Ed), *Proceedings of the 2nd Congress of the International College of Psychosomatic Medicine, Amsterdam, 1973: Mechanisms in Symptom Formation.* New York, NY: S. Karger, 1974. vii, 303 p.

7536. **Crisp, A. H.; Harding, Britta & McGuinness, B.** (St George's Hosp Medical School, London, England) **Anorexia nervosa: Psychoneurotic characteristics of parents: Relationship to prognosis: A quantitative study.** *Journal of Psychosomatic Research*, 1974(Jun), Vol 18(3), 167-173.—Administered the Middlesex Hospital Questionnaire to 68 parents of 44 female patients with anorexia nervosa, and compared the results with those from a matched normal population. Parents were also examined in relation to the treatment and 6-mo outcome

of the illness in their daughters. Most of the parents became more psychoneurotically disturbed after the treatment (the mothers anxious; the fathers depressed). The 6-mo outcome for the patient's illness was significantly related to the initial levels of psychoneurotic morbidity in the parents.—*W. G. Shipman.*

7537. Davidson, Glenn S. & Neale, John M. (State U New York, Stony Brook) **The effects of signal-noise similarity on visual information processing of schizophrenics.** *Journal of Abnormal Psychology*, 1974(Dec), Vol 83(6), 683-686.—Performed 2 studies with a total of 34 schizophrenic and 34 nonschizophrenic male inpatients to examine the effect of target-noise similarity on the span of apprehension performance of schizophrenics. Ss were required to search a briefly presented display of letters for a target letter which was presented along with noise letters of varying degrees of physical similarity to the target. In both studies the schizophrenics' performance was significantly poorer than that of controls, and the target-noise similarity manipulation affected both groups equally. Results indicate that the information-processing operations of both groups were similar but that schizophrenics performed them at a slower rate.—*Journal abstract.*

7538. de M'Uzan, M. **Psychodynamic mechanisms in psychosomatic symptom formation.** In H. Musaph (Ed), *Proceedings of the 2nd Congress of the International College of Psychosomatic Medicine, Amsterdam, 1973: Mechanisms in Symptom Formation.* New York, NY: S. Karger, 1974. vii, 303 p.

7539. de Wever, T. (Inst for Medical Psychotherapy, Amsterdam, Netherlands) **[Nameless.]** (Duth) *Nederlands Tijdschrift voor de Psychologie en haar Grensgebieden*, 1974(Jul), Vol 29(5), 323-334.—Presents a transcript of an imaginary interview that reveals the conflicts and other emotionalized reactions of a female "nameless" S. These conflicts, which brought on general depression and lack of identity, were shown by a persistent mourning for a deceased father, adverse reactions to what is presented as an overactive and officious mother, and a strained relationship with her husband. These conditions motivated her to become a compulsive eater with an unkempt appearance. The chronological age of the S was about 25. Comments on the interview are made by the following psychologists: A. de Blécourt (see PA, Vol 53:Issue 4); R. W. F. Diekstra (see PA, Vol 53:Issue 4); P. J. Jongerius (see PA, Vol 53:Issue 4); B. W. Lehmann (see PA, Vol 53:Issue 4); and M. Tophoff (see PA, Vol 53:Issue 4). Behavior therapy for the patient is described by A. W. Burger (see PA, Vol 53:Issue 4).—*A. J. Ter Keurst.*

7540. Diekstra, R. W. (Catholic U Nijmegen, Netherlands) **[I am what I think: Variation on a Cartesian theme.]** (Duth) *Nederlands Tijdschrift voor de Psychologie en haar Grensgebieden*, 1974(Jul), Vol 29(5), 365-376.—Describes the reactions of the S reported by T. de Wever (see PA, Vol 53:Issue 4) as being self-centered, demanding, and suspicious of the reactions and motives of others concerning her welfare. Therapy should try to change the patient's "self-talk" to a greater interest in the welfare of others, to transform an introverted condition to a more extraverted one, and to develop a feeling of

generosity toward others, in keeping with the principle of Descartes, "I think, therefore I am."—*A. J. Ter Keurst.*

7541. Dongier, M. (McGill U, Montreal, Quebec, Canada) **Psychosomatic aspects in myocardial infarction in comparison with angina pectoris.** In H. Musaph (Ed), *Proceedings of the 2nd Congress of the International College of Psychosomatic Medicine, Amsterdam, 1973: Mechanisms in Symptom Formation.* New York, NY: S. Karger, 1974. vii, 303 p.

7542. Donovan, B. T. **Neuroendocrinology and mental illness.** *Psychological Medicine*, 1974(Aug), Vol 4(3), 237-239.—Discusses progress in neuroendocrinology, and cites reasons for early disappointments concerning the expectation that neuroendocrinology studies would lead to better understanding and treatment of mental illness.

7543. Dopchie, N. **[Considerations on the theory on infantile psychoses.]** (Fren) *Acta Psychiatrica Belgica*, 1973(Sep), Vol 73(5), 527-536.—Offers a reassessment of the theory of infantile psychosis, and concludes that the old concept of childhood schizophrenia should be abandoned. It is suggested that these states should be defined on the basis of the clinical picture and the patients' personality structure rather than on etiological considerations. (English, Dutch, German, Italian & Spanish summaries)—*E. Coché*

7544. Dorfman, Willfred. **Depression and psychosomatic illness.** In H. Musaph (Ed), *Proceedings of the 2nd Congress of the International College of Psychosomatic Medicine, Amsterdam, 1973: Mechanisms in Symptom Formation.* New York, NY: S. Karger, 1974. vii, 303 p.

7545. Dormaar, M.; Giel, R. & van Luijk, J. N. **Psychiatric illness in two contrasting Ethiopian outpatient populations.** *Social Psychiatry*, 1974(Oct), Vol 9(4), 155-161.—Reports that 2 Ethiopian general outpatient populations with very different socioeconomic backgrounds showed a significant difference in the proportions of patients with psychiatric illness. The 2 clinics varied considerably in their accessibility to patients. The differences in the prevalence of psychiatric illness are explained in terms of the varying illness behavior of the 2 populations rather than as a result of variations in the incidence of illness.—*Journal abstract.*

7546. Dorworth, Thomas R. (U Pittsburgh, Counseling & Testing Ctr, Johnstown) **Learned helplessness and RET.** *Rational Living*, 1973(Fal), Vol 8(2), 27-30.—Examines similarities reported in the literature between research findings on helplessness in dogs and basic nonverbal components of rational-emotive philosophy's explanation and management of abnormal human behavior. It is contended (a) that cognitive events provide a sufficient condition for maladaptive behavior; (b) that a strong functional relationship exists between maladaptive behavior and the phenomenological interpretation that a stimulus event is terrible; (c) that the goal of therapy should be to question the client's invalid or illogical interpretation of self and environment; and (d) that this goal should include immunizing the individual against future aversive stimulation. Since ethical considerations prohibit experimentation on humans, it is recommended that ideas about human

behavior continue to be tested on animal populations.  
—G. J. Frankel.

7547. Dotti, Andrea & Loredi, Camillo. (U Roma, Istituto di Psichiatria, Italy) [A contribution towards the study of chronic amphetamine psychoses.] (Ital) *Rivista di Psichiatria*, 1974(Jan-Feb), Vol 9(1), 63-77.—Describes 3 cases followed for several years, and argues that the possibility of a personality disorder of organic origin is more credible than the possibility of a schizophrenic-like psychosis. Hypothetically, the patient seeks a megalomaniac delusional state induced by amphetamines as a defense against depression. (16 ref)

7548. Duddle, May. (Cheadle Royal Hosp, Cheshire, England) Drug taking amongst emotionally disturbed university students. *British Journal of Addiction*, 1973(Jun), Vol 68(2), 166-169.—Measured 109 undergraduate psychiatric referrals to determine the extent of drug use among emotionally disturbed university students. Results show that 26 (23.9%) of the Ss had tried cannabis, 21 of whom used it regularly; 15 (13.8%) had tried LSD; and 3 had used other drugs, including heroin and amphetamines. Students who used drugs tended to have friends who were also users and estimated that a high proportion (48.9%) of all university students took drugs, whereas nonusers had few friends who took drugs and estimated that only 14.4% of the whole university were drug users. There was no evidence that taking cannabis increased the incidence or severity of psychiatric illness among students.—*Journal abstract*.

7549. Eggers, Christian. (U Heidelberg, Children's Clinic, W Germany) [The course of infantile and prepubertal schizophrenia.] (Germ) *Monographien aus dem Gesamtgebiete der Psychiatrie*, 1973, Vol 9, 250 p.—Observed 57 cases of infantile schizophrenia for an average of 15 yrs. Using data from personal interviews the cases were classified into acute-episodic and chronic groups and into 11 subgroups, based on E. Bleuler's definition of schizophrenia. The age of onset of the disease, the presence of premorbid personality, and above-normal intelligence were found to have prognostic significance, but the frequency of psychotic episodes, occurrence of prodromes, history of familial schizophrenia, family atmosphere, and individual symptomatology were prognostically insignificant. 7553. Finch, A. J. & Nelson, W. M. (Virginia Treatment Ctr for Children, Richmond) Locus of control

and anxiety in emotionally disturbed children. *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 469-470.—Administered 2 measures of locus of control and 2 measures of anxiety to emotionally disturbed children. Results show that whether locus of control was significantly related to anxiety was dependent on the measure of anxiety employed. All measures of anxiety intercorrelated significantly.

7554. Fontan, M.; Bouanna, G. & Piquet, J.-M. [A linguistic approach to schizophrenic discourse.] (Fren) *Annales Médico-Psychologiques*, 1974(Feb), Vol 1(2), 169-182.—Applies the linguistic approach of F. de Saussure to verbal productions by 8 schizophrenic Ss. These analyses are based on structural principles of speech, such as the heterogeneity of linguistic sign, and the notion of value, as these determine the "surge" of signification in thought passing into the communicative word. It is this focus on matching what is interior to the person with elements in the world exterior to him that promises an increased understanding of the schizophrenic psychopathological process. The frequently observed recourse of schizophrenic individuals to the use of pseudo-language indicates their inability to employ ordinary linguistic mechanisms (e.g., metaphor or metonymy) for basic and necessary interpersonal communication. Musaph (Ed), *Proceedings of the 2nd Congress of the International College of Psychosomatic Medicine, Amsterdam, 1973: Mechanisms in Symptom Formation*. New York, NY: S. Karger, 1974. vii, 303 p.

7558. Garfinkel, Paul E. (Clarke Inst of Psychiatry, Toronto Mental Health Foundation, Ontario, Canada) Perception of hunger and satiety in anorexia nervosa. *Psychological Medicine*, 1974(Aug), Vol 4(3), 309-315.—11 16-23 yr old female patients with anorexia and 11 matched controls were given questionnaires on hunger and satiety before and after a standard meal in order to evaluate the way in which patients with anorexia nervosa consciously recognize and describe their sensations of hunger and satiety. Findings show that the patients perceived hunger in a manner similar to controls, but were more preoccupied with thoughts of food, had a stronger urge to eat, and were more anxious when hungry. The patients, unlike the controls, frequently did not describe satiety in terms of gastric fullness. The disordered perception of satiety, however, was not

related to clinical outcome. Findings are discussed in terms of their implications for treating anorexia nervosa. (28 ref)—*Journal abstract*.

7559. Gibbons, J. L. **Endocrinology and psychiatry.** *Psychological Medicine*, 1974(Aug), Vol 4(3), 240-243. —Summarizes recent research findings on endocrine concomitants of psychiatric disorders, and describes the development of measurement techniques (e.g., hormone assay methods) which have led to major advances in human neuroendocrinology.

7560. Grasso, A. M. & Nicoletti, F. (U Catania, Clinica delle Malattie Nervosa e Mentali, Italy) **[Psychoneurophysiological observations in schizophrenics: Analysis of gastrocnemius motor and H and T responses after "click."]** (Ital) *Acta Neurologica*, 1974(May-Jun), Vol 29(3), 299-306. —Observed 15 male schizophrenics 18-42 yrs old in the acute phase of their illness and at their first dissociate episode. Ss showed no neurological signs and none of them was catatonic. An electromyograph with a supplemental panel was used to provide an acoustic stimulus with gradually increasing intensity, but applied in a randomized fashion. These acoustic stimuli were operated so that the S could not interpret them. Electric stimuli were also used with electrodes on various parts. Regardless of the intensity of the acoustic stimuli the H and T gastrocnemius monosynaptic reflexes did not show any variation, either in strength or in duration. Speculations are offered regarding the anatomic-functional relationship between attention and tonus regulation.—*M. Stanford*.

7561. Griffiths, R. D.; Hodgson, R. & Hallam, R. (Welsh National School of Medicine, Cardiff) **Structured interview for the assessment of work-related attitudes in psychiatric patients: Preliminary findings.** *Psychological Medicine*, 1974(Aug), Vol 4(3), 326-333. —Developed a structured interview to assess the drive, realism, self-confidence, and self-rated disablement of psychiatric patients in relation to work. Using 18-55 yr old psychotic patients who had been unemployed for at least 12 mo, the clinical and research value of the interview was demonstrated by (a) studies of rater consistency, temporal stability, and parallel form reliability; and (b) an investigation of its predictive validity. (19 ref)—*Journal abstract*.

7562. Gruzeller, J. H. & Venables, P. H. (University Coll Hosp Medical School, London, England) **Two-flash threshold, sensitivity and  $\beta$  in normal subjects and schizophrenics.** *Quarterly Journal of Experimental Psychology*, 1974(Nov), Vol 26(4), 594-604. —2-flash threshold, response criterion, and sensitivity (defined by the slope of the psychophysical ogive) were examined in 30 schizophrenics and in 12 normals under 3 conditions—a baseline condition and during and after continuous white noise. Schizophrenics were subdivided into 4 groups on the basis of whether or not they exhibited paranoid symptomatology and electrodermal orientating responses. In general schizophrenics had more lenient 2-flash response criteria than normal Ss. In the baseline condition schizophrenics with orienting responses had lower 2-flash thresholds than those without orienting responses. Paranoid schizophrenics had more lenient criteria than nonparanoid schizophrenics and lower sensitivity than the nonparanoid group with orienting

responses. Differential group effects were obtained during and after noise, especially with regard to sensitivity. (38 ref)—*Journal abstract*.

7563. Hafner, R. Julian. (Inst of Psychiatry, U London, England) **Physiological changes with stress in depression and obsessional neurosis.** *Journal of Psychosomatic Research*, 1974(Jun), Vol 18(3), 175-179. —Selected 12 depressed patients and 12 obsessionals to complete the Beck Depression scale and Hostility and Direction of Hostility Questionnaire and compared the results with those from a normal population. Salivary flow was measured before and after a stressfully loud tone. There was a significant difference between the depressed and obsessional group on T (Neuroticism) and Beck scores. All 3 groups reacted to stress with a significant fall in salivary flow but the mean flow for the depressed group was significantly lower.—*W. G. Shipman*.

7564. Hagnell, Olle; Kreitman, Norman & Duffy, J. (U Lund, Inst of Psychiatry, Sweden) **Mental illness in married pairs in a total population.** *British Journal of Psychiatry*, 1974(Sep), Vol 125, 293-302. —Conducted 2 surveys in 1947 and 1957 to investigate the prevalence of conjoint mental illness in husband-wife pairs; 269 couples participated. Results indicate that (a) in 1947, Ss had no tendency to conjoint illness, but by 1957 they showed a highly significant excess over the expected number; (b) there was a general tendency for the wives of sick husbands to show a progressive increase in morbidity with increasing duration of marriage; (c) chronicity of illness in the husbands could be shown to influence the morbidity of wives, but the dating of the onset of illness was often very uncertain; and (d) remission of illness in the husband was clearly related to lower illness rates in the wives, except in the lowest social class. It is suggested that the risk of a healthy wife becoming ill if her husband is ill is significantly greater than that for the healthy husband of a sick wife. (19 ref)—*Journal summary*.

7565. Hall, John N. (U Leeds, England) **Inter-rater reliability of ward rating scales.** *British Journal of Psychiatry*, 1974(Sep), Vol 125, 248-255. —An examination of 25 papers in selected volumes of a professional journal suggests the following: (a) Rating scales are useful devices for assessing patients, but their reliability is partly dependent on the situation in which they are used. (b) When choosing a method of calculating reliability, it may be necessary to assume that scores are distributed normally, agreement is meaningful, chance agreement is negligible, total scores are meaningful, and mean scores of both raters are similar. (c) If these assumptions are not valid, the statistic weighted kappa may be applied. Possible methods for improving the reliability of ward rating scales are presented.—*Journal summary*.

7566. Hammer, Leon I. (Adelphi U) **Psychotherapy and growth.** *Contemporary Psychoanalysis*, 1974(Jul), Vol 10(3), 389-405. —Focuses on the need for psychotherapists to regard the growth process occurring in nature as a separate and distinct phenomenon from psychopathology. Basic to this growth process is new experience in a structured, realistic, nonrigid atmosphere with a broader and less academic view of man than psychiatry has taken to date.

7567. Hansen, Otto & Dimitrakoudi, Maria. (MRC Unit for Metabolic Studies in Psychiatry, U Sheffield, England) **The relation of blood adenosine triphosphate to changes of mood in affective disorders.** *British Journal of Psychiatry*, 1974(Sep), Vol 125, 268-274.—Investigated the relationship between blood adenosine triphosphate (ATP) levels and mood in 2 females suffering from manic-depressive predictable short-term cycle psychotic states. ATP was found to be low in the depressive phases, and it correlated significantly with mood. One male and 1 female "endogenous depressive" patient was followed with blood ATP determinations and mood rating during a course of electroconvulsive treatment. Correlating significantly with mood scores, ATP rose to normal clinical recovery. (21 ref)—*Journal summary*.

7568. Harding, T. (U Edinburgh, Royal Edinburgh Hosp, Scotland) **Serum creatine kinase in acute psychosis.** *British Journal of Psychiatry*, 1974(Sep), Vol 125, 280-285.—Determined creatine kinase (CK) levels in 34 acutely psychotic, 26 newly-admitted nonpsychotic, and 20 chronic schizophrenic patients. In each group, a positively skewed distribution of CK levels was found, with no overall significant difference. 5 acutely psychotic patients had raised levels. It is argued that these raised levels are related to nonspecific factors and do not reflect the psychotic illness directly. Findings do not support the view that serum CK estimation is of diagnostic value in psychiatric patients. (16 ref)—*Journal summary*.

7569. Hare, E. H. (Bethlem Royal Hosp, Beckenham, England) **The changing content of psychiatric illness.** *Journal of Psychosomatic Research*, 1974(Aug), Vol 18(4), 283-289.—The content of psychiatric illness may change in response to changes in the physical environment or because of cultural or social changes. Decreased severity of mania and an improved prognosis of schizophrenia is noted. It is suggested that environmental changes may be causing changes in content of these illnesses.

7570. Harris, Sandra L. **The relationship between family income and number of parent perceived problems.** *International Journal of Social Psychiatry*, 1974(Spr-Sum), Vol 20(1-2), 109-112.—Surveyed 56 children brought for mental health treatment. The number of problems reported by the parent was unrelated to the child's sex or age, but was higher for children of low-income families, especially if the child was young. Mothers reported more problems than fathers.

7571. Hauri, Peter. (Dartmouth Coll, Medical School, Sleep & Dream Lab) **Sleep in depression.** *Psychiatric Annals*, 1974(Jul), Vol 4(7), 45-62.—Reviews literature on sleep disturbances that occur in the general categories of bipolar and unipolar depression, noting wide variations in individual sleep patterns within the same diagnostic category. Seemingly contradictory research findings are discussed. It is suggested that investigation of the underlying reasons for the similarities and differences in sleep patterns are viable avenues for further research. Possible explanations for REM-suppressing effects of monoamine oxidase inhibitors and tricyclic antidepressants are discussed. It is noted that therapies involving total REM sleep deprivation have

had some positive but often short-lived benefit in the treatment of depression. (2 p ref)—*C. Wright*.

7572. Hay, A. J. & Forrest, A. D. **The diagnosis of schizophrenia and paranoid psychosis: An attempt at clarification.** *British Journal of Medical Psychology*, 1972(Sep), Vol 45(3), 233-241.—Studied case records of 198 female and 177 male patients diagnosed as having schizophrenia or paranoid psychosis and discharged from the Royal Edinburgh Hospital between 1966 and 1968 to test the justification for these labels. The validity of intragroup discriminations in schizophrenia and the use of operational definitions in the differentiation of schizophrenia, paranoid psychosis, and schizophreniform psychosis were examined as part of a long-term computer-assisted follow-up scheme for schizophrenic Ss. Data suggest that the value of any intragroup classification is negated by overlap of symptoms. A reclassification scheme with new operational definitions is presented. (21 ref)—*R. Hall*.

7573. Ikeda, Terutika. (Kyushu U, Faculty of Medicine, Fukuoka, Japan) **[Vertex potential changes in a signal-reaction paradigm.]** (Japn) *Kyushu Neuro-psychiatry*, 1972(Apr), Vol 18(1), 41-46.—Investigated electrical activity of the human cortical surface in response to warning and signal stimulus. Ss were normal medical students and interns, and patients in a psychiatric ward. The S's task was to press a balloon as the signal stimulus (a light) following a warning tone was presented. The obtained data were analyzed in terms of (a) evoked potential changes in response to the warning signal and the signal stimulus, (b) slow negative potential shift following the warning signal, and (c) evoked potential shifts in response to the termination of the warning signal and positive potential shifts caused by motor reactions. Distinct evoked potential changes were obtained with both the initiation and the termination of the warning signal and the initiation of the signal stimulus, and these potential changes were clearly related not only to the laboratory conditions but also to the S's degree of attention. Findings suggest that the evoked potential pattern changes are related to the negative potential shifts which precede the initiation of the signal stimulus. (English summary) (15 ref)—*S. Ashida*.

7574. Ikemi, Yujiro, et al. (Kyushu U, Medical School, Japan) **Psychosomatic mechanism under social changes in Japan.** In H. Musaph (Ed), *Proceedings of the 2nd Congress of the International College of Psychosomatic Medicine, Amsterdam, 1973: Mechanisms in Symptom Formation*. New York, NY: S. Karger, 1974. vii, 303 p.

7575. Ikuta, Takumi. (Kyushu U, Faculty of Medicine, Fukuoka, Japan) **[Coding form for clinicophysiological studies in psychiatry.]** (Japn) *Kyushu Neuro-psychiatry*, 1972(Apr), Vol 18(1), 34-40.—Proposes a newly designed coding form which facilitates investigations of the relationships between somatosensory-evoked responses and psychiatric symptoms. The form allows simpler coding systems and direct computer data processing. It can also be used for other clinical purposes; e.g., establishing the relationships between physiological and psychological conditions. (English summary)

7576. Imura, Tsuneo & Makihara, Hiroshi. (Nihon U, School of Medicine, Tokyo, Japan) **Interpersonal rela-**

tionships in families of schizophrenics: Some considerations based on three case studies. *Foreign Psychiatry*, 1974(Sum), Vol 3(2), 103-126.—Presents 3 case studies to support the theory that the family of the schizophrenic suffers from mental disease, and the patient's illness is merely a symptom of this larger disorder. Correlations are drawn between impressions of the behavior and responses of each individual; the dyadic reciprocal relationships among father, mother, patients, and siblings; and results of tests of each individual's ability to empathize.—M. E. Pounsel.

7577. Jha, B. K. (Hosp for Mental Diseases, Ranchi, India) **Epidemiological studies on specialised groups.** *Indian Journal of Psychiatric Social Work*, 1973(Jul), Vol 2(1), 39-50.—Discusses the prevalence of different types of mental disorders, based on hospital statistics, data from private psychiatric and general practitioners, random sampling of entire populations, household surveys, and random sampling of defined districts. Results generally agree on the greater frequency of schizophrenia and relative rarity of manic-depressive cases in the lower socioeconomic class. The impact of industrial surroundings and of population migration are discussed. The frequency of psychological disorders in various branches of the military, both during peace and war, are reviewed, and military pilots are compared with airline pilots. (55 ref)—D. Berliner.

7578. Johnston, Mary H. (U Chicago) **Word associations of schizophrenic children.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 663-674.—Studied the word associations in normal and disturbed 10- and 11-yr-old children by integrating 2 prior methods of word-association research: the study of pathological features of adult schizophrenic language and the study of psycholinguistic features of developmental changes in children's associations. The associations of 8 schizophrenic and 8 nonschizophrenic children in residential treatment were compared with those of 84 normal children. The associative differences were most consistent and definitive among the schizophrenic Ss—they gave fewer common responses and more idiosyncratic, unrelated responses. All Ss made responses termed "playing with the word," which is a sign of association disturbance in adults but appears to be normal in children. The associative differences observed between normal and disturbed Ss are interpreted as not so much reflecting a "developmental lag" in associative structure as a difficulty in selection of an association from what is believed to be a normal associative repertoire. The variability in occurrence of common responses plus the appearance of the expected "paradigmatic shift" in all the children support this interpretation. (16 ref)—*Journal abstract*.

7579. Kanzaki, Yasunori; Yoshida, Shuzo; Fujimoto, Seijiro & Matsushita, Kensuke. (Kagoshima U, Faculty of Medicine, Japan) **[Statistics on new patients at the Psychiatric Department of Kagoshima University Hospital: 1971.]** (Japn) *Kyushu Neuro-psychiatry*, 1972(Apr), Vol 18(1), 59-62.—Presents classifications of 557 male and 473 female patients admitted to the hospital during 1971 by diagnosis, age and sex distribution, occupations by sex, resources for paying hospital bills, location of patient's home, and monthly admission rates.

7580. Katchadourian, Herant. (Stanford U, Medical School) **A comparative study of mental illness among the Christians and Moslems of Lebanon.** *International Journal of Social Psychiatry*, 1974(Spr-Sum), Vol 20(1-2), 57-67.—Reports biographic and psychiatric characteristics of 6,095 patients seen by Lebanese psychiatrists during 6 mo in 1964. Lebanese Moslems and Christians conform to customs that may acquire quasi-legal status. The effects of religious affiliation were sought in an examination of the psychiatric data. Overall care rates are lower for Moslems than Christians, and are especially low for Moslem women. More specifically, this pattern is found in care given for brain disorders, mental retardation, and psychotic, personality, and psychophysiologic disorders. For personality disorders, the sex difference is much more striking than the religious difference. The sex difference is reversed for rates of care for neurotic disorders. The varying availability of service is considered to be responsible for some differences, but causes for sex and diagnostic interactions with religion are seen as rooted in the Lebanese religious tradition.—W. R. Street.

7581. Klerman, Gerald L. (Harvard U, Medical School, Boston) **Depression and adaptation.** In R. J. Friedman & M. M. Katz (Eds), *The psychology of depression: Contemporary theory and research*. New York, NY: John Wiley & Sons, 1974. xvii, 318 p. \$15.

7582. Knobel, Mauricio. (U Buenos Aires, Medical School, Argentina) **Abnormality in normal development: A concept of symptom formation in childhood.** In H. Musaph (Ed), *Proceedings of the 2nd Congress of the International College of Psychosomatic Medicine, Amsterdam, 1973: Mechanisms in Symptom Formation*. New York, NY: S. Karger, 1974. vii, 303 p.

7583. Lansky, Melvin R. (U California, Medical School, Los Angeles) **Delusions in a patient with Capgras' syndrome.** *Bulletin of the Menninger Clinic*, 1974(Jul), Vol 38(4), 360-364.—Discusses the syndrome whose striking feature is the patient's insistence that a person or persons, usually those closest to him, have been replaced by doubles who impersonate them. A case report is included.

7584. Lens, Willy. (Psychologisch Inst, Leuven, Belgium) **A comparative study of motivational contents in projective and in direct, first person thought samples.** *Psychologica Belgica*, 1974, Vol 14(1), 31-54.—Investigated whether the Thematic Apperception Test (TAT) and the nonprojective Motivational Induction Method (MIM) have a different functional or motivational meaning for normals and neurotics. 3 groups of 30 military Ss each were used: psychoneurotics, medical patients admitted for physical illness, and a barrack group. Results did not support the prediction that psychoneurotics would express important needs and motives more in TAT fantasy and normal Ss more in MIM. Correlations between the 2 tests were affected by hospitalization and were different for different motives. Correlations for the achievement motive were always different in sign from those for the affiliative motive. (43 ref)—S. Slak.

7585. Lenz, Hermann. **[Loss, the central symptom of the depressive syndrome.]** (Germ) *Zeitschrift für Klinische Psychologie und Psychotherapie*, 1974, Vol 22(1).

39-44.—Proposes that depressed persons are overwhelmed by loss—loss of everything. This is evident in their complaints. They complain of loss of sleep, appetite, libido, interest, emotion, faith, and hope. Personality inventories lean heavily on the concept of loss. The aim of treatment is the suspension of loss. The opposite of loss is mania, because the manic believes that he possesses, knows, and understands all things. (English summary)—S. D. Babcock.

7586. Lesse, Stanley. (American Journal of Psychotherapy. New York, NY) **Psychiatric symptoms in relationship to the intensity of anxiety.** In H. Musaph (Ed), *Proceedings of the 2nd Congress of the International College of Psychosomatic Medicine, Amsterdam, 1973: Mechanisms in Symptom Formation*. New York, NY: S. Karger, 1974. vii, 303 p.

7587. Lewinsohn, Peter M. (U Oregon) **A behavioral approach to depression.** In R. J. Friedman & M. M. Katz (Eds), *The psychology of depression: Contemporary theory and research*. New York, NY: John Wiley & Sons, 1974. xvii, 318 p. \$15.

7588. Lipsitt, Don R. (Mt Auburn Hosp, Cambridge, MA) **Psychodynamic considerations of hypochondriasis.** In H. Musaph (Ed), *Proceedings of the 2nd Congress of the International College of Psychosomatic Medicine, Amsterdam, 1973: Mechanisms in Symptom Formation*. New York, NY: S. Karger, 1974. vii, 303 p.

7589. Love, Leonore R. & Kaswan, Jacques W. (U California, Los Angeles) **Troubled children: Their families, schools and treatments.** New York, NY: John Wiley & Sons, 1974. xi, 314 p. \$17.95.—Studied differences in the family and school environments of 120 elementary school children from various socioeconomic backgrounds who were seen as "disturbed" as compared to those considered normal by teachers, principals, and counselors. A psychological intervention—Information Feedback—for children's difficulties that focuses on mobilizing the self-help capabilities of significant adults in the child's daily life at home and at school is described and compared to child psychotherapy and parent counseling interventions. (9½ p ref)

7590. MacPhillamy, Douglas J. & Lewinsohn, Peter M. (Shasta Abbey, Mt Shasta, CA) **Depression as a function of levels of desired and obtained pleasure.** *Journal of Abnormal Psychology*, 1974(Dec), Vol 83(6), 651-657.—120 paid volunteer adults, equally divided into a depressed group and nondepressed and psychiatric control groups (from scores on the MMPI), were administered the Pleasant Events Schedule. Mean scores of the 3 groups were computed on scales purporting to measure obtained pleasure, activity level, and potential for being reinforced by a wide variety of events. As predicted, the depressed group scored significantly lower on these scales than the control groups, which did not differ significantly from each other. A minor hypothesis, derived from the neoanalytic theory of W. Bonime (1966), that depressed Ss would have higher scores on a scale purporting to measure the level of desired gratification was disconfirmed. (27 ref)—*Journal abstract*.

7591. Matsumoto, Kei. (Kagoshima U, Faculty of Medicine, Japan) **[Biological research in mental illness.]** (Japn) *Kyushu Neuro-psychiatry*, 1972(Apr), Vol 18(1), 1-6.—Briefly surveys current biological investigations of

mental patients, and the author's recent studies of the biochemical responses and functions of the autonomic nervous system of 54 chronic schizophrenic, 4 manic, and 29 depressive psychotic patients. In the chronic schizophrenic Ss, slightly slow reactions of the parasympathetic system and abnormality of the adrenal medulla occurred, and in the depressive psychotic Ss, abnormal functions of the autonomic system were observed. Prolonged (24-wk) examinations of 9 male chronic schizophrenic Ss who received only dietary treatment (no drugs) indicated no distinct excretion of either 17-hydroxycorticosteroids or 17-ketosteroids except during the occurrence of acute psychotic symptoms. Significant increases in the excretion of catecholamines, steroid hormones, tryptamine, 3-indoleacetic acid and 5-hydroxyindoleacetic acid occurred just prior to the display of acute psychotic symptoms. (25 ref)—S. Ashida.

7592. Mawson, A. R. (Loyola U, City Coll, New Orleans) **Anorexia nervosa and the regulation of intake: A review.** *Psychological Medicine*, 1974(Aug), Vol 4(3), 289-308.—Reviews recent work on the central mechanisms of food intake in relation to anorexia nervosa. On the basis of the review a number of conclusions are drawn as possible avenues for future research. A proposal is outlined for the investigation of levodopa as a potential treatment for anorexia nervosa.—*Journal abstract*.

7593. Melver, David & Presly, Allan S. (Royal Edinburgh Hosp, Scotland) **Towards the investigation of personality deviance.** *British Journal of Social & Clinical Psychology*, 1974(Dec), Vol 13(4), 397-404.—Used the Character Disorder scale of the Symptom Sign Inventory and the 16 Personality Factor Questionnaire (16 PF) to identify traits characteristic of psychopathic personalities. 86 18-55 yr old female psychiatric patients in 3 diagnostic groups—character disorder, personal disturbance, and borderline—served as Ss. Data from the Kolmogorov-Smirnov 1-sample test applied to the 16 PF scores identified 2 patterns associated with personality deviance which accounted for half the Ss. None of the other 6 logically possible personality patterns were clearly associated with personality deviance. Factors G, L, and Q, were found to be abnormally distributed in Ss with character disorders. Further support for the findings was obtained using A. S. Presly and H. J. Walton's rating scale as a different criterion of personality deviance. Problems in the use of personality categories are discussed. (17 ref)—*Journal abstract*.

7594. Mellett, Peter G. (Netherne & Horton Hosp, Surrey, England) **The clinical problem.** In H. R. Beech (Ed), *Obsessional states*. London, England: Methuen & Co, 1974. viii, 352 p. ae.—Discusses observations of 20 obsessional patients referred to a psychiatric hospital. Findings suggest that the "fixed" behavior and thought patterns of these patients are imprinted and evoked by depression or suppressed anger. Case studies of 5 female patients are presented in detail, and neurophysiological factors in obsessional disorders are examined.

7595. Mendelson, Myer. (U Pennsylvania) **Psychoanalytic concepts of depression.** (2nd ed). Flushing, NY: Spectrum, 1974. xiv, 352 p. \$15.—Presents a critical, historical review of psychoanalytic concepts of depression. The development of diagnostic conceptualizations

of depression, treatment of mourning and depression in children, the theoretical aspects of depressive illness, and the impact of recent genetic, psychophysiological, and pharmacological findings on psychoanalytic concepts of depression are also examined.

7596. Meré, A. Gallego. (Inst Psicoanalítico, Madrid, Spain) [Psychoanalytic study of schizophrenic delusions.] (Span) *Revista de Psiquiatría y Psicología Médica*, 1974(Jan-Mar), Vol 11(5), 295-300.—Discusses such delusions as "universal hostility" and "reversible death" and their theoretical bases.

7597. Musaph, H. (Ed.). *Proceedings of the 2nd Congress of the International College of Psychosomatic Medicine, Amsterdam, 1973: Mechanisms in symptom formation*. New York, NY: S. Karger, 1974. vii, 303 p.

7598. Nagaoka, Kouki. (Nagasaki U, Faculty of Medicine, Psychiatric Div, Japan) [Henri Ey's "Consciousness of patient's condition."] (Japn) *Kyushu Neuro-psychiatry*, 1972(Apr), Vol 18(1), 50-53.—Introduces H. Ey's psychiatric approach which classifies acute and chronic mental illness in terms of the "negative structure" (dysfunction) and the "positive structure" (resolution of the dysfunction) of consciousness. Examples are as follows: (a) Manic psychosis: negative structure may be identified by a dysfunction of "spiritual unity" and positive structure by the playful behavior of the patient. (b) Melancholic psychosis: negative structure may be identified by the general clinical symptoms of the patient and positive structure by his "tragic" behavior. (c) Acute delirium, hallucinatory psychosis: negative structure may be identified by severe dysfunction of consciousness and positive structure by dramatization, abstraction, and the artificialization of experience. (d) Confusion and delirium: negative structure appears as fuzzy thinking, fixation on a concept or extreme confusion among concepts, etc, and positive structure as inability to distinguish between the actual and the imagined. According to Ey, effective treatment can be initiated only when the psychiatrist understands the characteristics of these 2 types of structure.—S. Ashida.

7599. Nagayama, Haruo; Aikawa, Katsuyo & Matsunaga, Fumiya. (Nagasaki U, Medical School, Japan) [Mental disorders among university students studied through doctors' interviews.] (Japn) *Kyushu Neuro-psychiatry*, 1972(Dec), Vol 18(3-4), 201-205.—Reports results of 2-step interviews at Nagasaki University, conducted by psychiatrists with more than 4 yrs of clinical experience. The 1st interview, approximately 5 min long, was based on answers to a 160-item questionnaire previously given to each student. The 2nd interview, approximately 1 hr long, was given to those students who were suspected during the 1st interview of being potential mental patients. In 1971, 940 freshmen received the 1st interview and 41 students were recommended for the 2nd. 36 of these 41 took the 2nd interview and for 11 of them the suspicion of having some mental disorder was confirmed. In 1972, 1,041 freshmen took the 1st interview, and 50 of them were recommended for the 2nd interview. Of these 37 did so, and for 9 of these the suspicion of mental disorder was confirmed. Results indicate a need for public education in mental health and for reorganization and expansion of

student mental health programs. (English summary)—S. Ashida.

7600. Nakagawa, Helen; Osborne, Oliver H. & Hartmann, Kathleen. (U Washington, School of Nursing) *Fallacies in schizophrenia*. *Nursing Research*, 1974(Sep-Oct), Vol 23(5), 410-415.—Based on records of 1,769 patients—798 schizophrenic and 971 nonschizophrenic—hospitalized in 2 mental institutions between 1945 and 1969, 17 biological, personal, and sociocultural presenting problems that pertain especially to mental illness were identified. By clustering even as few as 3 presenting problems, no pattern was evident in more than 16% of the schizophrenic patients. This same cluster could be found manifest in 10% of those not labeled schizophrenic. It is concluded that the use of the schizophrenia label offers nothing in the way of a construct by which systematic decisions about treatment, prognosis, or disposition could be made. (25 ref)—*Journal abstract*.

7601. Naylor, G. J.; Stansfield, D. A.; Whyte, S. F. & Hutchinson, F. (U Dundee, Scotland) *Urinary excretion of adenosine 3':5'-cyclic monophosphate in depressive illness*. *British Journal of Psychiatry*, 1974(Sep), Vol 125, 275-279.—The urinary excretion of adenosine cyclic monophosphate (cyclic AMP) was estimated in 12 patients suffering from a depressive psychosis and estimated again when they had recovered. During each period of assessment the patients were maintained under metabolic ward conditions. The urinary excretion of cyclic AMP increased significantly with recovery. The urine volume showed no significant change with recovery and did not correlate significantly with the cyclic AMP excretion. (15 ref)—*Journal summary*.

7602. O'Connell, Walter E.; Baker, Rodney R.; Hanson, Philip G. & Ermalinski, Richard. (VA Hosp, Houston, TX) *Types of "negative nonsense"*. *International Journal of Social Psychiatry*, 1974(Spring-Summer), Vol 20(1-2), 122-127.—The Personal Belief Inventory (PBI), a measure of irrational thinking, was administered to 172 male psychiatric patients. Factor analysis identified 4 factors: (a) self-esteem, (b) hyperdependency, (c) humanism, and (d) external conformity. A 2nd group of 27 male patients was given the PBI 3 times during a 4-wk course of group therapy. Ss were classed as either high or low in verbal participation. High participants had higher self-esteem factor scores and lower hyperdependency factor scores than low participants. Results are congruent with Adler's concept of humanistic identification.—W. R. Street.

7603. Paunero, Enrique. (Hosp Nacional de Psiquiatría, Buenos Aires, Argentina) [Alienation and mental illnesses.] (Span) *Revista de Psiquiatría y Psicología Médica*, 1974(Jan-Mar), Vol 11(5), 277-285.—Presents an existential view of alienation, discussing the types of alienation and the process of its development.

7604. Pershad, Dwarka & Shukla, T. R. (Post-Graduate Inst of Medical Education & Research, Chandigarh, India) *Distribution of socio-economic factors among hospitalised mental patients*. *Indian Journal of Psychiatric Social Work*, 1973(Jul), Vol 2(1), 17-20.—Studied diagnostic groups in a mental hospital to determine the impact of social and economic factors. 172 patients admitted during 1 3-wk period were interviewed, using a

structured "Interview Schedule" and 2 standard socioeconomic scales. Most patients were suffering from schizophrenia, with almost all the others being in the affective and organic groups, with only 2 neurotics. Results indicate few significant differences among the groups on socioeconomic status, mode of family, and area of domicile. Significant differences were noted in education, in marital status, and in the history of venereal disease and head injuries.—*D. Berliner.*

7605. Pfeiffer, Wolfgang M. (U Münster, Inst für medizinische Psychologie, W Germany) [Psychoses in a culture with strong traditions.] (Germ) *Confinia Psychiatrica*, 1974, Vol 17(1), 15-41.—Carried out a field study of 57 psychiatrically ill persons, identified by local informants, on a Sumatran island. The sociocultural characteristics, data-collection methods, discussions of psychological disturbances and their causes, and patient characteristics are reported in detail. The sex, age, education, occupation, diagnosis, length of illness and its course, and symptoms are reported for 40 of the patients, and case summaries of several schizophrenics, "a typical periodic psychosis," and manic-depressive disorders are given. The patients were 10-85 yrs old, most were diagnosed as schizophrenic, most had little or no formal schooling, and a number included conditions of athetosis, epilepsy, Parkinsonism, hemiparesis, and severe mental retardation. The principal points emphasized are the field-study characteristics and the relative universality of psychological disorders.—*I. N. Mensh.*

7611. Rendon, Mario. (Bellevue Psychiatric Hosp, New York, NY) Transcultural aspects of Puerto Rican mental illness in New York. *International Journal of Social Psychiatry*, 1974(Spr-Sum), Vol 20(1-2), 18-24.—Presents data on demographic and psychiatric characteristics of New York residents of Puerto Rican origin. Compared to non-Puerto Ricans, these show higher overall incidence of mental illness, with especially high rates among late adolescents and more frequent diagnoses of schizophrenia. Several factors are cited which bear more heavily upon Puerto Ricans than non-Puerto Ricans in similar socioeconomic circumstances; e.g., unrealistic aspirations and linguistic inabilities. Conflicts between cultural patterns also induce stress as the young Puerto Rican is forced to accept the seeming indecencies of American competition, sexual freedom, and nuclear family structure. Symptoms of hysteria and schizophrenia specific to Puerto Ricans in America are described.—*W. R. Street.*

7612. Rodnick, Elliot H. & Goldstein, Michael J. (U California, Los Angeles) Premorbid adjustment and the recovery of mothering function in acute schizophrenic women. *Journal of Abnormal Psychology*, 1974(Dec), Vol 83(6), 623-628.—42 female acute, 1st-admission schizophrenics treated briefly in a community mental health center were followed from day of admission to 1 yr postdischarge. Mothers in the sample, divided on the basis of premorbid adjustment ( $n = 19$  good premorbid;  $n = 8$  poor premorbid) were studied regarding the changing patterns of child care shown over the 1-yr period. Results indicate that poor premorbid mothers were younger than good premorbid at the time of their 1st psychotic episode and had at least 1 infant child. The children of good premorbid were largely in middle childhood. Data are discussed in terms of the implications of early release programs for schizophrenia on the ultimate mental health of the offspring and on the whole area of "high-risk" studies. (16 ref)—*Journal abstract.*

7613. Rome, Howard P. (Mayo Clinic, Rochester, MI) Depressive illness: Its sociopsychiatric implications. *Psychiatric Annals*, 1974(Jun), Vol 4(6), 54-68.—Discusses suicidal behavior and its relationship to sociocultural and economic factors. Cerebral bioamine metabolic disturbances are necessary but not sufficient causes of depression. Contributing social factors include transience of residence and of behavioral codes, increased polarization and compartmentalization, and a negative view of life and the universe. The correlation between radicalization and increased suicide rates in several cultures is noted. Environmental factors are selective in the development of depression since they stress development of different coping patterns. The necessity of considering both universal and variable cultural factors in depression is stressed. (51 ref)—*C. Wright.*

7614. Rubinstein, Benjamin B. (Private practice, New York, NY) On metaphor and related phenomena.

*Psychoanalysis & Contemporary Science*, 1972, Vol 1, 70-108.—Discusses the nature of metaphor formation, the varieties and functions of metaphors, and the relations of metaphors to normal and pathological thought processes. Metaphors are not semigrammatical or incomplete sentences, as suggested by N. Chomsky and J. J. Katz, but are expressions of a logical process by which classes possessing similar conspicuous attributes are subsumed under a more general class. Metaphors serve as devices for the evolution of language, compensate for the deficiencies of ordinary language, and help express vague, complex, or highly individual thoughts and emotions. Some parallels can be found between the process of metaphor formation and certain pathological, paralogical aspects of schizophrenic language and thought. It is suggested that the study of metaphor formation as a process of classification can shed light on mental functions in general. (2½ p ref)—*J. Kelly*.

7615. **Sahánek, O. & Vítková, D.** (Psychiatrická léčebna, Brno, Czechoslovakia) [The question of conception and classification of endogenous psychosis.] (Czech) *Československá Psychiatrie*, 1973(Feb), Vol 69(1), 17-22.—Reviews literature about "atypical" or "mixed" psychoses and analyzes 41 cases so diagnosed between 1966 and 1970. Following Kraepelin's dichotomy of functional psychoses, it is suggested that atypical psychoses are not to be classified as independent, nosological entities. They belong to the manic-depressive category, regardless of whether the atypical clinical component is more or less evident, if remissions between psychotic episodes are complete. If remissions are not complete, the diagnosis of schizoaffective psychosis or periodic (circular) schizophrenia should be made. (Russian & English summaries) (15 ref)—*V. Fischmann*.

7616. **Schmale, Arthur H.** (U Rochester, School of Medicine & Dentistry) **Depression as affect, character style, and symptom formation.** *Psychoanalysis & Contemporary Science*, 1972, Vol 1, 327-351.—Differentiates the characteristics of depression as affect, character style, and disease syndrome, and discusses the somatic adaptive mechanism (withdrawal) which underlies depressive reactions. Depression is seen as a conservation-withdrawal reaction to unpleasant situations or prolonged deprivation. The predominant affects of depression, helplessness, and hopelessness function as signals that current activities may lead to a re-experiencing of failure or deprivation and can result in constructive behavior adjustments or in further maladaptive symptom formation. The clinical syndromes of depression fall into 2 categories—exogenous depression, in which symptoms prevent a reawakening of pain associated with the infantile separation experience, and endogenous depression, in which symptoms result from a turning in of aggression onto the self. It is suggested that it is important for therapists to distinguish the stages and types of depression so that appropriate approaches to treatment can be provided. (2½ p ref)—*J. Kelly*.

7617. **Seiler, Lauren H. & Summers, Gene F.** (Queens Coll, City U New York) **Toward an interpretation of items used in field studies of mental illness.** *Social Science & Medicine*, 1974(Aug), Vol 8(8), 459-467.—Conducted a study of 1,003 rural heads of households to (a) describe the level of 2 symptom types among

subgroups in a rural population and (b) consider the importance of status variables and physiological malaise as factors in producing psychological stress. Data suggest that the quantity of psychological stress found in the rural community adult population was only minimally related to the ages of Ss. (40 ref)—*Journal abstract*.

7618. **Seligman, Martin E.** (U Pennsylvania) **Depression and learned helplessness.** In R. J. Friedman & M. M. Katz (Eds), *The psychology of depression: Contemporary theory and research*. New York, NY: John Wiley & Sons, 1974. xvii, 318 p. \$15.

7619. **Serban, George & Woloshin, Gerald W.** (New York U. Medical Ctr) **Relationship between pre- and postmorbidity psychological stress in schizophrenics.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 507-517.—To determine the relationship between pre-schizophrenic (childhood and adolescence) problems and the pattern of difficulties facing patients in their adult years, 516 chronic and 125 acute schizophrenics and 95 normal individuals were given the Social Stress and Functionability Inventory for Psychotic Disorders. Results demonstrate that schizophrenics encountered more problems in their youth, adolescence, and adult years compared to normals. Also, both chronic and acute schizophrenics showed a high degree of continuity between earlier and later types of difficulties. (21 ref)—*Journal abstract*.

7620. **Shackleton, V. J.** (Ashridge Management Coll, Berkhamsted, England) **Factors affecting the declaration and communication of symptoms by psychiatric patients.** *British Journal of Social & Clinical Psychology*, 1974(Dec), Vol 13(4), 405-412.—Reports 2 experiments on the effect of different situations on the responses of psychiatric patients to self-report personality and symptom measures. Exp I with 64 newly referred 16-65 yr old patients, compared the responses of patients seen in a psychiatric outpatient clinic with a comparable group seen at home. Exp II, which used 64 similar Ss, studied the effect of a 1st psychiatric interview on patients' responses. All Ss completed the short form of the Maudsley Personality Inventory, the Eysenck Personality Inventory, the Cornell Medical Index, and 5 symptom scales by J. G. Ingham. Female patients consistently reported more symptoms, and a greater intensity of symptoms, than males. The different situations had no significant effect on Neuroticism, Extraversion, and Symptom scores. It is concluded that the situational variables investigated can be regarded as insignificant influences on the responses of similar psychiatric patients. (23 ref)—*Journal abstract*.

7621. **Shaffer, John W.; Perlin, Seymour; Schmidt, Chester W. & Stephens, Joseph H.** (Johns Hopkins U. Medical School) **The prediction of suicide in schizophrenia.** *Journal of Nervous & Mental Disease*, 1974(Nov), Vol 159(5), 349-355.—Collected case history data on 361 schizophrenics from the time of their admission. These cases were subsequently followed for up to 5 yrs, and the incidence of suicide (12 out of 361) was determined. After elimination of all follow-up information, the case folders of the 12 suicides were interspersed among a random sample of 75 cases drawn from the remaining 349. These 87 cases were then blindly reviewed by 2 psychiatrists who rated each for degree of suicide

potential on an 11-point scale. Raters' accuracy and the predictive value of clinical and sociodemographic signs were also evaluated. Results indicate that although none of the signs and ratings, either singly or in combination, yielded individual accuracy of prediction superior to classification by base rate, the clinical judgments of the psychiatrists were significantly correlated with outcome ( $p < .01$ ). As expected, the number of previous suicide attempts was the most important single variable associated with outcome as well as the one which most influenced raters' judgments. Previously published "risk" scales were largely ineffective. (28 ref)—*Journal abstract*.

7622. Silverman, Lloyd H. (New York U) **Drive stimulation and psychopathology: On the conditions under which drive-related external events evoke pathological reactions.** *Psychoanalysis & Contemporary Science*, 1972, Vol 1, 306-326.—Discusses environmental conditions which precipitate psychopathological reactions by stimulating a threatening drive, and reviews laboratory and clinical investigations of the evocation of pathological defenses by subliminal and supraliminal presentations of drive-related stimuli. It was found that expression of conflict-producing drives which are activated by external stimuli will be blocked when the drive relevance of the stimulus is hidden, when the situation prohibits drive expression, or when unconscious meanings make drive expression taboo. It is postulated that 4 conditions are necessary for external stimuli to evoke pathological defenses: (a) the drive aroused must be unacceptable to the individual, (b) ego-strength must be insufficient for the individual to handle the drives adaptively, (c) a minimal level of drive derivatives must be available to consciousness, and (d) the situation in which the stimuli appear must discourage direct drive expression. (2 p ref)—*J. Kelly*.

7623. Skinner, Harvey A.; Jackson, Douglas N. & Hoffmann, Helmut. (U Western Ontario, London, Canada) **Alcoholic personality types: Identification and correlates.** *Journal of Abnormal Psychology*, 1974(Dec), Vol 83(6), 658-666.—Conducted a study (a) to identify the existence of distinct personality types among 282 white male alcoholic psychiatric patients and (b) to relate this empirically derived taxonomy to types from previous research with alcoholic patients and to general psychiatric types. Employing a sequential factor-analytic strategy, 8 bipolar typal dimensions that defined 1 cluster of persons at each pole of each dimension were identified. The 5 clearest bipolar typal dimensions were classified as follows: (a) acute anxiety vs denial and blunted affect, (b) antisocial attitudes vs hypochondriacal preoccupation, (c) hostile-hallucinatory syndrome vs neurotic depression, (d) neurotic disorganization vs hostile paranoid, and (e) emotional instability vs interpersonal conflict and depression. MMPI profiles from prior research with a variety of psychiatric groups showed marked correspondence with MMPI profiles estimated for the 8 common types. (23 ref)—*Journal abstract*.

7624. Slade, P. D. (Royal Free Hosp, School of Medicine, London, England) **Psychometric studies of obsessional illness and obsessional personality.** In H. R. Beech (Ed), *Obsessional states*, London, England: Methuen & Co, 1974, viii, 352 p. 45.

7625. Smith, Landgrave T. (U Oklahoma, Health Sciences Ctr) **Schizophrenia: The case for an organic brain syndrome.** *Biological Psychology Bulletin*, 1974(Mar), Vol 3(3), 84-98.—Considers accounts of schizophrenia involving autoimmunological mechanisms, errors in biogenic amine metabolism, and enzymatic factors. The evidence appears to support the position that in a definable segment of the schizophrenic population there is a metabolic anomaly which is correlated with symptom manifestation. (33 ref)—*Journal abstract*.

7626. Soni, Som D. & Rockley, G. Joseph. (Prestwich Hosp, Manchester, England) **Socio-clinical substrates of folie à deux.** *British Journal of Psychiatry*, 1974(Sep), Vol 125, 230-235.—Presents 8 cases of folie à deux seen at a European hospital. A relevant review of the literature in conjunction with these cases suggests that while the principal in folie à deux is always a psychotic who initiates the delusions on the basis of his morbid psychotic illness, the associates have an assortment of abnormalities including schizophrenia, subnormality, susceptible personality, and dementia which predispose them to acquire the delusions of their partners. The social milieu is considered as a determinant of the actual content of the delusional systems, and precipitant in some cases. A socio-clinical approach in treating folie à deux is suggested. (23 ref)—*Journal summary*.

7627. Steingart, Irving & Freedman, Norbert. (State U New York, Downstate Medical Ctr, Brooklyn) **A language construction approach for the examination of self/object representation in varying clinical states.** *Psychoanalysis & Contemporary Science*, 1972, Vol 1, 132-178.—Discusses the relation between some forms of syntactic construction in patient speech and the presence of clinical signs of psychopathology. Tapes of 8 therapy sessions involving 4 different patients were analyzed for type of language code (fragmented, narrative, or complex language), language status (representation of self or significant objects), and language focus (representation of self and objects as isolated or interacting). It was found that the depressed, paranoid, and remitted states of 1 patient were characterized by distinctive types of language construction, that schizophrenic symptoms correlated with a high degree of fragmented language, and that paranoid delusions were associated with a high proportion of conditional language constructions. It is concluded that patient differences in the use of some syntactic constructions reflect differences in the relative distribution of narcissistic libido and object libido. (4/4 p ref)—*J. Kelly*.

7628. Stevenson, Ian. (U Virginia) **Xenoglossy: A review and report of a case.** *Proceedings of the American Society for Psychical Research*, 1974(Feb), Vol 31, 264 p.—Presents a case of responsive xenoglossy (evidence of a learned language skill) inexplicable on the basis of the S's background. S was a 37-yr-old Jewish-American housewife who had never been to Scandinavia or knew intimately anyone who could speak any Scandinavian language. She had not previously shown any evidence of mediumistic abilities. "Jensen," the personality capable of speaking Swedish, developed unexpectedly during hypnotic age regressions employed by the S's physician husband. Extensive interviews of S with 3 Swedish-

speaking persons, supported by examinations of copies of original tapes by 3 additional Swedish-speaking persons, concurred that the case involved responsive xenoglossy. Cryptomnesia is considered extremely improbable on the basis of testimony by S's mother and 2 siblings as well as from S's low aptitude for foreign language. The personal characteristics of the S, results of extensive interviews with S and members of her family, as well as findings of psychological tests and a polygraph test for lie detection, yield no indication of fraud. Extrasensory perception is ruled out and the conclusion drawn that the case offers strong evidence of the survival of physical death by some aspect of human personality. —R. Scott.

7629. Stutte, Hermann. (Kinder-Jugendpsychiatrische, Universitätsklinik, Marburg/Lahn, W Germany) **Neurotic delinquency caused by a Thersites complex.** (Germ) *Praxis der Kinderpsychologie und Kinderpsychiatrie*, 1974(Jul), Vol 23(5), 161-166.—Analyzed 32 juvenile patients with reference to the somatic, psychological, and criminological aspects of their delinquent tendencies, and points out that a crisis of individuation may arise from a conflict of self-estimation connected with real, but overestimated, or simply imaginary somatic imperfections (Thersites complex). This complex has its own concrete therapeutic and preventive possibilities, which are briefly mentioned. (46 ref)—*Journal summary*.

7630. Timsit-Berthier, M. (Medical Psychology Service, Liège, Belgium) **[Recent EEG developments in early infantile autism.]** (Fren) *Acta Psychiatrica Belgica*, 1973(Sep), Vol 73(5), 556-567.—Unlike spontaneous EEGs, which may lead to gross diagnostic errors, the averaging of evoked potentials has led to results which have a descriptive but not a causative value. The primary components of the auditory evoked potential are exactly the same in autistic and normal children, indicating that the sensory input to the cortex is unaffected. On the other hand, autistic children show an increase of the secondary component N<sub>2</sub>, especially obvious during REM sleep, pointing to a disruption of the integrative functions of the cortex linked to an imbalance between excitatory and inhibitory systems regulating sensory inputs. As for the late components, studied through paired stimulations, autistic children show a pathological high-amplitude negative wave, leading to the hypothesis that the cortical processes responsible for conditioning are also disturbed in these children. (English, Dutch, German, Italian & Spanish summaries)—*Journal summary*.

Musaph (Ed), *Proceedings of the 2nd Congress of the International College of Psychosomatic Medicine, Amsterdam, 1973: Mechanisms in Symptom Formation*. New York, NY: S. Karger, 1974. vii, 303 p.

7632. Upadhyay, R. K. (Ranchi U, Hosp for Mental Diseases, India) **A study of the opinion of the educated towards mental illnesses.** *Indian Journal of Psychiatric Social Work*, 1973(Jul), Vol 2(1), 10-15.—Studied attitudes toward mental illness, with an eye toward improved utilization of increasing government financial support for mental health services. 60 students, teachers,

and school administrators whose education ranged from intermediate through MA degree completed a rating schedule on the nature and treatment of mental illness. Findings show that even among educated persons, faith healing and cruel physical treatment remain common; few are well informed about methods of scientific treatment; most cannot recognize mental illnesses until they are in advanced stages; and many are still unaware of the psychiatric implications of alcoholism, homosexuality, and crime.—D. Berliner.

7633. van den Berg, J. H. (U Leiden, Inst for Conflict Psychology, Netherlands) **Divided existence and complex society: An historical approach.** Pittsburgh, PA: Duquesne University Press, 1974. xii, 306 p.—Discusses the relationship of "divided existence" (i.e., multiple personality) to culture. Based on the idea that it was with the onset of complex, industrial society that multiple personality appeared, the incidences of these occurrences and their relationship of mesmerism, hypnotism, the unconscious, and other psychological phenomena are analyzed.

7634. van Keep, Pieter A. & Kellerhals, Jean M. **The impact of socio-cultural factors on symptom formation: Some results of a study on aging women in Switzerland.** In H. Musaph (Ed), *Proceedings of the 2nd Congress of the International College of Psychosomatic Medicine, Amsterdam, 1973: Mechanisms in Symptom Formation*. New York, NY: S. Karger, 1974. vii, 303 p.

7635. Veeraraghavan, Vimala. (Delhi U, School of Social Work, India) **Marital relations: A comparative study amongst neurotics and normals.** *Indian Journal of Psychiatric Social Work*, 1973(Jul), Vol 2(1), 1-9.—Investigated the marital relationships of 25 hysteria and anxiety state neurotics undergoing treatment in hospitals under qualified psychiatrists. Ss were matched with 25 normal persons with similar backgrounds. A structured questionnaire was used. Results indicate that about twice as many neurotic Ss as normal Ss experienced incompatibility in temperament, nonmaterial expectations from the spouse, the impression that demands remain unfulfilled, and maladjustment in sexual relations. Almost all factors support the hypothesis that married neurotic women have more strained marital relations than do normal women.—D. Berliner.

7636. Vogel, Gerald W. (Georgia Mental Health Inst. Sleep Lab) **Dreaming and schizophrenia.** *Psychiatric Annals*, 1974(Jul), Vol 4(7), 63-77.—Examines the hypothesis that similar brain mechanisms may operate in dreaming and in psychoses. The theory that REM deprivation is a causal agent in mental illness is seen to have been disproved, and hypotheses based on REM rebound differences between normal individuals and schizophrenics have been disproved in all but 1 case. The possible causal influence of irregularities in serotonin metabolism leading to ponto-geniculate-occipital spikes has just begun to be thoroughly tested in humans, but there are problems with the theory, and findings thus far are inconclusive. While 15 yrs of laboratory work have produced no firm evidence relating REM abnormalities to schizophrenia, it is noted that there may be relationships between schizophrenia and dreaming in other areas (e.g., sleep onset dreaming). (2 p ref)—C. Wright.

7637. **Watson, Stanley J.** (Stanford U, Medical School) **Effect of delayed auditory feedback on process and reactive schizophrenic subjects.** *Journal of Abnormal Psychology*, 1974(Dec), Vol 83(6), 609-615.—A group of 20 male process schizophrenic, 20 male reactive schizophrenic, and 20 normal Ss read a passage aloud under delayed auditory feedback. S grouping, length of hospitalization, age, education, reading speed, and audiometric variables were controlled. It was theorized that normal Ss would be most affected by delayed auditory feedback, followed by reactive and then process Ss. Results do not support this hypothesis; after covarying for control reading time, the effect of diagnostic group disappeared. However, post hoc analysis revealed a subgroup of process patients more influenced by delayed auditory feedback than all other Ss. They were older, had shorter hospitalization, more education, lower control reading times, and higher process-reactive scores than the remaining process Ss. These patients are thought to constitute an "intermediate" schizophrenic group in their social organization and psychotic symptomatology. Thus, it is speculated that delayed auditory feedback could tap interactions between sensory and social variables in certain subsets of the schizophrenic population.—*Journal abstract*.

7640. **Woerner, Margaret G. & Klein, Donald F.** (Long Island Jewish—Hillside Medical Ctr, Glen Oaks, NY) **14 and 6 per second positive spiking.** *Journal of Nervous & Mental Disease*, 1974(Nov), Vol 159(5), 356-361.—Compared 27 hospitalized psychiatric patients whose (otherwise normal) EEGs showed the 14 and 6/sec positive spike pattern (PSP) with matched normal EEG patients. A group of siblings of psychiatric patients with PSP was similarly compared with matched normal EEG siblings. Comparisons on a variety of measures including pregnancy and birth histories, developmental variables obtained from mothers' reports and school records, psychiatric ratings, and psychological tests revealed few significant differences between PSP and normal EEG patients or siblings. Findings offer little to indicate a distinctive clinical significance for the PSP pattern, but further study is suggested. (23 ref)—*Journal abstract*.

7641. **Wolkind, S. N.** (London Hosp Medical Coll, England) **Psychological factors and the minor symptoms of pregnancy.** *Journal of Psychosomatic Research*, 1974(Jun), Vol 18(3), 161-165.—Investigated the relationship of minor symptoms of pregnancy to the Malaise Inventory (MI) and the the Pregnancy Questionnaire. Of 118 women who completed the interviews, 37 were classified as neurotic from their scores on the MI. A number of symptoms were found to be more common in

the neurotic group and it appears that a woman with previous neurotic or psychological difficulties is likely to see herself as having a marked number of uncomfortable symptoms during pregnancy.—*W. G. Shipman*.

### Behavior Disorders

7642. **Adilman, Philip H.** **Mary Ann and mother: An adolescent's turmoil to individuate.** *Adolescence*, 1974(Sum), Vol 9(34), 199-220.—Describes the history and treatment of a 14-yr-old female admitted to hospital because of truancy, promiscuity, and defiant behavior. The case illustrates the need to assess certain adolescent behavior in terms of an unresolved symbiosis with the mother. (16 ref)

7643. **Bleckner, Janet E.** (California State U, San Francisco) **Psychological characteristics of the Haight "junkie."** *Journal of Psychedelic Drugs*, 1974(Jan), Vol 6(1), 21-28.—Administered a Rorschach Ink Blot Test and interviewed 37 male and 17 female heroin addicts to assess characteristics of "middle class junkies." Test scores indicate the blots tended to be viewed in a global rather than detailed manner; Ss expressed few anxiety signs, an excess of diffuse over form-dominated color, and more animal than human content. The sociological history data from the interviews were correlated with the Rorschach scores and the addicts characterized as impulsive, immature, lacking awareness of realities of daily existence, lacking responsibility, operating from a model of the noncoping male parent, coming from a home stressing conformity and superficial interpersonal relations, and lacking self-esteem.—*R. Tomasko*.

7644. **Calicchia, John P.** (New York Inst of Technology) **Narcotic addiction and perceived locus of control.** *Journal of Clinical Psychology*, 1974(Oct), Vol 30(4), 499-504.—Tested predictions derived from the narcotic-induced internality explanation of the relationship between narcotics and locus of control. Rotter's Internal-External Control Scale was administered to 120 male addicts who either were receiving the heroin substitute narcotic methadone or were undergoing a narcotic abstinence form of rehabilitation. Results support the hypotheses that (a) addicts would be more internally oriented than their control counterparts, (b) methadone addicts would hold significantly more internal locus of control beliefs than the abstinence addicts, and (c) the length of addiction and perceived internality would be positively correlated. Data are discussed in terms of the narcotic-induced internality explanation and its meaning for the treatment of addicts. (15 ref)—*Journal summary*.

7645. **Carlsson, Carl; Claeson, Lars-Erik & Pettersson, Lena.** (Lillhagen Mental Hosp, Göteborg, Sweden) **Psychometric signs of cerebral dysfunction in alcoholics.** *British Journal of Addiction*, 1973(Jun), Vol 68(2), 83-86.—Psychometrically tested 67 chronic alcoholics admitted to a Swedish hospital ward for alcoholics for signs of cerebral dysfunction. Results indicate that 83.6% of Ss had signs of cerebral dysfunction on at least 3 of the tests; only 1 patient showed no such signs. (20 ref)

7646. **Castro, Gonzalo A.** [Mental health and alcoholism.] (Span) *Acta Psiquiátrica y Psicológica de América Latina*, 1974(Apr), Vol 20(2), 142-146.—Suggests that alcoholism interferes with the mental health of the alcoholic himself, by impairing his capacity to accept

himself and perceive the world, thus preventing his adjustment to life. It also damages the mental health of all of the other members of his family by hindering the development of a good family environment.

7647. Chambers, Carl D.; Bridge, T. Peter; Petersen, David M. & Ellinwood, Everett M. (U Miami, Medical School, Div of Addiction Sciences) **Methaqualone: Another "safe" sedative?** *Journal of Drug Issues*, 1974(Spring), Vol 4(2), 126-129.—Presents statistics on acute nonfatal and fatal reactions to methaqualone seen during 1972 at Jackson Memorial Hospital (Dade County, Florida). It was found that cases involving methaqualone represented 8.9% of all acute drug reactions and 30.1% of all acute reactions involving sedatives. In a substantial number of cases reaction to methaqualone was associated with use of other drugs or alcohol. All fatalities resulting from accidental overdoses of methaqualone involved individuals 21 yrs old or younger. It is suggested that methaqualone can no longer be considered a safe, nonabused sedative.—J. Kelly.

7648. Cocconcelli, C. (Istituto Psichiatrico "S. Lazzaro", Reggio Emilia, Italy) **[The phenomenon of nonalcoholic addiction in the Italian sociocultural environment: Reality and prejudice.]** (Fren) *Rivista Sperimentale di Freniatria e Medicina Legale delle Alienazioni Mentali*, 1972(Oct), Vol 96(5), 1390-1399.—Examined cases treated from 1901 to 1970 in an interprovincial neuropsychiatric hospital with outpatient facilities. The period 1961-1970 showed notably different characteristics than other years, especially the use of intoxicants not actually definable as drugs, a lower average user age, and socially-based rather than physically-based reasons for use. In the same period, conditions normally accompanying addiction (as defined by the World Health Organization) were absent. Considering the significance of these findings, and the rootedness of Italian sociocultural values, it is suggested that present repressive attitudes seem greatly out of proportion. (Italian summary)—L. Klinkon.

7649. Coe, John I. (Hennepin County General Hosp, Minneapolis, MN) **Sexual asphyxias.** *Life-Threatening Behavior*, 1974(Fal), Vol 4(3), 171-175.—Some asphyxial deaths in young white males, usually by hanging, are accidents occurring during aberrant sexual activity. The physical aspects and limited psychological knowledge of these cases that distinguish them from suicidal deaths are discussed.—*Journal abstract*.

7650. Colon, P. G. (US Public Health Service, Federal Corrections Inst, San Pedro, CA) **The effects of heroin addiction on teeth.** *Journal of Psychodetic Drugs*, 1974(Jan), Vol 6(1), 57-60.—Describes the impact of heroin addiction on oral health. Heroin withdrawal is related to the occurrence of necrotizing ulcerative gingivitis (trench mouth). The high incidence of dental disease noted in a review of the medical records of 322 addicts is attributed to local environmental factors coupled with systemic effects of heroin, rather than to the drug itself. (16 ref)

7651. De Forest, John W.; Roberts, Thomm K. & Hays, J. Ray. (Texas Research Inst of Mental Sciences, Houston) **Drug abuse: A family affair?** *Journal of Drug Issues*, 1974(Spring), Vol 4(2), 130-134.—Compared the personal and interpersonal behavior patterns of 31

mothers of adolescent patients at a drug abuse clinic with those of a matched group of mothers from non-drug-abuse families. The MMPI and the Interpersonal Check List were used to measure levels of interpersonal behavior assessed by T. Leary's interpersonal system. It was found that the drug abuse mothers were significantly less identified with their mothers than were the control mothers. Significant numbers of drug abuse mothers described their husbands as hostile, critical, and arrogant, and their children as hostile and resentful. It is concluded that members of drug abuse families may be help-rejecting and that mothers can serve as mediators between hostile fathers and children. It is suggested that therapeutic intervention with drug-abusing adolescents must focus on the family as a whole.—J. Kelly.

7652. Deikel, Stuart M. (U California, Los Angeles) **The life and death of Lenny Bruce: A psychological autopsy.** *Life-Threatening Behavior*, 1974(Fal), Vol 4(3), 176-192.—Discusses the life and show-business career of Lenny Bruce to determine whether he deliberately caused his own death by morphine overdose, if there are any significant indices that clarify why death occurred when it did, and the appropriate assignment for the mode of death. Factors involved in Bruce's success as a comedian, his eventual decline, arrests for obscenity, his use of drugs, and various personality characteristics are described. Findings suggest that Bruce's death was a subintentional death of moderate lethality (i.e., one in which the decedent has played an indirect, unconscious role in hastening his death). (27 ref)—L. Gorsey.

7653. Demoulin, Ch.; Donnay-Richelle, J.; Renerte, J. C. & Timsit, M. (U Liège, Belgium) **[Perverse structure and sexual deviations: I. Clinical approach.]** (Fren) *Acta Psychiatrica Belgica*, 1973(Nov), Vol 73(6), 725-746.—Discusses various instances of sexual perversion from a psychoanalytic vantage point. Shifts from neurosis to perversion and from perversion to psychosis have frequently been observed. (English, Dutch, German, Italian & Spanish summaries) (29 ref)—E. Coché

7654. Deusinger, Ingrid M. (Johann Wolfgang Goethe U Frankfurt, Inst of Psychology, W Germany) **[The personality structure of delinquents.]** (Germ) *Psychologische Beiträge*, 1973, Vol 15(3), 408-418.—In Test 1, 20 female Ss jailed for criminal offenses were compared with 20 controls jailed for merely asocial offenses (e.g., vagrancy or prostitution). Results of the Rosenzweig Picture Frustration Test showed significant differences between the 2 groups; the 20 Ss tended to avoid questions of guilt, to view the situation as inevitable, and to feel less hope that time and circumstances would solve their problems. In Test 2, 67 male juvenile Ss all jailed for crimes against property were compared with a group of juvenile offenders jailed for miscellaneous crimes. Ss answered the 18 lie-items of the Eysenck-Maudsley Personality Questionnaire. The property crimes group scored significantly higher for tendencies to lie. In Test 3, neuroticism, extraversion, rigidity, dogmatism, and tendency to lie were measured in 127 male and 51 female juvenile jailed offenders and in 218 controls. Jailed offenders were more neurotic and more prone to lie than those not in jail. Neuroticism decreased after prolonged detention. Only female detainees had a significantly

higher rigidity score than nondetainees. (English & French summaries) (17 ref)—*T. Fisher.*

7655. Devaux, C.; Petit, G.; Perol, Y. & Porot, M. (Hôpital Général, Clinique Neurologique et Psychiatrique de la Faculté de Médecine de Clermont-Ferrand, France) [Inquiry into parricide in France.] (Fren) *Annales Médico-Psychologiques*, 1974(Feb), Vol 1(2), 161-168.—Reports the chief statistical and psychopathological features which characterized 62 cases of parricide occurring in France 1958-1967. Parricide most often occurred in the North, in an agricultural population, and among those with a poor scholastic record; it was most often committed by males. Of the parent-slayings, 65% were of father by son, 20% mother by son, and 6% father by daughter. At least half of the families in which parricide took place were of a classically negative type; i.e., a parent missing, or parents tyrannical and physically abusive, utterly indifferent to the child's needs, etc. Roughly 60% of the cases presented a major psychotic syndrome, 20% an epilepsy, and 20% alcoholism. Of the psychotic syndromes, 64% were schizophrenic, 16% delusions of persecution, 8% chronic hallucinated states, 8% were manic-depressive, and 4% delusions of influence. Those not clearly belonging to any of the established categories of mental disease presented the psychotic traits of psychological rigidity, nervous "crises," or affective instability.—*H. E. King.*

7656. Devroye, A. (U Liège, Clinique Psychiatrique, Belgium) [Incest: Bibliographical review.] (Fren) *Acta Psychiatrica Belgica*, 1973(Nov), Vol 73(6), 661-712.—Reviews the literature on incest extensively. Ethnological data documenting the near-universality of the incest taboo are discussed in reference to various unconvincing explanatory hypotheses. Statistical data stemming from many authors concerning the frequency of incest are presented. Incestual relations are viewed from a family systems aspect, as a 3-generational event. The effect of incest on its protagonists, and the therapeutic questions involved are examined in detail. (English, Dutch, German, Italian & Spanish summaries) (2 p ref)—*E. Coché*

7657. Feldstein, Stanley; Chesler, Phyllis & Fink, Max. (U Baltimore) **Psychological differentiation and the response of opiate addicts to pharmacological treatment.** *British Journal of Addiction*, 1973(Jun), Vol 68(2), 151-157.—Re-evaluated the internal consistency of the Heroin Addict Questionnaire (HAQ) and examined its relationship to personality dimensions. In a study of 21 male opiate addicts in a city hospital treatment service, it was hypothesized that an inverse relationship would exist between the extent to which addicts claim to use heroin as a "normalizer" and their levels of psychological differentiation. Ss were administered the HAQ, the Embedded Figures Test (EFT), the Breskin Rigidity Test (BRT), and the California F Scale. Results show that the levels of Ss' psychological differentiation as measured by the EFT were unrelated to their scores on the HAQ. However, further investigations of the HAQ are suggested because of its high internal consistency.—*M. E. Pounsel.*

7658. Forbes, C. D.; Prentice, C. R. & Sclaire, A. B. (U Glasgow, Royal Infirmary, Scotland) **Surreptitious ingestion of warfarin.** *British Journal of Psychiatry*,

1974(Sep), Vol 125, 245-247.—Presents the case study of a 27-yr-old male who was treated for complications from the periodic ingestion of 5 mg of warfarin. It is suggested that surreptitious ingestion of anticoagulant drugs represents a form of deliberate disability in which the patient consciously deals with emotionally stressful circumstances by inducing a simulated illness.

7659. Fracchia, John; Sheppard, Charles; Ricca, Elizabeth & Merlis, Sidney. (Central Islip State Hosp, NY) **Interrelations among psychological needs of suburban heroin addicts.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 559-562.—Among the 15 variables assessed by the Edwards Personal Preference Scale (EPPS) for 50 male and 9 female applicants to a suburban methadone maintenance program, the pattern, direction, and magnitudes of correlations between need states were significantly different from those of the EPPS normative sample. The tendency of addicts to associate positively a number of incompatible needs is discussed in terms of its implications for counseling, generating interpersonal conflict, and understanding the addict as an individual.—*Journal abstract.*

7660. Friedman, Richard C.; Friedman, Judith G. & Ramirez, Terry. (El Paso Ctr for Mental Health & Mental Retardation Services, TX) **The heroin overdose as a method of attempted suicide.** *British Journal of Addiction*, 1973(Jun), Vol 68(2), 137-143.—Explored the relationship between overdose, depression, and suicide in 103 patients in a methadone maintenance clinic. A survey of Ss revealed that 33 had taken heroin overdoses during their lives, and historical reconstruction of the events showed that most overdoses were covert suicide attempts. Only 12% were accidents due to variability of street samples; 38% of the covert suicide attempts were related to incarceration. It is suggested that jail plays a role in contributing to the etiology of suicidal behavior in addicts. 5 cases are presented illustrating the causes of overdose in this group.—*Journal abstract.*

7661. Grotjahn, Martin. (U Southern California) **The changing view of sexual pathology.** *Contemporary Psychoanalysis*, 1974(Jul), Vol 10(3), 407-413.—Notes that nowadays individuals are less driven by anxiety and fear in the sexual area, so that sexuality reflects a more or less healthy acceptance of sex in all forms. As a result, new types of sexual pathology are observed, and psychotherapy of sexual disorders is facilitated.

7662. Harper, Mary J. **Courts, doctors, and delinquents: An inquiry into the uses of psychiatry in youth corrections.** *Smith College Studies in Social Work*, 1974(Jun), Vol 44(3), 158-178.—Conducted a follow-up study of the usefulness of psychiatric evaluations and of how psychiatric diagnoses and recommendations, based upon categories of ego functioning, had predicted recidivism among 88 "assaultive boys" in the year after the evaluations. Major findings were that psychiatric evaluations did not appear to be useful in identifying dangerous juveniles or in predicting recidivism. Nonclinical variables were also examined and appeared to be better predictors of assaultive behaviors. Findings point to the need for a psychosocial approach in prediction and treatment.—*M. W. Linn.*

7663. Hollis, W. Slater. (Memphis State U) **On the etiology of criminal homicides: The alcohol factor.**

*Journal of Police Science & Administration*, 1974(Mar), Vol 2(1), 50-53.—Attempts to document the extent of alcohol involvement in criminal homicides. For all homicides ( $N = 372$ ) in Memphis, Tennessee, over an 8-yr period the drinking status of the victim and of the offender when possible ( $N = 50$ ) were obtained from police records. 74.7% of the victims had been drinking when they died. Of 50 offenders for whom data were available, 86% had been drinking. The number of homicide victims increased with the victims' level of alcohol consumption. In 7 cases where the blood alcohol levels of both victim and offender could be determined, they were found to have the same level.—R.J. Albers.

7664. Jarvis, George K. & Messinger, Harley B. (U Western Ontario, London, Canada) **Social and economic correlates of juvenile delinquency rates: A Canadian case.** *Canadian Journal of Criminology & Corrections*, 1974(Oct), Vol 16(4), 361-372.—Reanalyzed data from an earlier study of delinquency rates and 38 other variables in London, Ontario. Factor analysis with varimax rotation reaffirmed the relationship between socioeconomic factors and delinquency rates, identifying 4 constellations of variables that accounted for 70% of the variance. (French abstract)

7665. Juliano, Daniel B. (State U New York, Buffalo) **Conceptual tempo, activity, and concept learning in hyperactive and normal children.** *Journal of Abnormal Psychology*, 1974(Dec), Vol 83(6), 629-634.—Conducted an experiment with 40 hyperactive and 80 normal 8-11 yr old males which examined the relations among activity, conceptual tempo, and diagnostic category on a concept learning and transfer task. Results reveal a small but significant performance decrement by the hyperactive group on the learning task. However, this decrement did not carry over to the transfer task, in which a group difference was not found. Activity and conceptual tempo were related to diagnosis, with the hyperactive group being more active and having a greater percentage classified as impulsive. Nonetheless, activity and conceptual tempo were not related to the performance tasks. Rather than accept a label of "brain damage" as an explanation for the learning problems of hyperactive children, it is suggested that future research might focus on cognitive styles and performance characteristics of hyperactive children. (15 ref)—*Journal abstract*.

7666. Kalish, Richard A.; Reynolds, David K. & Farberow, Norman L. (Graduate Theological Union, Berkeley, CA) **Community attitudes toward suicide.** *Community Mental Health Journal*, 1974(Fal), Vol 10(3), 301-308.—Studied the effects of age, sex, and education on the views and experiences of 434 adults regarding suicide. Results indicate that (a) over 1/2 of all men and women cited mental illness as the primary reason for suicide, (b) approximately 1 out of 8 Ss displayed little or no sympathy with individuals who threatened suicide but lacked real intent, and (c) half of the younger Ss (20-39 yrs old) and approximately 40% of the other groups (49-59 yrs and 60 yrs and older) recognized that unconsummated threats were either a call for help or were deserving of professional intervention.—M. E. Pounsel.

7667. Kilmann, Peter R. (U South Carolina) **Personality characteristics of female narcotic addicts.** *Psycholog-*

*ical Reports*, 1974(Aug), Vol 35(1, Pt 2), 485-486.—Used the Adjective Check List to compare the personality characteristics of 84 institutionalized female narcotic addicts with those of 176 normal females (mean age = 25 yrs). The addicts checked more adjectives and described themselves as being less defensive, self-controlled, personally adjusted, need-achieving, dominant, enduring, orderly, nurturant, and deferent. They also described themselves as being more unfavorable, labile, heterosexual, exhibitionistic, autonomous, aggressive, succorant, and attracted to novel experiences. Collectively, results indicate the female addict engages in immature social interactions. It is suggested that further research involve a therapeutic approach aimed at the development of meaningful interpersonal relationships.—*Journal abstract*.

7668. Kirchner, John H. & Marzolf, Stanley S. (Wood County Mental Health Clinic, Bowling Green, OH) **Personality of alcoholics as measured by Sixteen Personality Factor Questionnaire and House-Tree-Person color-choice characteristics.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 627-642.—Describes 4 studies of measures of the alcoholic personality by the 16 Personality Factor Questionnaire (16 PF) and the House-Tree-Person (HTP) test. A total of 101 male and 11 female alcoholics were compared to 16 PF normative samples and normal college students studied previously. In a sample of 49 male alcoholics support was found for the 16 PF alcoholic personality reported in earlier studies on 4-7 scales. Differences in incidence of 20 chromatic characteristics of drawings and in sex of the HTP person drawings between normals and alcoholics were also discovered. Previous research on collegiates reported some low but significant point biserial correlations and discriminant functions between 16 PF traits and trait combinations, and 20 chromatic drawing characteristics. In 3 instances, alcoholic and college men's drawing characteristics correlated significantly ( $p < .05$ ) with the same 16 PF scale. In 3 other cases, identical findings occurred in correlations of alcoholic men and college women's drawings and traits. Comparison of the data from alcoholics and college students led to the conclusion that, in general, relationships between drawing characteristics and personality traits may well depend on the type of sample used. (41 ref)—*Journal abstract*.

7669. Knaus, William J. (Inst for Advanced Study in Rational Psychotherapy, New York, NY) **Overcoming procrastination.** *Rational Living*, 1973(Fal), Vol 8(2), 2-7.—Examines procrastination from a rational-emotive perspective. The irrational bases of procrastination, its resistance to change, and ways to overcome the problem are discussed. The procrastinator, a person with delayed self-development and self-maintenance, usually holds 2 irrational beliefs: he views himself as inadequate and the world as too difficult and demanding. Behavioral manifestations of these beliefs are described, and the major mechanisms through which change is resisted. Ways to reduce or minimize the tendency to procrastinate by self-management techniques are presented.—G. J. Frankel.

7670. Lewis, Peter W. & Patterson, David W. (Loyola U, New Orleans) **Acute and chronic effects of the voluntary inhalation of certain commercial volatile**

**solvents by juveniles.** *Journal of Drug Issues*, 1974(Spring), Vol 4(2), 162-175.—Reviews investigations of the physiological and psychological effects of inhalation of toxic solvents by juveniles. Studies indicate that most glue-sniffers are males around 13 yrs old who come from broken homes and who have histories of delinquency. Immediate effects of inhalation of toxic vapors range from acute inebriation to transient psychotic reactions. It is suggested that the pattern of chronic usage of intoxicating solvents resembles addiction to narcotics or alcohol. It is concluded that although the voluntary use of toxic solvents has serious consequences, it is not presently a major social problem among juveniles. (2½ p ref)—J. Kelly.

7671. Mariátegui, Javier. (U Nacional Mayor de San Marcos, Lima, Peru) **[Epidemiological aspects of alcoholism in Latin America.]** (Span) *Acta Psiquiátrica y Psicológica de América Latina*, 1974(Apr), Vol 20(2), 86-98.—Reviews epidemiological research on alcoholism in Argentina, Bolivia, Brazil, Costa Rica, Chile, Ecuador, Mexico, Peru, and Uruguay. Overall, these studies show higher alcoholism rates in poor, less well developed areas. The importance of social-anthropological studies on the role of alcohol in cultures undergoing transformations is emphasized. (76 ref)—English summary.

7672. McDougall, Joyce. (Paris Inst of Psychoanalysis, France) **The anonymous spectator: A clinical study of sexual perversion.** *Contemporary Psychoanalysis*, 1974(Jul), Vol 10(3), 289-310.—Reports a case involving an imaginary voyeur, an unknown other who watched the obsessional acts of the patient. Certain oedipal constellations in sexual perversion are explored by attempting to formulate the basic fantasies to which the oedipal "solution" gives rise and the economic means through which the ensuing ego identity is maintained.

7673. Murphy, H. B. (McGill U, Montreal, Quebec, Canada) **[Planning for an international comparative study of alcohol and alcohol abuse.]** (Span) *Acta Psiquiátrica y Psicológica de América Latina*, 1974(Apr), Vol 20(2), 121-131.—Discusses the problems faced by an epidemiologist doing research on alcoholism, mainly the lack of a precise definition of the disease and the unreliability of the sources of information. Several sources of epidemiological information are suggested which may help to obtain comparable and reliable data from several countries: hospital statistics, general medical practitioners, the police, and nonprofessional key informants who, through gossip, may provide information not available from other sources.—English summary.

7674. Negrete, Juan C. **[Cultural factors in epidemiological studies on alcoholism.]** (Span) *Acta Psiquiátrica y Psicológica de América Latina*, 1974(Apr), Vol 20(2), 112-120.—Epidemiological research on alcoholism has been hindered by the lack of an adequate definition of the disease; in fact, epidemiological studies of alcoholism are usually nothing but surveys of alcohol consumption. Despite this flaw, research studies have shown that different cultural patterns influence prevalence, occurrence, symptomatology, evolution, and methods of treatment. (24 ref)—English summary.

7675. Nettler, Gwynn. (U Alberta, Edmonton, Canada) **Explaining crime.** New York, NY: McGraw-Hill, 1974. vii, 301 p. \$4.95.—Describes and critiques methods

of research on crime and sociological and sociopsychological explanations of criminal behaviors. Also discussed are ways of unofficially and officially counting crime; some correlates of serious crimes; subcultural, structural, symbolic-interactionist, and control explanations of criminality; possible criminogenic conditions; and the cost of reducing crime. (32 p ref)

7676. Orford, Jim & Hawker, Ann. (Inst of Psychiatry, Addiction Research Unit, London, England) **Note on the ordering of onset of symptoms in alcohol dependence.** *Psychological Medicine*, 1974(Aug), Vol 4(3), 281-288.—Notes that E. M. Jellinek's (1952) proposed phases in the development of alcohol dependence covered a wide diversity of areas. Other researchers have rejected these detailed proposals on the grounds that not all alcoholics experience all symptoms and those that do experience them do not necessarily experience them in the same order. Data from 59 halfway house residents confirm these 2 points. However, a small number of clusters of items were isolated which were reported to occur in characteristic sequence. These were first, the onset of psychological dependence; second, tremor, morning drinking, and amnesia; and, third, aspects of alcoholic psychosis. It is concluded that there is a characteristic ordering of new events and symptoms suggestive of a developmental process in alcoholism, but this ordering is apparent only if attention is confined to a limited part of the broad spectrum of events and symptoms associated with alcoholism. This process is obscured by a consideration of the social concomitants of alcohol dependence.—Journal abstract.

7677. Petrella, Fausto & Barale, Francesco. (U Pavia, Istituto di Clinica Psichiatria, Italy) **[The alcoholic's conjugal relationship.]** (Ital) *Rivista di Psichiatria*, 1974(Mar-Apr), Vol 9(2), 138-158.—Offers a general interpretation of the typical relational pattern of the alcoholic with his wife, based on observation of hospitalized patients and a review of literature. The relationship is described as pregenital sadomasochistic. (29 ref)

7678. Picou, J. Steven; Cosby, Arthur G.; Lemke, James W. & Azuma, Henry T. (Texas A&M U) **Occupational choice and perception of attainment blockage: A study of lower-class delinquent and nondelinquent black males.** *Adolescence*, 1974(Sum), Vol 9(34), 289-298.—Administered a questionnaire to 73 incarcerated and 68 nonincarcerated black male 9th-grade students. Results indicate lower-class black delinquents and nondelinquents desired prestigious occupational placement and were optimistic enough to plan for it. However, they were aware of possible blocks to their occupational success.

7679. Pirnay-Dufresne, Régine. (U Liège, Clinique Psychiatrique, Belgium) **[Incestuous intercourse in a large family.]** (Fren) *Acta Psychiatrica Belgica*, 1973(Nov), Vol 73(6), 713-724.—Presents a case study of an incestuous father-daughter relationship in a family of 8 children. (English, Dutch, German, Italian & Spanish summaries)

7680. Rahwan, Ralf G. (Ohio State U, Coll of Pharmacy) **Speculations on the biochemical pharmacology of ethanol.** *Life Sciences*, 1974(Aug), Vol 16(4), 617-633.—Reviews experimental studies in animals and

man which have investigated the pharmacological, toxicological, and pathological effects of ethanol and alcohol consumption, and discusses proposed models for an etiology of alcohol addiction. (63 ref)

7681. Retka, Robert L. & Chatham, Lois R. (National Inst of Mental Health, Div of Narcotic Addiction & Drug Abuse, Bethesda, MD) **The addict personality.** *Journal of Psychedelic Drugs*, 1974(Jan), Vol 6(1), 15-20.—Discusses the historical context of opiate drug addiction in the US. The results of opium addiction studies done in 1877-1920 are reviewed and the role of the Harrison Narcotic Act in changing the ecology of addiction is cited. The social context of addiction is stressed, and the existence of a single addict-personality type is disputed. The changing nature of addiction is considered a greater threat than its size, and the need is noted to match the diversity of addicts with an equally diverse range of treatment and prevention modes.—R. Tomasko.

7682. Rutstein, Eleanor H. & Goldberger, Leo. (Private practice, New York, NY) **The effects of aggressive stimulation on suicidal patients: An experimental study of the psychoanalytic theory of suicide.** *Psychoanalysis & Contemporary Science*, 1973, Vol 2, 157-174.—Presented aggressive and neutral stimuli subliminally and supraliminally to 64 female hospitalized psychiatric patients, 32 of whom had made serious suicide attempts. The Multiple Affect Adjective Checklist (MAACL) and the Rorschach Test were used to measure hostility, depression, anxiety, and aggression before and after stimuli viewing. It was found that suicidal Ss showed significantly more depression (as measured by the MAACL) following subliminal aggressive stimuli than following neutral stimuli. Supraliminal presentation of aggressive stimuli was followed by a decrease in depression and an increase in outward aggression in suicidal Ss. It is concluded that aggressive drives result in pathological adaptations such as depression and self-destruction only when the suicidal patient is not consciously aware of their presence. (1½ p ref)—J. Kelly.

7683. Schmideberg, M. **Treatment of an acting-out suicidal girl addicted to phenobarbital.** *International Journal of Offender Therapy & Comparative Criminology*, 1974, Vol 18(2), 196-197.—Describes the behavior of a 20-yr-old woman who was treated for various psychiatric disorders.

7684. Sims, Mary. (Addiction Research Foundation, Toronto, Ontario, Canada) **Sex and age differences in suicide rates in a Canadian province: With particular reference to suicides by means of poison.** *Life-Threatening Behavior*, 1974(Fal), Vol 4(3), 139-159.—Reports data on changes in age and sex suicide rates and methods for a 20-yr period. Rate increases from the earliest base have occurred in all age-sex groups. The proportion of poison suicides has increased greatly beginning in 1960 for women, and in 1965 for men. Adults aged 30 and over account for most of the increase in ingested poisons; death by carbon monoxide also occurs with increasing frequency among all males, as do violent suicides in males under 30. Accidental poisonings follow a similar pattern. In view of increasing alcohol consumption, risks of concomitant alcohol-drug use are discussed,

as are certain protective features for women inherent in their disproportionately high use of medically prescribed drugs. (33 ref)—*Journal abstract*.

7685. Sours, John A. (Columbia U, Psychoanalytic Clinic for Training & Research) **Physical, mental, and therapeutic aspects of anorexia nervosa.** *International Journal of Child Psychotherapy*, 1973(Oct), Vol 2(4), 419-439.—Discusses treatment of the patient with anorexia nervosa, based on the current physical status of the patient, the degree of regression, and the level of resistance apparent at that time. The primary and secondary signs of the illness are described as well as 3 of the most common types of patients in whom the primary anorexia nervosa syndrome is found. The disease's history, incidence, physical symptoms, and physiological concomitants are cited. A case is presented against the 2 extremes of treatment, the medical and the outpatient approach, and suggestions are made for tailoring the treatment to the patient. (39 ref)—R. S. Albin.

7686. Susman, Jackwell (Ed.). (American U) **Crime and justice: 1971-1972.** New York, NY: AMS Press, 1974. 491 p. \$15.—Presents a collection of 37 discussion and review papers on aspects of American crime and the judicial system's response to it to illustrate changing concepts of criminal justice within the social order. Topics include identity, personality, and role in crime; organizational and situational factors affecting crime; and community influences and social values in crime.

7687. US Dept of Justice. (Washington, DC) **Crimes and victims: A report on the Dayton-San Jose pilot survey of victimization.** Washington, DC: Dept of Justice, Law Enforcement Assistance Administration, 1974. vii, 191 p.—Tested survey methods and instruments in Dayton, Ohio and San Jose, California as a part of an effort by the President's Commission on Law Enforcement and Criminal Justice to measure the extent of common theft and assaultive violence in the US. Information was collected on rape, robbery, assault, burglary, and larceny. (19 ref)

7688. Varma, S. C. **Socio-cultural factors in problems of children.** *Indian Journal of Psychiatric Social Work*, 1973(Jul), Vol 2(1), 25-27.—Describes the cultural differences between American and Indian students (6-16 yrs old) in India, and suggests their relevancy to major differences in common behavior problems between the 2 groups.

7689. Wen, Chi-Pang. (Michigan State U, Coll of Human Medicine, Office of Health Services Education & Research) **Secular suicidal trend in postwar Japan and Taiwan: An examination of hypotheses.** *International Journal of Social Psychiatry*, 1974(Spring-Summer), Vol 20(1-2), 8-17.—Marked increases in suicide among young adults (ages 15-24) occurred in Japan in the late 1950s and in Taiwan in the early 1960s. In peak years, suicide caused over half of all deaths in this age group. 2-3 yrs after the peak in each country, the rate rapidly declined. Social factors commonly related to suicide are examined as possible causes, but all fail to explain the historical timing or age-specificity of the suicide waves. It is hypothesized that stress caused by World War II in Japan (1942-1945) and the massive immigration of refugees from mainland China into Taiwan (1948-1951) strongly affected children and predisposed them to

suicide as young adults, 13 yrs later. (28 ref)—*W. R. Street.*

7690. Whiskin, Frederick E. Treating depressed offenders in the court clinic. *International Journal of Offender Therapy & Comparative Criminology*, 1974, Vol 18(2), 136-142.—Reviews literature on and presents case histories of offenders to support the thesis that certain offenders express a depressive core of their personalities through their antisocial acting out. (15 ref)

7691. Wold, Carl I. & Tabachnick, Norman. (U Southern California) Depression as an indicator of lethality in suicidal patients. In R. J. Friedman & M. M. Katz (Eds), *The psychology of depression: Contemporary theory and research*. New York, NY: John Wiley & Sons, 1974. xvii, 318 p. \$15.

### Learning Disorders & Mental Retardation

7692. Abrams, Stanley & Weinstein, Edwin. (Permanente Clinic, Portland, OR) The validity of the polygraph with retardates. *Journal of Police Science & Administration*, 1974(Mar), Vol 2(1), 11-14.—Tested the assumption that retardates cannot be evaluated on the polygraph. 4 groups of retardates of 4 each, with different levels of retardation, were examined with the polygraph by 2 operators. 7 Ss with IQ of 65 or higher could be evaluated, but in the 2 groups with IQ below 65 either the Ss were untestable or the results were meaningless. Despite the artificial test situation and small number of Ss, results are believed to be generalizable.—*R. J. Albers.*

7693. Allen, Gordon. (NIMH, Bethesda, MD) Aetiology of Down's syndrome inferred by Waardenburg in 1932. *Nature*, 1974(Aug), Vol 250(5465), 436-437.—Cites an early suggestion by a Dutch ophthalmologist that mongolism may be the result of a chromosomal deficiency brought about by "non-disjunction" or by "chromosomal duplication."

7694. Blakey, R. S. (U Aberdeen, Scotland) Moral judgments in subnormal adults and normal children. *British Journal of Mental Subnormality*, 1973(Dec), Vol 19(37, Pt 2), 85-90.—Investigated 5 aspects of Piaget's definition of moral judgment in 20 retarded adults (mean mental age = 6 yrs, mean chronological age 26 yrs) and 20 normal children (mean chronological age = 6 yrs). Ss' responses to a group of stories were coded and scored, and median scores were not significantly different between the groups or between males and females. It is concluded that retardates show similar levels of moral judgment to normal children.—*C. Wright.*

7695. Buschke, Herman & Fuld, Paula A. (Albert Einstein Coll of Medicine, Yeshiva U) Evaluating storage, retention, and retrieval in disordered memory and learning. *Neurology*, 1974(Nov), Vol 24(11), 1019-1025.—Describes 2 methods (selective reminding and restricted reminding) that are clinically useful for analyzing impaired memory and learning. These methods provide simultaneous analysis of storage, retention, and retrieval during verbal learning because they allow the patient to show learning by spontaneous retrieval without confounding by continual presentation. The method also allows patients to distinguish list learning from item learning, so that impaired memory

and learning can be analyzed further in terms of 2 stages of learning—item and list. (15 ref)—*Journal abstract.*

7696. Cook, J. W. (School Psychological Service, Guildford, England) Dyslexia: A critical comment. *Association of Educational Psychologists' Journal & Newsletter*, 1973(Win), Vol 3(3), 51-60.—Discusses some of the reasons for the controversy surrounding the concept of dyslexia. A clear distinction between the medical and educational aspects of the problem is required. Although it may be medically meaningful to search for a special disease entity called "developmental dyslexia," educationally it makes more sense to treat the symptoms of poor progress in reading, without worrying greatly about which of the causative factors in primary. (42 ref)—*I. L. Zimmerman.*

7697. Dittmann, Werner. [The incidence of children with Down's syndrome in state schools for mentally retarded trainable classes.] (Germ) *Praxis der Kinderpsychologie und Kinderpsychiatrie*, 1974(May-Jun), Vol 23(4), 144-149.—Investigated the incidence of mongoloid children in the 602 state schools for the mentally retarded (trainable classes) in the West German Federal Republic. 21% of all children in these schools suffered from Down's syndrome; 53% were girls and 47% boys. (50 ref)

7698. Durfee, Kent E. (Scottsdale Psychiatric Ctr, AZ) Crooked ears and the bad boy syndrome: Asymmetry as an indicator of minimal brain dysfunction. *Bulletin of the Menninger Clinic*, 1974(Jul), Vol 38(4), 305-316.—The author cites his 1965 study of 275 children classified as mental retardates, learning disabled, delinquent, etc. Among these Ss asymmetry of the ears ranged from 67.8% to 96.2% ( $p = .005$ ). In the current study of 22 Ss, including some adults, significant asymmetry of the ears was likewise found ( $p = .009$ ). It is suggested that the described technique of measuring asymmetry may be a method of screening for the possible existence of congenital central nervous system defects.

7699. Eggert, Dietrich. (Pädagogische Hochschule Niedersachsen, Hannover, W Germany) [A comparative study on the social competence of trainable mentally retarded children and non-retarded children with the Vineland Social Maturity Scale.] (Germ) *Praxis der Kinderpsychologie und Kinderpsychiatrie*, 1974(May-Jun), Vol 23(4), 139-144.—A short German version of the Vineland Social Maturity Scale was tried out on 728 trainable mentally retarded children 7-12 yrs old and on 446 nonretarded children 2-6 yrs old. Psychometric data on reliability and validity were gathered, showing a relatively high usefulness of the scale even for nonretarded children. Problems of the relevance of the concept of social maturity as a classificational device for mental retardation, and the use of intelligence and psychomotor tests, are discussed. Although a 3-dimensional diagnosis (intelligence, motor, social competence) creates more possibilities for therapeutic procedures, it is concluded that the concept of social competence needs further elaboration to become a useful part of a multidimensional diagnostic and therapeutic system for classifying and treating mental retardation. (27 ref)—*Journal summary.*

7700. Fällström, K. & Aronson, M. [The effect of early psychological training of mentally retarded children.] (Swed) *Nordisk Psykiatrisk Tidsskrift*, 1972, Vol 26(8).

467-473.—Matched 2 groups of mongoloid children with respect to age (16-69 mo) and sex (2 boys and 6 girls in each group). One group received the following types of training: (a) sensory functions (exposure to musical instruments, tactile stimuli, and games involving color and form discrimination); (b) bodily needs (table manners, toilet training, etc); (c) intellectual functions (jigsaw puzzles, verbal games); (d) motorics: gross (e.g., climbing stairs), and fine (e.g., sewing); (e) memory (of location of toys); (f) control of aggressive behavior; (g) social functions (setting a table, serving food); (h) attention. The Ss were trained twice a week for an unspecified period of time; no details on teaching methods are offered. All were tested 4 times with Griffiths Mental Development Scales, 0-8 years. The trained children showed significantly greater increments in mental age (mean = 10.5 mo) than the matched controls (mean = 3.5 mo). Training improved performance on all subscales.—R. G. Wikmark.

7701. Johnson, Janet M. & Zinner, Carol C. (Ohio State U, Faculty for Exceptional Children) **Stimulus fading and schedule learning in generalizing and maintaining behaviors.** *Journal of Music Therapy*, 1974(Sum), Vol 11(2), 84-96.—Attempted to determine whether experimentally verified conditions for generalization and maintenance could be applied in a music therapy clinic. The Ss were 2 retarded boys at a state hospital and training center. A music preference test (Cotter and Toombs, 1966) was given to each. Both Ss preferred music to white or ambient noise, and both selected children's music and rock-and-roll music. Initial therapy goals were achieved: (a) to increase accuracy of color discriminations, and (b) to increase on-task behaviors, defined as proximity to the task and absence of vocalizations. Results demonstrate that the amount of therapist time and attention required to establish desired behaviors could be gradually decreased if specific plans for maintaining behaviors were applied.—F. O. Triggs.

7702. Kaplan, Bonnie J. **Malnutrition and mental deficiency.** In F. Rebelsky & L. Dornon (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Reviews data on the interaction of malnutrition and mental deficiency. It is stated that although a causal connection has not been directly demonstrated in human Ss, the research contains compelling evidence that early malnutrition is a contributing factor in the incidence of mental deficiency. The physiology of malnutrition is examined. (3½ p ref)

7703. Kornmann, Reimer; Hils, Ursula; Riemer, Christa & Wäckerle, Rudolf. (Pädagogische Hochschule Heidelberg, Abteilung Lernbehindertenpädagogik, W Germany) **[Comparison of some validity criteria of the Hand-Dominanz-Test of Steingrüber and Lienert and the Leistungs-Dominanz-Test of Schilling for normal pupils and slow learners.]** (Germ) *Diagnostica*, 1974, Vol 20(3), 129-132.—Compared the retest reliabilities with an 8-wk interval of 2 measures of the degree of superiority of the dominant hand. The Hand-Dominanz-Test (HDT) by H.-J. Steingrüber and G. A. Lienert (1971) and the Leistungs-Dominanz-Test (LDT) by F. Schilling (1973) were administered to 24 slow learners 8-10 yrs old and to a matched group of normals. For the HDT the retest

reliabilities were .64 and .65 for the slow and normal groups; for the LDT they were .80 and .84.—M. Morf.

7704. Lambert, Jean-Luc. (U Liège, Belgium) **[Mental retardation and re-education: The behaviorist approach.]** (Fren) *Revue de Psychologie et des Sciences de l'Education*, 1974, Vol 9(1), 53-80.—Examines the application of operant conditioning techniques to the modification of the behavior of mental retardates in terms of self-help skills and social skills. Examples of research are given, including problems of body management, self-feeding, toilet training, social behaviors, the elimination of undesirable behaviors, and speech development. Research methods used in these studies are described. It is concluded that the development of behavioral techniques is required in Belgium. (French & English summaries) (47 ref)—*Journal summary*.

7705. Magerotte, G. (U Catholique Louvain, Ctr de Psychopathologie de l'Enfant et d'Orthopédagogie, Belgium) **[Scientific information in the area of mental retardation.]** (Fren) *Revue de Psychologie et des Sciences de l'Education*, 1974, Vol 9(1), 81-87.—Lists national and international organizations, specialized bibliographies, and the principal journals in English, French, and Dutch that deal with mental retardation.

7706. Magerotte, G. (U Catholique Louvain, Unite de Recherche en Pédiopsychiatrie, Belgium) **[Important aspects in the evaluation of mental handicaps: Intelligence and adaptive behavior.]** (Fren) *Revue de Psychologie et des Sciences de l'Education*, 1974, Vol 9(1), 3-7.—Attempts to broaden and delineate the concept of mental retardation. It cannot be reduced to an intellectual deficit alone; we must also take into account adaptive behavior and how its limits are laid down by society. Practical considerations about the measurement of intelligence and adaptive behavior and about prognosis are discussed. (French & English summaries) (42 ref)—*Journal summary*.

7707. Matsuda, Michihiko & Matsuda, Fumiko. (Chiba U, Japan) **[The effects of verbal reinforcement combinations on three-alternative discrimination learning in normal and mentally retarded children.]** (Japn) *Japanese Journal of Educational Psychology*, 1974(Mar), Vol 22(1), 40-44.—6 groups of 108 2nd graders and 6 groups of mentally retarded children (mean mental age 8½ yrs) performed 3-alternative discrimination and shift learning tasks of 2 dimensions, color and form, under 3 types of verbal reinforcement combinations. RW, RN, and NW. The mentally retarded NW group showed significant inefficiency in the original learning ( $p < .05$ ). No significant differences of the verbal reinforcement combinations were found between groups in the shift learning. Results indicate that mentally retarded children had more difficulty in using the information of W in the 3-alternative tasks than in 2-alternative tasks. —S. Choe.

7708. Metzler, Roberta K. (Augsburg Coll) **The use of music as a reinforcer to increase imitative behavior in severely and profoundly retarded female residents.** *Journal of Music Therapy*, 1974(Sum), Vol 11(2), 97-110.—Attempted to measure the influence of music as a reinforcer to increase imitative behavior in profoundly retarded female residents. The Ss, 30 retarded adults from a residential treatment center, were divided randomly into 3 groups: Group K had no music. Group

L had continuous music, and Group M had music as a reinforcer. Each S was tested individually for 18 trials of 10 min each. The 18 trials were divided into 2 conditions. Analysis of variance determined that there was no significant difference in each of the 18 trials. A trend analysis of variance, applied to both conditions for all 3 groups, showed no significant difference which could be attributed to the variable of music. There was no significant difference in the means of the 3 groups or in the interaction of groups times trials. Thus the variable of music as a reinforcer did not increase imitative behavior in the Ss studied, nor did it influence discriminatory behavior.—F. O. Triggs.

7709. Nissen, G. (Städtische Klinik für Kinder- und Jugendpsychiatrie Wiesengrund in Berlin-West, W Germany) [Play disturbances at pre-school age as precursors to learning difficulties of children and adolescents.] (Germ) *Acta Paedopsychiatrica*, 1974, Vol 40(6), 214-220.—Suggests that play disturbances in childhood are as frequent as learning disorders in children and adolescents, but are rarely diagnosed; skill in developmental psychology is needed to recognize them. As age-specific symptoms they depend on the basic neurosis structure, with a diversity of significance. Untreated, they undergo sequential symptom change in the course of subsequent mental development. Narrow pathogenic relations exist between play disturbances and family constellation. The play disturbances of 50 children showed a genesis influenced by early emotional frustration, professional employment of both parents, extreme indulgence and/or psychosomatic parental disease. Therapy must be both symptom focused and syndrome oriented. Only thus can mental maldevelopment be favorably influenced and age- or development-specific symptom change (learning or achievement disorders) be prevented.—G. Rubin-Rabson.

7710. Saito, Shigeru. [Facilitative effect of syntactical mediation on paired-associate learning by mentally retarded children.] (Japn) *Japanese Journal of Educational Psychology*, 1973(Dec), Vol 21(4), 233-236.—Gave paired-associate learning tasks to 3 groups of 30 mentally retarded children. Syntactical mediations, one in the form of sentences, the other in the form of required compositions, were given to 2 experimental groups. The effects of these 2 levels of verbal mediations were compared with the effect of simple stimulus-response associative learning undertaken by the control group. Results indicate a significant effect of syntactical mediations on paired-associate learning ( $p < .01$ ).—S. Choe.

7711. Schachter, M. (Comite de l'Enfance Deficiente de Marseille, France) [Long-term psychological and social prognosis in cases of mongolian retardation followed for more than 10 years.] (Fren) *Annales Médico-Psychologiques*, 1974(Feb), Vol 1(2), 195-224.—Re-examines the unresolved problems of social adjustment presented by mongoloid children, and underscores the growing importance of this problem as a consequence of their improved survival rate over the past 30 yrs. 7 individual cases are reported of mongolian children placed in a setting that was optimal from a combined medical, familial, and pedagogic viewpoint. Their development is traced over a 10-yr period,

including adolescence and (for some) young adulthood. Contrary to the findings reported by some optimistic writers, the social and economic development of these children was minimal, despite optimal conditions for growth. Although they can learn more than was realized formerly, which grants them a degree of independence in everyday life, they were found, without exception, to be dependent for the rest on the guidance and protection provided by their parents and by society.—H. E. King.

7712. Skeels, Harold M. Adult status of children with contrasting early life experiences: A follow-up study. In F. Reber & L. Dorn (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Presents 21-yr follow-up data on the outcome of 13 mentally retarded children in the "Iowa studies" who experienced early intervention (experimental group) compared to 12 children who experienced a relatively nonstimulating environment. Experimental Ss showed a marked increase in rate of mental growth, whereas the comparison group showed progressive mental retardation. (20 ref)

7713. Spring, Carl & Capps, Carolyn. (U California, Davis) Encoding speed, rehearsal, and probed recall of dyslexic boys. *Journal of Educational Psychology*, 1974(Oct), Vol 66(5), 780-786.—Describes a model attributing poor recall to slow speech-motor encoding. The following results, predicted from the model, were obtained with 24 poor readers of normal intelligence and 24 normal readers from ages 7 to 13: (a) Poor readers named visually presented, nonword stimuli more slowly than normal readers; (b) fewer poor readers than normal readers employed a cumulative rehearsal strategy during a probed-recall task; (c) the use of cumulative rehearsal was significantly related to naming speed; (d) the performance of poor readers was inferior to that of normal readers for all but the most recently presented items of the probe-recall task; and (e) naming speed and use of cumulative rehearsal accounted for 91% of the true variance of early and middle serial positions of the probed recall task.—*Journal abstract*.

7714. Umetani, Tadao. (Tokyo U of Education, Japan) [A study of discrimination reversal-shift learning in mentally retarded children: Investigation by reaction time.] (Japn) *Japanese Journal of Educational Psychology*, 1973(Dec), Vol 21(4), 248-253.—21 mentally retarded and 21 normal children, all of mental age (MA) 6-8, performed discrimination reversal shift learning tasks consisting of 2 dimensions and 2 values. The number of trials and the simple reaction time (RT) for 4 successive reversal shifts were observed and analyzed. Results show that the number of trials decreased with the increase of MA for the normal children but not for the retarded; that the number increased for the retarded with the repetition of reversal shift, whereas the number decreased for the normal S; and that the RT was shorter and the response pattern was uniform for the retarded children in the original learning.—S. Choe.

7715. Vellutino, Frank R.; Pruzek, Robert M.; Steger, Joseph A. & Meshoulam, Uriel. (State U New York, Child Research & Study Ctr, Albany) Immediate visual recall in poor and normal readers as a function of orthographic-linguistic familiarity. *Cortex*, 1973(Dec), Vol 9(4), 370-386.—Tested the hypothesis that the

visual-perceptual skills of poor readers are comparable to those of normal readers; specifically, that poor and normal readers would encounter similar difficulties when presented with an unfamiliar orthography, and greater difficulties than normal readers who were becoming acquainted with the graphic and linguistic components of that orthography. Employing a task requiring visual recall of Hebrew words, the performances of 2 non-Hebrew groups (poor and normal readers) were compared with one another and with the performance of normal readers learning Hebrew. Response variables consisted of total number correct, as well as omission, orientation, sequencing, and substitution errors. It was expected that the performance of the 2 non-Hebrew groups would be comparable on all measures but that both groups would be inferior to the Hebrew group. The prediction was supported for total number correct, as well as for omission and orientation errors, but there were no reliable differences among the groups on the sequencing and substitution measures. Results provide additional evidence that visual-spatial deficit is an unlikely cause of reading disability and indirectly support the notion that the disorder is attributable to dysfunction in visual-verbal integration.—*R. Gunter.*

7716. **Wheldall, Kevin & Jeffree, Dorothy.** (U Birmingham, School of Education, England) **Criticisms: Regarding the use of the E.P.V.T. in subnormality research.** *British Journal of Disorders of Communication*, 1974(Oct), Vol 9(2), 140-143.—Argues against the common practice of estimating mental age on the basis of a score on a test of a specific ability, usually receptive vocabulary. It is shown how a relatively high vocabulary age may be achieved on the English Picture Vocabulary Test by subnormal children. The danger of using this as a mental age estimate is stressed, especially in subnormality research where a mental age matching paradigm is employed using normal and subnormal children.—*Journal abstract.*

### Speech Disorders

7717. **Burgraff, Roger I.** (US Air Force Hosp. RAF Lakenheath, England) **The efficacy of systematic desensitization via imagery as a therapeutic technique with stutterers.** *British Journal of Disorders of Communication*, 1974(Oct), Vol 9(2), 134-139.—Examined the short-term effects of systematic desensitization via imagery on the severity of stuttering in a group of 9 19-51 yr old adult stutterers. These effects were compared with those obtained through the use of a traditional symptomatic therapy approach with another group of 9 adult stutterers. The 2 groups of stutterers were matched for stuttering severity. Within the short time span of this study, both groups attained significant improvement using numbers of blocks and block duration ratios as measures of severity. There were no significant differences of improvement between the 2 groups. There was also a lack of correspondence between the severity of stuttering and the level of speech anxiety in various situations. (21 ref)—*Journal abstract.*

7718. **Conn, Philip.** (U Manchester, Hester Adrian Research Ctr, England) **The interrelations of alternatives in symbolic representation.** *British Journal of Disorders of Communication*, 1974(Oct), Vol 9(2), 92-101.

—Presents a schematic attempt to synthesize a heterogeneity of therapeutic methods by specifying them in terms of a common framework of defining criteria. After characterizing a concept of "code," (regarded as more generic than the term "language," the defining criteria of the framework), speech and commonly used alternatives to speech are classified in terms of the framework. The relevance of the framework to remediation is noted, and further therapeutic alternatives are delineated.—*Journal abstract.*

7719. **Michel, Donald E. & May, Nancy H.** (Florida State U) **The development of music therapy procedures with speech and language disorders.** *Journal of Music Therapy*, 1974(Sum), Vol 11(2), 74-80.—Discusses work since 1958 at Florida State University concerning the relationships between music therapy and speech therapy, resulting in a number of research studies and reports. A review of pertinent studies indicates that accumulated experience with the use of music therapy in speech and language disorders has produced a gradual refinement of procedures and evaluation. Support is growing for the idea that music therapy is not only an additional modality adjunctive to speech pathology, but that it has unique contributions to make, both independently and in interdisciplinary ways.—*F. O. Triggs.*

7720. **Prins, David & Nichols, Anne.** (U Washington) **Client impressions of the effectiveness of stuttering therapy: A comparison of two programs.** *British Journal of Disorders of Communication*, 1974(Oct), Vol 9(2), 123-133.—A total of 32 11-15 yr olds in residential and nonresidential stuttering therapy used a questionnaire to evaluate the effects of the 2 programs. Results show impressions of significantly greater improvement in speech fluency following residential therapy. Speech data support the questionnaire findings in terms of the magnitude of stuttering severity change in pre- vs posttherapy recordings. Results are related to differences in the pretherapy stuttering frequency of Ss and the nature of the 2 programs. Ss' impressions following the nonresidential program were that its primary effects were related to improvement in morale. Possibilities for altering this program to increase its effectiveness upon speech fluency are suggested. (17 ref)—*Journal abstract.*

7721. **Tudor, Carole & Selley, Wilfred G.** (U Exeter, Inst of Biometry & Community Medicine, England) **A palatal training appliance and a visual aid for use in the treatment of hypernasal speech: A preliminary report.** *British Journal of Disorders of Communication*, 1974(Oct), Vol 9(2), 117-122.

7722. **Wynter, Helen.** (Central School of Speech & Drama, London, England) **An investigation into the analysis and terminology of voice quality and its correlation with the assessment reliability of speech therapists.** *British Journal of Disorders of Communication*, 1974(Oct), Vol 9(2), 102-109.—Presents a brief account of a pilot study conducted in an attempt to discover which factors of voice quality were most likely in the opinion of speech therapists to require treatment, and the extent to which therapists agreed among themselves. 25 raters (16 qualified therapists and 9 3rd-yr students) were asked to assess tape recordings in terms of nasality, pitch deviation, hoarseness, breathiness, and stridency. Each aspect of voice quality was correlated to ascertain

whether or not it was significantly related to therapy and certain aspects were intercorrelated to discover the degree of variance or agreement between raters. It was found that stridency, hoarseness, and breathiness were significantly correlated with the need for treatment by raters, and that raters were more reliable in judging pitch than nasality.—*Journal abstract.*

### Physical & Toxic Disorders

7723. **Altshuler, Kenneth Z.** (New York State Psychiatric Inst, New York) **The social and psychological development of the deaf child: Problems, their treatment and prevention.** *American Annals of the Deaf*, 1974(Aug), Vol 119(4), 365-376.—Traces the pathways involved in normal development and how they may be interfered with by the absence of audition and by family responses in the case of a deaf child. Behavioral problems, problems of family, difficulties of motivation vs capacity that may eventuate, and the occasional more severe gradations of illness are discussed. Based on normal developmental tracks, preventive suggestions are offered which can aid in the healthy development of the deaf child. (37 ref)—*Journal abstract.*

7724. **Andersen, Marcia D. & Pleticha, Jane M.** (Schoolcraft Community Coll, Livonia, MI) **Emergency unit patients' perceptions of stressful life events.** *Nursing Research*, 1974(Sep-Oct), Vol 23(5), 378-383.—Studied perceptions of recent stressful life events of 52 emergency unit patients (mean age = 34 yrs). The readjustment required by the stressful events was measured using the Social Readjustment Rating Scale. Patients' total readjustment magnitude score was extensive and significantly related to their perception of the severity of their medical problems. However, readjustment magnitude score was not related to their physicians' perception of the severity of their medical problem. When the relationship between specific stressful life events and specific symptomatology and diagnoses was examined, the readjustment magnitude score was found to be negligible. It is concluded that health professionals should routinely assess their patients' degree of readjustment to recent life changes and examine illness from this perspective.—*Journal abstract.*

7725. **Baker, Harry J.** **Famous persons who have been handicapped: A critical analysis.** In B. C. Ring & D. R. Schrader (Eds), *Eleventh annual Distinguished Lectures Series in Special Education and Rehabilitation*. Los Angeles, CA: U Southern California, School of Education, 1973. vi, 101 p. \$3.—Examines how various writers, musicians, inventors, educators, and scientists have overcome physical handicaps. Characteristics of the "will power" needed to overcome and compensate for deficiencies are discussed.

7726. **Bonfils, S. & de M'Uzan, M.** (B. Hôpital Bichat, Unité de Recherches de Gastroenterologie, Paris, France) **Irritable bowel syndrome vs ulcerative colitis: Psychofunctional disturbance vs psychosomatic disease?** *Journal of Psychosomatic Research*, 1974(Aug), Vol 18(4), 291-296.—Questions the correctness of an exclusive etiology for the irritable bowel syndrome and ulcerative colitis, pointing out that the psychosomatic factors are integrated in a pathophysiological chain at

completely different neuropsychological maturation levels for the 2 diseases.

7727. **Borg, E. & Zakrisson, J.-E.** (Karolinska Inst, Stockholm, Sweden) **Stapedius reflex and monaural masking.** *Acta Oto-Laryngologica*, 1974(Sep-Oct), Vol 78(3-4), 155-161.—Performed experiments with 32 control university students to determine some normal features of the stapedius reflex, and with 20 Ss with unilateral peripheral facial palsy. The masking produced by narrow-band, low-frequency noise was measured in 3 Ss with total unilateral stapedius paralysis. The 3 Ss had normal hearing up to 8 kHz. Hearing thresholds were traced with pulsating tone of fixed frequency in the range 1-8 kHz. Masking was produced by .5 kHz continuous noise (.3-kHz bandwidth) in the intensity range 85-120 db sound pressure level. Measurements were obtained both from the ear with stapedius paralysis and from the ear with normal stapedius reflex, during the acute stage of the paralysis and after recovery. Below reflex threshold, masking was equal in both ears. Above reflex threshold it was consistently greater in the ear with stapedius paralysis. The difference was greatest at 6 and 8 kHz and reached about 50 db. After recovery masking was equal in both ears. It was shown that the antimasking effect of the stapedius reflex could be completely explained by its attenuation of the low-frequency masking noise. It is concluded that the stapedius reflex has an important influence on hearing at high frequencies by decreasing the masking produced by low-frequency sound. (German summary)—*Journal abstract.*

7728. **Bruhn, John G.; Paredes, Alfonso; Adsett, C. Alexander & Wolf, Stewart.** (U Oklahoma, Health Sciences Ctr, Oklahoma City) **Psychological predictors of sudden death in myocardial infarction.** *Journal of Psychosomatic Research*, 1974(Jun), Vol 18(3), 187-191.—Studied 67 Ss with a myocardial infarction and 67 healthy controls. Psychological, sociological, physical, X-ray, and laboratory data were gathered at intervals for 7 yrs. On the basis of psychiatric interviews, 11 of 27 deaths were correctly predicted; on behavior pattern A, 7 of 18; and on a depression scale, 4 of 18 were correctly predicted. (24 ref)—*W. G. Shipman.*

7729. **Burnett, Loring L. & Struve, Frederick A.** (Kings Park State Hosp, NY) **The value of EEG study in minimal brain dysfunction.** *Journal of Clinical Psychology*, 1974(Oct), Vol 30(4), 489-495.—Presents a general discussion of the concept of minimal brain dysfunction (MBD) and explores the conflicting views on the EEG's diagnostic value in this condition. Several reasons for a negative evaluation are offered, and a positive position is explicated. The values and limitations of EEG findings for diagnosis, prognosis, and follow-up study of MBD individuals are described. It is suggested that in practical clinical approaches to MBD children the EEG provides only one of several useful procedures. (91 ref)—*Journal summary.*

7730. **Carlomagno, S. et al.** (U degli Studi di Napoli, Facoltà di Medicina e Chirurgia, Italy) **[Sanfilippo's disease: Genetic, clinical and biological study of two families.]** (Ital) *Acta Neurologica*, 1974(May-Jun), Vol 29(3), 231-251.—The disease was suspected in a 6-yr-old girl and an 11-yr-old boy in 2 different families because of evidence of an autosomic recessive disorder, symp-

toms of progressive mental disorder, symmetrically hyperactive deep tendon reflexes, dwarfism, and radiologically evident bony abnormalities. The diagnosis was confirmed by quantitative and qualitative analysis of mucopolysaccharides that demonstrated an abnormal amount of urinary excretion.—*M. Stanford.*

7731. Cravioto, Joaquin; Hambræus, Leif & Vahlquist, Bo (Eds.). **Early malnutrition and mental development.** Uppsala, Sweden: Almqvist & Wiksell, 1974. 87 p. —Presents a collection of 21 empirical and discussion papers on the physiological, sociological, and psychological effects of malnutrition on prenatal and early child development which were presented at an international symposium held in Sweden in 1973. 2 additional papers on methodologies in studies of malnutrition and mental development which were presented at a World Health Organization workshop are included.

7732. de-Nour, A. Kaplan & Czaczkes, J. W. **Bias in assessment of patients on chronic dialysis.** *Journal of Psychosomatic Research*, 1974(Jun), Vol 18(3), 217-221. —7 nephrologists followed the condition of 96 patients in their units during hemodialysis for 3 yrs. Ss were globally assessed twice by the nephrologists and a 3rd time by the authors on whether they were doing well in complying with the diet, in rehabilitation, and in emotional condition. Compared to the authors' assessments, 5 of the nephrologists overestimated their patients' adjustment through the use of denial. There seemed to be a tendency for more denial in units where the patients were doing less well. It is suggested that the patients do less well because of the physicians' denial. —*W. G. Shipman.*

7733. Dikmen, Sureyya & Reitan, Ralph M. (U Wisconsin, Madison) **Minnesota Multiphasic Personality Inventory correlates of dysphasic language disturbances.** *Journal of Abnormal Psychology*, 1974(Dec), Vol 83(6), 675-679. —Compared the MMPI performances of 15 male dysphasic brain-damaged adults with the performances of 15 matched control brain-damaged Ss without specific language impairment. A significant overall difference on the 9 clinical scales combined was shown by multivariate analysis, with higher scores obtained by dysphasic Ss. Further univariate analysis showed significantly higher scores on the *Pd* and *Sc* scales. Results are discussed in terms of (a) evidence for a closer relation between MMPI variables and behavioral measures than between MMPI variables and neurological measures of lesion laterality, and (b) the interpretive limitations implied by uncritical transference of MMPI findings based on psychiatric patients and normals to patients with central nervous system lesions. The need for validation studies investigating social behavior correlates of MMPI results in brain-damaged samples is emphasized. (18 ref)—*Journal abstract.*

7734. Duchowny, Michael S.; Weiss, Ira P.; Majlessi, Heshmatolah & Barnett, Ann B. (Children's Hosp Ctr, Boston, MA) **Visual evoked responses in childhood cortical blindness after head trauma and meningitis: A longitudinal study of six cases.** *Neurology*, 1974(Oct), Vol 24(10), 933-940. —6 children with cortical blindness following head trauma or meningitis had visual evoked response (VER) studies initially performed shortly after the onset of blindness. On long-term follow-up examina-

tion, 3 Ss had evidence of visual deficit and 5 exhibited varying degrees of psychomotor retardation. Initial and follow-up VERs were analyzed and correlated with changes in visual and clinical status. Results suggest that change in sort latency VER components correlates with visual ability, whereas change in longer latency VER components correlates with level of psychomotor function. (20 ref)—*Journal abstract.*

7735. Evans, Kathleen; Hickman, Veronica & Carter, C. O. (MRC Clinical Genetics Unit, Inst of Child Health, London) **Handicap and social status of adults with spina bifida cystica.** *British Journal of Preventive & Social Medicine*, 1974(May), Vol 28(2), 85-92. —Describes the present physical handicaps and social status of 202 adult survivors of spina bifida cystica. 93 of the patients, mostly with uncomplicated meningocele, were living normal lives. However, 109 had a serious disability, including 3 who were mentally retarded. Data on employment, marriage, and reproduction of survivors are presented.

7736. Freedman, David A. (Baylor Medical Coll, Houston, TX) **On hearing, oral language, and psychic structure.** *Psychoanalysis & Contemporary Science*, 1972, Vol 1, 57-69. —Reviews studies on the effects of some organismic factors (e.g., normal development of sight and hearing vs blindness or deafness) and related environmental factors (e.g., amount of mothering and sensory stimulation) on the development of personality, behavior, and cognitive processes. The high rate of an autistic-like syndrome among congenitally blind children appears to be due to sensory deprivation in the period of infancy during which differentiation of self and non-self occurs. By the time the use of speech and hearing becomes critical, deaf children have developed adequate ego structures to deal with the frustrations resulting from their deficiencies. It is suggested that although spoken language is an important instrument of communication and conceptual development, normal hearing and speech are not significant factors in the early phases of ego development. (2 p ref)—*J. Kelly.*

7737. Gainotti, G.; Caltagirone, C. & Carecchi, S. (U Cattolica del Sacro Cuore, Medical School, Milan, Italy) **[A case of pure alexia with color anomia.]** (Ital) *Archivio di Psicologia Neurologia e Psichiatria*, 1974(Apr-Jun), Vol 35(2), 144-163. —Presents a case study of the onset of "pure" alexia associated with right homonymous homianopia and color anomia following a transient left hemisphere ischemia. The patient presented no evidence of aphasia and no disturbance of writing, but he showed a clear literal alexia, and could read only by using his finger to trace the outline of each letter. Furthermore, he was completely unable to name and to select colors but he could match them for brightness and saturation. Findings are discussed from the viewpoint of "visual agnosia" and "visual-verbal disconnection."—*L. L'Abate.*

7738. Gelsz, D. & Steinhäusen, H.-Ch. (Universitätskinderklinik, Hamburg, E Germany) **[On the "psychological development of children with hydrocephalus.]** (Germ) *Praxis der Kinderpsychologie und Kinderpsychiatrie*, 1974(May-Jun), Vol 23(4), 113-118. —Compared test battery scores of 35 hydrocephalic grade school boys and girls with scores of a normal control

group, and investigated the role of age of 1st neurosurgery, time between 1st clinical manifestation and neurosurgery, and number of surgical revisions. Hydrocephalics were inferior on intelligence and motor tasks. Age at surgery, and time lapse between 1st clinical manifestation and surgery, were negatively correlated with scores on intelligence tests, on following orders, and on motor tasks. The number of surgical revisions did not reveal such correlations. Specific test profile analysis of the hydrocephalics showed fewest defects in vocabulary and most defects in motor tasks. Test data are compared with respect to developmental aspects. (22 ref)—*H. A. Euler.*

7739. **Green, Walter B.** (Ithaca Coll) **The development of semantic differential scales for deaf children.** *American Annals of the Deaf*, 1974(Aug), Vol 119(4), 361-364.—Used a modified word association task to elicit a pool of 360 modifiers from 90 residential students from a state-supported school for the deaf. Results indicate that the modifiers commonly used by hearing children were also common in the language behavior of the deaf Ss.

7740. **Guazzi, G. C.; Ghetti, B.; Barbieri, F. & Cecio, A.** (U Napoli, Italy) **Myoclonus epilepsy with cherry-red spot in adult: A peculiar form of mucopolysaccharidosis. A clinical, genetic, chemical and ultrastructural study.** *Acta Neurologica*, 1973(Sep-Oct), Vol 28(5), 542-549.—Presents the case of a 28-yr-old female of Mediterranean origin, with blood-related parents, who had suffered from these symptoms since age 21. The histochemical, ultrastructural, and biochemical results and the urinary pattern of mucopolysaccharides suggest a particular form of mucopolysaccharidosis which could not be linked with any known disease or with any reported case. (18 ref)—*M. J. Stanford.*

7741. **Guilleminault, Christian; Wilson, Richard A. & Dement, William C.** (Stanford U, Medical School, Sleep Disorders Clinic & Lab) **A study on cataplexy.** *Archives of Neurology*, 1974(Oct), Vol 31(4), 255-261.—Observed cataplexy, an abrupt and reversible paralysis, in 50 REM sleep narcoleptics. The attacks lasted from a very few seconds to as long as 30 min. During attacks, the EEG remained similar to the normal baseline awake EEG recorded previously in each patient; however, there were short periods where REM sleep could not be eliminated. Electromyographic tracings recorded an abrupt drop of muscle tone during attacks, but the numbers of muscles involved varied from one attack to another. Normal jerk reflexes could not be elicited, and H-reflex, systematically studied in 5 patients, was abolished. An exceptional patient with "status cataplecticus" with more than 30 daily cataplectic attacks was given levodopa, levohydroxytryptophan, and atropine sulfate intravenously in separate trials with no beneficial effect. Intravenously administered clomipramine hydrochloride suppressed the attacks dramatically. (37 ref)—*Journal abstract.*

7742. **Gutezeit, Günter & Mai, Peter.** (Universitätskinderklinik, Kiel, W Germany) **[Tachistoscopic investigations concerning the grasping and estimating of amounts with mildly brain-injured children.]** (Germ) *Praxis der Kinderpsychologie und Kinderpsychiatrie*, 1974(May-Jun), Vol 23(4), 130-139.—Tested theories which assume that brain-injured children with dyscalcul-

lia differ from children without brain injury in quantity estimation, especially under changed figure-ground relations, and in more frequent task perseveration. 40 mildly brain-injured children 7-10 yrs old were tested tachistoscopically on quantity estimation and motor tasks and compared to 38 control children without brain injuries but of comparable low intelligence. The brain-injured Ss performed more poorly in grasping and estimating amounts. Only the younger brain-injured Ss did significantly worse than the controls under changed figure-ground relations, and no difference in perseveration was found. Differences were observed, however, in gross motor coordination. The importance of remedial training and the possibility of integration into normal grade school classes are pointed out. (30 ref)—*H. A. Euler.*

7743. **Hagberg, Bo.** (U Hosp, Lund, Sweden) **A prospective study of patients in chronic hemodialysis: III. Predictive value of intelligence, cognitive deficit and ego defence structures in rehabilitation.** *Journal of Psychosomatic Research*, 1974(Jun), Vol 18(3), 151-160.—Administered psychological tests to 23 patients with chronic renal failure before hemodialysis began, to determine their primary intellectual level, signs of organicity, and dominant personality characteristics in terms of defense mechanisms. 21 of the 23 were tested 6 mo after dialysis and 16 were again tested after 12 mo. The patient group as a whole showed an average and constant intellectual level during the treatment period. Better intellectual level, fewer signs of organicity, and a more flexible defense structure were prognostically favorable but only within the 1st 6 mo of treatment. At both follow-ups, signs of isolation were a negative prognostic factor. (26 ref)—*W. G. Shipman.*

7744. **Hanne, B. & Gutezeit, G.** (Universitäts-Kinderklinik, Kiel, E Germany) **[Factor analysis concerning the solving behavior of risk children.]** (Germ) *Praxis der Kinderpsychologie und Kinderpsychiatrie*, 1974(May-Jun), Vol 23(4), 119-125.—Assigned 82 "risk-children," born 1964, to the following groups on the basis of their scores on the Goettinger Form Reproduktions Test: no brain damage, definite brain damage, and possible brain damage. All Ss were tested on the WISC. Their solving steps were recorded on the subtests Picture Arrangement, Block Design, and Object Assembly. Results were factor analyzed which gave a different number of dimensions for each group. A psychological interpretation could not be given in every case, despite rotation. The factor structure of the group with definite brain damage was the least differentiated. In the other 2 groups the Block Design solving factor was the most important. It is argued that these subtests are valuable in the diagnosis of brain damage. (23 ref)—*H. A. Euler.*

7745. **Irvine, Elizabeth E.** **The risks of the register: Or the management of expectation.** In E. J. Anthony & C. Koupornik (Eds), *The child in his family: Children at psychiatric risk: III.* New York, NY: John Wiley & Sons, 1974. xxi, 547 p.—Emphasizes the need for increased interaction between the parents of the handicapped child and professionals in order to aid healthy personality development in both the child and others in his environment.

7746. Jeffrey, D. Balfour. (Emory U) **Some methodological issues in research on obesity.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 623-626.—Notes that results of numerous behavior-modification, weight-reduction studies have clearly demonstrated that obesity can be controlled. It is suggested that it is time to move beyond the demonstration stage and to begin studying the problems of obese patient dropouts, standardized improvement measures, long-term maintenance, cost-effectiveness analysis, research strategies, the development of behavioral predictors, and an analysis of both successes and failures. (16 ref)—*Journal abstract*.

7747. Johnstone, Eve C.; Allan, J. G.; Geraghty, B. P. & Russell, R. I. (U Glasgow, Scotland) **Psychiatric disturbance and postvagotomy diarrhoea.** *Journal of Psychosomatic Research*, 1974(Jun), Vol 18(3), 205-208.—The Standardized Psychiatric Interview, a self-rating scale, and the Middlesex Hospital Questionnaire were administered to 28 patients who had a vagotomy, 14 of whom then had diarrhea. The 2 groups did not differ in psychiatric abnormality.

7748. Kopyreninova, N. G. (Orenburg Pedagogical Inst, USSR) **[Formation of topographic images in the blind.]** (Russ) *Defektologiya*, 1972, No 4, 45-49.—Studied the conditions needed to form topographic images in 2 groups of blind Ss, 6 adults 21-45 yrs old and 6 children 12-16 yrs old. Ss were asked to remember 2 paths of approximately equal difficulty. After being introduced to a path by 1 of 2 methods—transversing it independently by following a sound or being led along it by a guide—S gave a verbal description of the path, sketched it, and attempted to walk it by himself. Then the 2nd path was introduced using the other method and the S's ability to remember it was tested. For adults either method established a precise image. For children only the method of independent movement following a sound proved effective. Results suggest that blind children should be trained to move about independently to help them overcome the habit of relying on a seeing guide.—E. C. Koffman.

7749. Korshunova, L. V. (USSR Academy of Pedagogical Sciences, Inst of Defectology, Moscow) **[Spelling disturbances in deaf children who lost their hearing after the inception of speech.]** (Russ) *Defektologiya*, 1972, No 4, 41-45.—Discusses the results of observations of spelling in 1st- to 4th-grade deaf children who lost their hearing between the ages of 3 and 6 yrs, after they had begun to speak. Instances of strictly phonetic spelling of words by these Ss lead to the conclusion that even 5 and more years after the loss of hearing, deaf children can retain in memory clear auditory representations. Factors which might influence the clarity of this "inner hearing" are enumerated.—E. C. Koffman.

7750. Kristianson, Per. (U Uppsala, Sweden) **The personality in psychomotor epilepsy compared with the explosive and aggressive personality.** *British Journal of Psychiatry*, 1974(Sep), Vol 125, 221-229.—Discusses the problems of differentiating between the alcoholic personality and that of certain epileptics. The MMPI profile of a subgroup of psychomotor epileptics with bitemporal independent EEG spike foci was compared with the MMPI profile of a patient with explosive aggressivity caused by chronic alcoholism. Results show that the

profile for the alcoholic patient was characterized by the values of the MMPI Depression and Hypomania scales. However, the reactions suggested by these scale values in the profile of psychomotor epileptics may only be regarded as partial symptoms of the complete adhesiveness syndrome. The main part of the syndrome with paranoid and perseverative symptoms, along with the tendency to schizoadaptive reactions, was not characteristic of the alcoholic patients. Results suggest that the MMPI offers a means differentiating between the explosive aggressivity caused by chronic alcoholism and some defined personality changes in one important form of psychomotor epilepsy. (26 ref)—*Journal summary*.

7751. Lagos, Jorge C. (Children's Memorial Hosp, Oklahoma City, OK) **Seizures, epilepsy, and your child: A handbook for parents, teachers, and epileptics of all ages.** New York, NY: Harper & Row, 1974. xi, 238 p. \$7.95.—Presents a guide, in a question-and-answer format, to the nature, origins, diagnosis, treatment, and management of epilepsy. Topics include the relationship between epilepsy and mental retardation, the epileptic child and society, and behavioral and psychological problems in children with epilepsy.

7752. Lazarus, Gary M. **A clinical application of the visual evoked potential in the diagnosis of ophthalmic and neuro-ophthalmic pathology—organic and functional lesions: IV.** *Journal of the American Optometric Association*, 1974(Aug), Vol 45(9), 1056-1063.—Discusses the use of the clinical EEG in the diagnosis of organic and functional ophthalmic lesions. A review of relevant literature shows positive findings for visual evoked potentials in cases of color deficiency, retinitis pigmentosa, cerebral palsy, glaucoma, optic atrophy, pre- and post-chiasmal lesions, and amblyopia ex anopis. (92 ref)

7753. Lhermitte, François; Lecours, André R.; Ducarne, Blanche & Escourolle, Raymond. (Salpêtrière Hosp, Neurology & Neuropsychology Service, Paris, France) **Unexpected anatomical findings in a case of fluent jargon aphasia.** *Cortex*, 1973(Dec), Vol 9(4), 436-449.—Fluent-euathric-meaningless linguistic segments witnessing a tendency to paragrammatism and non-fluent-dysarthric-meaningful linguistic segments witnessing a tendency to agrammatism were observed to coexist in the oral linguistic productions of a right-handed cerebrovascular accident patient with severe "Wernicke's aphasia." Extensive bilateral cortico-subcortical infarcts were found at autopsy: among other structures, Broca's area and Wernicke's area proper, together with their interconnecting fibres of the arcuate bundle, were almost completely destroyed; there was little involvement of the left supramarginal gyrus and complete sparing of the left angular gyrus; the striatum, pallidum, and thalamus were bilaterally uninvolved. It is suggested that motor control in the production of fluent-euathric-meaningless jargon was assumed by the spared subcortical gray and that only the 115:non-fluent-dysarthric-meaningful productions constituted a direct expression of the destruction of Broca's area.—R. Gunter.

7754. Lubovskii, V. I. (USSR Academy of Pedagogical Sciences, Inst of Defectology, Moscow) **[Higher nervous activity and psychological characteristics of children**

with a delay in development.] (Russ) *Defektologiya*, 1972, No 4, 10-16.—Summarizes the author's experiments on the motor conditioning of children with minimal brain damage and other studies of their cognitive functioning. 30 children showing delayed development were compared with normal and mentally retarded children on such conditioning phenomena as (a) the speed of establishing a simple conditioned response (CR); (b) the stability of a CR; (c) the effect of extraneous stimuli on a CR; and (d) the S's verbal account of the establishment of a CR, stimulus generalization, and stimulus differentiation. Other studies were concerned with such tasks as incidental learning, mediated memorization, and the classification of objects. However, children with delayed development form a heterogeneous group, and not every child manifests all the characteristics described.—E. C. Koffman.

7755. Machemer, Peter. [The problem of diagnosing mild brain injuries of early childhood in children.] (Germ) *Praxis der Kinderpsychologie und Kinderpsychiatrie*, 1974(May-Jun), Vol 23(4), 125-129.—Critiques high occurrence of diagnosis of mild brain injuries of early childhood. 3 assumptions implicit in these diagnoses—(a) delineation of a clearly circumscribed symptom complex, (b) diagnosis as uncovering causes of symptoms, and (c) indication of specific treatments from the diagnostic classification—are critically scrutinized and rejected. It is argued that diagnosis is legitimate only if specific treatments can be made available. (32 ref)—H. A. Euler.

7756. Mencher, George T.; Clack, T. Dean & Rupp, Ralph R. (Children's Hosp. Hearing & Speech Clinic, Halifax, Nova Scotia, Canada) **Decruitment and the growth of loudness in the ears of brain-damaged adults.** *Cortex*, 1973(Dec), Vol 9(4), 335-345.—Investigated "decruitment," the inability of patients with temporal lobe damage to perform the Alternate Binaural Loudness Balancing (ABLB) and to satisfactorily balance tones of equal intensity. Poor performance has been attributed to an abnormally slow growth of loudness in the ear contralateral to the lesion, but findings of this study indicate that decruitment is actually the inability to integrate and relate auditory tasks presented dichotically.

7757. Modestin, J. (Psychiatrische Universitätsklinik, Bern, Switzerland) [On the pathogenesis of delirious states.] (Germ) *Confinia Psychiatrica*, 1974, Vol 17(1), 42-52.—It is suggested that the delirious, toxic-confusional states occasionally observed during administration of various psychotropic drugs are essentially atropine-like psychoses induced by an anticholinergic component of the drugs mentioned. On the other hand, an enhancement of the central sympathetic tonus as an expression of central vegetative imbalance is considered as a possible explanation for the development of delirious states due to the withdrawal of alcohol and/or drugs. Both hypotheses were tested. On a single-blind basis the parasympathomimetic agent physostigmine was administered intravenously to 15 delirious patients. Delirious states observed during therapy with various psychotropic drugs reversed, and delirious states due to withdrawal of alcohol and/or drugs were not influenced by physostigmine, the difference between the 2 groups being statistically significant. Thus, the 1st hypothesis

was confirmed, the 2nd was not. It is evident that the same psychopathological syndrome develops not only for various etiological reasons but also on the basis of various pathogenetical mechanisms.—*Journal abstract.*

7758. Money, John. (Johns Hopkins U Hosp) **Turner's syndrome and parietal lobe functions.** *Cortex*, 1973(Dec), Vol 9(4), 387-393.—Reports that many girls with Turner's syndrome (irrespective of sex-chromatin type) exhibit a degree of space-form dysgnosia, directional-sense dysgnosia, and mild numerical disability that suggests a developmental parietal lobe anomaly. It is presumably related to the chromosomal defect basic to the syndrome, perhaps by way of a fetal neurohormonal mechanism that might affect space perception as it pertains to the sex-related mechanism of territorial behavior. A contrary developmental deficit has been identified in mildly retarded boys.—R. Gunter.

7759. Morreale, V.; Gargano, M. A. & Rallo, G. (U Catania, Facoltà di Medicina e Chirurgia, Italy) **Atypical West's syndrome: Illustration of a clinical case.** (Ital) *Acta Neurologica*, 1974(May-Jun), Vol 29(3), 264-274.—The syndrome is described in a girl 3 yrs and 10 mo old exhibiting symptoms of encephalopathy and epilepsy which can be included in this syndrome. This case, with symptoms referable to various clinical syndromes, poses the question of whether it is valid to delineate these forms of infantile epileptic encephalopathy rigidly in different nosological pictures. It is suggested that the forms be included in one classification. (23 ref)—M. Stanford.

7760. Nielsen, Johannes & Tsuboi, Takayuki. (Arhus State Hosp, Cytogenetic Lab, Risskov, Denmark) **Electroencephalographic examination in the XYY syndrome and in Klinefelter's syndrome.** *British Journal of Psychiatry*, 1974(Sep), Vol 125, 236-237.—Made EEG studies of 25 males with the XYY syndrome and 59 with Klinefelter's syndrome. Abnormal EEG was found in 32% of the XYY syndrome Ss and in 19% of Ss with Klinefelter's syndrome; 4 males showed specific EEG abnormalities. None of the XYY syndrome Ss had suffered from epilepsy. 3 Klinefelter syndrome Ss had suffered from epilepsy, and 6 had suffered from conversional hysterical fits.

7761. Pavlovský, P. & Pokorná, P. (U Karlova, Výzkumná psychiatrická laboratoř, Prague, Czechoslovakia) **Anxiety and fear as symptoms of burns.** (Czech) *Československá Psychiatrie*, 1973(Feb), Vol 69(1), 32-34.—Reviews literature on emotional problems of persons who suffered burns. The incidence of anxiety and phobic fear in 250 patients hospitalized with burns and examined psychiatrically is reported. Results show that although such symptoms occur relatively often, they are not typical manifestations of the burns but are secondary complications with specific etiology. They are due either to traumatic experiences during the injury, concomitant injury to the central nervous system (e.g., postconcussional syndrome), or premorbid inadequate and psychopathic personality. Several illustrative clinical cases are briefly presented. (Russian & English summaries)—V. Fischmann.

7762. Pontius, Anneliese A. (New York U, Medical School) **Basis for a neurological test of frontal lobe system functioning up to adolescence: A form analysis**

of action expressed in narratives. *Adolescence*, 1974(Sum), Vol 9(34), 221-232.—354 stories told by 137 2-4 yr olds, previously published by E. J. Pitcher and E. Prelinger (1963), were reanalyzed for the form of action, rather than content. Developmental phases were identified which parallel those revealed in actual behavior during these years, when there exists a specific gross inability to switch the principle of action of an ongoing activity, particularly on verbal command. This inability is associated with the known neuro-anatomical immaturity of the frontal lobe system. It is theorized that an analogous parallel development exists through adolescence and the early twenties. Therefore, the more subtle dysfunctioning that may occur at this later age could also be studied by analyzing narratives.—A. Krichev.

7763. Pujol Doménech, J. & Ferrer Raldúa, J. (Clínica Psiquiátrica Universitaria, Hospital Clínico y Provincial, Barcelona, Spain) [A case of pseudo paraphrenic psychosis in the course of the development of a terminal renal deficiency.] (Span) *Revista de Psiquiatria y Psicología Médica*, 1973(Oct), Vol 11(4), 261-268.

7764. Pyeryeslyani, L. I. (USSR Academy of Pedagogical Sciences, Inst of Defectology, Moscow) [Characteristics of attention in children with a delay in development.] (Russ) *Defektologiya*, 1972, No 4, 23-28.—Studied attention in children with a delay in development (minimal brain damage) by measuring the latency periods of their motor reactions to tactile stimuli under various distracting conditions. Vibrators were strapped to the wrists of 15 Ss with a delay in development, 12 mildly retarded Ss, and 16 normals. Each S had to respond as quickly as possible with the hand being stimulated while simultaneously hearing noise, music, or a story. Children with a delay in development had a longer mean reaction time (RT) than did the normals, and the variability of their RT was greater. RT did not change as a function of type of distracting sound for normals, but children with a delay in development were hampered more by the simultaneous presentation of a story than by the other distractors. It is concluded that children with a delay in development have deficits in speed of processing information and in ability to concentrate attention. The use of RT as a diagnostic tool is discussed.—E. C. Koffman.

7765. Rassidakis, N. C. et al. (U Athens, Greece) **Schizophrenia, psychosomatic illnesses, diabetes mellitus and malignant neoplasms.** *International Mental Health Research Newsletter*, 1974(Spr), Vol 16(1), 1, 12.—Studied the relationship between diabetes mellitus and schizophrenia, psychosomatic illnesses, and cancer in an attempt to validate previous research indicating that diabetes mellitus belongs on the psychosomatic illness continuum. Ss were 306 cancer patients and 324 schizophrenics randomly selected from admissions to 3 hospitals in Athens, Greece, and 300 control Ss representing the statistical incidence of diabetes mellitus, cancer, schizophrenia, and the psychosomatic illnesses in the general Greek population in 1972. Chi-square analysis found (a) cancer patients were significantly ( $p < .001$ ) less attacked by diabetes mellitus or psychosomatic illnesses than the general population and (b) schizophrenics were significantly ( $p < .001$ ) less diagnosed as having diabetes mellitus, cancer, or psychoso-

matic illnesses than the general population. The findings offer support for including diabetes mellitus on the psychosomatic continuum. Further discussion elucidates and challenges contrary findings, and suggests the utilization of projective techniques to study the personality structure of diabetic patients.—C. A. Heikkinen.

7766. Robinson, David. (Inst of Psychiatry, Addiction Research Unit, London, England) **Becoming ill.** *Journal of Psychosomatic Research*, 1974(Aug), Vol 18(4), 277-281.—Discusses 2 questions involved in becoming ill: (a) How do people define particular illness conditions? (b) How do they come to occupy the social position of sick person or patient? The social situation is important in both questions. People acquire a body of knowledge about their illness which is likely to include some kind of classification of episodes, evaluation of the nature and significance of common symptoms, and predictions relating to the probable outcome of illnesses and their usual handling.—W. G. Shipman.

7767. Rockson, Stanley; Stone, Richard; Van der Weyden, Martin & Kelley, William N. (Duke U, Medical Ctr) **Lesch-Nyhan syndrome: Evidence for abnormal adrenergic function.** *Science*, 1974(Dec), Vol 186(4167), 934-935.—Studied 10 children, from 18 mo to 16 yrs old, with the Lesch-Nyhan syndrome. 6 patients with the severe form of this X-linked disorder had a virtually complete deficiency of the enzyme hypoxanthine-guanine phosphoribosyltransferase (HGPRT), characterized by mental retardation, spasticity, and self-mutilation. They exhibited an apparently unique pattern of adrenergic dysfunction characterized by elevated plasma dopamine  $\beta$ hydroxylase activity and an absence of pressor response to acute sympathetic stimulation. Patients with a partial deficiency of HGPRT without self-mutilation did not exhibit these abnormalities of adrenergic function. (29 ref)—*Journal abstract*.

7768. Rodgers, Beckett; Ferholt, Julian & Cooper, Carol L. (Yale U, School of Nursing, Pediatric Nursing Program) **A screening tool to detect psychosocial adjustment of children with cystic fibrosis.** *Nursing Research*, 1974(Sep-Oct), Vol 23(5), 420-426.—Describes a tool to assess psychosocial adjustment of school-age children with cystic fibrosis which uses 3 instruments: a standardized open-ended parent interview, a self-administered teacher questionnaire, and a self-administered parent demographic data form. The 3 instruments enabled the pediatric nurse practitioner to make a clinical assessment of the child's psychosocial adjustment. This assessment was checked for validity by means of a social worker interview, and tested on 20 6-12 yr old children, their parents, and their teachers. Findings show that the standardized semistructured interview with the parent was the best method of screening the child's psychosocial adjustment. (15 ref)—*Journal abstract*.

7769. Sander, Elisabeth. (Paedagogische Hochschule Rheinland, Aachen, Fed Rep Germany) **[A comparative study of the visual perception of handicapped and normal children.]** (Germ) *Praxis der Kinderpsychologie und Kinderpsychiatrie*, 1974(May-Jun), Vol 23(4), 149-157.—Compared 4 groups of handicapped children: 40 cerebral palsied, 40 physically disabled but not brain-injured, 40 minimally brain-injured but not physically disabled, and 40 in a special school for children with

learning disabilities. All were between 7 and 10 yrs old, with IQs between 70 and 90. The groups were also compared with a group of 40 normal but younger children, whose average mental age was the same as the average chronological age of the handicapped children. All Ss were given 4 tests of visual perception, a test of simultaneous number perception, and an arithmetic test. The normal Ss performed better than the disabled ones in nearly all the tests, and the cerebrally palsied children performed worst. It is argued that disabled children with the same characteristics as the described experimental groups, especially palsied children, need more intensive visual perceptual training than younger normal children. (26 ref)—*Journal summary*.

7770. Schacht, Joachim. [The psychology of skin diseases.] (Germ) *Zeitschrift für Klinische Psychologie und Psychotherapie*, 1974, Vol 22(1), 67-85.—Presents 4 case studies to illustrate the relation between a person and the skin diseases that he may experience. Allergies may in great part be conversion symptoms. The anthropological ambiguity of the skin makes it an excellent organ to portray unconscious conflicts, particularly the ambivalent emotions associated with earlier disturbances in communication with the mother. (English summary)—S. D. Babcock.

7771. Schnaper, Nathan et al. Management of the dying patient and his family. New York, NY: MSS Information Corp, 1974. 198 p. \$15.—Presents a collection of 19 previously published articles on the psychological management of the terminally ill patient and the effects of his death on family members. Topics include the concerns of the dying patient, nursing problems of the terminally ill, the physician's moral obligations to his patient, and the care of the seriously ill or dying child.

7772. Shoshin, P. B. (USSR Academy of Pedagogical Sciences, Inst of Defectology, Moscow) [Recognition of simple visual stimuli by children with a delay in psychological development.] (Russ) *Defektologiya*, 1972, No 4, 35-40.—Studied recognition thresholds for simple visual stimuli in 19 children with a delay in development (minimal brain damage), 23 mildly retarded children, 20 normal children, and 10 adults. Child Ss were 9-11 yrs old. Stimuli, 1-6 dots, were presented tachistoscopically. Thresholds for normal children were similar to those for adults; thresholds for children with a delay in development were even higher. With unsymmetrically arranged stimuli having more than 4 elements, under conditions of increasing exposure, 20 mentally retarded Ss showed "split" thresholds. They began by responding correctly on almost 100% of the trials, but with further increases in exposure the number of errors rose sharply until much longer presentation times were employed. This did not occur in any normals and in only 3 children with a delay in development. The significance of these results for the differential diagnosis of children with a delay in development and for their education is discussed.—E. C. Koffman.

7773. Solomon, George F.; Amkraut, Alfred A. & Kasper, Phyllis. Immunity, emotions and stress. In H. Musaph (Ed), *Proceedings of the 2nd Congress of the International College of Psychosomatic Medicine*,

Amsterdam, 1973: *Mechanisms in Symptom Formation*. New York, NY: S. Karger, 1974. vii, 303 p.

7774. Suetsugu, Motohiro & Mitsuyama, Yoshio. (Kyushu U. Faculty of Medicine, Fukuoka, Japan) [Two autopsy cases of olivo-ponto-cerebellar atrophy.] (Japn) *Kyushu Neuro-psychiatry*, 1972(Dec), Vol 18(3-4), 176-182.—Case 1 was a 56-yr-old coal miner, who had developed slowly progressive gait, speech, and coordination disturbances, rigidity, and dysuria, and died about 4 yrs after onset of the illness. Neuropathological examination revealed severe neuronal loss of the pontine nuclei and the inferior olivary nuclei with demyelination and gliosis of the cerebellopontine fibers. In addition, degeneration in the substantia nigra and the striatum was observed as "associated lesion." Case 2 was a 62-yr-old single woman who had suffered from gait disturbance, parkinsonism, and both incontinence and orthostatic hypotension with loss of consciousness. She died in status epilepticus 3 yrs after onset of the symptoms. Neuropathological findings were similar to those of Case 1, except that no lesions in the substantia nigra and striatum were observed. The spinal cord was not examined. Results indicate that olivopontocerebellar atrophy is associated with both striato-nigral degeneration and Shy-Drager syndrome. (English summary)—S. Ashida.

7775. Teshima, Hideki; Inoue, Sadahisa; Ago, Yukihiko & Ikemi, Yujiro. (Kyushu U, Fukuoka City, Japan) Plasmic activity and emotional stress. In H. Musaph (Ed), *Proceedings of the 2nd Congress of the International College of Psychosomatic Medicine*, Amsterdam, 1973: *Mechanisms in Symptom Formation*. New York, NY: S. Karger, 1974. vii, 303 p.

7776. Toulaitos, John & Lindholm, Byron W. (Auburn U) Influence of parental expectancies and responsiveness on achievement motivation of minimally brain-injured and normal children. *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 395-400.—16 families with minimally brain-injured children and 16 families with normal children were matched on a number of characteristics. It was found that the 2 groups differed with regard to mothers' expectancies for achievement, fathers' rewards for success and punishment for failure, and children's need for achievement. Moreover, parents had a significant influence on their children's achievement motivation but patterns of relationships were not the same for the 2 groups.—*Journal abstract*.

7777. Tourkow, Lawrence P. Psychic consequences of loss and replacement of body parts. *Journal of the American Psychoanalytic Association*, 1974, Vol 22(1), 170-181.—Discusses reports presented at the 1973 annual meeting of the American Psychoanalytic Association. These dealt with blind infants and their mothers; the psychoanalytic view of cardiac transplantation and of renal hemodialysis and transplantation; and the psychological reactions in congenital amputations.

7778. Tridenti, A.; Ragionieri, M.; Rigamonti, P. P. & de Risio, C. [Investigation into the personality of patients with gastric and duodenal ulcer by means of Rorschach and Rosenzweig tests.] (Ital) *Rivista Sperimentale di Freniatria e Medicina Legale delle Alienazioni Mentali*, 1972(Oct), Vol 96(5), 1400-1428.—Examined 30 male and 2 female 21-47 yr old patients at the Institute

of Surgical Pathology, University of Parma, for duodenal or gastric ulcers. Anamneses showed in many cases a preoccupation with economic problems and a possible negative position with regard to the father. The Rosenzweig Picture-Frustration Study showed tendencies toward affective coercion, ambition beyond capacities, self-affirmation/renunciation ambivalence, intrapunitive, and impunitivity. The Rorschach showed coercion, extratensivity, insufficient affective maturity, low degree of resources especially in comparison with ambitions, and "shock" at the 4th chart. (French & English summaries) (34 ref)—*L. Klinkon*.

7779. Weinstein, Edwin A. (Mt Sinai Medical School, City U New York) **Sexual disturbances after brain injury.** *Medical Aspects of Human Sexuality*, 1974(Oct), Vol 8(10), 10-31.—Describes different sexual disorders and behavior patterns that occur after specific types of brain injury. In some patients libido may be diminished, while in others it is increased. The most conspicuous disturbances of sexual behavior usually appear after lesions of the limbic system. Changes in sexual behavior in brain-damaged patients are often abnormal by reason of the circumstances in which they occur, rather than through their intrinsic nature. Electroconvulsive shock therapy can also cause changes in sexual behavior. The relationship between the premorbid personality of the patient, habitual modes of coping with stress, and channels of social relations after injury are examined.—*L. Gorsey*.

7780. Wiegel-Crump, Carole & Koenigsknecht, Roy A. (Northwestern U, Speech & Language Clinics) **Tapping the lexical store of the adult aphasic: Analysis of the improvement made in word retrieval skills.** *Cortex*, 1973(Dec), Vol 9(4), 411-418.—Drilled 4 aphasics who had obvious word-finding difficulties in 18 therapy sessions on 20 of 40 words that each patient had failed to retrieve on a pretherapy confrontation naming test. No work was done with the other 20 words. After each 6 sessions, Ss were retested on the 20 drilled and 20 nondrilled words. Though there was some inter-S variability, all showed essentially the same pattern of improvement: they increased their ability to retrieve words on which they had been drilled, and they also responded correctly and with reduced latency to the nondrilled items. Improvement was noted also on nondrilled items outside the superordinate categories from which drill words were selected. Data support the argument that in amnesic aphasia there is no reduction in the lexical store itself, but rather an impairment of the ability to retrieve bits of information from the store. Therapy is viewed as a mechanism for improving the general retrieval process, not merely as a setting for teaching vocabulary via rote memorization.—*R. Gunter*.

7781. Yegorova, T. V. (USSR Academy of Pedagogical Sciences, Inst of Defectology, Moscow) **[Characteristics of memory in children with a delay in development.]** (Russ) *Defektologiya*, 1972, No 4, 16-23.—Studied memorization in 60 9- to 10-yr-old Ss, of whom 40 attended 1st- or 2nd-grade classes for children with a delay in development and 20 attended ordinary 2nd- or 3rd-grade classes. Ss had 5 trials on each of 2 equally difficult lists. When learning List 1, the groups did not differ statistically in the number of items reproduced on

Trial 1, but the normals did significantly better on Trial 5. Analyzing items reproduced into those reproduced on a previous trial and those reproduced for the 1st time led to the conclusion that children with a delay in development are impaired in retaining "old" information. Comparing performance on Lists 1 and 2, 35% of the normals showed an improvement, 10% a decrement; 12.5% of the children with a delay in development showed an improvement, 37.5% a decrement. Analysis of items reproduced when examples of the same concept were grouped together in recall led to the conclusion that fatigue in children with a delay in development hindered their using this rational strategy.—*E. C. Koffman*.

7782. Zharyenkova, G. I. (USSR Academy of Pedagogical Sciences, Inst of Defectology, Moscow) **[Performance of children with a delay in psychological development on tasks which include visual models and verbal instruction.]** (Russ) *Defektologiya*, 1972, No 4, 29-35.—Studied the performance of 20 1st and 2nd graders with a delay in psychological development (minimal brain damage) on 3 groups of tasks: (a) A visual model was presented which displayed all information necessary to perform the task; (b) A visual model was present which displayed some of the information necessary to perform the task, with verbal instructions supplementing the model; (c) All instructions were verbal. 20 mentally retarded and 20 normal 1st and 2nd graders also participated. Unlike the normal Ss, Ss with a delay in development (a) made an abundance of spontaneously corrected errors, (b) did not improve their performance over trials, and (c) had difficulty in fulfilling several requirements simultaneously. The greatest differences between the 3 groups appeared on tasks with only verbal instructions. While the normal Ss made practically no errors, Ss with a delay in development had difficulties in completing the tasks and the mentally retarded children were unable to complete them.—*E. C. Koffman*.

## TREATMENT AND PREVENTION

7783. ———. **[The 13th Kyushu Association of Neuropsychiatry Conference: 1971. Toward new treatments for schizophrenia: Symposium.]** (Japn) *Kyushu Neuro-psychiatry*, 1972(Apr), Vol 18(1), 7-25.—The main topics discussed were (a) new drug treatments, (b) dynamic psychiatry, (c) behavior therapy, and (d) new ways to involve the patient's family.

7784. Aring, Charles D. (U Cincinnati, Medical School) **The Gheel experience: Eternal spirit of the chainless mind.** *JAMA: Journal of the American Medical Association*, 1974(Nov), Vol 230(7), 998-1001.—Describes the care offered to the mentally ill in Gheel, Belgium. The emphasis placed on community participation in the care-giving process is discussed, along with the history of Gheel, patient classification procedures, types of personalized care, and the general facilitative atmosphere considered to be almost perfect for the rehabilitation of the mentally ill.

7785. Badosa-Gallart, Juan. (Hosp del Sagrado Corazón, Barcelona, Spain) **[Encopresis.]** (Span) *Revista de Psiquiatría y Psicología Médica*, 1974(Jan-Mar), Vol

11(5), 321-330.—Describes treatment of various types of anal incontinence.

7786. **Burton, Lindy (Ed.).** (Queen's U Belfast, Northern Island) **Care of the child facing death.** London, England: Routledge & Kegan Paul, 1974. xi, 225 p. \$15.50.—Presents a collection of 17 papers which discuss the general problem of the dying child and suggest ways of helping both the child and his family. Specific topics include problems facing parents and children following diagnosis, observations of parents and children facing repeated child mortality, the role of education in helping the child with a potentially fatal disease, and bereavement and the rebuilding of family life.

7787. **Deabler, Herdis L.; Fidel, Edward; Dillenkoffer, Robert L. & Elder, S. Thomas.** (VA Hosp, New Orleans, LA) **The use of relaxation and hypnosis in lowering high blood pressure.** *American Journal of Clinical Hypnosis*, 1973(Oct), Vol 16(2), 75-83.—Attempted to determine whether high blood pressure (hypertension) could be lowered through muscular relaxation and hypnosis. 6 nonmedicated hypertensive patients were used as controls while another 6 served as treatment Ss receiving muscular relaxation and hypnosis procedures. 9 patients on stabilized antihypertensive medication also received muscular relaxation and hypnosis procedures. Significant lowering of both systolic and diastolic pressures were obtained in both the no-drug and drug groups receiving treatment, but there was no significant reduction in the control group. Hypertensive levels were reduced through muscular relaxation and completely eliminated during hypnosis. Instruction was given in self-relaxation and self-hypnosis to promote continuation of beneficial effects after hospitalization.—*M. V. Kline.*

7788. **Ellis, Richard H. & Wilson, Nancy C.** (Ft Logan Mental Health Ctr, CO) **Evaluating treatment effectiveness using a goal-oriented automated progress note.** *Evaluation*, 1973, Mono 1, 6-11.—Describes a fully automated progress note system for evaluating psychiatric treatment programs in terms of explicitly defined goals. 703 goal statements are grouped into categories: medical, symptom, self-concept, patient-initiated interaction, other-initiated interaction, and disposition plan. Patients, staff, and community members participate in determining treatment goals. The complete progress note for each patient includes (a) previously selected goals and treatment methods; (b) ratings of the importance of each goal and its degree of attainment, and the effectiveness of each method; and (c) a composite success score for each goal, based on ratings of its degree of attainment weighted by ratings of its importance.—*J. Adams-Webber.*

7789. **Erickson, Milton H. & Rossi, Ernest L.** **Varieties of hypnotic amnesia.** *American Journal of Clinical Hypnosis*, 1974(Apr), Vol 16(4), 225-239.—Presents 8 detailed examples of the varieties of hypnotic amnesia found in clinical and naturalistic settings, together with a number of E. Erickson's innovative approaches to inducing hypnotic amnesia. The relevance of these examples for current experimental work in hypnotic amnesia is discussed. A case is made for conceptualizing hypnotic amnesia in clinical practice as "state-bound."

The significant place of amnesia is summarized.—*M. V. Kline.*

7790. **Freudenberger, Herbert J. (Ed.).** **The free clinic handbook.** *Journal of Social Issues*, 1974, Vol 30(1), 208 p.—Presents a special issue of the *Journal of Social Issues* which contains 20 articles on the problems and rationale of free clinics, the organization of specific services, administrative and staff issues, and types of free clinics. Topics include the role of the clinic coordinator, establishing a laboratory, gay counseling, free clinics and the law, special problems of clinics serving minority populations, and the psychology of the counseling staff in a free clinic.

7791. **Gunderson, John G.** **The influence of theoretical models of schizophrenia on treatment practice.** *Journal of the American Psychoanalytic Association*, 1974, Vol 22(1), 182-199.—Reports on papers presented at the 1973 annual meeting of the American Psychoanalytic Association meeting. Discussions covered the influence on theories and treatment of community psychiatry and psychopharmacology, of the defense and deficit models, and of other theoretical constructs. The last presentation attempted to provide a simplified outline of transactional modes and to trace some of the theoretical and therapeutic consequences.

7792. **Kales, Anthony; Kales, Joyce D. & Bixler, Edward O.** (Pennsylvania State U) **Insomnia: An approach to management and treatment.** *Psychiatric Annals*, 1974(Jul), Vol 4(7), 28-44.—Presents 2 case histories to illustrate common underlying problems in insomnia and their effective management. Factors leading to insomnia are grouped in 3 categories: situational (e.g., job worries), medical (especially when pain is a symptom of the physical problem), and psychological (e.g., as in manic depressive illness). It is stated that most cases of insomnia are secondary to psychological problems, although patients often deny this possibility. The pros and cons of medication in the management of insomnia are explored. It is suggested that areas of concern that are common in persons suffering from insomnia should be investigated by therapists in an active, direct way. (24 ref)—*C. Wright.*

7793. **Kaplan, Helen S.** (Cornell U, Medical School) **Fiction and fantasy: No-nonsense therapy for six sexual dysfunctions.** *Psychology Today*, 1974(Oct), Vol 8(5), 77-86.—Describes methods successfully used to relieve impotence, premature ejaculation, retarded ejaculation, frigidity, female orgasmic dysfunction, and vaginismus. Nearly all patients who follow the prescribed exercises find that their problems can be totally resolved. Therapy sessions involve both partners and seldom number more than 20 sessions.—*E. J. Posavac.*

7794. **King, Lorna J.** **A sensory-integrative approach to schizophrenia.** *American Journal of Occupational Therapy*, 1974(Oct), Vol 28(9), 529-536.—Based study of 15 chronic schizophrenics on the hypothesis that defects in the proprioceptive mechanism result in lack of sensory integration; this leads to lack of perceptual constancy, poor body image, inadequate motor planning, and fatigue producing postural patterns. These handicaps are hypothesized to result in severe emotional stress and to predispose patients to hallucinatory phenomena. Treatment principles and implications for preventive pro-

grams are discussed. It is suggested that the neurophysiological theories of A. Ayres (1972, 1973) provide a unified model which satisfactorily links P. Schilder's (1933) observations with current studies. (43 ref)—*Journal abstract.*

7795. **Labar, Paule.** (Psychomedical Polyclinic, Liège, Belgium) [Treatment of nocturnal enuresis in children based on neurophysiology of sleep.] (Fren) *Acta Psychiatrica Belgica*, 1973(Sep), Vol 73(5), 608-619.—21 children 5-8 yrs old were treated for enuresis by having to keep their own charts on the times and volumes of their bedwetting. Using these charts, hours for awakening could be established which eventually led to a cure in 13 cases. The remaining cases were found to be slovenly in chart-keeping and to have more disturbed relationships with their parents. The differences between this approach and behavior modification and psychotherapy are discussed. (English, Dutch, German, Italian & Spanish summaries)—*E. Coché*

7796. **Ryback, Ralph S.** (McLean Hosp, Alcohol & Drug Abuse Services, Belmont, MA) **The problem oriented record in psychiatry and mental care.** New York, NY: Grune & Stratton, 1974. xi, 192 p.—Describes the rationale, uses, evaluation procedures, and goals of the problem-oriented record (POR) in psychiatric care, a conceptual framework to expedite and improve the medical care. The 4 sequential sections of the POR—data base, problem list, plans, and follow-up—are detailed, and the relevance of the POR to the computer and professional standards review organizations is discussed. (3 1/4 p ref)

7797. **Shapiro, Alexander.** (Harperbury Hosp, Herts, England) **Fact and fiction in the care of the mentally handicapped.** *British Journal of Psychiatry*, 1974(Sep), Vol 125, 286-292.—Examines the past and present state of mental handicap services and discusses the propositions that (a) it has not been shown that the care of the mentally handicapped is a medical concern and (b) the care of the mentally handicapped is a "generalism" rather than a "specialism."

7798. **Spence, Donald P. & Lugo, Marta.** (New York U) **The role of verbal clues in clinical listening.** *Psychoanalysis & Contemporary Science*, 1972, Vol 1, 109-131.—Studied the influence of 2 modes of listening—listening for specific unambiguous signal words and listening for larger symbolic themes—on the accuracy of clinical judgment. 25 undergraduates listened to 17 passages from the clinical transcript of an ulcer patient and attempted to decide which statements had been followed by reports of stomach pain during therapy. When Ss were undistracted, the number of correct responses was at chance level. The number of Ss scoring above chance was increased when Ss were required to write a random series of numbers, first at a slow pace and later at a fast pace, while listening. It is suggested that Ss distracted by number writing were more accurate judges because they were forced to listen to the types of verbal clues which were the most powerful predictors of patient symptom reporting. It is concluded that patterns of attention are more important than the amount of attention given to clinical material and that the selection of verbal clues on which to base clinical judgments is influenced by prior conceptions of the patient, by the

amount of attention available for the listening task, and by initial priming instructions.—*J. Kelly.*

7799. **Sullivan, Philip R.** **Treatment of acute schizophrenia: The place of ECT.** *Diseases of the Nervous System*, 1974(Oct), Vol 35(10), 467-469.—Compared the results of a treatment approach based on a combination of electroconvulsive therapy (ECT), phenothiazine therapy, and nonintensive psychotherapy with the findings of a study of treatment approaches in which these methods were separately utilized. 100 consecutive 1st psychiatric admission, adult patients with a diagnosis of schizophrenia were chosen for study. 56% of the patients were treated with ECT. After their period of hospitalization, 88% of the patients were discharged as improved. Results show that the average hospital stay under combined treatment was 31 days as opposed to 130 days in the fastest of the separately used methods. It is concluded that the combination treatment is capable of producing a superior remission in a shorter time.—*B. Lindsey.*

7800. **Szasz, Thomas S.** (State U New York, Upstate Medical Ctr, Syracuse) **Justice in the therapeutic state.** In L. M. Irvine & T. B. Brelje (Eds), *Law, psychiatry and the mentally disordered offender: II.* Springfield, IL: Charles C Thomas, 1973. xv, 132 p. \$9.75.—Discusses the concept of "contract" as a social device and its implications for the "therapeutic" control of human relations. Differences between legal and medical approaches to social control are examined in terms of the treatment of illness and the extent of individual freedom in the judicial and scientific-technological environments. (17 ref)

7801. **Thauberger, Patrick C. & Thauberger, Eileen M.** (U Saskatchewan, Regina, Canada) **A consideration of death and a sociological perspective in the quality of the dying patient's care.** *Social Science & Medicine*, 1974(Aug), Vol 8(8), 437-441.—Discusses some of the component interactions on the meaning of death with respect to the quality of patient care. Univariate analyses frequently yield information that is static, inappropriate, irrelevant or nongeneralizable to dynamic contexts. An increased emphasis on multivariate analysis, which is considered an appropriate research paradigm for the investigation of the dying patient's dynamic social treatment system, is suggested for the enhancement of the quality of the dying patient's care. (31 ref)—*Journal abstract.*

7802. **Vasilchenko, G. S.** (Ministry of Health, Moscow, Russian SFSR) **[Systemic approach in sexual pathology.]** (Czec) *Československá Psychiatrie*, 1973(Feb), Vol 69(1), 3-10.—Criticizes the practice of treating patients with sexual problems by different medical specialists and explains the necessity for the creation of an independent discipline of sexual pathology. The new discipline should be a synthesis of urology, gynecology, endocrinology, neuropathology, and psychiatry which deals with different components or subsystems of the sexual system. The value of systemic approach is demonstrated on selected clinical cases. Basic stages in systemic analysis of sexual disorders are outlined and a scale of vectors determining the male sexual constitution is presented. (Russian & English summaries)—*V. Fischmann.*

### Psychotherapy & Psychotherapeutic Processes

7803. Adams, Paul L. (U Miami) **Psychotherapy with obsessive children.** *International Journal of Child Psychotherapy*, 1973(Oct), Vol 2(4), 471-491.—Discusses the importance of the study of the natural history of childhood obsessive disorders and the results achieved with various types of therapies. In general, obsessive children who are untreated seem to fare best when their illness has occurred in a setting of depression and worse when the basic processes are schizophrenic or psychopathic. A one-to-one therapist-patient relationship is suggested. 6 points are given for assessing the changes that can occur with the kind of treatment recommended: decreased symptoms, behavior changes, self-image, ego structure, superego changes, and interpersonal relations. The role of the parents in the child's improvement is emphasized. Case examples are provided. (19 ref)—R. S. Albin.

7804. Antonelli, Ferruccio. (Catholic U Rome, Italy) **[The usefulness and limitations of hypnotherapy in psychosomatic medicine.]** (Ital) *Medicina Psicosomatica*, 1972(Jan), Vol 17(1), 31-40.—Hypnosis and autogenous training are looked upon favorably by Italian experts in psychosomatic medicine. Both techniques can be used in short-term therapy which is the method of choice in treating psychosomatic symptoms, but some clinical danger exists when hypnosis tries to suppress a symptom without having first understood its psychodynamic significance. The best use of hypnosis seems to be in the context of psychodynamic psychotherapy; however, in some cases the depth and source of pathology may require prolonged therapy and hypnosis may not be advisable. (English & French summaries) (16 ref)—D. Araoz.

7805. Bailis, Susan S. & Adler, Gerald. (Tufts U, Medical School) **Co-therapy issues in a collaborative setting.** *American Journal of Psychotherapy*, 1974(Oct), Vol 28(4), 599-606.—Discusses some difficulties encountered by physician and social worker co-therapists working with patients and families in the intensive short-term psychiatric unit of a general hospital. Aspects of the relationship between co-therapists (e.g., the nature of the working alliance, personality conflicts arising from random assignment of co-therapists, and sexual identity issues) are examined. Examples are cited in which co-therapists displayed feelings of helplessness in the therapeutic situation, overidentified with particular family members, and used family meetings to help individual patients avoid work on personal problems. It is concluded that although co-therapy is a valuable technique, some significant issues are involved in its use.—J. Kelly.

7806. Best, J. F. & Jones, J. G. (U Western Australia, Nedlands) **Movement therapy in the treatment of autistic children.** *Australian Occupational Therapy Journal*, 1974(Apr-Jun), Vol 21(2), 72-86.—Conducted a study of 4 autistic children to determine the value of a physical activity program in the treatment of autism. 3 Ss were given 30 swimming sessions and 10 movement education sessions; the other S participated only in the movement education sessions. Results indicate that Ss were capable of learning motor skills to a discernable level, and it is suggested that such a program may

contribute to the development of the autistic child's total growth. (36 ref)—M. E. Pounsel.

7807. Bey, Douglas R. & Chapman, Robert E. (U Illinois, Medical School, Peoria) **Psychiatry—the right way, the wrong way, and the military way.** *Bulletin of the Menninger Clinic*, 1974(Jul), Vol 38(4), 343-354.—Contrasts the principles and practices of combat military psychiatry with the private practice of civilian psychiatry.

7808. Black, F. William; Williams, Alfred V. & Bowen, Clotilde D. **Electroconvulsive treatment (ECT) in illicit drug-related psychosis: Case reports.** *Military Medicine*, 1974(Nov), Vol 139(11), 887-888.—Describes the use of electroconvulsive shock treatment (ECT) in 6 male 20-24 yr old patients admitted to the hospital for psychotic reaction associated with heavy illicit drug use. Findings indicate that ECT may be used effectively as a short-term treatment for patients who are refractory to the usual psychiatric treatment.

7809. Booth, Gotthard. **Cancer and the psyche.** *International Mental Health Research Newsletter*, 1974(Spr), Vol 16(1), 15-16.—Presents the argument, based on psychoanalytic theory and on research results, that cancer is somatization of depression. Cancer therapy must therefore deal directly with the causal depression by satisfying the strong underlying need for close interpersonal relationships. (23 ref)

7810. Bornstein, Philip H. (U Montana) **"I" language-induced anxiety.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 453-454.—Presents a 6-step procedure which allows the therapist to obtain a clear statement of problematic behavior from patients who are unable to define problems presently experienced. The technique described makes use of a combined behavioral-gestalt approach in the gathering of diagnostic information.

7811. Bragard, A. & Toye, N. (Counseling Ctr for Children & Adolescents, Verviers, Belgium) **[Reflections on the therapeutic attitude in a case of infantile psychosis.]** (Fren) *Acta Psychiatrica Belgica*, 1973(Sep), Vol 73(5), 581-590.—Presents the case of an 11-yr-old girl whose therapy of 2½ yrs was centered around issues of communication between her and the other members of her family. (English, Dutch, German, Italian & Spanish summaries)

7812. Bumpass, Eugene R.; Via, Bobby M.; Forgotsen, Judith H. & Fagelman, F. Diane. (U Texas, Health Science Ctr, Dallas) **Graphs to facilitate the formation of a therapeutic alliance.** *American Journal of Psychotherapy*, 1974(Oct), Vol 28(4), 500-516.—Discusses the use in psychotherapy of linear graphs representing the chronological sequence and intensity of patient feelings, external stimuli, and patient behavior. 5 cases in which cooperative construction of graphs by therapist and patient increased patient understanding of and control over acting-out behavior are presented. Patients suffering from neurotic personality disorders or borderline syndrome showed the most impressive changes as a result of use of the graphing technique. It is concluded that graphing can be an effective tool in psychotherapy with patients who have difficulty forming an observing ego and a therapeutic alliance. (23 ref)—J. Kelly.

7813. Büttner, Christian. [Therapy in educational homes.] (Germ) *Praxis der Kinderpsychologie und Kinderpsychiatrie*, 1974(Jul), Vol 23(5), 182-188.—Points out the main conditions which may restrict the work of a client-centered therapist in educational homes; e.g., institutional conditions, the therapist's self-concept, and assumptions about the etiology of deviant behavior. Institutional changes can be initiated only in the light of the social aims of home education.

7814. Černý, M. (U Karlova, Výzkumná psychiatrická laboratoř, Prague, Czechoslovakia) [Therapeutic use of posthypnotic suggestion evoked by autostimulation.] (Czec) *Československá Psychiatrie*, 1973(Feb), Vol 69(1), 11-16.—Reports on the effect of posthypnotic therapeutic suggestions, associated by the hypnotherapist with stimuli whose source lies in the patient himself. Any movement by the patient, e.g., pressing thumb against forefinger, may become the signal evoking the suggestions. The technique was used with 34 chronic neurotic and psychosomatic patients 21-57 yrs old who responded positively to 3 preceding hypnotic sessions. Treatment resulted in 6 complete remissions, 23 improvements, and 5 exclusions (no change). It is uncertain whether the remissions and improvements will be permanent. Main advantage of the technique is that it enables patients to produce posthypnotic suggestions under any circumstances with minimal interference from external influences. (Russian & English summaries)—V. Fischmann.

7815. Cancro, Robert; Fox, Norma & Shapiro, Lester E. (Eds.). (U Connecticut, Health Ctr) *Strategic intervention in schizophrenia: Current developments in treatment*. New York, NY: Behavioral Publications, 1974. xviii, 326 p.—Presents a collection of 12 papers which give an overview of the schizophrenic syndrome and illustrate a variety of therapeutic strategies in the areas of individual, family, and group psychotherapy; somatic, pharmacological, behavioral, and early intervention techniques; and brief hospitalization, rehabilitation, and extramedical procedures.

7816. Check, David B. *Sequential head and shoulder movements appearing with age-regression in hypnosis to birth*. *American Journal of Clinical Hypnosis*, 1974(Apr), Vol 16(4), 261-266.—Suggests that sequential head and shoulder movements occurring during age-regression to the birth process are valuable indicators of validity for the subsequent verbal reporting. It is unlikely that hypnotized Ss will know the mechanisms of vaginal delivery. Other criteria for assessing factual nature of reporting involve acceptance only when physiological and ideomotor responses occur before the S knows what is reflected at these deeper levels of awareness.

7817. Cheney, Thomas. (U Georgia) *Attitude similarity, topic importance, and psychotherapeutic attraction*. *Journal of Counseling Psychology*, 1975(Jan), Vol 22(1), 2-5.—Studied the effect of attitude similarity and topic importance on attraction in a natural setting by exposing 75 prison inmates, incarcerated for public intoxication, to varying attitudes of a psychotherapist prior to hearing him in a taped therapy session. The therapist's attitudes were either similar or dissimilar to the S's and pertained to either alcoholism (important) or general (unimportant) issues. Attraction was assessed using the Client's Personal Reaction Questionnaire developed by J. D.

Ashby et al. A group of control Ss received no attitudinal information. Ss were more attracted to the therapist after receiving alcohol items regardless of degree of similarity expressed.—*Journal abstract*.

7818. Collier, Herbert L. (Greater Phoenix Psychiatric Ctr, AZ) *Enuresis and encopresis*. In W. G. Klopfer & M. R. Reed (Eds), *Problems in psychotherapy: An eclectic approach*. Washington, DC: Hemisphere Publishing Corp, 1974. xi, 178 p.—Discusses psychological variables and treatment of enuresis and encopresis in children in terms of family genetics and personality predisposition.

7819. Collier, Herbert L. (Greater Phoenix Psychiatric Ctr, AZ) *The patient with somatic symptoms*. In W. G. Klopfer & M. R. Reed (Eds), *Problems in psychotherapy: An eclectic approach*. Washington, DC: Hemisphere Publishing Corp, 1974. xi, 178 p.—Discusses factors which affect symptom choice in psychophysiological disorders and the influence of therapist orientation on symptom type and expression. Suggestions for understanding and treating specific somatic symptoms (e.g., obesity and stomachache) are presented. (21 ref)

7820. Criddle, William D. (Inst for Rational Living, Northwest Branch, Seattle, WA) *Guidelines for challenging irrational beliefs*. *Rational Living*, 1974(Spring), Vol 9(1), 8-13.—In learning and using rational-emotive therapy, the 1st step toward permanent change is to challenge. This consists of convincing oneself of the illogical, irrational, and unrealistic aspects of one's emotion-producing ideas, accomplished by questioning, applying logic to ideas, and replacing the illogical ideas with rational, logical ones.

7821. Crosa, Giuseppe. (U Genoa, Clinic for the Nervous & Mental Diseases, Italy) [Considerations regarding the prevailing autogenous modality of the recall phase of autogenous training exercises.] (Ital) *Medicina Psicosomatica*, 1972(Jan), Vol 17(1), 47-51.—Autogenous training exercises lead to complete muscle relaxation. The recall phase has proven more beneficial if it is slowed down, rather than treated rapidly as in hypnosis. By extending the recall phase the patient is helped to benefit from his autogenous training in keeping an optimal muscle tone during his daily activities. The more gradual, slower, autogenic recall phase, which is the logical consequence of the spontaneous transition from the state of passivity to that of awareness, is described in detail. (French & English summaries)—D. Araoz.

7822. David, Charles A. (Dalhousie U, Victoria General Hosp, Halifax, Nova Scotia, Canada) *The use of the confrontation technique in the battered child syndrome*. *American Journal of Psychotherapy*, 1974(Oct), Vol 28(4), 543-552.—Presents a case in which the confrontation technique was used successfully to help a battering parent gain control over her punitive treatment of her child. Some causative factors in the development of the battered child syndrome are discussed. Treatment of the battering parent is a psychiatric emergency since its primary goal, protection of the child, must be reached quickly. Once some patient-therapist rapport has been established, the use of authoritative confrontation statements which direct the patient to control battering impulses intensifies transference and relieves the anxiety and guilt of the patient by allowing him to rely on the

therapist as an external source of control. It is concluded that the confrontation technique can be an effective tool in psychotherapy with battering parents.—*J. Kelly.*

7823. **DeVoge, Catherine.** (Larned State Hosp. KS) **A behavioral approach to RET with children.** *Rational Living*, 1974(Spr), Vol 9(1), 23-26.—Based on the principle that people feel the way they think and that overt behavior is an expression of these feelings, a method of teaching disturbed children to think rationally was tested. It was hypothesized that children who were strongly and consistently rewarded for verbal expressions of rational thinking would gain more control of their behavior than those who were not so reinforced. 16 children 8-13 yrs old, not mentally retarded, were randomly assigned to 1 of 2 groups. Each group met twice weekly for 4 wks. Group A received rational-emotive therapy. Excerpts from anecdotal records of behavior problems before and after the group experience are reported. Results support the hypothesis, suggesting that reinforcing rational statements results in change toward more self-controlled behavior.—*G. J. Frankel.*

7824. **Ferrannini, Luigi et al.** (U Bari, Istituto di Psichiatria, Italy) [Family dynamics in a group of psychotics as determined by the doctor's observations, patient's viewpoint, and projective testing of family members.] (Ital) *Rivista di Psichiatria*, 1974(Mar-Apr), Vol 9(2), 79-137.—Followed 8 families in individual and group therapy. The most significant observations relate to the complete dominance of 1 parent in all decisions, with no real emotional relationship with the offspring. Children's roles seemed to be static, and their behavior, based on an overacted interpretation of the roles of the father and mother, was more useful in preserving parental self-confidence than in developing the children's own maturity. The more or less overt repression of offspring attempts at self-government and the severe control of their sexual life were evident manifestations of the parental need for self-confidence. (76 ref)—*Journal summary.*

7825. **Frank, Jerome D.** (Johns Hopkins U, Medical School) **Therapeutic components of psychotherapy: A 25-year progress report of research.** *Journal of Nervous & Mental Disease*, 1974(Nov), Vol 159(5), 325-342.—Summarizes the experiments of the Johns Hopkins Psychotherapy Research Unit on brief psychotherapy of psychiatric outpatients. Major findings were that the beneficial results of psychotherapy include 2 components, activation of patients' expectations and learning of social skills; that psychiatric outpatients showed a marked decrease of symptoms in response to placebos, the degree of response depending on the interaction between the patient's momentary state at a particular time and the situation; and that an interview preparing patients for therapy led to more appropriate behavior in therapy and to greater clinical improvement. Data are summarized concerning factors related to remaining in treatment and to short-term improvement. Aspects of the long-term course of psychiatric outpatients revealed by 5- and 10-yr follow-up studies are reviewed. (51 ref)—*Journal abstract.*

7826. **Friedenberg, Edgar Z.** (Dalhousie U, Halifax, Nova Scotia, Canada) **Laing's relationship to philosophy.** *Review of Existential Psychology & Psychiatry*, 1973,

Vol 12(2), 105-128.—Examines R. D. Laing's concept of mental illness, his approach to psychotherapy, and the relationship of his work to the principles of existential philosophy and existential psychotherapy.

7827. **Friedman, Henry J.** (Tufts—New England Medical Ctr, Boston, MA) **New considerations in the treatment of certain adolescent patients.** *Adolescence*, 1974(Sum), Vol 9(34), 155-168.—Deals with issues of values, limit setting, and confrontation during psychotherapy with adolescents whose parents have abandoned their position of authority and may openly advocate their adolescent's indulgence in rebellious and self-destructive behavior. Analytic neutrality must be abandoned in such cases. 3 case histories are reported.

7828. **Goeppert, S. & Geoppert-Frank, H. C.** (Albert-Ludwigs-U, Freiburg, Switzerland) [Some considerations on class-specific behavior in psychoanalysis and psychotherapy.] (Germ) *Confinia Psychiatrica*, 1974, Vol 17(1), 53-68.—Presents a sociolinguistic analysis of primary and secondary process and the relations of transference and countertransference in response to the adoption by some psychoanalysts of class-specific linguistic behavior in describing therapeutic problems. It is argued that psychoanalytic treatment of working-class patients cannot be considered as compensatory speech education. A new concept of illness and therapy is advanced with respect to the specific function of speech for working-class people.—*I. N. Mensh.*

7829. **Gottman, John M. & Leiblum, Sandra R.** (Indiana U) **How to do psychotherapy and how to evaluate it: A manual for beginners.** New York, NY: Holt, Rinehart & Winston, 1974. vii, 184 p.—Presents a step-by-step manual for beginning therapists on the principles, techniques, and results of psychotherapy. A flow chart of the treatment process in psychotherapy is presented, and subsequent chapters clarify the therapeutic processes involved, including designating the organization system, determining how the decision to seek treatment was made, administering problem assessment, negotiating therapeutic contracts, and assessing the impact of a planned intervention. (7 p ref)

7830. **Gottschalk, Louis A.** (U California, Coll of Medicine, Irvine) **The application of a method of content analysis to psychotherapy research.** *American Journal of Psychotherapy*, 1974(Oct), Vol 28(4), 488-499.—Discusses possible applications of the author's content analysis method to psychotherapeutic research. Some steps in the development of the method (e.g., the definition of psychologic dimensions to be measured, construction and validation of scales, and training of reliable scorers) are described briefly. The use of the method in studies on the prediction of treatment outcome, and in psychosomatic, psychophysiology, and psychopharmacological research relevant to psychotherapy is reviewed. It is suggested that the value of a content analysis method to psychotherapy lies in its ability to measure specific psychologic states precisely and accurately. (29 ref)—*J. Kelly.*

7831. **Gray, William & Gray, Lucille R.** (Malden District Court Clinic, MA) **Court clinic therapy: Theory and practice.** *International Journal of Offender Therapy & Comparative Criminology*, 1974, Vol 18(2), 153-158.—Describes a family treatment therapy program in which the

family structure is a part of both the clinic and the court. Co-therapists serve as parent models, and students and disposition officers serve as other models for family behavior.

7832. Grüss, Ursula & Bach, Otto. [How intensive should and may the treatment of psychoses be? Considerations on somatherapy from the sociopsychiatric viewpoint.] (Germ) *Psychiatrie, Neurologie und medizinische Psychologie*, 1974(May), Vol 26(5), 287-294.—Recommends intensive somatic therapy of psychoses with a regimen of fast intervention, initial electroshock with sufficient frequency, and large doses of neuroleptic medications, specifically fluphenazine, haloperidol, trifluoperazine, butyrylperazine, and metoprenazine.—K. J. Hartman.

7833. Hanley, F. W. Individualized hypnotherapy of asthma. *American Journal of Clinical Hypnosis*, 1974(Apr), Vol 16(4), 275-279.—Describes 2 cases in which asthma was treated with an individualized hypnotherapeutic approach.

7834. Harris, Jay E. (Albert Einstein Coll of Medicine, Yeshiva U) A design for psychotherapy with schizophrenic patients. In R. Cancro, N. Fox & L. E. Shapiro (Eds), *Strategic intervention in schizophrenia: Current developments in treatment*. New York, NY: Behavioral Publications, 1974. xviii, 326 p.

7835. Hellwig, Karen & Memmott, Rae J. (El Camino Coll) Co-therapy: The balancing act. *Small Group Behavior*, 1974(May), Vol 5(2), 175-181.—Discusses the ingredients for a successful relationship between cotherapists: (a) open communication, (b) mutual acceptance of each other as peers, (c) acceptance of differing opinions, (d) knowledge of the assets and limitations of each, (e) willingness to give and accept constructive criticism, and (f) cotherapist dialogue prior to and following group sessions.

7836. Hill, Clara E. (Southern Illinois U, Carbondale) Sex of client and sex and experience level of counselor. *Journal of Counseling Psychology*, 1975(Jan), Vol 22(1), 6-11.—Examined how sex of client and sex and experience level of the counselor affected behaviors in counseling. 12 male and 12 female counselors, half inexperienced and half experienced, each recorded the 2nd counseling session with 1 male and 1 female client. Satisfaction items, frequency counts of counselor and client verbal behavior, activity levels, and judges' ratings were obtained for each session. Results indicate that same-sex pairings had more discussion of feelings by both counselor and client, and that inexperienced males and experienced female counselors were more active and empathic and elicited more feelings from clients than did their counterparts. (17 ref)—*Journal abstract*.

7837. Hodnett, Mary L. (U Texas, Arlington) A broader view of art therapy. *Art Psychotherapy*, 1973(Fal), Vol 1(2), 75-79.—Proposes that art therapy should supplement its early subservience to psychoanalysis by stressing self-actualization through creativity in keeping with humanistic psychology, and by adopting an existentialist emphasis on the uniqueness of the person. Behavior modification through art work and music has been applied to retarded and disturbed children by T. Gaston. The full benefit of art therapy will be realized, however, only when its objectives reach beyond social

adjustment to acquaint clients with the broad range of aesthetic expression practiced by artists. (19 ref)—R. Arnheim.

7838. Hofmann, Adele D. & Becker, R. D. (New York U—Bellevue Medical Ctr, NY) Psychotherapeutic approaches to the physically ill adolescent. *International Journal of Child Psychotherapy*, 1973(Oct), Vol 2(4), 492-511.—Presents a selective review of the psychological reactions of adolescents to illness and hospitalization. A critical examination of defensive and coping mechanisms invoked to combat anxiety is systematically discussed. Therapeutic guidelines are suggested which will encourage those preexisting and naturally occurring healthy strategies essential to satisfactory readjustment after hospitalization. The characteristic responses of adolescents to medical or surgical crises are reviewed. The importance of recognizing the anxieties actuated by illness, surgery, or hospitalization among this age group, is stressed. The role of the consulting psychiatrist or psychologist on the medical unit is considered. (36 ref)—R. S. Albin.

7839. Kavalier, Susan I. (Postgraduate Ctr for Mental Health, New York, NY) Dance therapy with retarded children. *International Mental Health Research Newsletter*, 1974(Spr), Vol 16(1), 9-11.—Describes, in the context of other therapeutic efforts with retarded children, the difficulty of determining experimentally, in 1 study, the general effectiveness of short-term dance therapy even when individual changes were clearly apparent. (32 ref)

7840. Keller, James F.; Croake, J. W. & Brooking, Janis Y. (Virginia Polytechnic Inst & State U) Effects of a program in rational thinking on anxieties in older persons. *Journal of Counseling Psychology*, 1975(Jan), Vol 22(1), 54-57.—Investigated the effects of a program of rational-emotive education on irrational thinking and self-reported anxiety in 30 individuals 60 yrs of age and older. Experimental and control groups each comprised 15 individuals. Both groups were pretested using the Adult (Irrational) Ideas Inventory and the State-Trait Anxiety Inventory. The experimental group received 4 wks of study in rational-emotive education while the control group waited its turn for the study. Both groups were posttested in the 5th wk. The control group showed no significant declines in irrational thinking or anxiety, but the experimental group did. (15 ref)—*Journal abstract*.

7841. Killory, J. F. (Carroll Coll) In defense of corporal punishment. *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 575-581.—In defense of corporal punishment, 4 criteria for punishment are enumerated, and comments are made concerning side effects both specific to a punishment and common to all procedures. Punishment techniques available to parents and therapists are discussed.—*Journal abstract*.

7842. Klopfer, Walter G. & Reed, Max R. (Eds.). (Portland State U) Problems in psychotherapy: An eclectic approach. Washington, DC: Hemisphere Publishing Corp, 1974. xi, 178 p.—Presents a collection of 9 papers which illustrate alternative approaches to the treatment of various types of patients seen in psychotherapy, including the suspicious, suicidal, or seductive patient, the patient with somatic symptoms, the patient

not ready for behavior therapy, and the silent patient in group therapy.

7843. Klopfer, Walter G. (Portland State U) **The suspicious patient.** In W. G. Klopfer & M. R. Reed (Eds), *Problems in psychotherapy: An eclectic approach*. Washington, DC: Hemisphere Publishing Corp. 1974. xi, 178 p.—Discusses possible causes of suspiciousness in patients and how it may be reinforced. Suggestions for handling this type of patient by different types of therapists (e.g., client-centered, psychoanalytic, or behavior therapists) are presented.

7844. Klopfer, Walter G. (Portland State U) **The seductive patient.** In W. G. Klopfer & M. R. Reed (Eds), *Problems in psychotherapy: An eclectic approach*. Washington, DC: Hemisphere Publishing Corp. 1974. xi, 178 p.—Considers how the intimate nature of all psychotherapeutic approaches may result in seductiveness on the part of the patient toward the therapist and how this problem can be handled in the course of treatment. Suggestions for working with the sexual tension in psychotherapy for both male and female therapists working with male and female patients are presented.

7845. Lalli, Nicola; Bordin, Manilio & Cuzzolaro, Massimo. (U Roma, Istituto di Psichiatria, Italy) **[The doctor-patient relationship.]** (Ital) *Rivista di Psichiatria*, 1974(Jan-Feb), Vol 9(1), 41-62.—Citing the cases of 4 female and 3 male psychiatric outpatients 28-69 yrs old, it is suggested that when a doctor does not understand the psychological meaning of the symptoms offered by the patient he encourages the patient to "organize" a somatic syndrome. The doctor should look upon the patient as a whole to treat him effectively. It is suggested that about 45% of the outpatients of any general practitioner are neurotic. (19 ref)—N. De Palma.

7846. Lehmann, B. W. **[The search for identity: A Rogerian approach.]** (Duth) *Nederlands Tijdschrift voor de Psychologie en haar Grensgebieden*, 1974(Jul), Vol 29(5), 385-398.—Discusses the Rogerian approach to rehabilitating the S reported by T. de Wever (see PA, Vol 53:Issue 4). An S who has difficulty in defining her identity can be rehabilitated by responding to statements by the clinician in terms of a system of positive and negative reinforcements to her expressions.—A. J. Ter Keurst.

7847. Levenson, Edgar A. (William Alanson White Inst, New York, NY) **Changing concepts of intimacy in psychoanalytic practice.** *Contemporary Psychoanalysis*, 1974(Jul), Vol 10(3), 359-371.—Considers that concepts of intimacy are a by-product of a changing society. The trend is towards more active interaction between patient and therapist. Intimacy—openness to the other person as he is—results from an authentic engagement of the therapist with the patient. It requires that the therapist recognize the perspectivistic reality of the patient's world and abstain from moving the patient into change.

7848. Levin, Sidney. (Harvard U, Medical School, Boston) **A brief note on the "undoing" of childhood traumatic experiences through environmental manipulation.** *Bulletin of the Menninger Clinic*, 1974(Jul), Vol 38(4), 365-368.—Notes that the undoing of childhood traumas through environmental intervention often requires the cooperation of parents as well as others.

Efforts at undoing are more likely to be successful if the traumatizing person participates personally in the undoing process.

7849. Lievens, P. (U Louvain, Belgium) **[Psychotherapy with adolescents.]** (Fren) *Acta Psychiatrica Belgica*, 1973(Sep), Vol 73(5), 630-653.—Suggests that psychotherapy with adolescents encounters major difficulties such as nosology and hospitalization. Outpatient interview and therapy also pose special problems. Psychotherapy with adolescents is different from child psychotherapy and adult psychotherapy. The characteristics are, among others, the flexible choice of the therapeutic method in the course of the same therapy, the type of verbal relationship that needs more than a positive neutrality, the importance of the contact with the patient and of the relations with the parents. The importance of combining psycho- and pharmacotherapy is stressed. (English, Dutch, German, Italian & Spanish summaries)—*Journal summary*.

7850. Marcus, Ned. (Jewish Child Care Assn, New York, NY) **Yawning: Analytic and therapeutic considerations.** *International Journal of Child Psychotherapy*, 1973(Oct), Vol 2(4), 406-418.—Presents the case of a 13-yr-old boy living in a small group residence. A major symptom was continuous yawning during psychotherapy. It is shown that the active analysis of this nonverbal expressive behavior was of value in understanding and treating a youngster who, because he was so withdrawn, would not otherwise have been amenable to the standard one-to-one approach. The literature concerning nonverbal expressive behavior is reviewed. Yawning, in this case, served a dynamic need to regress. Yawning, when appropriate, may be viewed as a regression in the service of the ego, facilitating a more relaxed, more resourceful utilization of passivity. (16 ref)—R. S. Albin.

7851. Meltzer, Donald. (Tavistock Clinic & Inst of Psycho-analysis, London, England) **Narcissistic foundation of the erotic transference.** *Contemporary Psychoanalysis*, 1974(Jul), Vol 10(3), 311-316.—Advances the thesis that the dynamic approach to the problem of erotization of the transference, and therefore to the problem of a powerful type of resistance which may lead to acting-out in and out of transference, does not adequately reveal the complexity of mental functioning, nor does interpretation along these lines successfully promote working through. Instead it is suggested that the structural approach, especially that aspect of it which views narcissism and object relations from an organizational viewpoint, is more satisfying intellectually and more potent in practice. This concept is illustrated by the case of a young woman in which the erotic transference resistance had been broken into by the revelation in a dream of a hidden area of narcissistic organization which functioned as a collusion against parental standards.—M. J. Stanford.

7852. Mosher, Loren R. (NIMH Ctr for Studies of Schizophrenia, Rockville, MD) **Psychiatric heretics and the extra-medical treatment of schizophrenia.** In R. Cancro, N. Fox & L. E. Shapiro (Eds), *Strategic intervention in schizophrenia: Current developments in treatment*. New York, NY: Behavioral Publications, 1974. xviii, 326 p.

7853. Pagano, Vittorio. [New perspectives of psychotherapy in psychosomatic disorders.] (Ital) *Medicina Psicosomatica*, 1972(Jan), Vol 17(1), 23-29.—Suggests that the general practitioner must find his own psychotherapeutic style since much of his work deals with psychosomatic symptoms. Physicians need training in psychotherapy and awareness of their role in this area. (English & French summaries)

7854. Parietti, Piero. (H. Bernheim Clinic, Ctr for the Study of Hypnosis, Verona, Italy) [Hypnotherapy in psychosomatic disorders.] (Ital) *Medicina Psicosomatica*, 1972(Jan), Vol 17(1), 41-46.—Analyzes the role of hypnosis in psychosomatic manifestations. Psychotherapy, defined in terms of insight and understanding, will use hypnosis as a tool to aid such insight when emotional factors cause somatic dysfunctions. Hypnosis is no longer used to remove symptoms but to help diagnose and treat the personality disturbances which might be at the root of symptoms: it is not therapy but an adjunct to it. Hypnosis is seen as an "induced psychosomatic state", i.e., as the possibility of orienting the client's psyche towards an understanding of changes which might be effected in his bodily functions. The words used in producing hypnosis are interactive sound stimuli, image evokers, and a means of communication at the conscious level.—D. Araoz.

7855. Peck, Edwin C. (U California, Irvine) **The relationship of disease and other stress to second language.** *International Journal of Social Psychiatry*, 1974(Spr-Sum), Vol 20(1-2), 123-133.—Applies concepts about bilingualism to the everyday practice of general psychiatry. Past studies, though useful, do not concentrate on the effects of stress on self-expression in a 2nd language. A case study illustrates such effects in detail. To make accurate clinical assessments when consulting with bilingual patients, the psychiatrist must add these questions to his mental status assessment: (a) At what age and in what place did the patient learn his 1st language? (b) What are the attitudes towards his 1st language in his current environment? (c) Is the patient under stress, and how is the stress affecting his self-expression in his 2nd language?—*Journal summary.*

7856. Peck, Michael L. & Wold, Carl I. (Narcotics & Drug Abuse Rehabilitation Program, Long Beach, CA) **The suicidal patient.** In W. G. Klopfer & M. R. Reed (Eds), *Problems in psychotherapy: An eclectic approach*. Washington, DC: Hemisphere Publishing Corp, 1974. xi, 178 p.—Presents a clinically-oriented analysis of suicidal behavior in patients and possible therapist responses. A review of previous findings on the evaluation of suicide potential, special risk groups, management of the suicidal patient, and crisis intervention techniques and some sample case histories are presented (24 ref)

7857. Powell, John R. (Michigan State U, Counseling Ctr) **Understanding male homosexuality: Developmental recapitulation in a Christian perspective.** *Journal of Psychology & Theology*, 1974(Sum), Vol 2(3), 163-173.—Reviews etiological explanations of male homosexuality. Theories that are concerned with family pattern dynamics are considered credible and are related to biblical teachings regarding marriage and the family. The concept of developmental recapitulation as a means of guiding therapy is discussed and related to a mode of

multiple therapy with male clients having homosexual concerns. (16 ref)—*Journal abstract.*

7858. Priest, Peter N. (U Auckland, Medical School, New Zealand) **The destiny of psychological therapies: Convergence or divergence?** *British Journal of Medical Psychology*, 1972(Sep), Vol 45(3), 209-219.—Reviews data on the relative merits of psychotherapeutic methods. 2 conflicting "pipe-dreams" are examined: that behaviorism techniques are superior and that a unity of disparate approaches is taking place. The 2nd position is viewed as particularly dangerous and is analyzed in detail. Its emphasis on "process" research, the assumption that all orientations are at the same stage of their development, and its simplistic eclecticism are challenged. Hardened attitudes toward behavior therapy are considered unjustified. It is concluded that a confrontation between approaches would help force evaluation of the methods on their results. (3 p ref)—R. Hall.

7859. Razin, Andrew M. (Albert Einstein Coll of Medicine, Yeshiva U) **The A-B variable and therapist persuasiveness.** *Journal of Nervous & Mental Disease*, 1974(Oct), Vol 159(4), 244-255.—Investigated the hypothesis that A therapists are more persuasive than B therapists. (A-B distinctions were made on the basis of Strong Vocational Interest Blank responses.) 15 male and 6 female therapists each tape recorded 3 therapy sessions with 1 of their neurotic outpatients, and 3 sessions with 1 of their schizoid or schizophrenic outpatients. Therapists, patients, and an independent rater rated (a) patients' acceptance of therapists' "messages" to them, (b) therapists' embodiment of 4 correlates of persuasiveness, and (c) therapists' general persuasiveness. Analyses of variance showed significant A > B differences on 2 measurements: message acceptance rated by rater and total-of-4 correlates rated by therapist; the 7 other analyses showed nonsignificant A > B differences. Results are interpreted as essentially null or at best mildly supportive of the hypothesis. (43 ref)—*Journal abstract.*

7860. Reed, Max R. (Portland State U) **Psychotherapy: A modern Tower of Babel.** In W. G. Klopfer & M. R. Reed (Eds), *Problems in psychotherapy: An eclectic approach*. Washington, DC: Hemisphere Publishing Corp, 1974. xi, 178 p.—Discusses the proliferation of psychotherapeutic approaches, from the beginnings of psychoanalysis to the neo-Freudians and finally to the more recent existential, learning, and conditioning approaches. Differences between approaches in terms of the extent of explicit control over patients and the extent to which the disciplines view their methods as having specificity or generality are discussed. (4 p ref)

7861. Rosenheim, Eliyahu. (Bar-Ilan U, Ramat Gan, Israel) **Humor in psychotherapy: An interactive experience.** *American Journal of Psychotherapy*, 1974(Oct), Vol 28(4), 584-591.—Discusses the uses of humor as a psychotherapeutic technique. The use of a humorous orientation requires the therapist to be relatively free from defensiveness and ready for mutuality with the patient. Humorous exchanges during therapy can impinge a patient's ability to perceive himself and his relations to others accurately, can serve as affect releasers for depressed, schizoid, or obsessive patients, and can help overcome the resistance of adolescent

patients. It is concluded that humor is valuable in psychotherapy because its intrinsic qualities of intimacy, humaneness, and directness help the therapist and patient form a closer, more informal working alliance.—J. Kelly.

7862. Ryle, Anthony & Lipshitz, Susan. **Towards an informed countertransference: The possible contribution of repertory grid techniques.** *British Journal of Medical Psychology*, 1974(Sep), Vol 47(3), 219-225.—Discusses the use of repertory grid techniques in investigating and understanding countertransference. It is suggested that such techniques can provide evidence on (a) how the therapist views the patient in terms of the patient's feelings, (b) how far these and other feeling constructs relate to each other, and (c) how these countertransference constructs relate to constructs describing behavior or transference reactions.—M. E. Pounsel.

7863. Schatzberg, Alan F.; Lobis, Robert A. & Westfall, Michael P. (Harvard U, Medical School, Boston) **The use of psychodrama in the hospital setting.** *American Journal of Psychotherapy*, 1974(Oct), Vol 28(4), 553-565.—Discusses the benefits and some potential antitherapeutic effects of the use of psychodrama in a hospital setting. Summaries are presented of 8 cases drawn from a weekly psychodrama group composed of voluntary inpatient participants representing a range of diagnoses, ages, and cultural backgrounds. Psychodrama with hospitalized psychiatric patients was found to be most useful in promoting acknowledgement and expression of affects, teaching socialization and communications skills, and analyzing behavior patterns and ego defenses. The use of psychodrama sometimes led to destructive expression of anger, limited exploration of uncharged material, and acting-out behavior. It is suggested that the beneficial effects of psychodrama can be achieved with other therapeutic methods which have fewer inherent risks and limitations.—J. Kelly.

7864. Schneck, Jerome M. **Observations on the hypnotic nightmare.** *American Journal of Clinical Hypnosis*, 1974(Apr), Vol 16(4), 240-245.—Discusses the hypnotic nightmares of a patient, focusing on the equivalence of the hypnotic nightmare with the spontaneous nocturnal nightmare of the same S. Functional attributes of hypnotic dreams and nightmares are alluded to. Little has appeared in the literature on the hypnotic nightmare in comparison to material on other hypnotic experiences. The nature and content of the hypnotic nightmares of the present S, in their regressive features with oedipal components, are consistent with reactivation of certain childhood conflicts at this point in the hypnoanalysis and with the transference relationship.—M. V. Kline.

7865. Schwartz, Barry J. & Snow, Laurence H. (Medical Coll Pennsylvania, Philadelphia) **On getting kicked out of medical school.** *American Journal of Psychotherapy*, 1974(Oct), Vol 28(4), 574-583.—Describes some character types found among students (mostly women) who failed medical school and sought psychotherapy prior to seeking readmission. Students who failed were found to have sufficient manifest motivation, but displayed over-cathected latent motiva-

tion, rigid self-images, and inflexible defensive systems. (15 ref)

7866. Schwartz, Ronald M. (U California, Medical School, Los Angeles) **Sexual history taking.** *Journal of the American College Health Association*, 1974(Jun), Vol 22(5), 405-408.—Outlines techniques that are useful in taking sexual histories. Methods include utilizing free flow of thought and words with only occasional guidance by the interviewer, but this method is thought to be too cumbersome and impractical. The direct method of following an outline which includes chief complaint, present illness, and past history, taken with a certain amount of flexibility on the part of the interviewer, is considered to be more successful. It is important that the interviewee progress comfortably from stage to stage of the interview. It is recommended that the interviewer maintain the 3 C's of counseling: calm, confidence, and concern.—A. de la Haba.

7867. Serban, George & Gidynski, Christina B. (New York U—Bellevue Medical Ctr, NY) **Schizophrenic patients in community: Legal misinterpretations of "right to treatment."** *New York State Journal of Medicine*, 1974(Oct), Vol 74(11), 1977-1981.—Presents evidence that postdischarge schizophrenic patients suffer from a lack of awareness of psychological impairment which prevents them from participating in outpatient remedial care programs. The extent of insight into mental condition and the premorbid functioning of 419 schizophrenic Ss were assessed through self-reports and psychiatric evaluation within 6 days of hospitalization. It was found that Ss' social functioning in the community prior to admission had been impaired, and that Ss were confused about reasons for admission and the severity of their illness. It is concluded that discharged schizophrenic patients who experience a recurrence of symptomatology do not have sufficient insight to seek rehabilitative treatment which might prevent repeated hospitalization. (21 ref)—J. Kelly.

7868. Sirois, F. (Hôtel-Dieu du Sacré-Coeur de Jésus, Child Psychiatry Service, Quebec, Quebec, Canada) **[Clownery and the child.]** (Fren) *Acta Psychiatrica Belgica*, 1973(Sep), Vol 73(5), 654-658.—Some symptomatological and psychodynamic aspects of clown behavior and the child are discussed and illustrated with clinical cases. (English, Dutch, German, Italian & Spanish summaries)

7869. Soubrier, Jean-Pierre. **[Chemotherapies and psychotherapies: Are they complementary or antagonistic? A personal study.]** (Fren) *Annales Médico-Psychologiques*, 1974(Feb), Vol 1(2), 225-233.—Asserts that chemotherapy and psychotherapy arise from different conceptions of the problem confronting a psychiatric patient, that each is valid, and that a proper model for their simultaneous use is based on the idea that different kinds of care apply to different needs. To fail to prescribe chemotherapeutic treatment, carefully selected to be appropriate for the individual, from today's broad array, is to deny the patient the assistance of a proven therapeutic aid. To treat only "target symptoms" by biologically active substances, however, is to neglect the psychosocial or existential concerns that may be central to finding a cure. Suicide provides a dramatic example of the need to treat at 2 levels, as many patients who

commit suicide are under chemotherapy at the moment. Some, ironically, choose an acute intoxication with psychotropic agents (e.g., tricyclic antidepressants) as their means of self-destruction.—*H. E. King.*

7870. **Straatmeyer, Alvin J. & Watkins, John T.** (Problems-In-Living Ctr, Sioux Falls, SD) **Rational-emotive therapy and the reduction of speech anxiety.** *Rational Living*, 1974(Spr), Vol 9(1), 33-37.—Compared the effectiveness of a complete course of rational-emotive therapy (RET) in treating public-speaking anxiety with that of 3 other procedures: (a) a modified RET procedure, omitting the element of dispute; (b) an attention placebo; and (c) a no-treatment control condition. 57 Ss participated, in 4 experimental groups corresponding to the 4 methods. To determine the effectiveness of each treatment in reducing speech anxiety, 2 self-report and 2 behavioral measures were used. The hypothesis that Ss who received RET would show improvement was supported.—*G. J. Frankel.*

7871. **Szasz, Thomas S.** (State U New York, Upstate Medical Ctr, Syracuse) **The myth of psychotherapy.** *American Journal of Psychotherapy*, 1974(Oct), Vol 28(4), 517-526.—Discusses the metaphorical character of implicit comparisons between psychotherapy and medical treatment, and examines the uses of the vocabulary of psychotherapy. It is argued that the interactions between patient and therapist which are conventionally called psychotherapy do not involve psyches and are not necessarily therapeutic. Jung correctly rejected Freud's use of science to legitimize psychotherapy and instead saw psychoanalysis as a system of secular ethics. It is suggested that psychotherapy is a process of personal influence which reflects the values, personalities, and aspirations of its theorists and practitioners. The assumption that the outcome of psychotherapy will be therapeutic for the patient is not always valid. (17 ref)—*J. Kelly.*

7872. **Trexler, Larry.** (Camden Cty Community Mental Health Ctr, NJ) **The suicidal person and the restoration of hope.** *Rational Living*, 1973(Fal), Vol 8(2), 19-23.—Employs a rational-emotive approach in discussing treatment for suicidal clients. Determining whether and to what extent an individual is suicidal is primary. Investigating suicidal tendencies, whether the client has thought of suicide or not, follows. A theme of hopelessness, defined as the cognitive negative evaluation of the future, is frequently present, created by distorted cognitions. Often the psychological problem is a belief of being totally incapable of dealing with the situation and an insistence on not deserving to live. This is combined with views of the self as inadequate and unworthy, perception of the world as demanding and frustrating, and of the future as continuing failure. The therapist's task is to confront the client's feelings of helplessness, and ultimately train him to see the irrationality of his ideas. The therapist's perspective in working with these cases is discussed.—*G. J. Frankel.*

7873. **Turco, Ronald.** **Eskimo youth: Culture and conflict.** *Journal of Pastoral Care*, 1974(Mar), Vol 28(1), 36-39.—Discusses cultural patterns of Eskimo youth in Alaska, the conflicts of adaptation to American culture, and the unique therapeutic problems created by these conflicts. Complications in treatment arise from language differences, from local norms of acceptable

behavior, and from the need to modify standard psychological tests and examinations which do not apply to objects or situations in daily Eskimo life. 3 personality traits are prominent in young Eskimos: suspiciousness, anger, and depression. Ways of resolving issues by use of group therapy are mentioned.—*B. Smith.*

7874. **Tustin, Frances.** (Child Guidance Training Ctr, London, England) **Therapeutic communication between psychotherapist and psychotic child.** *International Journal of Child Psychotherapy*, 1973(Oct), Vol 2(4), 440-450.—Presents clinical and theoretical material in support of the hypothesis that psychotic children are protecting themselves against the premature experience of being disconnected from the mother. They have developed an insulation from sensory experience. The therapist must attempt to reach them by offering more realistic means of protecting and using their vulnerable areas. The importance of a stable treatment setting is emphasized, and several case examples are presented. The overinflated expectations of life by these children are unrealistic and must be changed from a source of disappointment to an acceptable and bearable challenge.—*R. S. Albin.*

7875. **Valentine, John H.** (U Pennsylvania, Medical School) **Alienation and the family history.** *American Journal of Psychotherapy*, 1974(Oct), Vol 28(4), 592-598.—Discusses the use of detailed reconstructions of family history in psychotherapy with patients whose symptoms stem from rootlessness and alienation. Oral traditions learned in childhood, family records, and mementos are used to recreate the characters, life-styles, and critical choices of past family members. Theoretical bases for the family history technique provided by the work of C. G. Jung, E. Erikson, H. S. Sullivan and others are described briefly. 3 cases in which the therapeutic reliving of historical family drama helped patients to develop a richer, more personal, and more congruent identity are presented. It is suggested that use of the family history technique can help patients relate their personal conflicts to a wider historical and cultural context.—*J. Kelly.*

7876. **Walker, Priscilla C.** (Medfield State Hosp, MA) **The hypnotic dreams: A reconceptualization.** *American Journal of Clinical Hypnosis*, 1974(Apr), Vol 16(4), 246-255.—Hypnotic suggestions to "dream now" have been used to produce a response called the hypnotic dream. Previous research has assumed that this dream is something over and above ordinary waking fantasy, and has attempted to demonstrate this difference by comparing the hypnotic dream with the nocturnal dream by stressing the unique role of the "trance" in producing the hypnotic dream. However, the data have not sufficiently supported this contention. The clearest way of conceptualizing the hypnotic dream seems to be to relate it to directed fantasy. The conceptualization best fits the available data and also suggests further research which would be meaningful.—*M. V. Kline.*

7877. **Waltzer, Herbert.** **The umbilicus as vagina substitute: A clinical note.** *Psychoanalytic Quarterly*, 1974, Vol 43(3), 493-496.—Cites the case of a female who regarded her umbilicus as though it were her vagina.

7878. **Ward, Alan J. & Leith, Virginia M.** (Eastern State School & Hosp, Trevoise, PA) **The joint treatment of an "autistic" child by clinical psychology and speech therapy.** *International Journal of Child Psychotherapy*,

1973(Oct), Vol 2(4), 451-470.—Reports the use of structural therapy in treating a 3½-yr-old autistic girl on an outpatient basis. Focus of the treatment was on the improvement of body image and human relationships. The patient was initially nonrelating, nonverbal, hyperactive, and fearful. The therapy and its progress are described in detail. 16 mo of treatment helped her to develop warm relationships with her immediate family, to start using simple words and short phrases for communication, to become less hyperactive, and to begin establishing peer relationships. The importance of differential diagnosis in early childhood disorders, of the choice of therapeutic strategy, and the relevance of improved body image and human relationships are stressed. (15 ref)—R. S. Albin.

7879. Warren, Sue A. (Boston U) **The distressed parent of the disabled child.** In W. G. Klopfer & M. R. Reed (Eds), *Problems in psychotherapy: An eclectic approach*. Washington, DC: Hemisphere Publishing Corp, 1974. xi, 178 p.

7880. Will, Otto A. (Austen Riggs Ctr, Stockbridge, MA) **Individual psychotherapy of schizophrenia.** In R. Cancro, N. Fox & L. E. Shapiro (Eds), *Strategic intervention in schizophrenia: Current developments in treatment*. New York, NY: Behavioral Publications, 1974. xviii, 326 p.

7881. Wittkower, E. D. & Warnes, Hector. (McGill U, Section of Transcultural Psychiatric Studies, Montreal, Quebec, Canada) **Cultural aspects of psychotherapy.** *American Journal of Psychotherapy*, 1974(Oct), Vol 28(4), 566-573.—Discusses cultural factors which influence the choice of preferred forms of psychotherapy and the possibility of transference of Western style psychotherapy to non-Western societies. Some psychotherapeutic methods used in developing nations, and in industrialized nations with contrasting world views (e.g., Russian "pathogenic psychotherapy," German "autogenic training," and Japanese "Morita therapy") are described. Attempts to apply Western psychotherapeutic procedures in non-Western countries often give rise to language difficulties, suspicion and distrust of the therapist, and serious clashes of the ideologies of patient and therapist. Acceptance of Western psychotherapy in developing nations will depend on the training of larger numbers of native therapists and on cultural changes. In the meantime, traditional healers will continue to play an important role in the treatment of the mentally ill in developing countries. (17 ref)—J. Kelly.

7882. Wohl, Julian. (U Toledo) **Third parties and individual psychotherapy.** *American Journal of Psychotherapy*, 1974(Oct), Vol 28(4), 527-542.—Discusses some problems associated with legitimate and illegitimate intervention in individual psychotherapy by 3rd parties who claim to have interests, rights, or concerns regarding the patient. 3rd party intervention may occur when the patient is a minor, when psychotherapy is conducted in an institutional setting, or when the patient is financially dependent. Legitimate 3rd party interests can threaten the confidentiality of the therapeutic relationship and expose the therapist to conflict of interest situations. It is suggested that therapists need to accept the existence of legitimate 3rd parties and to develop clear guidelines for dealing with 3rd party intrusions. A contractual ap-

proach to psychotherapy allows patient and therapist to determine mutually agreed upon rules regarding 3rd party intervention. (17 ref)—J. Kelly.

7883. Wolstein, Benjamin. (William Alanson White Inst, New York, NY) **"I" processes and "me" patterns: Two aspects of the psychic self in transference and countertransference.** *Contemporary Psychoanalysis*, 1974(Jul), Vol 10(3), 347-357.—Discusses the relationship between "I" processes and "me" patterns and how they affect therapeutic inquiry in practice. The therapeutic process becomes a shared experience between psychoanalyst and patient and is both psychic and ego-interpersonal involving their individual, subjective "I" processes and their objective, social "me" patterns.

7884. Worpell, Donald F. **Hypnotherapy with a hallucinating schizophrenic.** *American Journal of Clinical Hypnosis*, 1973(Oct), Vol 16(2), 134-137.

7885. Young, Howard S. (Family Service, Montgomery County, PA) **A framework for working with adolescents.** *Rational Living*, 1974(Spring), Vol 9(1), 3-7.—Suggests therapeutic guidelines for working with adolescents within a rational-emotive framework. A systematic, well-structured process is described that includes 4 stages: developing a relationship, defining the problem, teaching the principles of rational thinking, and encouraging change. Therapeutic efforts directed toward reality-facing and constructive problem-solving are highly recommended. Techniques to accomplish these ends, with particular emphasis on their use with adolescents, are presented.—G. Frankel.

7886. Zenz, H.; Brähler, E. & Braun, P. [The validity of on-off patterns as criteria for progress in psychotherapy.] (Germ) *Zeitschrift für Experimentelle und Angewandte Psychologie*, 1974, Vol 21(2), 326-338.—Used W. H. Holtzman's inkblot test as an experimental situation to test changes in communication patterns between therapist and client due to better understanding. 18 male students served as Ss. Analysis of variance of the computer-registered reaction times to the standard questions of the E and frequencies of interaction between E and S indicate that a decrease in E participation and a decrease in reaction times are reliable signs of progress in understanding the experimental situation. It seems, therefore, that the on-off patterns can be used as a criterion for progress in therapy.—W. J. Koppitz.

#### Drug Therapy & Drug Rehabilitation

7887. Abuzzahab, Faruk S. & Kulkarni, Anant S. (U Minnesota Hosp) **A pilot investigation of clinical effects of PM-33, a new anti-anxiety agent.** *Current Therapeutic Research*, 1974(Nov), Vol 16(11), 1181-1186.—Investigated the clinical properties of PM-33, a phenetidine derivative, in 13 neurotic patients. 10 completed the 3-6 wk study and received 50-600 mg/day. Patients were evaluated at 0, 3, and 6 wks using the MMPI, Brief Psychiatric Rating Scale (BPRS), and Wittenborn Psychiatric Rating Scales. Statistically significant improvement was observed among the items of MMPI, BPRS, and Wittenborn scales and in the global severity of illness. Insomnia and headache were present as side effects but decreased with continued treatment. Drowsiness increased with treatment. Tremor was present but

probably was not related to the drug. Nausea, vomiting, dry mouth, and blurred vision were also present.

—*Journal abstract.*

7888. **Ayd, Frank J.** (Taylor Manor Hosp, Ellicott City, MD) **A critical evaluation of molindone (Moban): A new indole derivative neuroleptic.** *Diseases of the Nervous System*, 1974(Oct), Vol 35(10), 447-452.—Reviews data gathered from almost 9 yrs of clinical experience with the neuroleptic molindone. Reports in the literature and the author's personal experience with this drug indicate that molindone is a safe, relatively nontoxic neuroleptic having essentially minor and transient side effects and that its therapeutic efficacy is equivalent to other potent antipsychotics in the treatment of various forms of acute and chronic schizophrenia. Slightly higher milligram doses of molindone are required, compared to some other neuroleptics, to achieve the same therapeutic response. Because some patients who have been unresponsive to or intolerant of all other neuroleptics do respond to molindone, it is concluded that this neuroleptic should be considered a useful addition to the list of antipsychotic drugs. (31 ref)  
—*B. Lindsey.*

7889. **Ayd, Frank J.** (Taylor Memorial Hosp, Ellicott City, MD) **Once-a-day dosage tricyclic antidepressant drug therapy: A survey.** *Diseases of the Nervous System*, 1974(Oct), Vol 35(10), 475-480.—Responses to a questionnaire mailed to a sample of 1,000 private practice and 1,000 hospital-based psychiatrists indicate a high percentage among them of prescribers of single daily dosages of tricyclic antidepressant drugs. The safety and effectiveness of this method of treatment are detailed, together with such advantages as greater likelihood of compliance with prescription instructions.

7890. **Bancroft, John; Tennent, Gavin; Loucas, Kypros & Cass, James.** (U Oxford, Warneford Hosp, England) **The control of deviant sexual behaviour by drugs: I. Behavioural changes following oestrogens and anti-androgens.** *British Journal of Psychiatry*, 1974(Sep), Vol 125, 310-315.—Assessed the effects of cyproterone acetate and ethinyl estradiol on sexual behavior of 12 sexual offenders, using a combination of behavioral, attitudinal, and physiological measures. There was no significant difference between the drugs on any measure. They were equally effective in reducing frequency of sexual thoughts and sexual activity, whereas only cyproterone acetate produced a weak effect in reducing erectile and subjective responses to erotic stimuli. The possibility of a placebo effect cannot be excluded. On the dosages used, neither drug produced troublesome side effects. (23 ref)—*Journal summary.*

7891. **Campanella, G. & Pennetta, R.** (U Bari, Clinica delle Malattie Nervose e Mentali, Italy) **[Experience in the treatment of Parkinson's disease with L-Dopa associated with a decarboxylase inhibitor (Ro 4-4602).]** (Ital) *Acta Neurologica*, 1974(May-Jun), Vol 29(3), 252-263.—Studied 19 male and 3 female patients who were given both drugs for 5-28 mo. Their symptoms improved quickly and markedly with only "central" levodopa side effects. This therapy is more easily handled and rapidly effective than levodopa therapy alone, requires fewer administrations during the day, and

abolishes "peripheral" side effects of levodopa.—*M. Stanford.*

7892. **Carpani, L.** (Istituto Psichiatrico Provinciale "G. Antonini," Limbiate, Italy) **[One-year experience in the treatment of chronic schizophrenic states by floripipamide (Piperonil).]** (Ital) *Rivista Sperimentale di Freniatria e Medicina Legale delle Alienazioni Mentali*, 1972(Oct), Vol 96(5), 1489-1497.—Administered only Piperonil in doses of 240-400 mg/day to 50 females whose histories included several years' hospitalization, intensive treatment with neuroplegics and Rauwolfia derivatives, and incapacity for group therapy. Results show shorter durations of hallucination and delirium, minimal side effects, and a growing desire and capacity in every case to harmonize with the environment. It is concluded that Piperonil is especially effective in autistic cases and that it has considerable advantages over other butyrophene derivatives discussed. (French & English summaries) (30 ref)—*L. Klinkon.*

7893. **Cuskey, Walter R. & Premkumar, T.** (U Pennsylvania) **A differential counselor role model for the treatment of drug addicts.** *Health Services Reports*, 1973(Aug), Vol 88(7), 663-668.—Discusses the various treatment modalities available to drug addicts, particularly the model using counselors in differential roles. Addicts' needs during the following plans of treatment are outlined: crisis intervention, progressive treatment, and social re-entry. Counselor roles include the ex-addict counselor, junior counselor, and senior counselor. The matching of counselor skills and wages, status of the counselor, and the addicts' need for different relationships are discussed.—*R. S. Albin.*

7894. **de Giacomo, P. & Pierri, G.** (U Bari, Clinica per le Malattie Nervose e Mentali, Italy) **[Clinical evaluation of bromazepam with special reference to the obsessive and phobic syndromes.]** (Ital) *Acta Neurologica*, 1974(May-Jun), Vol 29(3), 307-313.—Administered bromazepam to 20 female patients 20-74 yrs old. The drug was well tolerated and had a therapeutic effect in 40% of the cases. It is probably more beneficial than other benzodiazepines.

7895. **El-Yousef, M. Khaled & Manier, D. H.** (Vanderbilt U) **Effects of conjugated estrogens on plasma butaperazine levels.** *Psychopharmacologia*, 1974, Vol 39(1), 39-41.—Utilized a randomly assigned controlled-experimental grouping with a crossover design, using Ss as their own controls, to study the effects of conjugated estrogens on plasma butaperazine (Repoise) levels in 6 postmenopausal female schizophrenic patients. Significantly higher plasma butaperazine levels were measured following both a single loading dose and with maintenance doses of oral butaperazine in Ss when they were taking conjugated estrogens as compared to when they were not taking conjugated estrogens. The underlying mechanisms for these findings and their clinical implications are discussed briefly.—*Journal abstract.*

7896. **Fox, Vernelle.** (U Southern California, Medical School) **Dynamics of substance abuse and management.** In *B. C. Ring & D. R. Schrader (Eds), Eleventh annual Distinguished Lectures Series in Special Education and Rehabilitation*. Los Angeles, CA: U Southern California, School of Education, 1973. vi, 101 p. \$3.—Describes

rehabilitation service requirements for 4 types of addiction—alcoholism, sedative dependency, teenage "chemical rebellion," and narcotics addiction. The unique characteristics of each type of abuse, the services required by each type, and potential barriers to providing these services are discussed.

7897. **Gardos, George.** (Boston State Hosp. MA) **Are antipsychotic drugs interchangeable?** *Journal of Nervous & Mental Disease*, 1974(Nov), Vol 159(5), 343-348. —Studied the interchangeability of effective antipsychotic compounds in a clinical setting. 60 formerly hospitalized chronic schizophrenics were randomly assigned to chlorpromazine, thiothixene, or continued doctor's choice medication groups. Dose of antipsychotic medication and schedule of administration were kept constant. During the 2-yr study period 16 patients (44%) in the combined chlorpromazine and thiothixene groups ("switched group") underwent clinical deterioration to an extent that they had to be terminated from the study. Only 2 patients (12%) of the control group relapsed during the same period. The significant difference in relapse rates is attributed to the change in antipsychotic medication. Relapses were equal in number during the 1st and 2nd 6 mo of the study. The new antipsychotic (chlorpromazine or thiothixene) may have delayed but did not prevent the relapse of these patients.—*Journal abstract*.

7898. **González López, J. L.** [Monoclorimipramine in schizophrenia.] (Span) *Revista de Psiquiatria y Psicología Médica*, 1974(Jan-Mar), Vol 11(5), 315-320.—Presents 22 cases where patients improved with use of the drug and describes 5 cases in detail.

7899. **Howard, James S.** (Eastern State Hosp, Williamsburg, VA) **Haloperidol for chronically hospitalized psychotics: A double-blind comparison with thiothixene and placebo: A follow-up open evaluation.** *Diseases of the Nervous System*, 1974(Oct), Vol 35(10), 458-463. —Compared the treatment efficacy and side effects of haloperidol (Haldol) with those of thiothixene and those of placebo in an intensive program designed to release chronically hospitalized psychiatric patients from custodial care through the use of high doses of the chemotherapeutic agents. 46 women considered intractable psychotics, mean age 46.5 yrs and mean duration of illness 20.3 yrs, were selected for the study. Daily dosage was individually determined and did not exceed 200 mg of either active compound over the trial period (12 wks maximum). Results of 3 rating scales as well as treatment success consistently favor haloperidol. 43% of the haloperidol-treated patients, 31% of the thiothixene-treated patients, and 23% of the placebo-treated patients were considered no longer to require custodial care. It is concluded that haloperidol has a wide margin of safety for prolonged usage and that its treatment efficacy is not dependent upon the age or chronicity of the patient.—*B. Lindsey*.

7900. **Kline, N. S. & Shah, B. K.** **A pattern of antidepressant effect of tryptophan & imipramine in males and females.** *Diseases of the Nervous System*, 1974(Oct), Vol 35(10), 481-483.—Explicated sex differences in response to drug treatment. 15 male and 19 female patients in active depressive phase were randomly assigned to tryptophan or imipramine treatment for a

period of 6 wks. Tryptophan total daily dose was 3-6 g; imipramine total daily dose was 150-225 mg. Whereas an analysis of variance did not yield significant differences in average therapeutic ratings attributable to the drugs, the ratings of female patients were significantly lower ( $p < .05$ ) than those of males for both tryptophan and imipramine. Sex differences in drug effectiveness are indicated.—*B. Lindsey*.

7901. **Lehmann, Heinz E.** (Douglas Hosp, Montreal, Quebec, Canada) **The somatic and pharmacologic treatments of schizophrenia.** In R. Cancro, N. Fox & L. E. Shapiro (Eds), *Strategic intervention in schizophrenia: Current developments in treatment*. New York, NY: Behavioral Publications, 1974. xviii, 326 p.

7902. **Lievens, Paul.** (U Louvain, Belgium) [Use of psychotropic drugs in infantile psychoses.] (Fren) *Acta Psychiatrica Belgica*, 1973(Sep), Vol 73(5), 591-607. —Presents a case history of an autistic child 2 yrs and 4 mo old who was treated with a combination of neuroleptic medication and psychotherapy for several years. (English, Dutch, German, Italian & Spanish summaries)

7903. **Martin, William E.; Loewenson, Ruth B.; Resch, Joseph A. & Baker, Abe B.** **A controlled study comparing trihexyphenidyl hydrochloride plus levodopa with placebo plus levodopa in patients with Parkinson's disease.** *Neurology*, 1974(Oct), Vol 24(10), 912-919.—30 65-67 yr old patients were treated with trihexyphenidyl hydrochloride plus levodopa or placebo plus levodopa for 6-8 mo. No differences were observed between the groups in terms of dosage of levodopa required to maintain optimal function, the extent of the beneficial response, and the incidence of adverse reactions. (18 ref)

7904. **Moldofsky, Harvey; Tullis, Carol & Lamon, Richard.** (Clarke Inst of Psychiatry, Toronto, Ontario, Canada) **Multiple tic syndrome (Gilles de la Tourette's syndrome).** *Journal of Nervous & Mental Disease*, 1974(Oct), Vol 159(4), 282-292.—Studied biological and psychosocial features which influence the outcome of haloperidol treatment of multiple tic syndrome. Data from 15 11-40 yr old patients show that responders to haloperidol who have a family history of tics may suffer from a genetic and metabolic disorder, whereas nonresponders, who are inclined to perinatal abnormalities and have a later onset of tics, have an acquired disorder. Behavioral disturbances and psychosocial adaptation may influence or be influenced by drug usage. The hypothesis of uric acid metabolic abnormality was not supported, but dopaminergic and/or  $\gamma$ -hydroxybutyrate neural systems may be implicated. (34 ref)—*Journal abstract*.

7905. **O'Connor, Gerald.** (Florida State U) **Structural impediments in rehabilitation programs for drug addicts.** *Journal of Drug Issues*, 1974(Spr), Vol 4(2), 99-106. —Illustrates some problems arising from a unidimensional social control approach to drug treatment programs through a description of addict and parole agent interactions in a halfway house for adult male addicts. Attitudes of addicts included nostalgia for the pleasurable experiences of drug use, attachment to a deviant subculture, and low frustration tolerance. Parole agents acted as authoritarian, paternalistic controllers who viewed addiction as a personal and moral problem,

rather than as a social problem. Interactions between addicts and parole agents resulted in hostility and distance, rather than in development of a working therapeutic community. It is suggested that drug addiction treatment programs should emphasize social change as well as social control and should redefine the role of parole agents.—*J. Kelly.*

7906. Perales C., J. Alberto; García M., Alberto; Infantes P., Víctor & Valle E. D., Godofredo. (Clinica San Antonio, Lima, Peru) [Comparative study of clotiapine and trifluoperazine in acute paranoid schizophrenia.] (Span) *Acta Psiquiátrica y Psicológica de América Latina*, 1974(Jun), Vol 20(3), 207-213.—Carried out a double-blind study of trifluoperazine and a new antipsychotic drug, clotiapine, with 30 patients in the acute stage of paranoid schizophrenia. Each of the 2 groups of 15 Ss received one of the drugs and the therapeutic and secondary effects were assessed by means of standard scales and clinical procedures. Results show a statistically significant difference in favor of clotiapine, which was more useful than trifluoperazine in reducing several psychotic symptoms such as hostility, paranoid mood and thought, and emotional isolation. (17 ref)—*English summary.*

7907. Prien, Robert F. & Caffey, Eugene M. (VA Hosp. Central Neuropsychiatric Research Lab, Perry Point, MD) **The current status of lithium prophylaxis.** *Diseases of the Nervous System*, 1974(Oct), Vol 35(10), 470-471.—Summarizes controlled studies which showed that lithium was more efficacious than imipramine or placebo in reducing the severity of episodes of primary affective illness (mania and depression). The importance of identifying lithium responders and of comparing the drug with other treatment methods is stressed. (18 ref)

7908. Ransom, Raymond A. (Harlem Hosp Ctr, Alcoholism Program, New York, NY) **Comprehensive alcoholism program.** *Psychiatric Annals*, 1974(May), Vol 4(5), 73-83.—Describes the major treatment goals and strategies of a multiservice, multidisciplinary alcoholism treatment program at Harlem Hospital Center. Facilities include a detoxification unit, an outpatient clinic, and a therapeutic halfway house. Following complete medical and psychiatric evaluation, patients are referred to appropriate clinics and given supportive family and individual psychotherapy. Rehabilitation and training are stressed, and strong ties are maintained with Alcoholics Anonymous and similar organizations. The need to understand the sociocultural backgrounds of patients, and to include recovered alcoholics and individuals of similar backgrounds on the staff is stressed.—*C. Wright.*

7909. Reese, Christine C. (Norwich State Hosp, CT) **Forced treatment of the adolescent drug abuser.** *American Journal of Occupational Therapy*, 1974(Oct), Vol 28(9), 540-544.—Describes techniques of force or coercion used to admit and maintain 48 adolescent drug abusers in a treatment program. The coercion came from 3 sources: parents, a significant adult, or the courts. Analysis of a treatment model designed for forced inpatient treatment indicates that patients' attitudes changed from seeking self-destruction to using constructive measures to cope with their psychosocial problems.—*Journal abstract.*

7910. Ré, Osvaldo. (Riker Labs, Northridge, CA) **2-dimethylaminoethanol (deanol): A brief review of its clinical efficacy and postulated mechanism of action.** *Current Therapeutic Research*, 1974(Nov), Vol 16(11), 1238-1242.—Reports evidence from the literature that deanol is effective in the management of learning and behavior (hyperkinesia) disorders of childhood. Deanol represents the only well-documented pharmacological alternative to the use of amphetamine and amphetamine-like drugs in the management of these children. There is strong evidence that deanol is effective also in levodopa-induced dyskinesias and Huntington's chorea. These findings, however, need reconfirmation. It is important that the drug be used at appropriate dosage and for prolonged periods. Research suggests that deanol may be helpful in other neurological disorders (e.g., tardive dyskinesias and mania). With respect to deanol's mechanism of action, it has been demonstrated that the drug is a precursor of choline and that it crosses the brain barrier; evidence strongly suggests that deanol is a precursor of acetylcholine. (15 ref)—*Journal abstract.*

7911. Rizzitelli, F. & Spina, A. (Ospedali Riuniti de Foggia, Div Neurologica, Italy) [The effect of imipramine-desipramine association on depressive disorders: EEG study during spontaneous sleep.] (Ital) *Acta Neurologica*, 1973(Sep-Oct), Vol 28(5), 580-587.—Carried out a study with 5 females and 3 males, of whom 4 suffered from severe forms of depression, 3 from depressive neuroses, and 1 from psychomotor arrest. Ss were divided into 2 groups, the 1st group receiving imipramine and desipramine and the 2nd group imipramine only. Clinical and laboratory studies were done and EEGs taken before and several times during the 32-day treatment. While the administration of imipramine alone influenced the sleep pattern only slightly after 1 mo, imipramine and desipramine together altered the patients' sleep remarkably after 4 days, with gradual normalization occurring. Specific improvements were established from a clinical viewpoint and from the EEGs. (Italian & English summaries) (27 ref)—*M. J. Stanford.*

7912. Robinson, David. (U London, Inst of Psychiatry, England) **Alcoholism as a social fact: Notes on the sociologist's viewpoint in relation to a proposed study of referral behaviour.** *British Journal of Addiction*, 1973(Jun), Vol 68(2), 91-97.—Suggests probable areas of concern of sociologists involved in referral behavior, particularly as it relates to alcoholism. A sociologist's definition of alcoholism and the component parts of that definition are also offered.

7913. Robinson, J. T.; Chitham, R. G.; Greenwood, R. M. & Taylor, J. W. (Roffey Park Hosp, Horsham, England) **Chromosome aberrations and LSD: A controlled study in 50 psychiatric patients.** *British Journal of Psychiatry*, 1974(Sep), Vol 125, 238-244.—Conducted a controlled study of chromosome aberrations of 100 lymphoid cells in each of 50 psychiatric patients and 50 controls. Results show no significant difference between the control and patient Ss and support the latest review of the literature which indicates that LSD does not cause chromosome breakage. (23 ref)

7914. Robinson, Marilyn B. (Burke Rehabilitation Ctr, White Plains, NY) **Levodopa and Parkinsonism.** *Ameri-*

*can Journal of Nursing*, 1974(Apr), Vol 74(4), 656-661. —Describes the psychological effects of Parkinson's disease including inability to perform activities of daily living, acute depression, social isolation, and strained family and personal relationships. Effective rehabilitation of Parkinson's disease by chemotherapy with resultant role reversals is described as problematical for the S and family.

7915. Rucker, T. Donald. (Ohio State U, Coll of Pharmacy) **Drug use: Data, sources, and limitations.** *JAMA: Journal of the American Medical Association*, 1974(Nov), Vol 230(6), 888-890. —Discusses characteristics and sources of drug utilization data (e.g., demographic and socioeconomic differences in drugs used and the type of data obtained from manufacturers, prescribers, dispensers, and patients). Limitations of these sources of information are examined, and the need for a model information system for prescription services to support professional decision making in patient care is discussed. (24 ref)

7916. Salmoni, G.; Amati, A.; Vacca, L. & Giambelluca, A. (U Napoli, Facolta di Medicina e Chirurgia, Italy) [Clinical and therapeutic considerations on the effect of bromazepam, (Ro 5-3350), a new benzodiazepine derivative, on obsessive-compulsive and phobic symptoms.] (Ital) *Acta Neurologica*, 1973(Sep-Oct), Vol 28(5), 588-609. —Presents individual descriptions of the cases of 7 males and 8 females 21-59 yrs old hospitalized at the University of Naples. Clinical, personal, and psychodynamic data were gathered. Patients were interviewed frequently and 11 were given Rorschach tests. Blood and urine studies were done and EEGs were taken. The amount of bromazepam administered varied according to patient. Observation periods were 3-5 wks, longer for a few patients. Bromazepam was subjectively well tolerated, showing good therapeutic effects without damaging liver and kidney functions. It is considered satisfactory in view of the well-known fact that psychopathological manifestations in obsessive-compulsive and phobic patients are generally resistant to drugs. (Italian & English summaries)—*M. J. Stanford*.

7917. Sathananthan, Gregory L.; Rick, William; Matz, Rodney & Angrist, Burton M. (New York U, Medical Ctr) **Psychomotor effects of a new CNS stimulant, Abbott 34519.** *Current Therapeutic Research*, 1974(Nov), Vol 16(11), 1177-1180. —Conducted a study with 8 depressed inpatients to determine a dosage of A-34519 which could be used in a more definitive study to evaluate the drug's antidepressant effect. Under conditions of this study, the drug induced stimulant and neurological effects which made it almost impossible to elicit any antidepressant effect. 3 patients showed a partial or complete remission during the placebo lead-in phase of the study. This is consistent with prior observations that placebo response is common in depressive illness. The minimal "improvement" observed in some patients may have been nonspecific central nervous system stimulation rather than true antidepressant effect. The effects of this drug in this group of patients do not suggest a potent antidepressant effect which has rapid onset at doses below those giving severe stimulation and dysphoria. The usefulness of A-34519 in

certain other depressive illnesses can be ascertained only with another clinical trial.—*Journal abstract*.

7918. Scelles, F.; Mahuzier, G.; Saby, J. & Borenstein, P. (Hôpital psychiatrique de Villejuif, France) [Usefulness and dosage of ornithine-carbamyl-transferase in a psychiatric milieu.] (Fren) *Annales Médico-Psychologiques*, 1974(Feb), Vol 1(2), 183-193. —The dosage required for ornithine-carbamyl-transferase activity provides a valuable auxiliary for determining the hepatic innocuousness of a treatment regime. Its sensitivity permits a monitoring of the reactivity of the hepatic cell to changes in drug therapy, or even to changes in dose levels, in certain Ss. Both drug and alcohol addiction are related to increases in the activity of this enzyme.—*H. E. King*.

7919. Schuckit, Marc A. & Cahalan, Don. (US Navy Medical Neuropsychiatric Research Unit, San Diego, CA) **Evaluation of alcohol treatment programs.** *US Navy Medical Neuropsychiatric Research Unit, Technical Report*, 1974(Jul), No 74-53, 32 p. —Discusses evaluation theory and procedures as they pertain to alcoholism treatment programs. After a review of the literature on alcoholism treatment, concrete guidelines are presented for doing evaluation research. (5 p ref)

7920. Shelley, Edward M.; Mendlewicz, Julien & Fieve, Ronald R. (Columbia U, Coll of Physicians & Surgeons) **Affective disease health maintenance organization: Patterns of lithium response.** *New York State Journal of Medicine*, 1974(Sep), Vol 74(10), 1766-1768. —Studied the effectiveness of a health maintenance program for patients with recurrent affective disease. 20 manic-depressive and recurrent depressive patients, whose average age was 51.9 yrs, were given maintenance doses of lithium carbonate over a 78-wk period. Ss were seen at least 1 time/mo by a rating team of psychiatric nurses and aides who administered a structured interview using a manic-depressive rating scale. It was found that 14 Ss did not require additional medication or psychiatric consultation. It is concluded that treatment programs emphasizing "well-care" and prevention of affective episodes can be successful with manic-depressive and depressive patients.—*J. Kelly*.

7921. Small, Joyce G. & Kellams, Jeffrey. (Indiana U, Medical School, Larue D. Carter Memorial Hosp) **Early hospital experience with fluphenazine decanoate.** *Disorders of the Nervous System*, 1974(Oct), Vol 35(10), 453-456. —Studied treatment effects of the depot injectible drug fluphenazine decanoate (FD) and the impact of its availability upon hospital practice. Hospital pharmacy records were used to identify those patients who received the medication initially as inpatients, who had received more than 2 injections of the drug, and who were followed for a minimum of 6 wks. 5 males and 8 females, mainly diagnosed schizophrenics 22-47 yrs old, met the inclusion criteria and were selected for FD injection, primarily because they could not be relied upon to take oral medications. Results show that the outcome of treatment was considered satisfactory in only 5 of the patients; in the others, unusually severe and prolonged side effects indicated discontinuation of the drug after an average of less than 2 mo. This finding suggests that depot injectible phenothiazines may be

unsafe when exposure to such drugs occurs without intermittent respites. (23 ref)—*B. Lindsey.*

7922. Soloway, Irving H. (Temple U) **Methadone and the culture of addiction.** *Journal of Psychedelic Drugs*, 1974(Jan), Vol 6(1), 91-99.—Describes changes in the culture of the urban heroin addict following introduction of a methadone maintenance outpatient program. The functionally adaptive aspects of heroin addiction were determined through interviews with 103 active illegal drug users. Primary methadone abuse and the relation of cocaine use to methadone are also considered. Findings contradict funding agency reports of the methadone program's success in reducing drug abuse and criminal activity and in encouraging addict employment. It is concluded that methadone has been assimilated into the addict's culture as another form of drug abuse.—*R. Tomasko.*

7923. Sweet, Richard D. & McDowell, Fletcher H. (New York Hosp—Cornell Medical Ctr, NY) **Plasma dopa concentrations and the "on-off" effect after chronic treatment of Parkinson's disease.** *Neurology*, 1974(Oct), Vol 24(10), 953-956.—Measured plasma concentrations of levodopa during "on" (mobile and dyskinetic) and "off" (akinetic or tremulous) episodes in 10 patients. Results show that (a) levodopa levels were higher during "on" than during "off" spells, (b) a diet containing less than 10 gm/day of protein resulted in higher plasma levodopa levels, and (c) the "on-off" effect was greatly relieved by low protein diets in 3 of 11 patients. (40 ref)

7924. van Praag, H. M. (Psychiatric U Clinic, Groningen, Netherlands) **Therapy-resistant depressions: Biochemical and pharmacological considerations.** In H. Musaph (Ed), *Proceedings of the 2nd Congress of the International College of Psychosomatic Medicine*, Amsterdam, 1973: *Mechanisms in Symptom Formation*. New York, NY: S. Karger, 1974. vii, 303 p.

7925. Vitezza, Matteo. (Regina Margherita Hosp Board, Div of Neurology, Messina, Italy) **[Psychopharmacological therapy with pyritinol hydrochloride in child psychiatry.]** (Ital) *Medicina Psicosomatica*, 1972(Jan), Vol 17(1), 53-69.—Reports on the use of pyritinol hydrochloride (Encephabol) in psychiatric disorders of children, mainly postencephalitic epileptic syndromes, character disorders, and mental deficiency. Ss were 120 children 5-15 yrs old with organic brain damage, divided into 3 age groups (5-7, 7-12, and 12-15). To evaluate the results, the Wechsler-Bellevue Intelligence Scale, the Bender-Gestalt, and other tests were administered. It was found that the drug acts on perception, cognitive functions, memory, emotions, and motor and visual coordination, thus showing it to have psychotropic properties affecting higher psychic activities. (English & French summaries)—*D. Araoz.*

7926. Whiskin, Frederick E. **An interview with a patient under the influence of marijuana.** *International Journal of Offender Therapy & Comparative Criminology*, 1974, Vol 18(2), 198-199.—Compares an interview of a 19-yr-old marijuana user with an interview of a sodium amyltal user under light hypnosis. It is suggested that in both cases, the repressive ego forces were weakened enough so that the patient could speak in a language quite close to the unconscious meanings of drug usage.

## Behavior & Group Therapy

7927. Altamura, Leonard S. & Chitwood, P. R. (Calhoun-Cleburne Mental Health Ctr, Anniston, AL) **Covert reinforcement and self-control procedures in systematic desensitization of gagging behavior.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 563-566.—A case of chronic gagging associated with numerous topographically dissimilar conditional stimuli in a 26-yr-old male was successfully treated in 11 sessions of behavioral therapy. A flexible, multifaceted approach was applied utilizing systematic desensitization, covert reinforcement, and self-control procedures.

7928. Anderson, Kathryn A. & King, H. Elizabeth. (U Oregon, Medical School) **Time-out reconsidered.** *Journal of Instructional Psychology*, 1974(Spr), Vol 1(2), 11-17.—Traced the development of the use of time-out (TO) from positive reinforcement from its origins in the laboratory to its current application in child treatment and school settings. The differences among the quite diverse procedures currently carrying the label TO are described, with special emphasis directed at unintended behavioral problems produced by the inappropriate use of TO procedures. Because of the inappropriate use of TO procedures, and subsequent public criticism, it is recommended that (a) TO should be used only by trained or properly supervised professionals, teachers, and parents, (b) the child in TO should be vigilantly monitored, (c) new labels should be found for procedures which have little in common with each other, and (d) public understanding and cooperation should be sought. (18 ref)—*Journal abstract.*

7929. Bass, Barry A. (Towson State Coll) **Sexual arousal as an anxiety inhibitor.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1974(Sep), Vol 5(2), 151-152.—Reports that a 24-yr-old male was successfully treated for impotence using a variant of systematic desensitization. The treatment substituted sexual arousal for the relaxation response used in conventional desensitization. "Insight" gained as a result of treatment is discussed.—*Journal abstract.*

7930. Billings, James H.; Rosen, David H.; Asimos, Chris & Motto, Jerome A. (U California, Medical Ctr, Langley Porter Neuropsychiatric Inst, San Francisco) **Observations on long-term group therapy with suicidal and depressed persons.** *Life-Threatening Behavior*, 1974(Fal), Vol 4(3), 160-170.—Describes a long-term, open-ended group for depressed and suicidal individuals who had made suicide attempts. 200 persons participated in the sample groups over a 46-mo period, with only 10 suicide attempts and 1 suicide occurring in this high-risk group during the period of the study. Observations corroborate some findings and differ from other reported experiences with groups of individuals who have manifested suicidal behavior. Recommendations for starting groups of suicidal persons are presented, and it is stressed that this method of therapy appears to be an effective mode of suicide prevention.—*Journal abstract.*

7931. Book, Howard E. (New Mount Sinai Hosp, Toronto, Ontario, Canada) **Hypnosis, aversive conditioning and transference improvements.** *American Journal of Clinical Hypnosis*, 1974(Apr), Vol 16(4), 256-260.—Describes the successful treatment of a

patient with amphetamine abuse who received aversive conditioning under hypnosis.

7932. **Brudny, Joseph et al.** (Bellevue Hosp Ctr, New York, NY) **Sensory feedback therapy as a modality of treatment in central nervous system disorders of voluntary movement.** *Neurology*, 1974(Oct), Vol 24(10), 925-932.—Used audiovisual sensory feedback from muscles to treat 36 patients, most of whom had received conventional therapy for up to 25 yrs with limited or no improvement. Ss learned volitional control of the functionally defective muscle group by means of audiovisual displays of integrated myoelectric activity from the monitored muscles. As volitional control of motor activity was achieved, the exteroceptive feedback was gradually withdrawn. 32 Ss responded with varying degrees of improvement ranging from functional "recovery" to symptomatic relief within 8-12 wks. It is suggested that a significant number of patients with disrupted internal feedback loops can incorporate the learned movement pattern by using those components of the neuromuscular system that are still functionally available. (22 ref)—*Journal abstract*.

7933. **Burchard, John.** (U Vermont, Clinical Training Program) **Behavior modification with the delinquent offender.** In L. M. Irvine & T. B. Brelje (Eds), *Law, psychiatry and the mentally disordered offender: II*. Springfield, IL: Charles C Thomas, 1973. xv, 132 p. \$9.75.

7934. **Burger, A. W.** (U Amsterdam, Psychological Lab, Netherlands) **[A plan of behavior therapy for J.]** (Duth) *Nederlands Tijdschrift voor de Psychologie en haar Grensgebieden*, 1974(Jul), Vol 29(5), 355-363.—Suggests that the basic problem of the S (whose initial is "J") described by T. de Wever (see PA, Vol 53:Issue 4) is total dependence on the approval of others. The process of rehabilitation would include a systematic desensitization of the S by which she would learn to tolerate the absence of sympathy by others. The S must discard her self-imposed dictum, which may be stated "I must satisfy everyone because everyone must find me nice." The desensitization process employs a rational emotive therapy that includes "flooding," a technique consisting of a series of disquieting situations which the S must learn to tolerate. Desensitization would also include assertive training by which the S would learn self-assertion to replace her almost total dependence on the approval of others.—*A. J. Ter Keurst*.

7935. **Caird, William K. & Wincze, John P.** (Dalhousie U, Halifax, Nova Scotia, Canada) **Videotaped desensitization of frigidity.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1974(Sep), Vol 5(2), 175-178.—Videotaped cassettes of heterosexual behavior were arranged in a hierarchy and shown to a 24-yr-old sexually frigid female by her husband, who acted as therapist. Following 7 sessions, significant improvement in the couple's heterosexual behavior was reported. Therapeutic gains were maintained at a 9-mo follow-up. (17 ref)

7936. **Cantor, Alfred J.** **How to turn on the power of your mind with alpha-theta UNITROL: Gateway to the unconscious for creativity, self-healing, enlightenment with the UNITROL of Yoga and Zen.** New York, NY: Hippocrates Press, 1973. xv, 193 p.—Describes a

program of self-control of alpha and theta brain waves—UNITROL—to enhance peace of mind, creativity, and self-awareness. 13 meditations, based on the teachings of Yoga and Zen, the concept of the mind as memory, and methods of achieving tranquility and inner peacefulness by relaxation and free-association procedures are described.

7937. **Carr, John E.** (U Washington) **Behavior therapy in a case of multiple sexual disorders.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1974(Sep), Vol 5(2), 171-174.—The case of a 25-yr-old male is presented to illustrate an approach to the treatment of multiple sexual disorders. The intervention program described involved careful orchestration of a variety of behavioral techniques in order to differentiate the complex contingency relationships and modify the target behaviors.

7938. **Cayner, Jay J. & Kiland, James R.** (Norwood Hosp, Marshfield, WI) **Use of brief time out with three schizophrenic patients.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1974(Sep), Vol 5(2), 141-145.—Brief 5-min response-contingent time out was used to eliminate the inappropriate behavior of 2 female and 1 male 43-56 yr old hospitalized psychiatric patients who were diagnosed as chronic schizophrenics. The procedure was effective in eliminating the aberrant behavior.—*Journal abstract*.

7939. **Chrisman, Marilyn.** (Los Angeles County-U Southern California Medical Ctr, Los Angeles) **Dyspnea.** *American Journal of Nursing*, 1974(Apr), Vol 74(4), 643-646.—Describes psychological interventions for the avoidance or reduction of respiratory disorders. The S's perception of his respiratory distress is identified as the primary factor for diagnosis. Effective psychological interventions include: (a) development of empathic relationships, (b) positive reinforcement of effective ventilation, and (c) use of desensitization exercises for situations of respiratory distress.—*R. G. Gibson*.

7940. **Ciani, Nicola.** (U Roma, Istituto di Psichiatria, Italy) **[Family psychiatry and the pragmatics of communication.]** (Ital) *Rivista di Psichiatria*, 1974(Jan-Feb), Vol 9(1), 1-40.—Utilizes 4 clinical cases and citations from the literature to relate the development of family psychiatry to the rules of human communication: i.e., "impenetrability, the endless game, point-counterpoint, and complementary relationships." Phenomenology, symptomatology, and family intervention are important in understanding behavior. (28 ref)

7941. **Clegg, Hugh G.** (Devereaux Hall/Manor Unit, Devon, PA) **Group analytic practice in the therapeutic community.** *Devereaux Forum*, 1974(Win), Vol 9(1), 1-6.—Outlines the possible use of a psychoanalytic model in group therapeutic interactions. A brief summary is given of the overt and covert dynamics that may occur in different phases of therapy and the role the therapist may play in each.

7942. **Daniels, Lloyd K.** (Central Connecticut State Coll) **A single session desensitization without relaxation training.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1974(Sep), Vol 5(2), 207-208.—In a single 2-hr desensitization session, the entire hierarchy of 15 steps was completed by a 19-yr-old male with a small animal

phobia. Immediately following this and 6 mo later the patient was able to stroke and fondle laboratory rats.

7943. Davis, Robert W. (McLoughlin Mental Health Ctr for Clackamas County, Oregon City, OR) **The patient unready for behavior therapy.** In W. G. Klopfer & M. R. Reed (Eds), *Problems in psychotherapy: An eclectic approach*. Washington, DC: Hemisphere Publishing Corp, 1974. xi, 178 p.

7944. Ellis, Albert. (Inst for Advanced Study in Rational Psychotherapy, New York, NY) **Rational-emotive therapy in groups.** *Rational Living*, 1974(Spring), Vol 9(1), 15-22.—Describes how rational-emotive therapy utilizes group work to facilitate change to rational thinking and appropriate emotions. Not all emotions are considered appropriate; inappropriate feelings are held to be caused by irrational beliefs.

7945. Ellis, Albert. (Inst for Advanced Study in Rational Psychotherapy, New York, NY) **Are cognitive behavior therapy and rational therapy synonymous?** *Rational Living*, 1973(Fall), Vol 8(2), 8-11.—Expresses doubt that rational-emotive therapy and cognitive behavior therapy are synonymous. The 2 approaches are differentiated by comparing their theoretical emphasis, desensitization procedures, homework assignments, operant conditioning, and emotive and cognitive emphasis. Rational-emotive therapy (RET) stresses the cognitive factor in the acquisition and change of emotional reactions, while cognitive behavior therapy stresses environmental and mediational processes. RET goes beyond symptom removal methods to obtain deep-rooted philosophic changes. It extends to desensitization of feelings and philosophies rather than merely responses. Homework assignments are done in real life, checked by cognitive challenging, and accompanied by cognitive restructuring. RET may overlap cognitive behavior therapies, but its special theoretical and practical emphasis differentiates it from them.—G. J. Frankel.

7946. Filmer-Bennett, Gordon T. (Div of Corrections, Bureau of Clinical Services, Madison, WI) **The silent patient in the group.** In W. G. Klopfer & M. R. Reed (Eds), *Problems in psychotherapy: An eclectic approach*. Washington, DC: Hemisphere Publishing Corp, 1974. xi, 178 p.

7947. Girodo, Michel. (U Ottawa, Ontario, Canada) **Yoga meditation and flooding in the treatment of anxiety neurosis.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1974(Sep), Vol 5(2), 157-160.—9 18-42 yr old patients diagnosed as anxiety neurotic had their anxiety symptoms monitored by an anxiety symptom questionnaire before practicing yoga meditation at each training session. After approximately 4 mo of practice, 5 patients improved significantly and the other 4 failed to show any appreciable decline in anxiety symptoms. These 4 then engaged in imaginal flooding, in the course of which anxiety decrement occurred. Analysis of patient characteristics suggested that yoga meditation was beneficial for patients with a short history of illness and that flooding was effective in those with a long history. Questionnaire data suggested that the former patients had higher cognitive symptom scores.—*Journal abstract.*

7948. Goldberg, J.; Katz, S. & Yekutieli, E. (Bar Ilan U, Ramat Gan, Israel) **The effects of token reinforcement**

**on the productivity of moderately retarded clients in a sheltered workshop.** *British Journal of Mental Subnormality*, 1973(Dec), Vol 19(37, Pt 2), 80-84.—Investigated use of a token economy with 7 moderately to mildly retarded Ss (mean IQ = 58, mean age = 17 yrs) in a sheltered workshop. Baseline levels of production and preferences for reinforcing items were determined over a 28-day period. Tokens were awarded hourly and exchanged daily at first, with increasing intervals during the 21 experimental days. Productivity increased by 42% during reinforcement and dropped to below-baseline levels after termination of reinforcement. The interaction of the token reinforcement with the reinforcing effect of E's presence and interaction is stressed.—C. Wright.

7949. Hall, Jane S. & Holmberg, Margaret C. (Frank Porter Graham Child Development Ctr, Chapel Hill, NC) **The effect of teacher behaviors and food serving arrangements on young children's eating in a day care center.** *Child Care Quarterly*, 1974(Sum), Vol 3(2), 97-108.—Studied methods of increasing the sampling of different foods by 2 children attending a day care program. All the experimental conditions increased food sampling either singly or in combination. No statistical analyses were performed.

7950. Hannie, Thomas J. & Adams, Henry E. (Charity Hosp, New Orleans, LA) **Modification of agitated depression by flooding: A preliminary study.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1974(Sep), Vol 5(2), 161-166.—Hypothesized that flooding therapy (FT) would be superior to both support therapy (ST) and no-treatment control (NTC) in eliminating the agitated depression which had resulted in the hospitalization of the 21 18-44 yr old females. Pre- and posttreatment measures included the Mental Status Schedule, the Multiple Affect Adjective Check List, the Fear Survey Schedule III, and the WAIS Digit Symbol subtest. The FT and ST Ss attended 3 individual therapy sessions per week for a total of 9 sessions, while the NTC group received no individual sessions but remained on the unit for a similar period of time. Results indicate that, as hypothesized, flooding was the most effective regime.—*Journal abstract.*

7951. Hausman, Margareta. **Parents' groups: How group members perceive curative factors.** *Smith College Studies in Social Work*, 1974(Jun), Vol 44(3), 179-198.—Investigated the treatment of parents in group psychotherapy at a child guidance clinic as seen by the parents and the group therapists. The 2 major schools of thought regarding the approach to parents' groups are contrasted: one emphasizes ego-oriented guidance, the other stresses the development of insight leading to deeper personality change. Parents and therapists evaluated treatment differently as to the importance of the group as family analogy and as to what constituted therapeutic gain. The study points to the need for more effective communication between group leaders and group members.—M. W. Linn.

7952. Hiltz, Philip J. **Behavior mod.** New York, NY: Harper's Magazine Press, 1974. xi, 242 p. \$7.95.—Discusses the theoretical, practical, and ethical strengths and weaknesses of the field of behavior modification. The potential for misuse and abuse of the technology of

behavior by the medical and bureaucratic establishments is examined, along with the documented evidence of its success in treating a variety of psychological and behavioral problems. (4 p ref)

7953. Houle, Thomas A. (Devereaux Foundation, CT) **The use of positive reinforcement and aversive conditioning in the treatment of encopresis: A case study.** *Devereaux Forum*, 1974(Win), Vol 9(1), 7-14.—Describes the procedure and results of a behavior modification program aimed at eliminating encopresis in a 12-yr-old male. A short-term follow-up revealed no symptom substitution.

7954. Ikuta, Takumi. (Kyushu U, Faculty of Medicine, Fukuoka, Japan) **[A behavior therapy for tic: "Counting."]** (Japn) *Kyushu Neuro-psychiatry*, 1972(Dec), Vol 18(3-4), 183-188.—Reports results of a new "counting" method applied in treating a 16-yr-old girl with tic. During the 1-hr sessions, which took place twice a day for 15 consecutive days, the girl sat quietly in her room, pressing the lever of a counter each time the tic occurred. She was instructed not to try to stop the tic, but merely to press the lever for each occurrence just as if she were counting some other person's tics. The number on the counter was visible to the girl. The rate of tic decreased progressively as the number of treatment sessions increased. (English summary) (18 ref)—S. Ashida.

7955. Jensen, Judith L. & McGrew, W. Leona. (Biola Coll) **Leadership techniques in group therapy with chronic schizophrenic patients.** *Nursing Research*, 1974(Sep-Oct), Vol 23(5), 416-420.—Assessed the level of anxiety experienced by 2 groups of 5 male and 5 female chronic schizophrenics who participated in 2 types of group therapy. One group was structured and the leaders maintained a directive role, while the other group was a nonstructured one, with the leaders assuming a nondirective role in the group process. The State-Trait Anxiety Inventory was used to assess anxiety levels, and blood pressure and pulse rate were used as measures of physiological arousal. Significantly more anxiety and/or arousal was experienced by Ss in the structured than in the nonstructured group. No differences in pulse rate were observed. When blood pressure measures taken before the groups began were examined, Ss in the structured groups exhibited higher levels of arousal than Ss in the unstructured group. Males had higher anxiety scores than females. (32 ref)—*Journal abstract*.

7956. Johnson, Richard K. & Meyer, Robert G. (U Louisville, Psychology Clinic) **Phased biofeedback approach for epileptic seizure control.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1974(Sep), Vol 5(2), 185-187.—A phased biofeedback method for seizure control was used in an 18-yr-old female. Based on reports that epileptic seizures can be prevented by EEG biofeedback, a phased sequence of relaxation training, electromyogram feedback, and feedback of alpha and theta EEG frequencies was employed to develop a low arousal, antistress response. Intervention over a 1-yr period resulted in a 46% decrease in monthly seizures. Follow-up showed maintenance of decreased seizure activity. Self-report and charges in locus of control

orientation affirm the learning of an effective antistress response.—*Journal abstract*.

7957. Jongerius, P. J. (Psychotherapeutic Ctr, Halstereen, Netherlands) **[Cooperating with others about yourself: Group psychotherapy.]** (Duth) *Nederlands Tijdschrift voor de Psychologie en haar Grensgebieden*, 1974(Jul), Vol 29(5), 377-384.—Discusses the rehabilitation of the S described by T. de Wever (see PA, Vol 53:Issue 4) from the viewpoint of group psychotherapy. This rehabilitative device deals with the problem of the patient's identity with the therapy group, including her concept of the differences between herself and the group, her concept of the motives of the group, and the techniques that the group employs to assist her in reducing her feelings of inadequacy.—A. J. Ter Keurst.

7958. Joseph, Brian S. (Erich Lindemann Mental Health Ctr, Boston, MA) **Lessons on heroin abuse from treating users in Vietnam.** *Hospital & Community Psychiatry*, 1974(Nov), Vol 25(11), 742-744.—2 psychiatric workers and a chaplain established a voluntary, 3-wk, therapeutic community program for heroin users in their Vietnam unit, intended for users who were psychologically stable. The program was a failure, apparently partly because the more stable heroin users were able to work effectively and did not enter the program; those who did take part usually entered under pressure, such as threat of prosecution, and apparently had been significantly disturbed before becoming users. The need to constantly reevaluate widely held assumptions about drug abuse is stressed.—*Journal abstract*.

7959. Karapetian, Mary. **Modeling variables and procedures with socially withdrawn children.** *UMJC: University of Maryland Counseling & Personnel Services Journal*, 1973-1974, Vol 4(1), 22-38.—Presents a review of the literature on the rationale of modeling, how it functions as a learning process, the effects of reinforcement and punishment on modeled responses, the effects of individual and situational variables on modeling behaviors, and the effectiveness of modeling with socially withdrawn children. The treatment of withdrawn children usually involves 2 approaches—anxiety reduction by close interpersonal contact and the development of appropriate social skills. The use of shaping, desensitization, and a combination of these with modeling in treating withdrawn children is discussed. It is concluded that modeling is a durable, flexible, and efficient method of teaching behaviors. (19 ref)—L. Gorsey.

7960. Katz, Roger C. (U of the Pacific) **Single session recovery from hemodialysis phobia: A case study.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1974(Sep), Vol 5(2), 205-206.—In an 18-yr-old male renal patient with a phobia for hemodialysis, the phobia was quickly and successfully resolved by the combined use of systematic desensitization, fading of stimulus control, and social reinforcement.

7961. Kau, Mary L. & Fischer, Joel. (U Hawaii, School of Social Work) **Self-modification of exercise behavior.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1974(Sep), Vol 5(2), 213-214.—Describes the senior author's use of a self-behavior modification program to successfully increase exercise behavior.

7962. Knepler, Kenneth N. & Sewall, Susan. (Ozaukee County Mental Health Clinic, Port Washington, WI)

**Negative practice paired with smelling salts in the treatment of a tic.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1974(Sep), Vol 5(2), 189-192.—After only 80 min of massed practice paired with "smelling salts" (aromatic ammonia), a facial-eye-blink tic of 4-yr duration in a 20-yr-old male declined significantly. By the 6-mo follow-up, almost total symptom remission had occurred.

7963. **Kondáš, O.** (U Komenského, Katedra psychologie, Bratislava, Czechoslovakia) [Developmental trends of psychotherapy by learning.] (Slovak) *Československá Psychiatrie*, 1973(Feb), Vol 69(1), 39-44.—Presents a paper given at the meeting of the Slovak Psychiatric Association. The history, stages, trends, schools, and representatives (mostly American) of behavioral therapy are reviewed and discussed. The application, limitations, and overall significance of "therapy by learning" are briefly evaluated. (Russian & English summaries) (21 ref)

7964. **Le Boeuf, Alan.** (Hollymoor Hosp, Northfield, England) **Aversion treatment of headbanging in a normal adult.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1974(Sep), Vol 5(2), 197-199.—A case of headbanging in a 23-yr-old male, normal in all other respects, was treated by the application of a mild punishment contingency (interruption of recorded music or an alarm) which could be self-imposed at home. The undesired behavior was removed over a 45-day period. At follow-up improvement was maintained.

7965. **Leibowitz, J. Michael & Holcer, Pauline.** (U Nebraska, Medical Ctr, C. Louis Meyer Children's Rehabilitation Inst) **Building and maintaining self-feeding skills in a retarded child.** *American Journal of Occupational Therapy*, 1974(Oct), Vol 28(9), 545-548.—Used operant conditioning techniques to teach a 4-yr-old echolalic female with severe behavior problems to accept an increasing variety and texture of foods while concurrently developing appropriate self-feeding skills. S had existed for 3 yrs on a diet consisting primarily of cinnamon toast, bacon, milk, and eggnog. 15 working days were required to teach her to self-feed and accept nutritionally balanced meals. Progress in other self-help areas accompanied the acquisition of self-feeding skills, which were still present 5 mo after termination of treatment.—*Journal abstract.*

7966. **Levine, Fredric M. & Fasnacht, Geraldine.** (State U New York, Stony Brook) **Token rewards may lead to token learning.** *American Psychologist*, 1974(Nov), Vol 29(11), 816-820.—Questions the widespread use of tokens to effect desired changes in behavior. Analysis of data from attribution-type research demonstrates that learning to perform an activity on the basis of external, token reinforcement does not generalize to natural reinforcement but leads, instead, to a decrease of intrinsic interest in the activity. Withdrawal of the token reinforcement often reduces performance. This may be because the generalization paradigm used is often either a discrimination or an extinction paradigm. It is suggested that employment of token reinforcement be restricted to situations in which an important behavior has a low base-rate of occurrence. (26 ref)—*B. Lindsey.*

7967. **Lowenstein, L. F.** **The treatment of moderate school phobia by negative practice and desensitization procedures.** *Association of Educational Psychologists'*

*Journal & Newsletter*, 1973(Win), Vol 3(3), 46-49.—Studied 12 children whose school phobias were expressed in various bodily ailment complaints and anxieties related to school attendance and leaving home. 2 matched groups of 6 children each, ages 9-14 yrs, were subjected to either J. Wolpe's systematic desensitization technique or discussion sessions. After 5 wks of treatment, both groups underwent a 5-wk period of a verbal extinction procedure known as negative practice. While both groups improved, a greater reduction in personal distress was experienced by children in the desensitization group. Improvement in academic work was also reported by the schools they attended. A 6-mo follow-up indicated that improvement was maintained.—*I. L. Zimmerman.*

7968. **Lubetkin, Barry S. & Fishman, Steven T.** (Inst for Behavior Therapy, New York, NY) **Electrical aversion therapy with a chronic heroin user.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1974(Sep), Vol 5(2), 193-195.—A 23-yr-old male graduate student who had been using heroin for 3 yrs was treated with electrical aversion conditioning. The drug-taking behavioral sequence was broken into discrete phases which the patient imagined and verbalized. An 8-mo follow-up showed him to be drug free.

7969. **Mahoney, Michael J.** (Pennsylvania State U) **Cognition and behavior modification.** Cambridge, MA: Ballinger, 1974. xv, 351 p.—Discusses the rationale, principles, procedures, criticisms, and moral issues involved in cognitive behavior modification. Models of covert conditioning and cognitive learning, the therapeutic implications of these models, and measurement and theory in mediational research are evaluated. (40 p ref)

7970. **Marti Tusquets, J. L. & Cabrero Avila, L.** [Experience in group psychotherapy.] (Span) *Revista de Psiquiatria y Psicología Médica*, 1973(Oct), Vol 11(4), 225-237.—Discusses group experiences as they relate to psychosocial phenomena, behavior and its analysis, group thinking, fantasy, group structure, corrective experiences, and group functioning in institutional settings. (38 ref)

7971. **Mash, Eric J. & Terdal, Lelf G.** (U Calgary, Alberta, Canada) **Behavior-therapy assessment: Diagnosis, design and evaluation.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 587-601.—Discusses the development of behavior-therapy assessment as it relates to social learning theory and practice of behavior modification. Characteristic features of behavior-therapy assessment are outlined and discussed. A framework is provided for considering assessment in terms of initial decision-making and selection of target behavior, design of treatment programs, and evaluation of outcome of treatment. Problems concerning reliability, validity, and generalizability are discussed in relation to each of the phases in assessment. (38 ref)—*Journal abstract.*

7972. **Mathews, A. M.; Johnston, D. W.; Shaw, P. M. & Gelder, M. G.** (U Oxford, Warneford Hosp, England) **Process variables and the prediction of outcome in behaviour therapy.** *British Journal of Psychiatry*, 1974(Sep), Vol 125, 256-264.—Examined variables measured before and during behavior therapy or nonspecific treatment of 36 phobic patients to determine their possible relevance to outcome and to the processes occurring during successful treatment. Measures ob-

tained before treatment did not provide a useful guide to outcome, with the possible exception of high extraversion scores, which were associated with good response irrespective of treatment given. Flooding treatment was associated with a greater initial increase in heart rate, which disappeared after 8 treatment sessions but did not seem to influence outcome. Ratings of phobic anxiety, made by Ss who were improved after desensitization or flooding, declined systematically during treatment. Anxiety experienced when thinking about phobic situations showed a consistent decline after preparatory interviews were completed, but estimated anxiety in real life did not begin to decrease until immediately before the *in vivo* practice phase of treatment.—*Journal summary*.

7973. Meeks, John E. (Psychiatric Inst of Washington, Child & Adolescent Services, DC) **Structuring the early phase of group psychotherapy with adolescents.** *International Journal of Child Psychotherapy*, 1973(Oct), Vol 2(4), 391-405.—Presents techniques for encouraging the open expression of emotions in adolescent psychotherapy groups and for promoting and maintaining group cohesion. These techniques include verbalization by the therapist of feelings, establishment of therapeutic contacts, and a variety of artificial contrivances in which the therapist actively encourages group members to perform certain actions or take particular roles that facilitate the expression of emotion. It is suggested that these techniques are secondary to an overall understanding of group process and individual psychodynamics by the therapist. Thus, they can succeed only if the therapist has a genuine wish for open emotional interaction with his young patients and sufficient skill to use the interaction for therapeutic ends. Case examples are provided.—R. S. Albin.

7974. Meichenbaum, Donald & Cameron, Roy. (U Waterloo, Ontario, Canada) **The clinical potential of modifying what clients say to themselves.** *Psychotherapy: Theory, Research & Practice*, 1974(Sum), Vol 11(2), 103-117.—Describes a research program on the efficacy of self-instructional training procedures with clinical populations such as schizophrenics, hyperactive children, neurotics, low creativity college students, and cigarette smokers. Studies indicate that it might be useful to combine the clinical concerns of semantic therapists with the armamentarium of behavior therapists. A number of behavior therapy procedures including desensitization, modeling, and operant and aversive conditioning were altered in order to include the client's self-statements in the treatment regimen. Results indicate that when standard behavior therapy was augmented with self-instruction, greater treatment efficacy, more generalization, and greater persistence of treatment effects were obtained. It is concluded that the environmental consequences per se are not of primary importance in modifying maladaptive behaviors, but rather what the S says to himself about those consequences.—C. P. McCreary.

7975. Nau, Sidney D.; Caputo, James A. & Borkovec, Thomas D. (U Iowa) **The relationship between credibility of therapy and simulated therapeutic effects.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1974(Sep), Vol 5(2), 129-133.—Assessed the effect of

variable credibility of treatment procedures on avoidance behavior in 3 studies with a total of 175 female and 24 male snake-fearful undergraduates (as measured by Gear's Fear Survey Schedule). Ss were pretested and then presented with descriptions of, and rationales for, various therapy and placebo conditions. Subsequently, the Ss were asked to assume that they had received 5 wks of therapy by the described treatment, to simulate its effects on the posttest, and to rate its credibility. While 1 experiment demonstrated that Ss simulated more positive treatment outcome under preferred treatment conditions, no mean differences in outcome were found among placebo and therapy rationale conditions in the 2 other experiments. Simulated therapy response and rated credibility were, however, significantly correlated in all 3 studies.—*Journal abstract*.

7976. Orval, Joseph. [An experimental group therapy technique aimed at teaching social skills to children and character-disordered adolescents.] (Fren) *Acta Psychiatrica Belgica*, 1973(Sep), Vol 73(5), 620-629.—Conducted successful group therapy with institutionalized youngsters. The daily practice of responsibility, participation, and commitment helped to resolve many institutional problems such as tension, antagonism, and discipline. (English, Dutch, German, Italian & Spanish summaries)

7977. Parsell, Sue & Tagliareni, Elaine M. (California State U, San Francisco) **Cancer patients help each other.** *American Journal of Nursing*, 1974(Apr), Vol 74(4), 650-651.—Describes the use of group-centered therapy for Ss with incurable cancer. Group themes focused upon feelings of helplessness and dependency, meaning of death, and estrangement from family and friends. Implications for nursing and medical treatment of cancer Ss are discussed.

7978. Paul, Gordon L. (U Illinois) **Experimental-behavioral approaches to "schizophrenia."** In R. Cancro, N. Fox & L. E. Shapiro (Eds), *Strategic intervention in schizophrenia: Current developments in treatment*. New York, NY: Behavioral Publications, 1974. xviii, 326 p.

7979. Ravich, Robert A. & Wyden, Barbara. (Cornell U, Medical School, New York) **Predictable pairing: The structures of human atoms.** New York, NY: Peter H. Wyden, 1974. 288 p. \$8.95.—Using case histories as illustrations, a diagnostic approach to the problems of intimate relationships is described—the Ravich Interpersonal Game/Test (or the Train Game). Varying behavior patterns which frequently occur in couples (e.g., dominant-submissive or cooperative-competitive) are described and analyzed.

7980. Reisinger, James J. (Holy Spirit Community Mental Health Ctr, Camp Hill, PA) **Masturbatory training in the treatment of primary orgasmic dysfunction.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1974(Sep), Vol 5(2), 179-183.—Treated a 23-yr-old college woman in a laboratory setting for primary orgasmic dysfunction by employing masturbatory training with erotic stimuli. Heart-rate readings reached their maximums in correspondence with reports of orgasm during intervention. A 6-mo follow-up verified client ability consistently to achieve orgasm. (20 ref)

7981. Rigo, L. (Ctr Medico Psico Pedagogico della Provincia di Treviso, Italy) [Further contribution to the

group technique of "imagerie mentale" in adults.] (Ital) *Rivista Sperimentale di Freniatria e Medicina Legale delle Alienazioni Mentali*, 1972(Oct), Vol 96(5), 1429-1459.—Reviews various stages of this therapy with examples and guidelines. Correct grouping, setting, and relaxation-facilitating procedures are important in the preparatory phase. Throughout, the therapist must keep participants involved without too much intervention and, taking cues from the group's tone and the individual's psychic needs, guide development to a positive shared experience stage. Also stressed are group conversations to keep experiences in perspective. (French & English summaries)—L. Klinkon.

7982. Rose, Sheldon D. (U Wisconsin, School of Social Work, Madison) **Training parents in groups as behavior modifiers of their mentally retarded children.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1974(Sep), Vol 5(2), 135-140.—Natural and foster parents' groups were taught a number of principles of behavior modification and how to apply them to their retarded children. Group leaders used programmed booklets, modeling and behavior rehearsal, lecturing and discussion, weekly assignments, and positive reinforcement. As weekly assignments, the parents read a programmed text, counted and charted their children's behavior, and intervened with reinforcement, extinction, time outs, modeling, cueing, and rehearsal procedures. Following completion of training in 11 groups, 27 of the 33 families entering the program successfully modified 55 of the 58 behaviors for which plans were initiated. (24 ref)—*Journal abstract*.

7983. Rubinstein, David. (Temple U, Medical School) **Techniques in family psychotherapy of schizophrenia.** In R. Canero, N. Fox & L. E. Shapiro (Eds). *Strategic intervention in schizophrenia: Current developments in treatment*. New York, NY: Behavioral Publications, 1974. xviii, 326 p.

7984. Scheer, Robert R. **Modification of insomnia using chaining techniques: A case report.** *UMJC: University of Maryland Counseling & Personnel Services Journal*, 1973-1974, Vol 4(1), 39-47.—Attempts to teach a 25-yr-old male college student who suffered from transient bouts of insomnia how to control his own sleep patterns by using chaining techniques that would establish a discriminative stimulus for falling asleep. S was instructed to keep a diary for 4 wks to determine what type of activities immediately preceded going to bed and how long it took to fall asleep. Insomnia usually occurred when the typical chain of presleep behaviors was interrupted. S was instructed to follow the same chain of behaviors each night; the pattern was to be followed as often as necessary until he was successful in falling asleep. During the 60-day treatment phase, the rate of insomnia dropped to 60% of the baseline rate, and in 5 of the 6 cases of insomnia, S fell asleep after following the presleep behavioral chain 1 time. At a 1-yr follow-up, S reported that insomnia occurred approximately 1-2 times/mo, but that the chain was still effective in inducing sleep.—L. Gorsey.

7985. Scignar, C. B. (Behavior Therapy Ctr, New Orleans, LA) **Exposure time as the main hierarchy variable.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1974(Sep), Vol 5(2), 153-155.—Describes 2

cases of hypochondriacal obsessional neuroses in a 22-yr-old female and a 38-yr-old male in which the hierarchy consisted of allowing the patient to visualize the obsessive phobic scene for varying periods, beginning with a few seconds, and eventually increasing to several minutes. This proved to be successful in both cases.—*Journal abstract*.

7986. Sipich, James F.; Russell, Richard K. & Tobias, Lester L. (U Illinois, Psychological & Counseling Ctr) **A comparison of covert sensitization and "nonspecific" treatment in the modification of smoking behavior.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1974(Sep), Vol 5(2), 201-203.—49 volunteer participants in a study to reduce cigarette smoking, were randomly assigned to 1 of 5 experimental conditions: covert sensitization, attention-placebo, self-control, monitoring control, or no-contact control. Ss in the 1st 3 conditions received 6 individual contacts over a 2-wk treatment period. Ss in all 3 of these "treatment" conditions significantly decreased smoking behavior. There were no significant differences between these groups at the end of treatment or at follow-up. Although smoking rates increased during follow-up, Ss were still smoking significantly fewer cigarettes than baseline at the end of 6 mo.—*Journal abstract*.

7987. Slucki, Henry. (U Southern California, Medical School) **Behavioral tape recorder.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1974(Sep), Vol 5(2), 167-168.—Reports that an audio tape recorder may be used to record behavior as an on-off event in time. Actuation of the switch produces a 60-Hz noise (buzz) on tape. Uses and applications of this recording technique to behavioral research and therapy are discussed.

7988. Smith, Marcia D. **The use of behavior therapies in the treatment of school phobia.** *UMJC: University of Maryland Counseling & Personnel Services Journal*, 1973-1974, Vol 4(1), 48-62.—Describes the origins and characteristics of school phobia and evaluates the relative effectiveness of behavioral therapies based on either operant, classical, or a combination of these conditioning paradigms in terms of the child's return to school, his performance in school after his return, and evidence of symptom substitution. It is concluded that school phobia can be successfully treated by any one of these 3 procedures. However, further research is needed in the areas of follow-up investigations, comparative studies of behavior therapy and psychotherapy with respect to remission rates, comparisons of operant and classical conditioning therapies, and parent and teacher involvement in the treatment of school phobia. (23 ref)—L. Gorsey.

7989. Spiegel, John P. (Brandeis U) **The family: The channel of primary care.** *Hospital & Community Psychiatry*, 1974(Dec), Vol 25(12), 785-788.—Suggests that family therapy is one of the most important channels of primary care in preventive psychiatry. Its growth in recent years is pointed out, noting that it now reaches into every area of clinical practice. Although problems are found in the field—theoretical inconsistency, lack of attention to ethnic and subcultural differences in families, and economic issues—it is contended that family therapy promises new and more effective forms of

mental health services for people who previously could not afford them.—*Journal abstract.*

1990. Steinfeld, George J. & Mabli, Jerome. (Federal Correctional Inst, Danbury, CT) **Perceived curative factors in group therapy by residents of a therapeutic community.** *Criminal Justice & Behavior*, 1974(Sep), Vol 1(3), 278-288.—The Narcotic Addiction Rehabilitation Act (NARA) therapeutic community at the federal correctional institution in Danbury, Connecticut, utilizes up to 15 hrs of group procedures weekly, as well as a reward system and an inmate status system. 50 NARA therapeutic community residents were administered Yalom's 60-item Q-sort of characteristics of successful therapy patients. Insight-related items were most highly ranked, followed by existential and catharsis factors, respectively. These results were compared to those of I. D. Yalom (1970), and highest-ranked items were examined. Implications for understanding therapeutic communities are discussed.—*Journal abstract.*

1991. Stephenson, Richard M. & Scarpitti, Frank R. (Douglass Coll, Rutgers State U) **Group interaction as therapy: The use of the small group in corrections.** Westport, CT: Greenwood, 1974. xiii, 235 p. \$12.50.—Reports a 4-yr study of the operation and effectiveness of group therapy program specifically designed to change the behavior of juvenile law violators. Specific details of the program are presented, how the group integrates, develops, and operates in guided interaction sessions; techniques used to persuade participants to change their behavior; methods of evaluating group outcomes; and characteristic authority and participant roles created by the group meetings. MMPI data for the participants are also presented. (4¼ p ref)

1992. Suedfeld, Peter & Ikard, Frederick F. (Rutgers State U) **Attitude manipulation in restricted environments: IV. Psychologically addicted smokers treated in sensory deprivation.** *British Journal of Addiction*, 1973(Jun), Vol 68(2), 170-176.—Based a study of 5 psychologically addicted smokers on 3 hypotheses: (a) sensory deprivation (SD) disrupts complex cognitive behavior, (b) the maintenance of a stable belief structure in the face of a persuasive attack represents such a complex behavior, and (c) the induction of belief instability by a message leads to attitude change. Ss, whose smoking rates were between 30-50 cigarettes a day, underwent a procedure consisting of 24 hrs of SD with periodic taped messages. 2 of the Ss were given "booster" sessions 2 mo later. All Ss reported that their craving for cigarettes disappeared during and for some days after the treatment, and all showed significant reductions in smoking rate for at least 2 wks afterwards. Results also show that 3 Ss had not smoked or craved cigarettes for at least 1 mo. (19 ref)—*Journal abstract.*

1993. Usandivars, Raúl J. [Group and myth.] (Span) *Acta Psiquiátrica y Psicológica de América Latina*, 1974(Jun), Vol 20(3), 161-167.—Considers the therapeutic group as a generator of myths and the task of the group therapist to build up a tale, using the contributions of each member. The tale is then described to the group in fragments with each interpretation. Studying a series of myths produced by a group helps the therapist to understand what happens during the session and also the

changes taking place in a group from 1 session to the next.—*English summary.*

1994. Wijesinghe, B. (Claybury Hosp, Woodford Bridge, England) **A vomiting phobia overcome by one session of flooding with hypnosis.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1974(Sep), Vol 5(2), 169-170.—Reports that a 24-yr-old female patient with a long-standing vomiting phobia was treated by flooding under a hypnotic trance. A follow-up 1 yr after treatment showed that she had remained free of her phobia.

1995. Wodarski, John S.; Feldman, Ronald A. & Flax, Norman. (Washington U, George Warren Brown School of Social Work) **Group therapy and antisocial children.** *Small Group Behavior*, 1974(May), Vol 5(2), 182-210.—Discusses the use of selected techniques of behavior modification in working with antisocial children in groups. A formula for determining the "conformity proneness" of certain group members is based upon "the proportion of members who must enact a given behavior in order to receive reinforcement" and "the proportion of members who are to receive reinforcement for the enacted behavior." It is suggested that group contingencies may be more effective than individual contingencies in changing some behaviors. (54 ref)—G. R. Breed.

1996. Wolberg, Lewis R. & Schwartz, Emanuel K. (Eds.). (New York U, Medical School, Postgraduate Ctr for Mental Health) **Group therapy: 1973: An overview.** New York, NY: Intercontinental Medical Book Corp, 1973. viii, 232 p.—Presents a collection of 18 papers on various alternative strategies in group psychotherapy and the problems and issues involved in their use. Topics include psychotherapy with deaf mutes, acting out in group psychotherapy, a synergistic systems approach to family therapy, psychoanalytic group therapy, and the group as a matrix of the individual's mental life.

1997. Wright, Wilbert; Morris, Kenneth T. & Fetting, Burt. (Central Michigan U, Counseling Ctr) **Comparative effects of social skill development.** *Small Group Behavior*, 1974(May), Vol 5(2), 211-221.—Measured the self-concept (Tennessee Self Concept Scale and self-report) of male and female college freshmen before and after participation in a structured ( $n = 7$ ), an unstructured ( $n = 8$ ), or a no-treatment ( $n = 11$ ) group. Treatment groups met for 8 wks. Significant increases in Tennessee Self Concept Scale subscale scores (Self-Satisfaction, Personal Self, Social Self, Positive Self) occurred for the unstructured group. Positive Self scores increased for the control group. The structured group showed no changes.—G. R. Breed.

1998. Wynne, Lyman C. (U Rochester, School of Medicine & Dentistry) **Family and group treatment of schizophrenia: An interim view.** In R. Cancro, N. Fox & L. E. Shapiro (Eds), *Strategic intervention in schizophrenia: Current developments in treatment.* New York, NY: Behavioral Publications, 1974. xviii, 326 p.

1999. Yule, William; Sacks, Ben & Hersov, Lionel. (U London, Inst of Psychiatry, England) **Successful flooding treatment of a noise phobia in an eleven-year-old.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1974(Sep), Vol 5(2), 209-211.—An 11-yr-old boy with a severe phobia for loud noises was treated in 2 sessions of flooding treatment following the failure of in vivo

desensitization. The boy has remained free of phobia behavior over a 25-mo follow-up period.

8000. Zarle, Thomas H. & Willis, Steven. (Purdue U) **A pregroup training technique for encounter group stress.** *Journal of Counseling Psychology*, 1975 (Jan), Vol 22(1), 49-53.—Determined the efficacy of induced affect as a pregroup training experience for coping with stress related to participation in an encounter group. 26 undergraduates who volunteered to participate in an encounter group randomly were assigned to 3 treatment groups, induced-affect training plus the encounter group, induced-affect training only, and encounter group only. The following hypotheses were supported: (a) group participants who did not receive the induced-affect pregroup training would demonstrate significant increases on the Neuroticism scale of the Eysenck Personality Inventory and (b) group members who did receive such training would not manifest such increases. (16 ref) —*Journal abstract*.

### Psychoanalysis

8001. Adatto, Carl P. (Louisiana State U) **Evolution of the transference in the psychoanalysis of an adolescent boy.** In M. Harley (Ed), *The analyst and the adolescent at work*. New York, NY: Quadrangle, 1974. xix, 303 p. \$12.50.

8002. Ammon, Günter. [The narcissistic deficit as a problem of psychoanalytic treatment: A contribution to the theory and practice of a retrieval of ego development.] (Germ) *Dynamische Psychiatrie*, 1974, Vol 7(4), 201-215.—Suggests that some patients with a permanent mistrust of the psychoanalyst may not be showing resistance or negativism, but a special form of psychic illness, different from neuroses: archaic ego illness. This is a substitute for missing psychic structure and compensates for damage to ego development which occurred in the symbiotic phase of early childhood. It is a narcissistic deficit, a "hole in the ego" arresting psychic development. Instead of analytic dissolution it is important to communicate directly with the patient about his archaic anxieties of being forsaken and help him to overcome them. Freud (1914) formulated the therapeutic program for neuroses: "to remember, to repeat, to work through"; for the archaic ego illness the formula must be: "to repeat, to retrieve, to remember, to work through."—H. Bruml.

8003. Aronson, Gerald. (Los Angeles Inst for Psychoanalysis, CA) **Some types of transference and countertransference.** *Bulletin of the Menninger Clinic*, 1974 (Jul), Vol 38(4), 355-359.—Delineates 3 forms of transference phenomena: the normal, the eroticized and the archaic. It is suggested that all patients in analysis manifest these forms in differing proportions. Methods of dealing with transference phenomena are discussed.

8004. Astigueta, Fernando D. (Postgraduate Ctr for Mental Health, Group Therapy Clinic, New York, NY) **Bion, Tavistock, the Argentine school and psychoanalytic group psychotherapy.** *International Mental Health Research Newsletter*, 1974 (Spr), Vol 16(1), 6-9.—Gives a perspective in which Bion's work on groups can be adapted to psychoanalytic group psychotherapy. Examples and discussion show how the therapist, by combining appropriate focus on the "here and now" with

traditional psychoanalytic techniques, can enable group members to overcome projections of social stereotypes or roles, and become a work group fostering individual personality development.

8005. Astley, M. Royden. **Psychoanalysis: The future.** *Journal of the American Psychoanalytic Association*, 1974, Vol 22(1), 83-96.—Discusses the present difficult times for psychoanalysis, which offer little hope of improvement in the near future. Psychoanalysts are currently viewed as irresponsible, irrelevant, or unimportant, causing many to become frightened and confused. However, one current development that may have favorable results is the trend of psychoanalysis toward the study and resolution of social issues and toward activity in mental health programs.—D. R. Marino.

8006. Dahl, Hartvig. (New York U, Research Ctr for Mental Health) **A quantitative study of a psychoanalysis.** *Psychoanalysis & Contemporary Science*, 1972, Vol 1, 237-257.—Applied quantitative measures, including a computer content analysis technique, to tape-recorded data obtained from the psychoanalysis of a young woman. 53 psychological variables were chosen for study and P-technique factor analysis was used to group them into family, sexuality, dream, anxiety, and resistance categories. Estimates of the amount of each factor present were used to divide analytic sessions into working hours, middle hours, and resistance hours. A content analysis of the patient's speech using the categories of the Harvard III Psychosociological Dictionary revealed that there were more self references during working hours, and more references to others and nonspecific objects during resistance hours. It is concluded that quantitative measures such as simple computerized content analyses can describe clinical material adequately and can discriminate between qualitatively different psychoanalytic sessions.—J. Kelly.

8007. Dahl, Hartvig. (State U New York, Downstate Medical Ctr, Brooklyn) **The measurement of meaning in psychoanalysis by computer analysis of verbal contexts.** *Journal of the American Psychoanalytic Association*, 1974, Vol 22(1), 37-57.—Describes one of a series of quantitative studies of a single psychoanalysis in order to demonstrate the systematic methods for quantitatively and objectively selecting, reducing, and describing data in audio recordings. It is concluded that there is a need for systematic methods of this kind to measure meaning.

8008. Dauntton, Elizabeth. (Case Western Reserve U) **Treatment of a bisexual conflict in prepuberty and adolescence.** In M. Harley (Ed), *The analyst and the adolescent at work*. New York, NY: Quadrangle, 1974. xix, 303 p. \$12.50.

8009. de Blécourt, A. [Considerations about a referred "nameless" patient.] (Duth) *Nederlands Tijdschrift voor de Psychologie en haar Grensgebieden*, 1974 (Jul), Vol 29(5), 335-353.—Analyzes the behavior of the S described by T. de Wever (see PA, Vol 53:Issue 4) with reference to several well-known psychoanalytic syndromes: identification, projection, regression to childlike behavior, denial as a defense mechanism, and lack of integration in emotionalized behavior from puberty to adulthood. The prognosis is made that under favorable circumstances considerable improvement is

likely to appear in the adjustment of the S.—A. J. Ter Keurst.

8010. Farrell, Dennis. (C. F. Menninger Memorial Hosp, Topeka, KS) **The prediction of terminability in analysis.** *Bulletin of the Menninger Clinic*, 1974(Jul), Vol 38(4), 317-342.—Reviews the psychoanalytic literature on analyzability and on termination. A case study is presented which illustrates the emotional effect of the anticipation of termination.

8011. Grand, Stanley & Pades, Herbert. (State U New York, Downstate Medical Ctr, Brooklyn) **The transition from sleep to wakefulness: Implications of a study of the organization of laboratory dream reports for the psychoanalytic situation.** *Journal of the American Psychoanalytic Association*, 1974, Vol 22(1), 58-82.—Attempts to link the REM awakening situation to the free association situation in psychoanalysis by focusing upon the fluctuations between silence and verbalization in transitional states of consciousness characteristic of both situations. A study of the laboratory dream reports of a neurotic patient in psychotherapy revealed that the considerable variation in the time between the signal to awaken and the initiation of dream reporting was related to certain formal linguistic aspects of the manifest dream reports. An attempt is made to specify how such data may be helpful to the clinician, and problems for future research, are outlined. (50 ref)—*Journal summary*.

8012. Harley, Marjorie (Ed.). **The analyst and the adolescent at work.** New York, NY: Quadrangle, 1974. xix, 303 p. \$12.50.

8013. Joseph, Edward D. (Mt Sinai School of Medicine, City U New York) **An aspect of female frigidity.** *Journal of the American Psychoanalytic Association*, 1974, Vol 22(1), 116-122.—Presents a fragment from the analysis of a woman, one of whose symptoms was frigidity, which contained among its many determinants the direct preservation of certain libidinal impulses arising from the oedipal period of development.

8014. Kaplan, Donald M. (Private practice, New York, NY) **A technical device in psychoanalysis and its implications for a scientific psychotherapy.** *Psychoanalysis & Contemporary Science*, 1973, Vol 2, 25-41.—Examines Freud's use of the free association technique as an experimental method to investigate symptom formation, and discusses the question of whether traditional psychotherapeutic techniques are relevant to modern personal problems. Free association is seen as a technical device analogous to methods of scientific observation which gain information about a phenomenon by obstructing its normal activity. The inability of the patient to comply with the technique's demand for full disclosure reveals mental obstructions to patient and therapist. It is suggested that contemporary alternatives to the classical psychotherapeutic method avoid crucial personal and social problems by stressing immediacy, impact, and sensation. It is concluded that the Freudian psychoanalytic paradigm is still a viable approach to solving questions concerned with self-knowledge. (1 p ref)—J. Kelly.

8015. Keller, Ursula. [Ego-splitting in perversion.] (Germ) *Dynamische Psychiatrie*, 1974, Vol 7(4), 216-229.—Views the perverse reaction as an archaic ego-illness which was considered by Freud (1938) to be ego-

splitting. While Freud considered perversion untreatable, dynamic psychiatry sees it as amenable to analytic therapy. It is a result of damage to an interpersonal process between the growing child and the mother, with a resulting archaic ego-illness in the form of a narcissistic deficit of the ego.

8016. Knapp, Peter H. (Boston U, Medical School) **Segmentation and structure in psychoanalysis.** *Journal of the American Psychoanalytic Association*, 1974, Vol 22(1), 14-36.—Discusses structural organization, a naturalistic approach to the study of the psychoanalytic situation. The method involves the task of dividing the interview transcripts into meaningful segments and then proceeding, segment by segment, from actual utterances to inferences about emotions, defenses, constellations of transference fantasy, and their structural organization. The purpose is to follow the activity of the therapist and the flow of the patient's associative attention as it shifts in mode, type of content, and temporal focus. (59 ref)—D. R. Marino.

8017. Kramer, Selma. (Philadelphia Psychoanalytic Inst, PA) **Episodes of severe ego regression in the course of an adolescent analysis.** In M. Harley (Ed), *The analyst and the adolescent at work*. New York, NY: Quadrangle, 1974. xix, 303 p. \$12.50.

8018. Maddi, Salvatore R. (Chicago U) **The victimization of Dora.** *Psychology Today*, 1974(Sep), Vol 8(4), 90-94, 99-100.—Examines Freud's discussion of his treatment of Dora and concludes that Freud was unethical and ineffectual. Freud tried to convince Dora that her neurotic symptoms were the result of her sexual feelings. In reality, Dora was living among adults who were deceitful and she required support, not attempts to convince her that she caused her own problems. Dora quit analysis after 3 mo. Her symptoms ceased after she successfully confronted a married couple who had participated in the deceit surrounding her.—E. J. Posavac.

8019. McCann, Marie E. (Cleveland Psychoanalytic Society, OH) **Mourning accomplished by way of the transference.** In M. Harley (Ed), *The analyst and the adolescent at work*. New York, NY: Quadrangle, 1974. xix, 303 p. \$12.50.

8020. Nell, Renee. (Country Place, Litchfield, CT) **The reflections of the liberation movement in the unconscious.** *International Mental Health Research Newsletter*, 1974(Spr), Vol 16(1), 2-5.—Interprets the liberation movements in terms of the Jungian animus, or thinking function, and anima, the feeling function. Examples from dream analysis stress the paramount need to reconcile these opposite principles within individuals seeking liberation. Seeking sex-linked roles or sexual partners that permit only the individual's animus or anima to function is self-defeating; true liberation exists in the peaceful reconciliation of opposites within oneself, not in their elimination or in continual strife.—C. A. Heikkinen.

8021. Niederland, William G. (State U New York, Downstate Medical Ctr, Brooklyn) **The Schreber case: Psychoanalytic profile of a paranoid personality.** New York, NY: Quadrangle, 1974. xvi, 172 p. \$8.95.—Presents a collection of 19 discussion and interpretative papers on various aspects of the case of Daniel Paul

Schreber (1842-1911), one of the most famous paranoid personalities in psychological literature. Topics include the content of Schreber's delusions, the merits of Freud's account of the case, data on the father-son relationship, and various other psychodynamic aspects of the case. (152 ref)

8022. Sachs, Lisbeth J. **An unusual object choice during the Oedipal phase.** *Psychoanalytic Quarterly*, 1974, Vol 43(3), 477-492.—Presents a psychoanalytic case study of a boy in the oedipal phase. After undergoing an eye operation at 4 yrs old, he blamed his mother and withdrew his love for her. He regressed to an angry, clinging child, and turned to his female dog as his oedipal love object. In treatment he acted out his fury at his mother. When this was worked through, he gave up the dog as an oedipal substitute and returned to his oedipal relationship with his parents.

8023. Schimel, John L. **Youth culture: The psychopathology of materialism.** *Adolescence*, 1974(Sum), Vol 9(34), 245-254.—Suggests that adolescents who come for psychoanalysis are rarely interested in understanding either themselves or outer reality. They want things (friends, achievement, recognition, things to work better for them) and when the things come about, they leave therapy although often no wiser.

8024. Schleisinger, Herbert J. (U Colorado, Medical Ctr, Denver) **Problems of doing research on the therapeutic process in psychoanalysis.** *Journal of the American Psychoanalytic Association*, 1974, Vol 22(1), 3-13.—Discusses the requirements of scientific research which involves a clinical psychoanalytic situation. Imposing an additional research purpose upon a therapeutic analysis intrudes into the psychoanalytic situation and increases its complexities. The researcher's 1st obligation is to determine whether or not psychoanalysis is taking place. He must also demonstrate that the research procedures have not distorted the psychoanalytic process. Another research requirement is that the data be complete and public. For the sake of simplicity the working model of the psychoanalysis may be only a partial or crude version of the actual psychoanalysis as it occurs under clinical conditions; but an oversimplified model may yield only trivial results. Thus, the situation under research must be representative of the clinical model of psychoanalysis. Sample size and replicability are other problems which the researcher must consider. Control of research bias and of the patient's material is necessary.—D. R. Marino.

8025. Settlage, Calvin F. (San Francisco Psychoanalytic Inst, CA) **The technique of defense analysis in the psychoanalysis of an early adolescent.** In M. Harley (Ed), *The analyst and the adolescent at work*. New York, NY: Quadrangle, 1974. xix, 303 p. \$12.50.

8026. Shengold, Leonard. **The metaphor of the mirror.** *Journal of the American Psychoanalytic Association*, 1974, Vol 22(1), 97-115.—Describes the mirror as a metaphor for the mind. Inasmuch as images of the self and of objects can be presented in the mirror, most conflicts can be enacted there. All the main psychic dangers, as well as the specific reassurances that try to counteract them, motivate mirror acts and fantasies. Emphasis is placed on the mirror reflections of narcissistic and libidinal conflicts in those people who regress as a

result of traumatic overstimulation in childhood. In them, the presence of an unsynthesized introject acts as a "devil behind the glass" of the mind. Exorcism by analysis is needed to free them to think reflectively, playfully, and meaningfully, and to restore their sense of self. (29 ref)—*Journal summary*.

8027. Sonnenberg, Stephen M. **Children of survivors.** *Journal of the American Psychoanalytic Association*, 1974, Vol 22(1), 200-204.—Reports 3 psychoanalytic cases presented in a workshop at the 1973 annual meeting of the American Psychoanalytic Association: a boy whose father had fled the Nazis, a boy with a learning disturbance, and a boy born after the war whose mother had been left guilty and dependent on her parents.

8028. Sprince, Marjorie P. **A contribution to the study of homosexuality in adolescence.** In M. Harley (Ed), *The analyst and the adolescent at work*. New York, NY: Quadrangle, 1974. xix, 303 p. \$12.50.

8029. Stamm, Julian L. **A unique poetic sublimation of conflicts revived during termination.** *Psychoanalytic Quarterly*, 1974, Vol 43(3), 427-437.—Reports a psychoanalytic case, especially the terminal phase of the analysis. A poem written by the patient for the final session affirmed that his struggle with passivity and illness had ended.

8030. Winkler, Walter Th. (Westfälisches Landeskrankenhaus Gütersloh, W Germany) [The derealization and depersonalization syndrome: With a report on an analytic therapy.] (Germ) *Dynamische Psychiatrie*, 1974, Vol 7(4), 230-241.—Describes various views on derealization and depersonalization and discusses the difference between objectified ego-image and the nonobjectifiable primary ego. The self-actualization of the primary ego is seen as the basic function which provides the foundation for all other ego-functions. During derealization and depersonalization the self-actualization of the ego is impaired; perceived objects have no ego-quality and the ego remains in an "observation position." A patient is described whose progress in therapy provides important information about ego structure.—H. Bruml.

8031. Worden, Frederic G. (Massachusetts Inst of Technology, Neurosciences Research Program) **Questions about man's attempt to understand himself.** *Psychoanalysis & Contemporary Science*, 1972, Vol 1, 38-54.—Discusses the relationship between science in general and psychoanalysis by exploring some questions about the nature of psychoanalysis (e.g., What does it mean to understand another person?; Why isn't psychiatry more scientific?; What is a psychiatrist?; What is mind?). Science attempts to understand the world of objects by locating explanatory causes, whereas psychoanalysis attempts to understand living subjects through a search for explanatory meanings. It is suggested that although the scientific method is an inappropriate tool for conducting the interpersonal transactions of psychotherapy, information gained from investigations in the neurosciences can extend man's understanding of himself. (19 ref)—J. Kelly.

#### Counseling & Community Mental Health & Crisis Intervention

8032. Adams, Wesley J. (U Alberta, School of Household Economics, Div of Family Studies, Canada)

**The marriage counselor and interspousal communication.** *Western Psychologist*, 1973, Vol 4(4), 112-117.

—Communication between partners is considered the most common problem brought to marriage counselors. 7 propositions concerning interpersonal communication problems are set forth: (a) Communication is an integral part of, and not separate from an interpersonal relationship. (b) The quality of communication within a relationship often reflects where that relationship is in its development. (c) Communicative acts represent a striving toward fulfilling "something" within each individual. (d) Communication occurs at different levels. (e) Communication is "more or less" programed with minor innovative variations. (f) Communication may be problematic within a relationship because of outside factors. (g) Communication is a never-ending attempt to understand and to be understood. Each proposition is discussed and its importance in marital counseling considered.—D. R. Evans.

8033. Addario, Dominick & Rodgers, Thomas A. (U California, San Diego) **Some techniques for the initial interview in couples therapy.** *Hospital & Community Psychiatry*, 1974(Dec), Vol 25(12), 799-800.—Describes techniques including discussing the early months of marriage and courtship, rating the couple's commitment to the marriage by means of a simple scale, and introducing the concept of trading behaviors as "homework" for the marriage partners. The belief is stated that the techniques will be helpful to both the novice and the experienced marriage counselor and will offer a structure that will elicit maximum verbal and nonverbal information from the couple.—*Journal abstract*.

8034. Allan, Thomas K. & Allan, Kathryn H. (U Maryland) **Group counseling of the disadvantaged.** In R. E. Hardy & J. G. Cull (Eds), *Group counseling and therapy techniques in special settings*. Springfield, IL: Charles C Thomas, 1974. ix, 166 p.—Proceeds from a general discussion of the positive aspects of using group counseling in treating the disadvantaged to more specific discussions on defining the disadvantaged, selecting group members, and identifying change in the individual.

8035. Allen, Priscilla. **A consumer's view of California's mental health care system.** *Psychiatric Quarterly*, 1974, Vol 48(1), 1-13.—Discusses the current condition of mental health care in the state hospital and in the board and care home system in California. Popular myths concerning the benefits or disadvantages of community vs hospital care for the mentally ill are cited briefly. Ambiguities in the concept of "treating people in the community" are outlined; it is questioned whether residents of board and care homes are actually able to live "in the community" and whether the "treatment" as it presently exists is, in reality, a viable treatment. Many aspects of board-and-care-home living institutionalize a person as much as some hospital care. The need for more resources to be allocated to state hospitals is mentioned, with the argument that fewer and far better hospitals should be the emphasis for future funding. However, the need for increased resources to overcome inadequacies of board and care homes is stressed as of prime importance. Specific problems of the latter are described, and suggestions are made for

general improvement of the state's mental health care delivery.—B. McLean.

8036. Beigel, Allan. (Southern Arizona Mental Health Ctr. Tucson) **Planning for the development of comprehensive community alcoholism services: Organizational approaches.** *Journal of Drug Issues*, 1974(Spring), Vol 4(2), 142-148.—Discusses issues underlying community approaches to comprehensive alcoholism services. The development of truly comprehensive community-based alcoholism programs will require state and local governments to enter nontraditional service areas and to cooperate with community agencies. The advantages and disadvantages of control of alcoholism services by single agencies, multiple agencies, or private profit-making corporations are examined. It is suggested that development of effective community alcoholism services will require careful attention to pre-program planning, funding, and organizational structure.—J. Kelly.

8037. Berry, C. Markam. (Private practice, Atlanta, GA) **Counseling in the medical office.** *Journal of Psychology & Theology*, 1974(Sum), Vol 2(3), 174-181.—Discusses the principles of *paraklesis* as the basis of an in-process counseling technique which can be used by the practicing physician. Distinctions are drawn between this technique, intervention, and nouthetic counseling.

8038. Blocher, Donald H. (U Minnesota) **Developmental counseling.** (2nd ed). New York, NY: Ronald Press, 1974. ix, 318 p.—Presents an overview of the sources of counseling therapy, the philosophical bases for counseling, and methods of maximizing human effectiveness, based on the idea that human development is organized around life stages and is expressed in various social roles and coping and mastery behaviors. Psychometric, ethical, and methodological issues in counseling are also examined.

8039. Breitmeyer, Rudolf G.; Bottum, Greg & Wagner, Bernard R. (Adolf Meyer Ctr, Decatur, IL) **Issues in evaluative follow-up for a residential program.** *Hospital & Community Psychiatry*, 1974(Dec), Vol 25(12), 804-806.—Distinguishes between clinical follow-up and monitoring, or evaluative follow-up, and describes some of the characteristics of an adequate monitoring system. Basic issues involved in planning a follow-up design are discussed, including examining the specific reasons for follow-up, involving the appropriate staff, determining the technical components, and testing the design.—*Journal abstract*.

8040. Buchta, Roger C.; Range, Donald L. & Wetzel, Richard D. (Belleview Mental Health Out-Patient Ctr, IL) **Characteristics of crisis outreach clients.** *Crisis Intervention*, 1974, Vol 5(4), 17-24.—Describes a method which combines a crisis intervention phone service with emergency home visits. Characteristics of a sample of clients visited are given; many of them subsequently entered a treatment program.

8041. Buckles, Nancy J. & Parker, Austin T. (Indiana U) **Married couples workshop: Problems and process.** *Journal of the American College Health Association*, 1974(Jun), Vol 22(5), 431-434.—Describes a workshop consisting of 4 couples recruited from the psychiatric division of a university clinic. Participation was limited to couples married at least 2 yrs and whose marriages had been failures from the beginning, but who were not

seriously considering divorce. The encounter workshop was held over 26 meetings, totaling 76 hrs. The goals were to enhance recognition and expression of feelings, to encourage self-definition to others, and to foster synthesis of internal feelings with external behavior. The case histories of the 4 couples are presented. It is concluded that, with 1 exception, the participants moved toward the desired goals, and that for all the couples communications were improved.—*A. de la Haba.*

8042. Burgess, John; Nelson, Ronald H. & Wallhaus, Robert. (Adolf Meyer Ctr, Research & Evaluation, Decatur, IL) **Network analysis as a method for the evaluation of service delivery systems.** *Community Mental Health Journal*, 1974(Fal), Vol 10(3), 337-344.—Attempts to show how network analysis may be applied to various ongoing mental health operations. (18 ref)

8043. Carderón N., Guillermo. [Community psychiatry: Basic concepts and goals.] (Span) *Acta Psiquiátrica y Psicológica de América Latina*, 1974(Jun), Vol 20(3), 194-200.—Describes the basic concepts and goals of community psychiatry and suggests several parameters which may be used to define important new ideas in this field.

8044. Carp, Joel M. & Goldstein, Melvin. (Bernard Horwich Jewish Community Ctr, Chicago, IL) **Better living without chemistry: Some program alternatives to drug abuse.** *Journal of Drug Issues*, 1974(Spr), Vol 4(2), 149-161.—Presents excerpts of case materials from 2 community-based drug programs which provide services such as telephone counseling, walk-in counseling, parent education, and discussion groups at local high schools.

8045. Easton, Karl. (Mt Sinai School of Medicine, City U New York) **Residential facilities for hospital-discharged former mental patients: Aspects in development.** *New York State Journal of Medicine*, 1974(Sep), Vol 74(10), 1762-1765.—Discusses community problems created by recent emphasis on community-based residential treatment of formerly hospitalized mental patients. It is suggested that both long-term custodial care facilities and actively therapeutic rehabilitative facilities are needed. (20 ref)

8046. Fairbanks, Rollin J. (Episcopal Theological School, Cambridge, MA) **Some current trends in marriage counseling.** *Journal of Pastoral Care*, 1974(Mar), Vol 28(1), 13-16.—Comments on current aspects of marriage counseling: the trend toward family counseling, counseling "ex-married" and prospective marriage partners, group counseling, increased tolerance of sexual activities, women's roles, and the effect of the personal philosophy of the counselor.

8047. Flipot, G. & Rucquoy, G. (U Catholique de Louvain, Faculté de Médecine, Belgium) [Comparative study of the Rorschach of patients attending a marriage counseling center and of patients attending a general psychiatry consultation.] (Fren) *Acta Psychiatrica Belgica*, 1973(Nov), Vol 73(6), 762-784.—Presents Rorschach data obtained from both partners in 10 couples who had come to a marriage counseling center. Similarities and differences between the partners were examined in 5 aspects of their personalities, demonstrating much similarity between partners. These findings were compared with Rorschachs of 10 couples in which one

partner had sought psychiatric help. In the latter group there were more manifest neurotic problems and less similarity between the partners, and sexual difficulties were less apparent. The attitude towards the presenting symptom was also different: it was seen mostly as a problem of the applying patient rather than as the partner's problem, which was the case in many of the couples in marriage counseling. (English, Dutch, German, Italian & Spanish summaries)—*E. Coché*

8048. Getz, William; Wiesen, Allen E.; Sue, Stan & Ayers, Amy. (U Washington, School of Social Work) **Fundamentals of crisis counseling.** Lexington, MA: D. C. Heath, 1974. xiv, 184 p.—Presents a discussion of the rationale, procedures, and goals of crisis intervention and counseling and several case histories to illustrate different approaches to handling crisis. Definitions of crisis, how to select an effective counselor, methods of interviewing with different types of clients, and procedures in telephone counseling are discussed.

8049. Grace, Helen K. (U Illinois, Medical Ctr) **The development of a child psychiatric treatment program.** New York, NY: Schenkman, 1974. 224 p.

8050. Groen, J. J. (U Leiden, Psychiatric Inst, Netherlands) **The challenge of the future: The prevention of psychosomatic disorders.** In H. Musaph (Ed), *Proceedings of the 2nd Congress of the International College of Psychosomatic Medicine*, Amsterdam, 1973: *Mechanisms in Symptom Formation*. New York, NY: S. Karger, 1974. vii, 303 p.

8051. Halpern, Werner I. (Rochester Mental Health Ctr, Children & Youth Div, NY) **The child guidance clinic in a community mental health center: A five-year report.** *Community Mental Health Journal*, 1974(Fal), Vol 10(3), 292-300.—Describes the transition of a child guidance clinic to a community health center where the change was characterized by an accelerated caseload, more efficient use of manpower, and diversification of programs despite the loss of organizational autonomy. (23 ref)

8052. Hamdi, Mark E. (State U New York, Albany) **Crisis intervention as a model for facilitating the adjustment of severely homesick children.** *Devereaux Forum*, 1974(Win), Vol 9(1), 15-20.—Discusses the possibility of using a crisis intervention model in treating severe homesickness. The method is illustrated by a case study of a 10-yr-old male who had emotional problems and received residential treatment at a summer camp.

8053. Holen, Michael C. & Kinsey, William M. (Kansas State U) **Preferences for three theoretically derived counseling approaches.** *Journal of Counseling Psychology*, 1975(Jan), Vol 22(1), 21-23.—Examined differences in potential-client preference and believed effectiveness for counseling approaches based on behavioral, client-centered, and psychoanalytic theory using 57 college students. Analyses of S responses to randomly ordered same-client, same-problem demonstration tapes of each approach indicated that the behavioral approach was significantly more highly preferred and believed more effective than either the client-centered or psychoanalytic approach. No significant differences were found between ratings of client-centered and psychoanalytic approaches. While the preference for behavioral counseling merits further theoretical and empirical investigation.

more importantly, preference and believed-effectiveness differences suggest that counseling outcomes should be investigated as a function of the acceptability to the client of actual counseling behaviors.—*Journal abstract.*

8054. Holton, Wilfred E.; New, Peter K. & Hessler, Richard M. (Northeastern U) **Citizen participation and conflict.** *Administration in Mental Health*, 1973(Fal), 96-103.—Specifies crucial issues affecting citizen participation in poverty area community mental health centers. Using 6 case studies, 3 models of citizen participation are described: the elitist model, the advisory model, and the consumer control model. Sources of conflict which inhibit effective citizen participation include (a) differing definitions of citizen participation, (b) conflicting vested interests, and (c) fear of the unknown. A transitional model of change is proposed to facilitate moving toward workable consumer control.—*R. J. Albers.*

8055. Johnson, Roswell D. (Brown U, Health Services) **Alcohol and the college campus.** *Journal of the American College Health Association*, 1974(Feb), Vol 22(3), 216-219.—Presents a technique devised to help the problem drinker on campus through the combined efforts of a sympathetic, knowledgeable faculty member such as a dean, chaplain, or physician, and 2 peers, close concerned friends of the involved student. The group meets with the drinker, frequently one who already is in difficulty because of violent behavior while drunk. They attempt to help him see his problem and encourage him to seek group or individual treatment. The likelihood of his dismissal from the institution if he does not seek such help is pointed out. Alcoholism in the US is discussed, and the need for an effective preventive program is stressed.—*A. de la Haba.*

8056. Kern, Joseph C. **Evaluating community drug abuse agencies.** *Journal of Drug Education*, 1974(Sum), Vol 4(2), 129-139.—Describes a 6-category code for evaluating the effectiveness of community-based drug treatment and prevention agencies in organizing their activities to meet programmatic goals.

8057. Kiresuk, Thomas J. (Hennepin County Mental Health Service, MN) **Goal attainment scaling at a county mental health service.** *Evaluation*, 1973, Mono 1, 12-18. Describes goal attainment scaling (GAS) in the evaluation of individual treatment programs. GAS consists of (a) a set of dimensions selected for each patient, (b) a schedule for assigning weights to dimensions, (c) a list of expected outcomes for each dimension, (d) a follow-up assessment of these outcomes, and (e) a total score summarizing outcomes across all dimensions. Intake scores are compared with follow-up scores to estimate change during treatment. GAS data for 170 patients indicate test-retest reliabilities of .70 for outcome scores and .88 for content, and interscorer reliability of .70 (22 ref).—*J. Adams-Webber.*

8058. Koumans, Alfred J. (Massachusetts Inst of Technology) **Planned informality: Alternate to drug programs.** *Journal of the American College Health Association*, 1974(Feb), Vol 22(3), 169-173.—Describes the successful use of existing facilities in a university community in its dealings with problems related to illegal drug use by students. As opposed to a formal program, this informal network of tutors, housemasters, faculty advisors, counseling deans, psychiatrists, and instructors

provided a human environment with de-emphasis on identifying drug takers as "ill," "drug-users," or "deviants." A supportive atmosphere was established, and the management of problems was left to those close to the scene. A drug test kit was developed and made available to the students on an anonymous, confidential basis. It is believed that this informal approach enhanced the social fabric of the community, and may have contributed to diminished drug use and related problems.—*A. de la Haba.*

8059. Kugel, Linda. (Carroll City Mental Health Service, North Conway, NH) **Combining individual and conjoint sessions in marital therapy.** *Hospital & Community Psychiatry*, 1974(Dec), Vol 25(12), 795-798.—Discusses the author's approach of seeing troubled marital partners individually and together for a total of 3 sessions/wk over a limited period of time. Approximately 55 couples were seen in a rural mental health center in the past 2 yrs. It was found that the individual sessions permitted each partner to gain an understanding of his own dynamics and helped emphasize each individual's responsibility for the success or failure of the relationship. The conjoint sessions focused on issues and problems facing the couple. The approach resulted in improved relationships in most cases. A case example is presented.—*Journal abstract.*

8060. Langan, Charles J. (Suicide Prevention & Crisis Service, Community Interchange, Buffalo, NY) **A preliminary structure for standards for crisis outreach services.** *Crisis Intervention*, 1974, Vol 5(4), 2-7. Presents the nucleus of a structure with skeletal content for crisis service standards. Ways in which such standards facilitate quality services are summarized.

8061. Leslie, Robert C. & Veldhuisen, John F. (Graduate Theological Union, Pacific School of Religion, Berkeley, CA) **Family counseling and the minister.** *Journal of Pastoral Care*, 1974(Mar), Vol 28(1), 3-12.—Discusses the appropriateness of family counseling for the minister: its family context, its ecological orientation, its varied emphases, its active intervening role in confrontation of reality, and its expectations of effecting change. Through interventions at the family rather than the individual level, frozen patterns of habitual interaction can be freed and unfamiliar usefulness ways of interacting modeled. A simulated family counseling conducted by a minister trained in family therapy is described, and 37 principles of counseling illustrated in the session are pointed out.—*Journal abstract.*

8062. Lubin, Bernard; Bangert, Charles J. & Hornum, Robin K. (Greater Kansas City Mental Health Foundation, MO) **Factor structure of psychological assessment at a community mental health center.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 455-460.—2 factors were derived from 40 assessment variables using principal components and varimax rotation applied to data derived from 387 adult applicants to a community mental health center and their relatives. Factor 1 represents the relatives' report of the patients' overall emotional-behavioral disturbance, and Factor 2 is the patients' self-report of depression. The factors have a simple structure, and the concepts, therefore, can be regarded as well-defined and independent. Several

correlates of the 2 factors are presented. (19 ref)  
*Journal abstract.*

8063 Lubin, Bernard; Hornstra, Robijn J. & Love, Allen. (Greater Kansas City Mental Health Foundation MO) **Initial treatment assignment as a function of patient self-assessment and/or family assessment of patient.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2) 495-498. A standardized interview, administered at intake to a cohort of 611 applicants to a community mental health center and to 433 of their family members, showed that patients who received hospitalization as their initial assignment were assessed as significantly more ill by their families than those who received other initial outpatient assignments. Patients who were hospitalized did not see themselves as being more ill, however. Patients assigned to medicine clinic saw themselves as significantly less psychologically ill. (15 ref)—*Journal abstract*

8064 Lucco, Alfred A. & Ephross, Paul H. (U Maryland, School of Social Work & Community Planning, Baltimore) **Behavior expertise and social policy: Observations on the care, feeding, and utilization of child development experts.** *Child Care Quarterly*, 1974(Sum), Vol 3(2), 87-96. Discusses the proper role of child development experts (CDEs) in assisting parents and child care workers. CDEs are advised to make standards realistic and goals explicit, and to emphasize cause-effect relationships. Values and biases should be clearly stated so that parents have the opportunity to accept or reject them. It is proposed that unrealistic standards will lead to harmful feelings of inadequacy in parents and child care staff. Both child-rearing advice and the operation of child care facilities should maximize parental control and reinforce parent's rights to influence children's experiences.—J. H. Feldstein.

8065 Macht, Lee B. (Cambridge-Somerville Mental Health & Retardation Ctr, Cambridge Hosp, MA) **On community-based care.** *Psychiatric Annals*, 1974(Jun), Vol 4(6), 80-92. Describes the history of community-based care for psychiatric problems, defining 5 levels of mental health service, ranging from out-of-area treatment facilities to foster homes. The need for evaluation at all levels and for integration of mental health with other human services is stressed.

8066 Manalis-Swennen, L.; Rucquoy, G. & Quirijnen, R. (U Catholique de Louvain, Faculte de Medicine, Belgium) **[Comparison between a university marriage counseling center and a similar community center.]** *Acta Psychiatrica Belgica*, 1974(Nov), Vol 4(2), 785-802. Compared 2 centers attended monthly by 1000 Catholic Belgian adults who tend to ask for help rather late in the development of their problems. 4 major differences were noted: (a) The clientele of the community center tended to be older and married longer, with more children, and there were more farmers and laborers among them. (b) The community center was attended mostly by women, the partner rarely cooperated. (c) Presenting complaints were more global at the community center and stressed sexual problems less. (d) There was less true therapy done in the community center, thus the number of sessions tended to be lower. (English, Dutch, German, Italian & Spanish summaries)—E. Cocher

8067 Meacham, Mary & Acey, Katherine T. (Suicide Prevention & Crisis Service, Crisis Outreach Service, Buffalo, NY) **Considerations in evaluating a crisis outreach service.** *Crisis Intervention*, 1974, Vol 5(4), 25-35. Recommends procedures for appropriate evaluation of crisis services. Goals, methods, and manpower needs of such services are discussed.

8068 Mettich, Jonathan M.; Schwartz, Al & Thum, Wendy. (Bernard M. Baruch Coll—Mt Sinai Medical School, City U New York) **An assessment of provider behavior in shared professional facilities.** *Public Health Reports*, 1974(Jul-Aug), Vol 89(4), 307-314. Studied provider behavior when there is an increase in demand for outpatient care. Providers in 32 shared professional facilities (SPFs) in New York City were surveyed by a team making unannounced site visits. The survey assessed whether the SPFs "meet standards of continuity, coordination, accessibility and acceptability. It was found that these criteria were not met. (19 ref)

8069 Mill, Cyril R. (NTI Inst for Applied Behavioral Science, Contracts & Consultation Div, Arlington VA) **Short-term consultation in organization development for mental health agencies.** *Hospital & Community Psychiatry*, 1974(Nov), Vol 25(11), 726-729. Suggests that mental health facilities unable to afford long term programs of organization development (OD) such as those used by industry, can benefit by brief OD consultation directed at small units or specific problems. The origins and principal techniques of OD are discussed, and ways are described in which brief OD consultation was used for facilitating work relationship between a new medical director and key staff, handling a committee's frustration at lack of direction, and helping an expanded child guidance clinic form a cohesive staff.

*Journal abstract*  
8070 Mounsey, Mark X. (Assn of Child Care Workers, Bronx, NY) **A legal challenge to child care services.** *Perspective and prospects.* *Child Care Quarterly*, 1974(Sum), Vol 3(2), 125-129. Discusses implications of a lawsuit charging the New York City child care system with religious and racial discrimination. Private system with religious and racial discrimination. Private system with religious and racial discrimination. Private system with religious and racial discrimination.

(religious) contract agencies are charged with religious discrimination. The most difficult cases: black children from slums. A pragmatic approach to behavior change emphasizing child care workers rather than psychiatrists is suggested. (10 ref)

8071 Salfutis, Donald H. (Thomson, Frank A. & Hallinan, Patricia R. (Southern California Medical School) **Mental health courses on a foundation for change in a rural community.** *Community Mental Health Journal*, 1974(Fall), Vol 10(3), 194-203. Describes a university effort to assist a rural community in developing a mental health education program for primary interveners within the community. Program goals were established and evaluated on a pre- and posttest basis, and compared with a questionnaire survey of community professionals within the community. Results suggest some significant change in the desired direction of the learning groups.

8072 Nelson, Scott H.; Rotstein, Paul B.; Shurvell, Marion & Mackenzie, Richard. (U.S. Dept of Labor, Marine Corps, Washington, DC) **"Turning on" a national agency: The Job Corps drug workshop experience.** *Journal of Drug Education*, 1974(Sum), Vol 4(2), 209-222.

—Discusses the process of developing a series of drug training workshops for a non-health agency and some of the principles and procedures used in successful workshops. Suggestions for other drug education programs are provided.

8073. **Orten, James D.** (U Tennessee, School of Social Work) **A transactional approach to suicide prevention.** *Clinical Social Work Journal*, 1974(Spring), Vol 2(1), 57-63. —Discusses the origin of suicide and gives examples of professional interventions which are viewed as less helpful than transactional approaches. Focus is on handling suicide calls. The ways in which transactional analysis can be used to effectively intervene in suicide crises are described.

8074. **Perlmutter, Felice.** (Temple U, School of Social Administration) **Prevention and treatment: A strategy for survival.** *Community Mental Health Journal*, 1974(Fall), Vol 10(3), 276-281. —Argues that the described National Institute of Mental Health (NIMH) prevention design will eliminate the problem of prevention activity, and that if prevention is a valid activity in community health, alternate strategies must be sought. Previous studies and current NIMH priorities are offered as support of the argument that prevention activity must be organizationally separated from service delivery. (20 ref)

8075. **Pulvermacher, Gerald D.** (Rideau Regional Ctr, Smith's Falls, Ontario, Canada) **Report on a home-management project at Rideau Regional Centre.** *Ontario Psychologist*, 1974(Oct), Vol 6(4), 19-23. —Describes a project which demonstrates that many retarded children could function outside an institution after the parents have been trained to act as therapists for the child.

8076. **Ramsden, Marna.** **Shaping the future: Home management: The past six years.** *Ontario Psychologist*, 1974(Oct), Vol 6(4), 14-17. —Traces the development of a program designed to help parents cope with the behavior of their mentally retarded children at home.

8077. **Reilly, Peter R.; Cohen, Roberta B. & Lundy, Nancy A.** (Child Guidance Clinic, Providence, RI) **Diagnostic interviewing with youthful offenders.** *International Journal of Offender Therapy & Comparative Criminology*, 1974, Vol 18(2), 153-158. —Discusses 18(2)153-158 problems inherent in interviewing youthful offenders and presents a method that allows the interviewer to (a) assess the mental status of the youth and (b) develop a disposition plan based on the youth's goals and desires. It is suggested that since action-prone youngsters are often unwilling or unaccustomed to talking about their feelings, these feelings must be inferred from perceptions and fantasies. 6 case samples are presented to illustrate the method. —*M. E. Pounsel.*

8078. **Reinhart, Richard A.** **The family drug awareness group: A citizen-initiated example of effective community concern.** *Journal of Drug Education*, 1974(Sum), Vol 4(2), 151-155. —Describes a model designed to involve parents in drug education programs. The model has been adopted in a high drug-incidence area in southern California and it is suggested that it has potential applicability in other areas.

8079. **Reiter, Gregg F. & Kilmann, Peter R.** (Brigham Young U) **Mothers as family change agents.** *Journal of Counseling Psychology*, 1975(Jan), Vol 22(1), 61-65.

—Studied the impact of a counseling program for mothers on the perceptions and behavior of family members. The mother, father, and 18-12 yr old problem child of 13 experimental and 11 control families were evaluated before and after 7 weekly counseling sessions. Pre- and postexperimental measures included the Family Concept Q Sort, a family decision-making task, and a behavioral data chart maintained by the mother. The experimental spouses experienced a significant increase in perceived family integration. The experimental families reflected a significant increase in the number of positive responses and a significant decrease in the number of negative responses used by the 3 family members. The undesirable behaviors of problem children within the experimental families decreased significantly. —*Journal abstract.*

8080. **Rizzo, Nicholas D.** (Lawrence Court Clinic, MA) **Strategies of interviewing in the court clinic.** *International Journal of Offender Therapy & Comparative Criminology*, 1974, Vol 18(2), 121-135. —Presents 9 case histories to illustrate methods of interviewing acutely upset, disturbed, psychotic, irrational, uncooperative, disinterested, or unmotivated offenders.

8081. **Rollin, Stephen A. & Arey, James.** (Florida State U) **A community action drug abuse program: The parent-helper.** *Journal of Drug Issues*, 1974(Spring), Vol 4(2), 176-180. —Describes a program which trained volunteers to work as community-based paraprofessional counselors with parents of drug-abusing children. Trainees were graduate students in a counselor education program, and volunteers represented a cross section of the community. The 50-hr training program emphasized basic counseling skills, basic drug information, and available community resources which dealt with drug problems. After completing the course, volunteers served as parent-helpers in a local telephone counseling service. It is suggested that future training programs would benefit from more extensive advertising for volunteers and from greater emphasis on drug crisis intervention. —*J. Kelly.*

8082. **Rosenberger, John W.** (Harlem Hosp Ctr, New York, NY) **Community psychiatry.** *Psychiatric Annals*, 1974(May), Vol 4(5), 51-56. —Describes the theoretical approach and practical application of community psychiatry at the Harlem Hospital Center. Provision of mental health education and consultation to the community is the Community Psychiatry Division's main function. Various modes of consultation are employed with specific social service agencies by a staff that includes a psychiatrist, 2 social workers, a mental health worker and a community liaison worker. Staff members are encouraged to participate in community activities and have done so in the areas of crime prevention, welfare rights, etc. 4 direct treatment programs have been developed by the division, 3 of which are now under other departments. —*C. Wright.*

8083. **Rubino, C. A.** **Community services: Legitimate at last.** *Ontario Psychologist*, 1974(Oct), Vol 6(4), 9-13. —Describes the development of a mental retardation unit within the child and adolescent outpatient department of a large metropolitan psychiatric hospital and how it functions as a community resource for clients and agencies.

8084. Ryan, William P. (Project Youth Drug Prevention Program, Queens, NY) **Diminishing adult responsiveness to the drug problem: An explanation and a remedy.** *Journal of Drug Education*, 1974(Sum), Vol 4(2), 205-208.—It is suggested that the decreasing number of adults attending community-oriented meetings on the problem of youthful drug abuse is a result of feelings of impotence engendered in adults by the failure of previous rallying meetings. Further, meetings focused around adult-adolescent interactions seem to produce greater response because of the hope they instill. —*Journal abstract.*

8085. Saeger, Vernon. (Suicide Prevention & Crisis Service, Crisis Outreach Service, Buffalo, NY) **Considerations for crisis outreach training.** *Crisis Intervention*, 1974, Vol 5(4), 8-16.—Presents goal objectives and content of a 9-session crisis outreach training program. It is anticipated that the outline will be useful in developing other training programs.

8086. Schneider, Jorge; Levinson, Hilliard & Weiss, Wanda M. **Community services in an adolescent program.** *Adolescence*, 1974(Sum), Vol 9(34), 177-184.—Describes 2 yrs of experience in developing an adolescent program with strong community ties. To meet the needs for psychiatric services for adolescents, experimentation and creativity are necessary. A case report is included which illustrates the community aspects of working with problem adolescents.

8087. Schwartz, Stephen. (Hahnemann Community Mental Health Ctr, Philadelphia, PA) **Decentralizing a community mental health center's service delivery system.** *Hospital & Community Psychiatry*, 1974(Nov), Vol 25(11), 740-742.—After disbanding a mental health center's emergency and outpatient services, staff members were reorganized into a decentralized service that consisted of 5 teams stationed throughout the catchment area. At the end of 2 yrs the number of outpatient cases from the catchment area increased significantly, while the referral of outpatients to the inpatient service remained stable.

8088. Shows, W. Derek. (Duke U, Medical Ctr) **A sleeping epidemic among first-grade children: Crisis intervention.** *Community Mental Health Journal*, 1974(Fal), Vol 10(3), 332-336.—Describes the psychological factors involved in and the treatment program designed for treating the patterned sleeping behavior of 6 1st-graders in a small southern rural community. The role of the consultant in dealing with the community crisis is presented as an example of crisis intervention.

8089. Shupe, Anson D. (Indiana U) **Development of mental health services among existing community institutions in rural areas: The case of the Japanese Kumiai.** *Community Mental Health Journal*, 1974(Fal), Vol 10(3), 351-358.—Discusses the Kumiai, a type of interest organization, as one method of increasing the number of modern community health professionals and facilities in rural areas of Japan. (23 ref)

8090. Shute, Robert E. & Swisher, John D. (Pennsylvania State U, Addictions Prevention Lab) **Training models for drug abuse prevention: Recommendations for the future.** *Journal of Drug Education*, 1974(Sum), Vol 4(2), 169-178.—Analyzes 3 major training modalities

for drug abuse prevention as a basis for presenting a recommended model for future training efforts.

8091. Slavson, S. R. **Child-centered group guidance of parents.** New York, NY: International Universities Press, 1974. x, 333 p. \$3.95.—Describes a technique for helping parents who have problems in child rearing and parent-child tensions to understand what it means to be a child and the responsibilities of being a parent. The historical background of child-centered group guidance, the dynamics of the discussion and guidance processes, the relationship of group guidance to group psychotherapy, and implications for general mental health and family climates are also examined.

8092. Spivak, Mark. (Moadon Shalom, Jerusalem, Israel) **A conceptual framework for structuring the housing of psychiatric patients in the community.** *Community Mental Health Journal*, 1974(Fal), Vol 10(3), 345-350.—Discusses the housing of psychiatric patients in terms of its dynamic placement within a conceptual framework of rehabilitation that specifies the goal of the rehabilitation process to be the resocialization and behavioral organization of the individual according to the norms, values, and expectations of the larger community. An attempt is made through facet analysis to specify those conditions associated with desocialization and to relate them to a definition of social articulation. The social structure of the housing situation is analyzed in terms of those dimensions postulated to counteract conditions associated with behavioral disorganization. —*Journal abstract.*

8093. Stone, Gerald L. & Stebbins, Larry W. (U Western Ontario, London, Canada) **Effect of differential pretraining on client self-disclosure.** *Journal of Counseling Psychology*, 1975(Jan), Vol 22(1), 17-20.—Studied the effectiveness of pretraining, a method of teaching clients behavioral skills useful in counseling, in teaching 30 college students to self-disclose. 3 modeling procedures were used to teach this verbal skill: video model, audio model, and no model. The number of self-references emitted during a 20-min interview was tabulated. Results indicate the video-model group was the most effective, followed by the audio-model group. No sex differences were found. (19 ref) —*Journal abstract.*

8094. Tangari, Anthony. (Menninger Clinic, Topeka, KS) **Family involvement in the treatment of a psychiatric inpatient.** *Hospital & Community Psychiatry*, 1974(Dec), Vol 25(12), 792-794.—Discusses the short-term diagnostic and treatment unit at a hospital which emphasizes maximum involvement of the family in the treatment process. The 16-bed unit deals with acute psychiatric crises in 6-8 wks of intensive treatment. Family members are required to accompany the patient to the preadmission interview and remain available for several days after admission. Frequent visits to the patient are encouraged; they are followed 3 days/wk by hour-long meetings involving several patients, their families, and staff. It is found that the meetings increase communication between patients and their families by providing a supportive group setting in which family members can explore their feelings and ventilate their anxieties. Unit staff believe this approach helps reduce recurrence of problems that precipitated hospitalization. —*Journal abstract.*

8095. Weiss, James; Freeborn, Donald K. & Lamb, Sara. (Portland State U) **Use of mental health services by poverty and nonpoverty members of a prepaid group practice plan.** *Health Services Reports*, 1973(Aug), Vol 88(7), 653-662.—Describes a study carried out (a) to determine the distribution of psychiatric diagnoses and utilization rates for 7,000 poverty group members and for 7,000 general members of the Kaiser Foundation Health Plan; (b) to compare referral rates for the 2 groups to the Plan's mental health clinic; and (c) to compare how the 2 groups kept their appointments at the clinic. The poverty group used more psychiatric sources than the general Health Plan sample, were more often referred to the mental health clinic, and broke more clinic appointments. Possible reasons for these differences are discussed. (25 ref)—R. S. Albin.

8096. Westermeyer, J. & Hausman, W. (U Minnesota) **Mental health consultation with government agencies: A comparison of two cases.** *Social Psychiatry*, 1974(Oct), Vol 9(4), 137-141.—Presents 2 case histories, one successful and one unsuccessful, of mental health planning consultation with government agencies. Both cases involved programs designed to provide treatment and rehabilitation for drug dependent persons—American Indians and a minority group in another country. Examination of these 2 cases emphasizes the importance of (a) explicit task definitions, (b) access of the consultant to policy makers, (c) access to the target population, (d) consultant control over his own schedule, and (e) adequate logistic support. Recommendations for achieving these objectives within a bureaucratic framework are presented. (18 ref)—*Journal abstract*.

8097. Westermeyer, Joseph & Hausman, William. (U Minnesota) **Cross cultural consultation for mental health planning.** *International Journal of Social Psychiatry*, 1974(Spr-Sum), Vol 20(1-2), 34-38.—Describes 4 sets of relations between consultant, consultee, and target population which vary with ethnic similarities and differences among these parties to social action programs. Each set presents its own problems. Guidelines for training and methods for cross-cultural consultation are presented. (25 ref)

8098. Winer, Jerome A.; Dinello, Frank A.; Pasca, Alyce & Weingarten, Samuel. (U Chicago) **"Extra-establishment" university mental health services.** *Journal of the American College Health Association*, 1974(Feb), Vol 22(3), 248-250.—Surveyed 39 university mental health service directors in 20 Illinois universities with regard to their opinions about student-operated "extra-establishment" mental health services. Such services exist on 90% of the campuses surveyed and include "rap" centers, free clinics, and telephone hotlines, usually staffed by nonprofessionals with or without professional back-up. Responses varied from a positive position that "extra-establishment" services filled a definite need that arose with the widespread use of drugs, and that the more services available to students the better, to negative comments concerning lack of counselor training and possible damage to the patient seeking help. Professionals are urged to examine these services and to begin outcome studies of their work.—A. de la Haba.

8099. Wogan, Michael & Amdur, Millard J. (U Connecticut) **Changing patterns of student mental**

**health, 1964 to 1972.** *Journal of the American College Health Association*, 1974(Feb), Vol 22(3), 202-208.—Compared data from 2 psychiatric clinic samples taken in 1964 (188 cases) and in 1972 (200 cases) to identify any changes in characteristics of students using the clinic. In 1972, clinic students were more likely to be female, more independent, married, graduate students, or more advanced undergraduates. The greater awareness of women's roles and role-conflicts, plus more available women therapists, may account for the increased number of females in the sample. More patients lived off campus and more married couples were seen, either individually or conjointly. It appears that patients experience the same emotional difficulties they did in the past, very often associated with establishing separate personal identities, as differentiated from their family backgrounds.—A. de la Haba.

8100. Wolk, Donald J. & Tomanio, Anthony J. (U Bridgeport) **A community-school problem-solving approach to the drug situation.** *Journal of Drug Education*, 1974(Sum), Vol 4(2), 157-168.—Results of 3 methods used to evaluate sessions on the drug problem indicate that participants experienced personal learning, increased understanding, and increased sensitivity to others. They also worked on concrete plans to resolve identified school-community problems related to drugs and communication. (15 ref)

### Physical Treatment

8101. Becker, D. & Igoins, L. [Dynamic approach to life-style attributable to chronic hemodialysis.] (Fren) *Bulletin de Psychologie*, 1973-1974, Vol 27(10-12), 536-551.—Studied medical and clinical data and Rorschach protocols for a group of 55 patients 14-25 yrs old undergoing long-term hemodialysis for chronic renal disease. The sample was heterogeneous with respect to physical, psychological, and sociocultural factors. Analysis of the various data revealed the following: (a) the importance of constraints, frustrations, and traumas because of their repetitive and uncontrollable nature and the amount of anxiety they entailed; (b) the Ss' capacity for tolerance, which was more marked as the danger became nearer and more real, requiring a massive and rapid mobilization of all defense mechanisms; and (c) the dynamic and precarious character of the attained equilibrium, which was usually fixed at the level of the primary processes, explained by intellectual displacement, and characterized by a certain poverty of fantasy in Ss' responses.—Z. M. Cantwell.

8102. Eisenberg, Louis; Taub, Harvey A. & DiCarlo, Louis. (VA Hosp, Syracuse, NY) **Acupuncture therapy of sensorineural deafness: Evaluation study.** *New York State Journal of Medicine*, 1974(Oct), Vol 74(11), 1942-1949.—Evaluated the effectiveness of acupuncture treatment in 4 studies with 10 female and 15 male volunteers. It was found that many Ss reported subjective improvement in hearing ability which was not substantiated by standard audiometric tests.

8103. Fox, Renée C. & Swazey, Judith P. (U Pennsylvania) **The courage to fail: A social view of organ transplants and dialysis.** Chicago, IL: University of Chicago Press, 1974. xviii, 395 p.—Presents a discussion of the social, ethical, and philosophical

aspects of medical transplants and dialysis procedures based on a series of case studies. Various social phenomena generated by these techniques, including the "gift-exchange" dimensions of transplantation, the psychological and sociological aspects of the "gift of life," problems created by professional uncertainty, and the scarcity and equity of organ distribution.

8104. Hynie, J. (U Karlova, Sexuologický ústav, Prague, Czechoslovakia) [Preventive custodial therapy of sexual delinquents serving their sentence.] (Czec) *Československá Psychiatrie*, 1973(Feb), Vol 69(1), 29-31. —Asserts that the first goal of correctional institutions in a socialist state is the quickest and most efficient re-education of criminal offenders. Such a goal could be achieved by preventive custodial therapy of offenders serving prison terms. In the case of sexual offenders, consideration of the following approaches is recommended: (a) voluntary surgical or other therapy when indicated, (b) removal of serious offenders to prisons with available hospitals for surgical castration therapy, (c) concentration of cases suitable for adaptation therapy in institutions where psychiatric control and hormonal therapy are available, and (d) special institutions with adequate therapeutic facilities for preventive detention and further therapy of dangerous sadists released from prison. (Russian & English summaries)—V. Fischmann.

8105. Keith, Robert L.; Ewert, Josephine C. & Flowers, Charles R. (Mayo Clinic, Rochester, MN) Factors influencing the learning of esophageal speech. *British Journal of Disorders of Communication*, 1974(Oct), Vol 9(2), 110-116.—Conducted a study of 49 male laryngectomized patients (mean age = 63 yrs) to determine the relationship between degree of mastery of esophageal speech and various educational and psychologic factors. 3 variables were found to correlate significantly with the final speech proficiency rating: initial speech proficiency rating, depression (MMPI Scale 2), and educational level. Results indicate that age and the educational and psychological variables investigated in this study are not as important to success in learning esophageal speech as indicated by previous authors. However, those variables may be important in individual cases. (21 ref)—*Journal abstract*.

8106. Lewis, Mary A. (U California, Primex Program, Los Angeles) Child-initiated care. *American Journal of Nursing*, 1974(Apr), Vol 74(4), 652-655.—Discusses the effects on children's attitudes and behavior toward their health of a problem-oriented approach by public health personnel. This approach is based on concepts from learning and decision-making theories. Ss were 400 inner-city children 5-12 yrs old in a Kansas City elementary school. An instrument measuring Ss' health and illness attitudes was developed for pre- and posttest measures. The problem-oriented approach was a method of (a) formulating hypotheses, (b) generating options for management, and (c) treatment with the S. Anecdotal evidence indicates that this approach increased Ss' initiation and participation in their health care. Implications for public health care are considered.—R. G. Gibson.

8107. Minckley, Barbara B. (VA Hosp, Palo Alto, CA) Physiologic and psychologic responses of elective surgical patients: Early definite or late indefinite

scheduling of surgical procedures. *Nursing Research*, 1974(Sep-Oct), Vol 23(5), 392-401.—Compared 2 groups of 30 patients who had the same type of corrective hip surgical procedure by the same orthopedic surgeon over a 6-mo period to test the effect of prolonged indefinite presurgical waiting vs early definite scheduling of the surgery. Patients were tested for physiologic and psychologic variables (e.g., changes in pulse rate, blood pressure, and standardized mood check lists). Little demonstrable difference was found in the quality of recovery of patients who had early or late surgery when variables were comparable and patients were convinced the surgery would relieve pain and restore function. A method for evaluating postoperative recovery for specific surgical patient populations is demonstrated. (26 ref)—*Journal abstract*.

8108. Scott, David L. (Whiston Hosp, Prescott, England) Hypnoanalgesia for major surgery: A psychodynamic process. *American Journal of Clinical Hypnosis*, 1973(Oct), Vol 16(2), 84-91.—Reviews literature on the use of hypnoanalgesia for surgery. Few indications remain today, due to many advances in modern anesthesia. One possible indication (nonessential cosmetic surgery on poor anesthetic risk patients) is illustrated with a case history.

8109. Tauš, L. & Sušická, L. (OUNZ, Psychiatrické oddělení, sexuologická ambulance, Liberec, Czechoslovakia) [Five-year observation of five sexual deviants after therapeutic intervention.] (Czec) *Československá Psychiatrie*, 1973(Feb), Vol 69(1), 51-55.—Reports postoperative observation with catamnesis of 5 socially dangerous sexual deviates on whom pulpectomy (therapeutic castration) was performed. Positive effects were indicated but the number of observed cases was too small to permit generalization. A cautious approach to such surgical therapy is recommended. (Russian & English summaries)

### Social Casework & Rehabilitation

8110. Acher, Martin. (U Oregon) Rehabilitation and poverty. In B. C. Ring & D. R. Schrader (Eds), *Eleventh annual Distinguished Lectures Series in Special Education and Rehabilitation*. Los Angeles, CA: U Southern California, School of Education, 1973. vi, 101 p. \$3. —Discusses indications of the failure of antipoverty programs (e.g., underemployment, health status, and delinquency indices), and suggests some areas that warrant further research if the poor are to be successfully involved in rehabilitation programs. Administrative, social policy, training, and client requirements are also examined.

8111. Becker, Robert E. (U Connecticut, Health Ctr) The challenge of rehabilitation. In R. Cancro, N. Fox & L. E. Shapiro (Eds), *Strategic intervention in schizophrenia: Current developments in treatment*. New York, NY: Behavioral Publications, 1974. xviii, 326 p.—Reviews the use and importance of social and vocational rehabilitation activities in the treatment of the mentally ill. Types of rehabilitative experiences are described, and a sociopsychiatric rationale for the clinical use and development of rehabilitation techniques for schizophrenic patients is outlined. (17 ref)

8112. **Borenzweig, Herman.** (U Southern California, School of Social Work) **Role enactment: A social work method for inducing behavior change.** *Clinical Social Work Journal*, 1974(Spring), Vol 2(1), 15-28.—Views role enactment as a basic concept of intervention theory, encompassing all the verbal aspects of any therapy system. Environmental manipulation, behavior modification, moral exhortation, cognitive techniques, suggestion and autosuggestion, and ways in which these techniques relate to role enactment are discussed. Whether the self selects a role, or the role forms the self, role enactment produces changes in perception, opinion, and behavior. The extent to which these changes are temporary or long lasting has not yet been determined. Nevertheless, empirical evidence supports the conclusion that role enactment is a means of producing changes in behavior.—S. R. Stein.

8113. **Craddock, George W.; Davis, Calvin E. & Moore, Jeanne L.** (Vocational Rehabilitation Project, Pittsburg, CA) **Social disadvantage and dependency: A community approach for the reduction of dependency through vocational rehabilitation.** Lexington, MA: D. C. Heath, 1970. xiii, 138 p.—Describes the background, operation, and outcome of an educational and vocational rehabilitation program for the disadvantaged in Pittsburg, California, which was based on the idea that the economically and culturally disadvantaged could fully participate in the planning and implementation of this type of program. The concept of the "Nitty Gritty Scale," which describes the organizational processes and procedures used in developing services and participants, administrative functions, operations of the local community councils, outcome and survey data, and outgrowths of the basic program are examined. (4 p ref)

8114. **Cull, John G. & Hardy, Richard E. (Eds.).** (Virginia Commonwealth U) **Rehabilitation techniques in severe disability: Case studies.** Springfield, IL: Charles C Thomas, 1974. xiii, 238 p. \$10.75.—Presents a collection of 14 articles which use the case-study approach to examine the special problems associated with the rehabilitation of severely-disabled individuals, including the mentally retarded, the epileptic, the blind and the blind diabetic, the spinal cord injured, the cancer patient, and the cardiovascular disease and pulmonary patient.

8115. **Davidson, William S. & Seidman, Edward.** (U Illinois) **Studies of behavior modification and juvenile delinquency: A review, methodological critique, and social perspective.** *Psychological Bulletin*, 1974(Dec), Vol 81(12), 998-1011.—Studies of the use of behavior modification techniques with delinquent youth are reviewed according to the type of behavior to be modified: educational, program, and delinquent behavior per se. While these investigations indicate an overall pattern of positive results, the definitiveness of the conclusions is restricted by methodological weaknesses. Issues regarding the relevance of this literature to the area of social policy decisions, and its impact on the various social systems that affect the lives of the youth who become labeled as delinquent, are discussed. (64 ref) —Journal abstract.

8116. **Fitzgerald, Thomas J.** **Contingency contracting with juvenile offenders.** *Criminology: An Interdisciplinary*

*Journal*, 1974(Aug), Vol 12(2), 241-248.—Tested 20 Ss to determine whether Ss on probation and under court order to pay fines would show an increased rate of work when positive contingencies of reinforcement were used in the form of contingency contracts. (17 ref)

8117. **Gorodischer, C.** (Beilinson Hosp, Cleft Palate Service, Petach Tikvah, Israel) **The social worker in the development of a service for cleft palate children.** *Indian Journal of Psychiatric Social Work*, 1973(Jul), Vol 2(1), 21-22.—Describes the functioning of a social worker in a prototype for the more extensive care of handicapped children and their parents. Success is claimed for counseling in the development of an experimental surgical technique.

8118. **Grant, G. W.; Moores, B. & Whelan, E.** (U Manchester, England) **Assessing the work needs and work performance of mentally handicapped adults.** *British Journal of Mental Subnormality*, 1973(Dec), Vol 19(37, Pt 2), 71-79.—Compared instructors' predictions of success or failure on 8 specific tasks with actual individual performances of 27 mentally handicapped adults (mean vocabulary age = 6.6 yrs, mean chronological age = 27.6 yrs). There were an average of 6 inaccurate predictions of failure on each task, and estimates of the number of trials that would be required to reach a criterion exceeded actual numbers of trials taken. These trends were particularly pronounced for female Ss. Results indicate that assessment of retardates' vocational potential and of the effectiveness of training programs should be more accurate and regular.—C. Wright.

8119. **Greenwood, Reed.** (U Arkansas) **Assessment of external effects in rehabilitation research.** *Journal of Applied Rehabilitation Counseling*, 1974(Fal), Vol 5(3), 138-142.—Develops the theory that evaluative research in rehabilitation calls for approaches which recognize that rehabilitation outcome is determined by a complex group of factors. A review is provided on the need for expanding the parameters of evaluative research to a system approved at both mezzo- (intermediate) and macrosystem levels, focusing on external or environmental influences affecting rehabilitation outcome. Specific external factors at mezzo and macro levels include social climate, geography, social mores and folkways, economic conditions, and institutional policies and practices. —Journal abstract.

8120. **Griffiths, R. David.** (Welsh National School of Medicine, Cardiff) **Rehabilitation of chronic psychotic patients: An assessment of their psychological handicap, an evaluation of the effectiveness of rehabilitation, and observations of the factors which predict outcome.** *Psychological Medicine*, 1974(Aug), Vol 4(3), 316-325.—Describes an investigation concerned with the description, treatment, and follow-up of 50 patients selected by age (18-55 years), diagnosis (psychotic), and the presence of work problems (unemployed for more than 12 mo). The patients were of below average intelligence, and substantial numbers were characterized by low drive to return to work, unrealistic attitudes, a lack of self-confidence, and adverse attitudes towards the existence and extent of handicap. Results of an evaluative and experimental study indicated that a rehabilitation program was unsuccessful in changing attitudes and

**prospect for prison reform.** *Psychiatric Annals*, 1974(Mar), Vol 4(3), 21-42.—Discusses the history of penal reform and the changing nature of prisons and prisoners, using the 1971 revolt at Attica prison as an example of the radicalization of prisons. Most changes advocated by modern reformers have been known for over a century. Obstacles to their implementation arise from legislative overcriminalization (i.e., prosecuting victimless crimes), and the lack of a political constituency for penal reform. Requirements for amelioration include (a) greater funding, (b) creation of true careers in penal service via training programs to decrease turnover and include women and minority group members, and (c) involvement of the legal profession and the judiciary in reform. It is concluded that a humane correctional system is possible.—C. Wright.

8130. Newman, Donald J. (State U New York, Albany) **In defense of prisons.** *Psychiatric Annals*, 1974(Mar), Vol 4(3), 6-17.—Examines contemporary approaches to crime control, noting the strong trend toward decriminalization of victimless crimes. Other strategies for change include (a) diversion of individuals from the stigmatization of typical criminal processing and (b) decarceration—either by closing all maximum security prisons or maintaining limited facilities for the most dangerous offenders. Obstacles to decarceration center around the lack of viable alternatives for community supervision of these offenders. Alternative possibilities are discussed, including vigilante justice, increased use of civil commitment procedures, electronic surveillance, and reinstitution of the death penalty. It is noted that strategies of alternative intervention employed in the juvenile justice system have often been unsuccessful. Decarceration without acceptable alternatives is seen to be a dangerous undertaking. (27 ref)—C. Wright.

8131. Prosky, Phoebe S. (Ackerman Family Inst, New York, NY) **Family therapy: An orientation.** *Clinical Social Work Journal*, 1974(Spr), Vol 2(1), 45-56.—Discusses basic techniques and orienting principles for professionals new to family therapy. Issues arising in the 1st family session, as well as issues of ongoing therapy, are presented. Specific suggestions given to help the new therapist include making home visits, sculpting the family, posing paradoxes, and retooling the family.

8132. Reilly, Mary. (U Southern California) **Competency as a battered concept.** In B. C. Ring & D. R. Schrader (Eds), *Eleventh annual Distinguished Lectures Series in Special Education and Rehabilitation*. Los Angeles, CA: U Southern California, School of Education, 1973. vi, 101 p. \$3.—Discusses the idea of human competency within an epistemological framework and how it can be assessed with reliability and validity outside of the medical model. The need for an interdisciplinary approach to the study of competency is emphasized because of the 2 languages involved in medical and behavioral models of competency.

8133. Ring, Barbara C. & Schrader, Donald R. (Eds.). *Eleventh annual Distinguished Lectures Series in Special Education and Rehabilitation*. Los Angeles, CA: U Southern California, School of Education, 1973. vi, 101 p. \$3.

8134. Rosen, Marvin & Kivitz, Marvin S. (Elwyn Inst, PA) **Beyond normalization: Psychological adjustment.** *British Journal of Mental Subnormality*, 1973(Dec), Vol 19(37, Pt 2), 64-70.—Examines the concepts of normalization and adaptation in treatment of retardates, noting contradictions in definition and application. Specific positive criteria of adjustment for retardates may differ from those for nonretarded individuals. Although personality traits of retardates who adjust poorly have been identified, predictors of positive adjustment are not available. 7 dimensions defining adjustment in retardates are proposed. Adaptation of such constructs would permit formulation of more explicit goals in rehabilitation and education.—C. Wright.

8135. Sackheim, Gertrude. (Private practice, Los Angeles, CA) **Dream analysis and casework technique.** *Clinical Social Work Journal*, 1974(Spr), Vol 2(1), 29-35.—Although dreams are not considered essential to casework treatment, they may be helpful in reinforcing interpretations, overcoming resistances, and presenting feelings previously denied. Clinical examples are provided to illustrate the usefulness of dream analysis in casework.

8136. Sampson, Allan. (Florida State U, Statistical Counseling Ctr) **Post-prison success prediction: A preliminary Florida study.** *Criminology: An Interdisciplinary Journal*, 1974(Aug), Vol 12(2), 155-173.—Applies several approaches to increasing the prediction of post-prison success, using a random sample of 200 prison system releasees. A cluster analysis of a subpopulation was shown to be superior to using either (a) parolee vs expirer population differences or (b) a variant on another state's base expectancy scale model. (19 ref)

8137. Shaw, John. (U Manchester, England) **The self in social work.** London, England: Routledge & Kegan Paul, 1974. xiii, 109 p. \$9.50(cloth), \$4.74(paper).—Develops the argument that life-long human development is the basis for social work intervention and that understanding the individual, as well as the political and social implications, is the ultimate goal of the social worker. The views of major psychologists on self-concept and theories of self-actualization are reviewed and related to the idea of life-long development. Practical methods of facilitating this development are also examined. (3 p ref)

8138. Shervington, Walter. (NIMH, Bethesda, MD) **Prison, psychiatry and mental health.** *Psychiatric Annals*, 1974(Mar), Vol 4(3), 43-60.—Provides statistics showing that correctional institutions control many individuals and consume much tax money. The high recidivism rate in federal prisons is seen as an indication that the goal of rehabilitation has not been achieved. The desirability of community-based rehabilitation is illustrated by a description of a controlled study of such a program. Because conflicts between treatment and custodial personnel have resulted in inefficiency and even legal action, it is suggested that the prison psychological staff provide educative and counseling services for other staff as well as prisoners. Goal-oriented group activities are recommended, with individual therapy reserved for crisis situations.—C. Wright.

8139. Smith, Robert R.; Wood, Larry F. & Milan, Michael A. (Rehabilitation Research Foundation, Experimental Manpower Lab for Corrections, Montgomery,

AL) **Ex-offender employment policies: A survey of American correctional agencies.** *Criminal Justice & Behavior*, 1974(Sep), Vol 1(3), 234-246.—Results of a survey of the 50 state correctional systems, the District of Columbia Department of Corrections, and the Federal Bureau of Prisons indicate that 44 of the 52 agencies have dropped whatever blanket prohibitions they may have had on the hiring of ex-offenders. Of these 44 agencies, 38 employed a total of 280 ex-offenders at the time of the survey. Slightly more than half the ex-offender employees held positions such as counselor, teacher, and correctional officer, which involved extensive interaction with the inmate population. The work performance of the ex-offenders was routinely rated as equal or superior to that of nonoffender counterparts, with respondents generally advocating more widespread employment of ex-offenders in the criminal justice system.—*Journal abstract.*

8140. **Strean, Herbert S.** (Rutgers State U, Graduate School of Social Work, New Brunswick) **Choosing among practice modalities.** *Clinical Social Work Journal*, 1974(Spr), Vol 2(1), 3-14.—Presents a brief history of social work practice and discusses various treatment modalities: the classical treatment model in social work, family therapy, work with small groups, crisis intervention, and short-term treatment. The client's level of psychosocial maturation and state of resistance are considered in relation to the different forms of treatment.

8141. **Strickler, Martin & Bonnefil, Margaret.** (Los Angeles Psychiatric Service/Benjamin Rush Ctr, CA) **Crisis intervention and social casework: Similarities and differences in problem-solving.** *Clinical Social Work Journal*, 1974(Spr), Vol 2(1), 36-44.—Distinguishes between crisis intervention and social casework in terms of goals, process, and structure. Clinical material is presented to highlight similarities and differences between the 2 treatment modalities.

8142. **Upadhyay, R. K.** (Ranchi U, Hosp for Mental Disease, Post-graduate Training Ctr, India) **Casework and psychotherapy.** *Indian Journal of Psychiatric Social Work*, 1973(Jul), Vol 2(1), 35-38.—Discusses the differences between case work and psychotherapy, with emphasis on the development of case work from history-taking through the impact of Freud to the intervention in the patient's psychosocial life. Differences between case work and psychotherapy are the level of consciousness addressed, the nature of techniques employed, the types of problems dealt with, and the ultimate objectives. It is concluded that case work consists of supportive and reeducative psychotherapy, plus social services in terms of concrete assistance.—*D. Berliner.*

8143. **Zeiller, B.; Tomkiewicz, S. & Finder, J.** **[Recidivism of juvenile delinquents: Report on 108 very difficult adolescents cared for and educated in an honor-system home.]** (Fren) *Hygiène Mentale (Supplement de l'Encéphale)*, 1973(Jul-Aug), Vol 62(2), 33-58.—Discusses the generally favorable adjustment of 108 male juvenile delinquents 10 yrs after release from an experimental home operated on an honor system. The majority (65) continued to report low-grade chronic anxiety and depression. 68 had married and only one had been divorced; those who did not marry reported

grave difficulties with homosexuality or sexual inhibitions. Most of them (92) were steadily and gainfully employed, chiefly at unskilled labor. Excellent prognosis for societal adjustment is related to stable work, marriage, prolonged absence of antisocial behavior, and a lively interest in the meaning of life. Prognosis is less favorable when these goals are not achieved.—*K. J. Hartman.*

#### Hospital Programs & Hospitalization & Institutionalization

8144. **Abrams, Lloyd et al.** (U Maine, Orono) **Transferable tokens: Increasing social interaction in token economies.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 447-452.—Notes that patients in token-economy programs are generally unable to reinforce each other's behavior with tokens, and social interaction among patients is usually minimal. In the present study, all 18 patients on a token economy ward of a state hospital were given a daily allowance of special transferable tokens in addition to whatever other tokens they earned. Transferable tokens could be spent by any patient except the one to whom they were issued. Both the frequency of social interaction and the number of different patients interacted with increased significantly.—*Journal abstract.*

8145. **Alpander, Guvenc G. & Gutmann, Jean E.** (U Maine, Orono) **A model for measuring the impact of change on an organization.** *Hospital & Community Psychiatry*, 1974(Nov), Vol 25(11), 719-723.—During a study at a psychiatric hospital in Maine, a model was developed for measuring organizational climate after the introduction of a geographical unit system brought a major change in the hospital's structure. Through questionnaires and interviews, attitudes of 124 team workers and 26 team leaders toward 9 factors, generally accepted as determinants of organizational climate, were examined. Areas studied included gaps in role perception between workers and supervisors, relationships among members and leaders of ward teams, motivational factors, and staff perceptions of the impact of change.—*Journal abstract.*

8146. **Altamirano, Guillermo & Clarke, Nancy W.** (U Chile, Facultad de Medicina, Santiago) **[Organization of a psychiatric ward for children and adolescents.]** (Span) *Acta Psiquiátrica y Psicológica de América Latina*, 1974(Jun), Vol 20(3), 180-186.—Describes a psychiatric service in Santiago, Chile. The emphasis is on primary prevention.

8147. **Aring, Charles D.** **Gheel revisited.** *JAMA: Journal of the American Medical Association*, 1974(Nov), Vol 230(6), 849.—Discusses the social implications of the trend to release long-term mental patients from state hospitals. The need for community acceptance and support is emphasized in a brief reference to the city of Gheel in Belgium which has been caring for released mental patients in a "boarding out" system under church and state sponsorship for centuries.

8148. **Barker, Philip (Ed.)** (Charles Burns Clinic, Birmingham, England) **The residential psychiatric treatment of children.** New York, NY: Halsted, 1974. xiii, 354 p. \$22.50.—Presents a collection of 12 papers which examine the work of child psychiatric hospital units in

Britain, emphasizing the varying philosophies, treatments, and organization of the units. Topics include the treatment of various specific childhood disorders (e.g., psychosomatic and conduct problems), the theoretical aims of inpatient psychiatric treatment for children, and the role of the child psychiatric nurse. (14 p ref)

8149. Berkowitz, D. A. (NIMH, Adult Psychiatry Branch, Bethesda, MD) **Termination and transfer in a psychiatric hospital.** *Social Psychiatry*, 1974(Oct), Vol 9(4), 131-136.—Studied patient reactions to termination and transfer at the annual resident turnover in a psychiatric institution over a 3-yr period. Using a participant-O method, data were obtained from interviews with the patients (mostly 18-25 yr olds) and from examinations of physician order books, nursing records, and hospital census sheets. Restrictions, an index of patient turmoil, were greatest during the change-over period. However, these restrictions were spread evenly throughout the patient population, despite individual differences in loss sustained. The disturbance of this period thus cannot be explained solely as the response of patients to separation and object loss. An alternative hypothesis to that of object loss—that patient turmoil reflects a hospital-wide crisis related to unconscious assumptions of the staff—is suggested. (15 ref)—*Journal abstract*.

8150. Bhaskaran, K. & Dhawan, N. (Hosp for Mental Diseases, Kanke, India) **A comparison of the effects of hospitalization on long-stay and recently admitted female schizophrenic patients.** *International Journal of Social Psychiatry*, 1974(Spr-Sum), Vol 20(1-2), 72-77.—Studied the attitudes and behavior of 2 groups of Indian female schizophrenics in relation to the duration of their stay in a psychiatric hospital. The long-term group (48 Ss) had been institutionalized for at least 2 yrs; the short-term group (50 Ss) for 2-6 mo. The long-term group had been ill for a longer time before admission, showed less interest in discharge from the hospital, and received fewer visits and letters than the short-term group. Length of stay was unrelated to diagnosis. There was a tendency for long-term patients to attend occupational therapy less often. Results are interpreted as consequences of prolonged institutionalization.—*W. R. Street*.

8151. Bonstedt, Theodor. (U Cincinnati) **Concrete goal-setting for patients in a day hospital.** *Evaluation*, 1973, Mono 1, 3-5.—Describes a 5-step system for evaluating progress in the treatment of psychiatric outpatients in a day hospital: (a) A deadline is set for a progress review of every case. (b) Concrete goals are determined for each patient. (c) Individual treatment programs for reaching these goals are developed. (d) Particular staff members assume responsibility for each case. (e) A date is set for the next review, at which time goals, methods, and staff may be changed. The main advantages of this approach are increased agreement among staff about specific treatment objectives and more explicit criteria for evaluating progress.—*J. Adams-Webber*.

8152. Carini, Esta; Douglas, Dorothy M.; Heck, Lois D. & Pearson, Marquerite. (Connecticut Dept of Mental Health, Hartford) **The mentally ill in Connecticut: Changing patterns of care and the evolution of**

**psychiatric nursing: 1636-1972.** Hartford, CN: Connecticut Dept of Mental Health, 1974. 554 p.—Describes changes in the role of psychiatric nurses and their forms of treatment in 3 Connecticut state hospitals from 1868 to 1972. A historical review of Connecticut statutes relating to the mentally ill and the type of treatment available before the establishment of state hospitals (1636-1868), data on staffing patterns collected by questionnaire, and the kinds of community resources available in the state for the mentally ill are also described. (14 p ref)

8153. Carr, Robert. **Violent and dangerous men in British prisons: Dispersal policy.** *International Journal of Offender Therapy & Comparative Criminology*, 1974, Vol 18(2), 192-195.—Describes a prisoner dispersal program which makes provisions for the incorporation of segregation units within existing prisons, strengthening security and control, constructing new facilities, and increasing the numerical and organizational figures of prison staffs.

8154. Cleghorn, John M. (McMaster U, Medical Ctr, Hamilton, Ontario, Canada) **Organization of psychosocial care in a teaching hospital.** In H. Musaph (Ed), *Proceedings of the 2nd Congress of the International College of Psychosomatic Medicine*, Amsterdam, 1973: *Mechanisms in Symptom Formation*. New York, NY: S. Karger, 1974. vii, 303 p.

8155. Desroches, Fred. (U Waterloo, Ontario, Canada) **Patterns in prison riots.** *Canadian Journal of Criminology & Corrections*, 1974(Oct), Vol 16(4), 332-351.—Discusses patterns of prison riots, noting increased destructiveness and demands for media coverage. Danger is greatest for inmate "undesirables"—hostages are often protected by inmate security forces. A sociological theory related to officials' disruption of inmate society is favored in a discussion of possible causal factors. (French abstract) (35 ref)

8156. Dinwiddie, F. William. (Edgemoade, Roanoke, VA) **Reciprocity of emotional transactions: A crucial issue in residential care and treatment.** *Child Care Quarterly*, 1974(Sum), Vol 3(2), 119-124.—Discusses the importance of emotional reciprocity—the child's ability to give of himself unselfishly—in successful family relationships. Children lacking this ability are emotionally draining, and incur rejection. They require institutional care in which a number of staff members interact with them. Reciprocity should be the treatment goal, and reinforced, but behavioral conformity may be the only goal possible with severely damaged children. Children who develop reciprocity may be placed in foster or group homes, and those who do not may be successfully placed in situations where conformity is sufficient, such as the military.—*J. H. Feldstein*.

8157. Doherty, Edmund G. (Wayne State U) **Therapeutic community meetings: A study of communication patterns, sex, status, and staff attendance.** *Small Group Behavior*, 1974(May), Vol 5(2), 244-256.—Examined the communication patterns during therapeutic community meetings of staff and patients of a private psychiatric hospital over a 6-wk period. During the 2nd and 3rd 2 wks, number of staff attending was half that of the 1st 2 wks. Amount of verbal participation of 6 groups was analyzed: (a) 6 psychiatrists and residents, (b) 5 social workers and occupational therapists, (c) 5 nurses, (d) 9

aides, (e) 26 male patients, and (f) 19 female patients. For physicians, nurses, and male patients, participation was greater during the 4 wks of reduced staff attendance than during the 1st 2 wks. Both sex and status contributed to frequency of participation: male patients spoke and were spoken to more frequently than all other groups; physicians (all male) spoke and were spoken to more frequently than were nurses (all but one of whom was female).—G. R. Breed.

8158. Dörken, Herbert. (U California, San Francisco) **Reorganization of California state hospitals: Impact on the allied health professions.** *Administration in Mental Health*, 1973(Fal), 42-51.—Describes the process of reorganizing state hospitals along treatment program lines instead of along hierarchical superintendent-medical director lines. The reorganization included decentralization of inpatient services and a complete revision of personnel classifications and pay scales for all medical and nonmedical management positions. The effects of this reorganization on psychology staffing are discussed.—R. J. Albers.

8159. Faltus, F. & Petrášek, J. (U Karlova, Psychiatrická klinika, Prague, Czechoslovakia) **[Psychiatric problems in intensive care units.]** (Czec) *Československá Psychiatrie*, 1973(Feb), Vol 69(1), 23-28.—Describes the character and function of intensive care units in departments of internal medicine and classifies various traumatic influences affecting both patients and staff. 4 kinds of psychiatric problems are presented: (a) symptomatic disorders connected with basic somatic disease, (b) reactive states arising during hospitalization, (c) disturbances connected with release of the patient from the unit, and (d) disorders arising in the staff itself. The importance of close cooperation between internist and psychiatrist and the possibility of psychiatric therapy on intensive care units are discussed. (Russian & English summaries)—V. Fischmann.

8160. Gold, Marsha R. & Rosenberg, Robert G. (Abt Assoc, Cambridge, MA) **Use of emergency room services by the population of a neighborhood health center.** *Health Service Reports*, 1974(Jan-Feb), Vol 89(1), 65-70.—Compared the use of a hospital emergency room and a health center by identifying all children's visits to each facility during a 4-wk period. The health center was used by almost 4 times as many children (801) as the emergency room (223). About  $\frac{1}{3}$  of emergency room visits occurred when the health center was closed. White children and those living outside a housing project were more likely to be taken to the emergency room.—S. Blackman.

8161. Gralnick, Alexander & D'Elia, Frank. (High Point Hosp, Port Chester, NY) **A social nursing-therapy service: Concept and development.** *International Journal of Social Psychiatry*, 1974(Spr-Sum), Vol 20(1-2), 1-7.—Describes a long-term program of redefining professional roles in a psychiatric hospital. Duties of therapists, administrators, and nurses were made more similar. Group treatment replaced much individual therapy and formerly isolated therapy units were joined. The theory underlying these changes is discussed.

8162. Greene, James A. (Hill Crest Hosp, Birmingham, AL) **Restructuring staff time: The eight-day week.** *Hospital & Community Psychiatry*, 1974(Nov), Vol 25(11),

733-735.—A significant drop in the average length of patient hospitalization, in cost per patient, and in staff absenteeism resulted from instituting a new work schedule, consisting of working 10 hrs/day for 8 days and then having 6 days off, among the staff of a private psychiatric hospital.

8163. Gruenberg, Ernest M. (Columbia U, Coll of Physicians & Surgeons) **Benefits of short-term hospitalization.** In R. Cancro, N. Fox & L. E. Shapiro (Eds), *Strategic intervention in schizophrenia: Current developments in treatment*. New York, NY: Behavioral Publications, 1974. xviii, 326 p.—Discusses safety, method of diagnosis, treatment availability, and the benefits of asylum (i.e., a nurturing environment), burden sharing, insight, and partnership as indications for short-term hospitalization of psychiatric patients.

8164. Gunzburg, H. C. (Hosp for the Mentally Subnormal, Birmingham, England) **The physical environment of the mentally handicapped: VII. "39 steps" leading towards normalized living practices in living units for the mentally handicapped.** *British Journal of Mental Subnormality*, 1973(Dec), Vol 19(37, Pt 2), 91-99.—Stresses the therapeutic importance of the design and environment on inpatient units for the mentally retarded. A checklist of 39 desirable features relating to physical characteristics and routine ward practices is presented for wards of no more than 20 ambulatory inpatients. Explanations and practical suggestions for implementation of improvements are included. 3 levels of managerial decision-making on such units are discussed.—C. Wright.

8165. Herridge, C. F. (West Middlesex Hosp, Isleworth, England) **Aircraft noise and mental health.** *Journal of Psychosomatic Research*, 1974(Aug), Vol 18(4), 239-243.—Conducted 2 studies to see whether aircraft noise affected mental health. Both compared the number of admissions to a psychiatric hospital from the Maximum Noise Area (MNA) to those from a less noisy area surrounding a London airport. Study 1 showed that psychiatric inpatient admission rates were significantly higher from the MNA than from outside it and that the person most at risk was the single, widowed, or separated older woman who was already neurotic. Study 2, which defined the high noise zone more precisely, showed the same general trend but the results were not significant.—W. G. Shipman.

8166. Herz, Marvin I. (New York State Psychiatric Inst, New York) **Brief hospitalization and aftercare.** In R. Cancro, N. Fox & L. E. Shapiro (Eds), *Strategic intervention in schizophrenia: Current developments in treatment*. New York, NY: Behavioral Publications, 1974. xviii, 326 p.—Discusses reasons for and goals of hospitalization for persons with psychiatric disorders, and reviews evidence on the effectiveness of brief hospitalization. Characteristics of the optimal hospital milieu are described, and alternatives to long-term hospitalization (e.g., aftercare, day hospitalization, supervised residences, and outpatient therapy) are examined. (34 ref)

8167. Higgenbottam, John A. **New directions for institutions and institutional psychologists.** *Ontario Psychologist*, 1974(Oct), Vol 6(4), 30-33.—Psychological services, increasingly important in institutions for the

mentally retarded, will become more so as institutional populations, which are changing toward the more severely retarded, produce greater demands for psychological intervention. As researcher-consultants, psychologists are integral to phasing out traditional services and developing community services for the retarded.

8168. Hirschowitz, Ralph G. (Harvard U. Medical School, Boston) **Two psychiatric hospitals in transition: Studies in staff behavior.** *Hospital & Community Psychiatry*, 1974(Nov), Vol 25(11), 730-733.—Observed the behavior of professional staff at 2 university-associated psychiatric hospitals in transition which had previously served selected patients through traditional structures, values, and operations. One hospital became a comprehensive community mental health center, required to serve all catchment-area patients. The other, which had stressed psychoanalytically oriented care, was forced by fiscal crises to admit more short-term patients, of different class and ethnic backgrounds, whose care was paid for by third-party insurance. In adapting to the changes, staff members in both hospitals passed through phases similar to those described by E. Kubler-Ross (1969) in the anticipation of loss: denial, anger, bargaining, depression, and acceptance.—*Journal abstract*.

8169. Ho, Man Keung & Norlin, Judy. (U Oklahoma, School of Social Work) **The helper principle and the creation of therapeutic milieu.** *Child Care Quarterly*, 1974(Sum), Vol 3(2), 109-118.—Discusses the establishment of a therapeutic milieu in a residential home for delinquent boys by using staff and clients as helpers. The helper may benefit from the status of his role and diversion from his own problems. Helpers provide tours for applicants and orientation for new residents, and assist in work with families of clients. Helpers should be similar to those with whom they work, but not identical in interests and values. Use of staff members in screening job applicants made interviews less threatening and improved communication regarding the status of various jobs.—*J. H. Feldstein*.

8170. Honigfeld, Gilbert & Klein, Donald F. (Sandoz Pharmaceuticals, Hanover, NJ) **The Hillside Hospital patient progress record: Explorations in clinical management by objective and exception.** *Evaluation*, 1973, Mono 1, 19-22.—Describes a computer-based clinical review system for graphically charting and evaluating psychiatric treatment programs in relation to predetermined quantitative goals. Therapists select a list of target areas for each patient. A quantitative goal is set in each target area using a 7-point scale to represent the degree of improvement expected. Patients' current status ratings are checked periodically against these goals. Patients are rated also in terms of their overall level of functioning. These data can be aggregated for comparing the effectiveness of therapists and treatment methods. This system is undergoing modification following a 2-yr pilot study.—*J. Adams-Webber*.

8171. Jones, Maxwell & Weeks, Margaret. (Ft Logan Mental Health Ctr, Denver, CO) **Systems approach to a correctional institution.** In L. M. Irvine & T. B. Brelje (Eds), *Law, psychiatry and the mentally disordered offender: II*. Springfield, IL: Charles C Thomas, 1973, xv, 132 p. \$9.75.—Discusses various components of systems theory (e.g., the authority system, 2-way communication,

shared decision making, and social learning) which are applicable to the problems and goals of correctional systems.

8172. Jones, Maxwell. (Ft Logan Mental Health Ctr, Denver, CO) **Therapeutic community principles.** In L. M. Irvine & T. B. Brelje (Eds), *Law, psychiatry and the mentally disordered offender: II*. Springfield, IL: Charles C Thomas, 1973, xv, 132 p. \$9.75.—Discusses the principles, goals, organization, and effects of therapeutic communities in terms of shared decision making, social learning, and leadership processes. Implications for psychiatry and community mental health are noted.

8173. Letcher, Patricia B.; Peterson, Lars P. & Scarbrough, Dorothy. (VA Hosp, Tuscaloosa, AL) **Reality orientation: A historical study of patient progress.** *Hospital & Community Psychiatry*, 1974(Dec), Vol 25(12), 801-803.—Describes a reality orientation program for elderly confused and disoriented patients, conducted at a Veterans Administration hospital as part of its total rehabilitation program. Results, based on a study of 125 male patients whose mean age at admission was 82.8 yrs, showed that 32% improved while 68% remained the same; only 1 S regressed. Findings indicate that reality orientation can prevent the decline of a large number of patients while actually improving the condition of others.—*Journal abstract*.

8174. Loveland, Catherine A. & Little, Verda L. **Juvenile correctional system.** *American Journal of Occupational Therapy*, 1974(Oct), Vol 28(9), 537-539.—Discusses the integration of occupational therapy into a multidisciplinary consultative clinic that serves a state juvenile correctional system. The areas in which the occupational therapist functions are sensory integration, visual motor training, vocational day care, recreation and crafts, staff training, and student supervision. These services are described as illustrative of the potential use of occupational therapy in a nontraditional setting.—*Journal abstract*.

8175. May, Philip R. & Cohen, Jerome. (VA Hosp, Brentwood, CA) **The mental health engineer: An agent for institutional change.** *Hospital & Community Psychiatry*, 1974(Nov), Vol 25(11), 735-739.—Argues that mental health delivery systems lose potential effectiveness because of the gap between research and application, a gap that is likely to become even wider as knowledge becomes more compartmentalized. The creation of a new class of professionals is proposed who would act as intermediaries and change agents to translate current research knowledge into programs. These professionals, defined as mental health engineers, would function as constructive critics and active, responsible participants in change. Ways in which the mental health engineer might help decrease hospital admissions, reduce staff alienation, or change a ward treatment program are suggested.—*Journal abstract*.

8176. McInnis, Titus; Himelstein, Howard C.; Doty, David W. & Paul, Gordon L. (U Illinois) **Modification of sampling-exposure procedures for increasing facilities utilization by chronic psychiatric patients.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1974(Sep), Vol 5(2), 119-127.—Sampling-exposure procedures by J. P. Curran et al (1973) increased the use of off-unit facilities and services, with generalization to contiguous

announce-only conditions in a milieu group but not in a social-learning group of chronic mental patients ( $N = 56$ ). However, the social-learning group showed comparable increases when ineligibility due to standing fines and possible token shortages was removed and when eligibility for off-unit facilities and services could be obtained by an additional payment on standing fines. Results for the social-learning group demonstrate that modifying treatment programs is preferable to concluding prematurely that patients are "unresponsive to treatment." Practical suggestions are offered for treatment of chronic patients by (a) treating heterogeneous groups to maximize the value of good modeling, (b) occasionally reinstating sampling-exposure procedures to "boost" performance, and (c) using the purchase-eligibility procedure in combination with response-costs to maintain exposure to backup reinforcers in token programs.—*Journal abstract.*

8177. Moore, Austin. (Harlem Hosp Ctr, New York, NY) **Adult psychiatric ambulatory care service.** *Psychiatric Annals*, 1974(May), Vol 4(5), 22-23.—Summarizes the activities of Harlem Hospital Center's adult ambulatory psychiatric service, which include an outpatient clinic, ward consultation services, a comprehensive geriatric day care program, and a socialization program. The service's objective is eventual interconnection of all units to permit pooling of resources and staff.

8178. Murphy, Lois B. **Growing up in Garden Court.** New York, NY: Child Welfare League of America, 1974. 282 p. \$4.95.—Describes experiences with the child residents of Garden Court, 1 of the psychiatric residential units of the Children's Hospital of the Menninger Clinic. Problems, procedures, and other issues involved with the day-to-day care, educational needs, staff relationships, communication between children and adults, problem behaviors, and the outcome of a group of children in Garden Court are detailed.

8179. Nachumi, Gideon. (Harlem Hosp Ctr, Adult Psychiatric Clinic, New York, NY) **Adult psychiatric clinic.** *Psychiatric Annals*, 1974(May), Vol 4(5), 23-35.—Recounts the particular problems encountered in ghetto psychiatric clinics (e.g., limited staff, large addict populations, and difficulties in coordination with social service agencies). Harlem Hospital Center's clinic emphasizes relief of acute symptoms and intervention in the social milieu, with a limited possibility of long-term psychotherapy. A problem of "therapeutic unambition" in inner-city hospitals is described, and the need for the program self-evaluation is stressed. Effects of the psychosocial realities of ghetto life on subsequent symptomatology and willingness to request treatment are examined.—*C. Wright.*

8180. Nichols, Glennadee A. et al. **Patients' perceptions of important, satisfying and dissatisfying aspects of army hospitalization.** *Military Medicine*, 1974(Nov), Vol 139(11), 871-878.—Administered a questionnaire about hospitalization experiences to 562 adults hospitalized on medical and surgical wards in 11 Army medical facilities in the US. Ss were grouped as stayers (i.e., those who remained in the hospital) and leavers (i.e., those who chose to leave). Stayers and leavers had similar perceptions of the importance of 87% of the items regarding hospitalization, but the impor-

tance they attached to 9 items was significantly different. 86% of all Ss were satisfied overall with their hospitalization. Inadequate communication between hospital personnel and patients contributed significantly to patient dissatisfaction. There were significant differences in the satisfaction of respondents in relation to 6 biographical variables. Patients hospitalized 2 wks or more, respondents on active duty, persons 18-26 yrs of age, unmarried Ss, and men were less satisfied than persons hospitalized for less than 2 wks, retired persons or dependents, Ss over 25, married Ss, and women. (17 ref) —*Journal summary.*

8181. Offir, Carole W. **Field report—Civil rights and the mentally ill: Revolution in bedlam.** *Psychology Today*, 1974(Oct), Vol 8(5), 60-72.—Reports on recent legal rulings that have made several significant changes in institutions for the mentally ill. A class action suit in Alabama has resulted in the decision that those involuntarily committed must be offered treatment. A 2nd change, now going into effect, is that patients must be paid for labor performed while hospitalized. A 3rd change is that involuntary long-term commitment occurs far less frequently than it did 5 yrs ago. Reforms can fail, however, if outpatient services are not provided and if political considerations and misguided community pressures force retrenchment.—*E. J. Posavac.*

8182. Sabbatini, F. & Furlan, P. M. (U Torino, Clinic for Mental & Nervous Disease, Italy) **Attempts at family approaches and re-entry with chronic patients nearing release.** [Ital] *Neuropsichiatria*, 1972(Jan), Vol 28(1-2), 53-57.—Describes attempts to reduce the difficulty of family re-entry by long-term hospitalized patients. To enhance the resocialization of chronic patients and to improve family attitudes toward their hospitalized relatives, a system was tried by which groups of 6-10 patients would visit one of the patients' families for a day. The patient whose family was to be visited would volunteer to be "host for the day." A psychiatrist and an attendant accompanied the patients during the visits. While no statistical data are reported, this system seemed to help both patients and families change stereotyped attitudes more quickly. It also benefited the psychiatric staff by giving them a more dynamic understanding of patient-family relationships and by improving their own attitudes. (English, French, & German summaries)—*A. Felice.*

8183. Saunders, Bruce T. (Waterford Country School, Educational & Clinical Services, Quaker Hill, CT) **Diagnostic-prescriptive educational programming in a multi-modal residential treatment center.** *Devereaux Forum*, 1974(Win), Vol 9(1), 27-37.—Explains the procedure and describes the results of programming in individual curriculum areas rather than using general ability assessments in school planning for children in residential treatment. A detailed example of one such program is included.

8184. Schween, Peter H. (Harlem Hosp Ctr, New York, NY) **The Psychiatric Ward Consultation and Liaison Service.** *Psychiatric Annals*, 1974(May), Vol 4(5), 35-51, 83.—Outlines the functions of the psychiatric consultation and liaison service of Harlem Hospital Center, noting difficulties and needs particular to an inner-city patient population. Activities include formal

and informal training of both psychiatric and nonpsychiatric personnel and short-term psychotherapy. The value of liaison nurses who perform tasks ranging from brief supportive therapy to education of psychiatric ward nurses is discussed. Special services are focused on hemodialysis and burn patients and their unique psychiatric problems. Problems common to all consultation efforts and those unique to ghetto hospitals are described.—C. Wright.

8185. Severin, Nelda K. & Becker, Robert E. **Nurses as psychiatric consultants in a general hospital emergency room.** *Community Mental Health Journal*, 1974(Fal), Vol 10(3), 261-267.—Psychiatric nurses served as consultants to 199 patients and to physicians in a general hospital emergency room. The nurses successfully managed 66% of the psychiatric referrals in the emergency room over a 5-mo period and required only telephone consultation in a majority of the remaining cases to develop and implement a satisfactory treatment plan. It is suggested that resistance to using nurses in this new role results from anxiety generated in the emergency room staff and physicians.—*Journal abstract.*

8186. Shah, Jyotsna H. (Central Bureau of Correctional Services, Dept of Social Welfare, New Delhi, India) **Probation services in India.** *International Journal of Offender Therapy & Comparative Criminology*, 1974, Vol 18(2), 187-191.—Discusses the application of probation laws in various East Indian states, including the number and training of personnel, institutional and noninstitutional care, and proportionate numbers of cases treated and cases released on probation.

8187. Shihadeh, Emile S. & Nedd, Albert N. (U Alberta, Faculty of Business Administration & Commerce, Edmonton, Canada) **The perception of parole prison activity.** *Canadian Journal of Criminology & Corrections*, 1974(Oct), Vol 16(4), 403-410.—Examined attitudes of 169 penitentiary inmates and 89 staff members toward rehabilitative activities of prison parole officers, who assess inmates' progress and readiness for release. Higher scores on a 9-item questionnaire developed by content analysis of interviews with staff and inmates indicated more positive perceptions. Mean normalized scores of the staff were significantly higher than those of inmates ( $p < .05$ ), and inmates who participated in counseling activities had more favorable perceptions than those who did not. Other hypothesized differences between participants and nonparticipants did not appear, and more research is suggested on the influence of voluntary vs involuntary participation on attitudes. (French abstract)—C. Wright.

8188. Storlie, Frances. (Portland State U) **Double entendre in a CCU.** *American Journal of Nursing*, 1974(Apr), Vol 74(4), 666-668.—Describes in narrative form a coronary patient's experience during her admission to a hospital cardiac care unit. The specialized terminology and behavior of the medical and nursing staff were confusing and frustrating to the patient.

8189. Sumner, Joan H.; Mueser, Sonja T.; Hsu, Louis & Morales, Rafael G. (Greystone Park Psychiatric Hosp, NJ) **Overcorrection treatment for radical reduction of aggressive-disruptive behavior in institutionalized mental patients.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 655-662.—Attempted to extend and evaluate a

new treatment, overcorrection, for the radical reduction of aggressive-disruptive behavior. The treatment emphasized 4 specific attributes: reeducation in prosocial adaptive responses; an extended period of work and effort; time out from general positive reinforcement; and prevention of any reinforcement from the disruptive behavior itself. Ss were 7 chronic female patients in a behavior-modification token-economy program in a state mental hospital. The treatment consisted of having S restore her disturbance to an extent that greatly improved the previous situation. Overcorrection required S to apologize and reassure all persons present that the disturbance would not be repeated. Data show that the average reduction for experimental Ss at the end of 8 wks was 91%. The average reduction for all controls at the end of 8 wks was 55%. However, the monotonic decreasing trend of the mean number of incidents over weeks for the experimental group was significantly greater than that of the control group. Additional data indicate that the inhibition of the maladaptive behavior lasted with little assistance from the staff. Thus, overcorrection may be considered a generally effective therapeutic procedure. The unexpected significant reduction in the control group was ascribed to the influence of modeling.—*Journal abstract.*

8190. Tizard, Jack & Tizard, Barbara. (U London, Inst of Education, England) **The institution as an environment for development.** In M. P. Richards (Ed), *The integration of a child into a social world*. London, England: Cambridge University Press, 1974. 316 p. \$15.50.—Examines some of the factors affecting the development of young children in long-stay residential care, including child-care personnel, extra-institutional experiences, and staff-child interaction. (21 ref)

8191. Trudel, Gilles; Boisvert, Jean-Marie; Maruca, Francesco & Leroux, Paul-André (Ctr Hospitalier Saint-Jean-de-Dieu, Montréal, Québec, Canada) **Unprogrammed reinforcement of patients' behaviors in wards with and without token economy.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1974(Sep), Vol 5(2), 147-149.—Compared unprogrammed reinforcement practices in a ward with token economy and in a control ward. The token economy ward contained 49 psychiatric patients and the control ward contained 48. Results clearly show that in unprogrammed interactions between staff and patients that were not formally part of the treatment, the aides of the token economy ward reinforced appropriate behaviors more than did those on the control ward.—*Journal abstract.*

8192. Vanden Heuvel, Kees J. (Rideau Regional Ctr, Smith's Falls, Ontario, Canada) **Some observations on a new mental retardation program for Ontario.** *Ontario Psychologist*, 1974(Oct), Vol 6(4), 24-29.—Views the Ontario government's decision to reduce by half the number of institutionalized retardates as a shift to "community-based institutions." The approach taken by 1 hospital to increase its community involvement is described.

8193. VanScoy, Holly C. & Bordelon, Karen J. (Meridell Achievement Ctr, Austin, TX) **Patient's perceptions of the residential treatment staff: Revisited.** *Adolescence*, 1974(Sum), Vol 9(34), 237-244.—110 children and adolescents in a residential center for

emotionally disturbed youth rank-ordered 10 staff members on their ability to meet the resident's personal needs for succorance, deference, achievement recognition, and playmirth. Results indicate same-sex staff were ranked higher. Staff members were ranked differently by younger and older patients, and by psychotic and nonpsychotic patients, except in achievement recognition. Therapists and child care workers were perceived as having the most potential to meet the patient's needs.—A. Krichev.

8194. Vigod, Zena L. (U New Brunswick, Fredericton, Canada) **A prison therapeutic community and its decision-making structure.** *Canadian Journal of Criminology & Corrections*, 1974(Oct), Vol 16(4), 411-420.—Describes the division and processes of decision making in a therapeutic community within a federal penitentiary, particularly in relation to the incompatible penal goals of custody vs treatment. Comparative research on the internal dynamics of such communities and on other treatment modalities in prisons is suggested. (French abstract)

8195. Wertheimer, J.; Bircher, L. M.; Périer, M. & Périer, J. (Hôpital Gériatrique, Prilly/Lausanne, Switzerland) **[Activity of an ambulatory center of psychogeriatrics.]** (Fren) *Social Psychiatry*, 1974(Oct), Vol 9(4), 143-154.—Studied sociodemographic factors, motivations for consultation, number of contacts, and treatment outcome in 1,219 psychiatric geriatric patients in an ambulatory care center. 29% of the patients were male and 71% female, a distribution different from that of the general area population where 60% of the people over 64 yrs of age were women. Singlehood was overrepresented, in that 54% of the patient population was married compared with 70% of men in the general population; for women the discrepancy was 22% and 35%, respectively. Most women had been housewives, and 58% of the men came from lower occupational levels. The most common reason for clinic contact was medical, followed by social and family problems. 81% of the patients also exhibited physical symptoms in addition to psychiatric problems. 42% had organic brain disease, 33% showed depression, and 11% were delirious. Depressed patients required more clinic visits than the other patient groups. 31% were eventually hospitalized, 26% were under medical supervision, and 16% had died.—English abstract.

8196. Wilking, Virginia N. (Harlem Hosp Ctr, New York, NY) **The Division of Child Psychiatry.** *Psychiatric Annals*, 1974(May), Vol 4(5), 56-73.—Analyzes available staff and facilities in Harlem Hospital Center's Division of Child Psychiatry, stressing its limited resources and lack of inpatient facilities. Services are specialized within age groups in accordance with a developmental viewpoint. 3 programs—developmental, child, and adolescent—provide therapeutic education, consultation with pediatric outpatient departments and clinics, emergency consultation, recreational programs, school liaison activities, consultation with parents, and liaison with family courts. Goals involve consolidation of services and 10-yr prospective review of care provided in order to adapt programs to further serve community needs.—C. Wright.

8197. Williams, Paul. (Whitechurch Hosp, Cardiff, Wales) **The district general hospital psychiatric unit and the mental hospital—some comparisons.** *British Journal*

*of Preventive & Social Medicine*, 1974(May), Vol 28(2), 140-145.—Compared information obtained on all acute psychiatric patients admitted to a new general hospital psychiatric unit and those admitted to a mental hospital. Patients admitted to the general hospital unit tended to be younger, of higher social class, neurotic rather than psychotic, and to have had fewer previous admissions than patients admitted to the mental hospital.

## EDUCATIONAL PSYCHOLOGY

8198. Huteau, M. (U René Descartes, Paris, France) **[Professional preferences of first year psychology students.]** (Fren) *Bulletin de Psychologie*, 1973-1974, Vol 27(10-12), 629-631.—Conducted a questionnaire survey to determine which of 7 professional activities were preferred by 365 beginning psychology students. 75% of Ss were female. The activities were presented in pairs, and each S made 21 judgments of preference. The 3 most often selected activities concerned social aspects of psychological work: therapy, consultation, and counseling.

8199. Long, Huey B. (U Georgia, Coll of Education) **Lifelong learning: Pressures for acceptance.** *Journal of Research & Development in Education*, 1974(Sum), Vol 7(4), 2-12.—Reviews literature which documents an increasing awareness in American society that education is a continuing, lifelong activity. 3 forces are seen as combining to strengthen the concept of lifelong learning: the basic human need to learn, rapid social and technological change, and institutional pressure of both a philosophical and practical nature. The implications of this concept are discussed. (36 ref)—E. S. Goodman.

8200. O'Brien, Thomas C. (Southern Illinois U, Edwardsville) **Some comments on British education.** *Elementary School Journal*, 1974(Oct), Vol 75(1), 42-49.—Compares the British and American systems of education from the viewpoint that the differences reflect the dissimilarities between the 2 cultures. The British system is characterized by localisms that can result in wide differences in the programs of neighboring schools. The emphasis is on caring for the welfare of the children as they are instead of compelling them to attain a certain norm, and on the "organic nature" of the child, which implies that his educational activities should be based on his life, interests, and abilities.—A. J. Ter Keurst.

8201. Yee, Albert H. (Ed.). (U Wisconsin, Madison) **Perspectives on management systems approaches in education: A symposium.** Englewood Cliffs, NJ: Educational Technology Publications, 1973. xi, 154 p.—Presents a collection of 8 theoretical and discussion papers on the feasibility and applications of systems approaches to educational planning and evaluation. Topics include objectives-based management strategies for large educational systems, the limits of scientific-economic-technological approaches to education, behavioral objectives and performance contracting, models of rationality in systems theory, and a guide to selected readings in systems sciences.

## School Administration &amp; Educational Processes

8202. Adams, Gerald R. & LaVoie, Joseph C. (U Nebraska, Omaha) **The effect of student's sex, conduct, and facial attractiveness on teacher expectancy.** *Education*, 1974(Fal), Vol 95(1), 76-83.—Investigated the bias effect of sex of child, conduct, and facial attractiveness on teacher assessment of a student's parents, peer relations, attitudes, and work habits. 295 female and 55 male teachers of Grades 1-6 were asked to predict parent interest, peer relations, attitudes, and work habits after examining a student progress report to which was attached a color photograph of the student. The fictitious student was either a boy or girl whose facial attractiveness was previously rated as low, moderate, or high, and whose grades on social and personal growth were manipulated to appear satisfactory or unsatisfactory. Teacher predictions on all measures were significantly influenced by the student's conduct, while facial attractiveness exerted little effect. (15 ref)—*Journal abstract*.

8203. Babb, Charles W. (Middle Tennessee State U) **Relationships between concerns and verbal behavior in elementary school teachers.** *Journal of Instructional Psychology*, 1974(Spr), Vol 1(2), 21-26.—Used a teacher concerns model as a conceptual base for observing 4 groups of elementary school teachers ( $N = 92$ ) on selected behavioral characteristics. 2 null hypotheses, that there were no statistically significant differences in verbal behavior among the 4 groups differentiated on the basis of level of concern and yrs of teaching experience, were rejected. Regardless of experience, elementary school teachers were more concerned for pupil need than for self-adequacy, were more indirect in their verbal interactions, and were more aware of higher cognitive processes.—*Journal abstract*.

8204. Bobilya, L. Jerry & Yarber, William L. (Columbus School for Girls, OH) **Reflections on the role of the advisors to the health service.** *Journal of the American College Health Association*, 1974(Feb), Vol 22(3), 177-181.—Analyzes the responsibilities of the faculty advisor to student health advisory boards with respect to motivating the student members, promoting responsible interpersonal relationships among them, and providing counseling when required. Recommendations are made for methods of appointing advisors.

8205. Boyce, Max W. (State Coll of Victoria, Toorak, Australia) **Student teacher misconceptions of manifestations of anxiety in children from different socio-economic/ethnicity backgrounds.** *Australian & New Zealand Journal of Sociology*, 1974(Jun), Vol 10(2), 138-139.—Asked 90 students in a teacher's college how they thought children from 2 socio-economic backgrounds in Melbourne would respond to 16 items taken from the Children's Manifest Anxiety Scale. Teacher predictions were compared with actual responses of 240 children from the 2 backgrounds. On most of the items the student teachers made incorrect predictions. Recommendations for teacher training are offered.—*R. Brislin*.

8206. Brunner, Joseph. (Montclair State Coll) **The development of learning modules for the training of content teachers in reading: A focus on progress.** *Reading World*, 1974(Oct), Vol 14(1), 44-48.—Discusses the development and use of learning modules in competency-based teacher education programs in read-

ing. Problems in the use of modules are described; e.g., there is a tendency to limit the postevaluation to pencil-and-paper tests, and developers use educational terminology that students may not be familiar with. Consequently, modules need to be clearly written and a systematized method of evaluation should be established.—*C. K. Miller*.

8207. Canter, Lee & Paulson, Terry. (Orange County Mental Health Services, Santa Ana, CA) **A college credit model of in-school consultation: A functional behavioral training program.** *Community Mental Health Journal*, 1974(Fal), Vol 10(3), 268-275.—Describes a pilot study which combined the didactic structure and credit of a college seminar with the immediate relevance, support, and training of a traditional in-school consultation. Data support the effectiveness of this model in training teachers as therapeutic change agents in their classrooms.

8208. Centra, John A. (Educational Testing Service, Princeton, NJ) **College teaching: Who should evaluate it?** *Findings*, 1974, Vol 1(1), 5-8.—Assessed the reliability of colleague evaluations of instructor classroom performance and compared colleague and student ratings of the same instructors. 16 items selected from the Student Instructional Report—items subject to observation during a class visit—were used for the comparison. Each teacher being evaluated was observed and rated twice by each of 3 colleagues for a total of 6 separate ratings. Colleagues proved to be very generous in their ratings. A reliability analysis was conducted on ratings given to the 54 teachers for whom complete data were available. A correlational analysis was used to test the level of agreement between responses of students and colleagues to the 16 items. It is concluded that students were better raters than colleagues. Ways of improving colleague ratings to use in conjunction with student ratings are discussed.—*R. Hall*.

8209. Colvin, Ralph W. & Zaffiro, Esther M. (Eds.). (State Coll Arkansas) **Preschool education: A handbook for the training of early childhood educators.** New York, NY: Springer, 1974. xviii, 362 p. \$13.95.—Presents a collection of 11 papers on various administrative, training, evaluative, and curriculum issues involved in early childhood personnel training programs.

8210. Cormany, Robert B. (West Shore School District, Pupil Services, Lemoyne, PA) **Faculty attitudes toward standardized testing.** *Measurement & Evaluation in Guidance*, 1974(Oct), Vol 7(3), 188-194.—Examined the attitudes of 1,027 teachers and counselors in 45 school districts toward the use of standardized tests. Ss' scores on an inventory of faculty attitudes toward standardized testing were analyzed on 8 demographic variables—sex, position, grade level, highest degree attained, previous membership on a test advisory committee, knowledge of the district's standardized testing program, number of years in education, and number of courses taken in tests and measurements. All but the last 2 variables showed significant differences in scores at the  $p < .01$  level.—*Journal abstract*.

8211. Doyle, Walter & Redwine, Judith M. (North Texas State U, Coll of Education) **Effect of intent-action discrepancy and student performance feedback on teacher behavior change.** *Journal of Educational Psychol-*

ogy, 1974(Oct), Vol 66(5), 750-755.—Studied the influence of 2 types of verbal feedback on changes in teacher perceptions and behavior. The experiment was conducted in a microteaching-type laboratory setting in which 36 experienced junior high school teachers taught the same content to 2 groups. Feedback between sessions consisted of information about (a) discrepancy between stated intent (S's estimate of how he or she would teach) and observed behavior and (b) student learning outcomes. Teacher behavior was coded using interaction analysis categories. Feedback treatments were associated with significant changes in teacher intent. No significant effects were observed for teacher behavior or for the interaction of treatments. (15 ref)—*Journal abstract*.

8212. Edeburn, Carl E. & Landry, Richard G. (South Dakota State U) **Self-concepts of students and a significant other, the teacher.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 505-506.—Results of testing teachers and students suggest that a teacher's self-acceptance is related to the development of good self-concepts by students in Grades 3-5.

8213. Eubanks, Eugene E. (U Delaware) **A study of perceptions of black and white teachers in de facto segregated high schools.** *Education*, 1974(Fal), Vol 95(1), 51-57.—In 2 studies, a total of 97 teachers from 6 de facto segregated high schools in a large midwestern school district completed a questionnaire on their perceptions of job satisfaction; teacher-student relations; status of a white high school as opposed to a black high school; attributes essential for the success of a teacher; and behavioral, emotional, and social characteristics of all students in their high schools. The 1st study involved a comparison between 47 teachers in white high schools and 50 teachers in black high schools on the above 5 variables. Teachers in white high schools differed significantly from teachers in black high schools on all variables except attributes of a teacher essential for the success of a teacher. The 2nd study compared 25 white teachers from black high schools and 25 black teachers from black high schools on the variables. No significant difference was found between the 2 groups on any of the variables.—*Journal abstract*.

8214. Falk, William W. & Cosby, Arthur G. (Texas A&M U) **School desegregation and the educational projections of rural black youth.** *Rural Sociology*, 1974(Spr), Vol 39(1), 28-41.—Investigated the effects of school desegregation on the educational attitudes of black youth. Members of a sample of rural Texas black youth were interviewed in their sophomore (1966), senior (1968), and post high (1972) years. In 1966 all students were attending segregated schools, but by 1968 approximately half were in desegregated schools. This allowed attitudes before desegregation (1966) to be compared with short-run (1968) and long-run (1972) effects of desegregation. While neither educational aspirations nor educational expectations were affected to a significant degree, the desegregated group was more likely than the segregated group to define their life-chances in racial terms, and to see the schools they had previously attended as detrimental.—*Journal abstract*.

8215. Farmer, James A. (U California, Los Angeles) **Impact of "lifelong learning" on the professionalization of adult education.** *Journal of Research & Development in*

*Education*, 1974(Sum), Vol 7(4), 57-67.—Reviews literature providing an assessment of the degree of professionalization which has been achieved in adult education and considers the "identity crisis" which lifelong education programs may precipitate. The adult educator may adopt attitudes which are reactionary, conservative, liberal, or radical; each attitude will have different effects on further professionalization of adult education. (36 ref)—*E. S. Goodman*.

8216. Follman, John; Wiley, Russell; Geiger, Glen & Lavelly, Carolyn. (U South Florida) **Effects of halo-effect instructions on level of ratings and intercorrelations.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 392.—Results support the conclusion that mere instructions to college student raters to consider each item on rating scales independently of all other items does not reduce halo effect.

8217. Fox, David J.; Steinmann, Anne & Losen, Stuart M. (City Coll, City U New York) **The impact of sex education on the sex-role perceptions of junior high school students.** *International Mental Health Research Newsletter*, 1974(Spr), Vol 16(1), 13-14.—Compared 125 male and 156 female white, upper middle-class, 8th-grade students (experimental group) with 37 male and 30 female students of similar backgrounds in a neighboring junior high school (control group), to determine the effect of an 8-wk sex education course. Measures included the Developmental Inventory of Feminine Values and the Developmental Inventory of Masculine Values, which place individuals on a family-oriented-self-oriented continuum. Pre-post *t* test comparisons of self-perception and ideal-self perception showed that (a) control Ss were significantly ( $p < .001$ ) more self-oriented than experimental Ss at pretest, although both groups were near midrange; (b) control Ss did not change over time; and (c) experimental males, but not experimental females, changed significantly ( $p < .001$ ) toward greater self-orientation. In light of other research showing that males experience more self-ideal discrepancies than females, the findings indicate promise in this area for even short-term school-based programs.—*C. A. Heikkinen*.

8218. Furniss, W. Todd. **Retrenchment, layoff, and termination.** *Educational Record*, 1974(Sum), Vol 55(3), 159-170.—Discusses the problems institutions face in re-assignment, nonpromotion, or dismissal. Although the courts have recognized that inflation, stable or decreasing enrollments, etc., might cause employee terminations, they have also recognized that institutions must not use "financial exigency" as an excuse for ridding themselves of "troublemakers." Supplementary procedures are suggested for objectively choosing the faculty an institution will retain in the event of abnormally high terminations.—*R. Gutzke*.

8219. Gitter, A. George & Fishman, Janet E. (Boston U, Communication Research Ctr) **Social indicators of educational opportunity: I.** *CRC Report*, 1973(Nov), No 68, 144 p.—Developed 2 types of factor analytical social indicators—factor scores and basic variables—which were shown to apply in aggregating multivariate education data. State indicators of educational input and educational output for 1960 were computed. They were used as dependent measures, with region, density,

urbanization, percent of whites, personal income, and nonwhite migration as independent variables, in analyses of variance and covariance. The relationships between social indicators of educational input and output were tested, both with and without controlling for environmental context of the relationships. Procedures for computing both state and national indicators for a base year, and any subsequent one, are described. (5½ p ref)  
—*Journal abstract.*

8220. Hiemstra, Roger. (U Nebraska) **Community adult education in lifelong learning.** *Journal of Research & Development in Education*, 1974(Sum), Vol 7(4), 34-44. —Discusses how home, school, and community can be linked to facilitate lifelong learning. The concept of the educative community proposes that most people, organizations, and agencies be included as potential contributors to the educational process. The community education movement is described, together with several successful examples. Implications related to future educational needs and roles are outlined, with special attention to the changes required of teachers and administrators. (36 ref)—*E. S. Goodman.*

8221. Holt, John. **Not so golden rule days.** In F. Reblsky & L. Dorman (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Proposes that compulsory school attendance laws should be changed or overturned in the courts, both in the interests of children and of the schools. It is suggested that a policy of resistance to these laws can achieve some results in the interim.

8222. Honig, Alice S. & Fears, Lois M. (Syracuse U, Coll for Human Development) **Practicum.** In R. W. Colvin & E. M. Zaffiro (Eds), *Preschool education: A handbook for the training of early childhood educators*. New York, NY: Springer, 1974. xviii, 362 p. \$13.95. —Discusses the history, purposes, and major elements of practicum experiences in the field of education. Issues involved in the relationship of practicum objectives to practicum decisions, supervision and staff utilization, program settings, and assessment of the practicum experience are examined. (3 p ref)

8223. Kaplan, Louis. **Pupil personnel services guidelines for introducing and developing a program of accountability.** Princeton, NJ: National Assn of Pupil Personnel Administrators, Mono. No. 3, 1974. 16 p.

8224. Kirkland, John. (U Missouri, Columbia) **Divergent thinking and academic course orientation.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 518.—Undergraduates classified as having an arts or a science academic course orientation were given a test of divergent thinking. Art-oriented students evidenced significantly more unique responses to the test than did science-oriented students.

8225. Klinzing, Dene G. & Klinzing, Dennis R. (U Delaware) **An examination of the verbal behavior knowledge and attitudes of day care teachers.** *Education*, 1974(Fal), Vol 95(1), 65-71.—Examined the verbal behavior, knowledge, and attitudes of day-care teachers, and the interrelationships of these factors. Data were collected from 53 randomly selected teachers from 20 randomly selected day-care centers. Results of statistical analyses reveal that the day-care teachers were student-centered in their verbal behavior, were lacking in their

knowledge of child development principles and practices, and had positive attitudes about some day-care related concepts. A relationship was also found among the teachers' verbal behavior, knowledge, and attitudes.  
—*Journal abstract.*

8226. Knight, Tony. (La Trobe U, Ctr for Urban Education, Bundoora, Vic, Australia) **Powerlessness and the student role: Structural determinants of school status.** *Australian & New Zealand Journal of Sociology*, 1974(Jun), Vol 10(2), 112-117.—Argues for a strong structural interpretation of student behavior in the school, focusing on situational factors rather than on "person blame." It is suggested that schools could be institutions where individual change is encouraged; where teachers and students offer the sort of leadership that strengthens decision-making skills, promotes cultural initiative, and enhances political competence.  
—*Journal summary.*

8227. Knox, Alan B. (U Illinois) **Higher education and lifelong learning.** *Journal of Research & Development in Education*, 1974(Sum), Vol 7(4), 13-23.—Illustrates ways in which universities can help school teachers and administrators continue their education by relating action problems to knowledge resources. Examples include an inservice peer review project for teachers, a process for increasing administrative competence, and defining components of the mentor role for planning and guiding adult learning. Attention is directed to methods for linking knowledge-producing systems with knowledge-using systems through the universities' role in sponsoring continuing education.—*E. S. Goodman.*

8228. Korim, Andrew S. (American Assn of Community & Junior Coll, Aging Project, Washington, DC) **Older Americans and community colleges: A guide for program implementation.** Washington, DC: American Assn of Community & Junior Colleges, 1974. 126 p.—Presents guidelines for establishing new relationships between community colleges and the elderly in terms of services, training, and other supportive programs. The status of training programs related to the field of aging, expanding and improving manpower programs, establishing centers for senior citizens, and obtaining community resources are examined.

8229. Kozol, Jonathan. **Chapter Two from Death at an early age.** In F. Reblsky & L. Dorman (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Discusses incidents of whippings in the Boston, Massachusetts, schools, the attitudes behind them, and the implications of the associated behavior.

8230. Kuhn, David J. (U Wisconsin, Parkside) **Modern biology and society: A program for the inservice teacher.** *Journal of Instructional Psychology*, 1974(Spr), Vol 1(2), 27-34.—Describes an inservice program designed to aid biology teachers in involving secondary students in the study of ecology, genetics and behavior. Programs and curricula which emphasized the social implications of life science and relevant pedagogical techniques and media are discussed. (20 ref)

8231. Levitin, Teresa E. & Chananie, J. D. **Responses of female primary school teachers to sex-typed behaviors in male and female children.** In F. Reblsky & L. Dorman (Eds), *Child development and behavior*. (2nd

ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.  
—Studied the responses of 40 female primary school teachers to descriptions of aggressive or dependent behaviors attributed to hypothetical male or female students, using a  $2 \times 2$  factorial design. Teachers were randomly assigned to 1 of 4 sex and behavior pairings. Teachers showed a clear preference for dependent behavior regardless of the student's sex and for the dependent girl vs other sex/behavior pairings. Achievement behavior was the most approved, and achieving girls significantly more liked than achieving boys.

8232. Lotecka, Lynn. **A project advocating humanistic education: An evaluation of its effects on public school teachers.** *Journal of Drug Education*, 1974(Sum), Vol 4(2), 141-149.—An evaluation of a seminar on preventing drug abuse shows that participating classroom teachers gained significantly in drug knowledge. There were also significant changes in attitudes concerning drug abuse, child development, and pedagogy.

8233. Mandel, Richard L. (U Pennsylvania) **Judicial decisions and organizational change in public schools.** *School Review*, 1974(Feb), Vol 82(2), 327-346.—Examines the effectiveness of the law as an instrument for educational change. Existing research shows that judicial decisions are relatively ineffective in changing schools and the behavior of school administrators. Explanations are advanced for this ineffectiveness in terms of role conflict theory. It is concluded that school administrators require a new model of school governance which incorporates judicially prescribed norms. (32 ref)—C. K. Miller.

8234. Manley-Casimir, Michael E. (L. W. Downey Research Assoc, Edmonton, Alberta, Canada) **School governance as discretionary justice.** *School Review*, 1974(Feb), Vol 82(2), 347-362.—Develops a model of school governance in terms of discretionary justice. The model is presented as judicially compatible and responsive to judicial norms. School administrators who adopt this approach would find accommodation to judicial decision less difficult and the schools themselves would become more just. (31 ref)—C. K. Miller.

8235. Martin, Felix. (Gwinnett County Schools, Lawrenceville, GA) **The effect of grade level upon teacher reinforcement preferences.** *Journal of School Psychology*, 1974(Fal), Vol 12(3), 199-203.—Examined a total of 103 elementary, middle, and high school teachers to test the hypothesis that reinforcement preferences are dependent on both the nature of the judging Ss and the target group about whom these judges are making reinforcement preferences (i.e., elementary, middle, or high school students). Evidence indicates a relationship between age or grade level of pupils and the perceived potency of possible reinforcers by teachers. From a 14-category reinforcement schedule, the elementary, middle, and high school teachers differed in their preference of possible reinforcers on 5 categories: positive physical contact, accepts ideas, direct concrete reinforcement, token concrete reinforcement, and asks questions.—*Journal abstract.*

8236. Marvell, J. (St Osyth's Coll of Education, Clacton, England) **Religious beliefs and moral values: The influence of the school.** *Educational Research*,

1974(Feb), Vol 16(2), 94-99.—Studied influence of teachers on religious beliefs and moral values in 2 multiracial comprehensive schools. Of 102 teachers interviewed, most saw character development as their primary aim in teaching, but results indicated that teacher influence on pupils was not substantial. It is suggested that a more open approach is needed in this area of school life.

8237. Mason, W. Dean. **Aging and lifelong learning.** *Journal of Research & Development in Education*, 1974(Sum), Vol 7(4), 68-76.—Discusses the developmental tasks and learning needs of older adults and how lifelong learning programs can contribute to continued well-being. Data is provided on the extent of educational services offered to older persons by community and junior colleges. (20 ref)

8238. Maxim, George W. (West Chester State Coll) **The role of research in competency-based teacher education.** *Education*, 1974(Fal), Vol 95(1), 94-96.—Contends that school teachers have neither the knowledge of nor the interest in empirical research applicable to teaching behavior and school programing decisions. It is suggested that this problem can be minimized if competency-based teacher education programs would include activities designed to develop skills for interpreting and applying research findings.

8239. Miller, P. J. (U Alberta, Edmonton, Canada) **Student and teacher attitudes towards education: An exploratory study.** *Alberta Journal of Educational Research*, 1974(Sep), Vol 20(3), 251-258.—Describes a 2-part investigation of student and teacher attitudes in which a conceptual model was developed to isolate significant attitudes and a questionnaire based on the model was constructed and administered to a total of 510 university students and practice teachers. An analysis of questionnaire data revealed significant attitudinal differences in students' and teachers' perceptions of education, with students indicating more child-centeredness in their responses.—*Journal abstract.*

8240. Nel, B. F. (U Pretoria, S Africa) **The phenomenological approach to pedagogy.** *Journal of Phenomenological Psychology*, 1973(Spr), Vol 3(2), 201-215.—Seeks to further the attempt of modern philosophical anthropology to treat pedagogy—the theory of the upbringing and education of the child—as a subject worthy of study independently of the practical considerations which these activities may involve. The phenomenological method is advanced as being most appropriate to a comprehension of the presential field of the child and of the interpersonal encounters through which he becomes humanized. Following M. J. Langeveld's theory (1944), 5 basic characteristics of the pedagogical situation are specified. This situation is considered to be one in which the child must receive the support of loving care to actualize his potentials and to be shaped morally through communicative relationships.—B. Lindsey.

8241. Nelson, Edward A. & Uhl, Norman P. (North Carolina Central U) **A factorial study of the attitude scales on the College Student Questionnaire with students at a predominantly black university.** *Multivariate Behavioral Research*, 1974(Oct), Vol 9(4), 395-405.—Examined the dimensionality of attitudes on the College Student Questionnaires (CSQ) administered to

772 black, entering freshmen. The correlation matrices for the 66 attitude items were analyzed using a principal axes factor analysis with an oblique rotation. Among the 11 factors, which accounted for 37% of the variance, the following were interpreted: Family Independence vs Cohesiveness, Autonomy vs Influenceability from Peers, Non-Affiliative vs Affiliative Peer Orientation, Concern for Social Problems, Aesthetic Interest, and Interest in Politics and World Affairs. These factors were compared with the original CSQ Attitude Scales, and a number of similarities and differences were noted. The items from the CSQ Liberalism Scale did not form any general interpretable factor, and the items from the CSQ Peer Independence Scale formed 2 distinct factors. Findings imply that special scales—corresponding with the factors found in the study—should be considered when studying attitudes of students attending predominantly black colleges and universities.—*Journal abstract.*

8242. Nicoletti, John A. & Patterson, Tom W. (Colorado State U) **Attitudes toward busing as a means of desegregation.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 371-376.—Attitudes toward enforced school busing were studied among 24 black, 167 white, and 34 Chicano adults in Denver, Colorado, in relation to 6 factors. Significant associations were found between type of attitude expressed and race, children enrolled in school, membership in the Parent-Teachers Association, expectation toward the quality of education to be obtained by busing, and home ownership. The number of contacts with the schools by the respondents was not related to attitudes toward busing. Supporters of busing emphasized the provision of equal educational opportunities for all children and improved communication among ethnic groups, while those opposed to busing emphasized the disruption of the neighborhood school concept as the bases for their attitudes. Issues related to the implementation of the plan are considered.—*Journal abstract.*

8243. Ogilvie, E. **Creativity and curriculum structure.** *Educational Research*, 1974(Feb), Vol 16(2), 126-132.—10- and 11-yr-old children in 5 schools with environments varying greatly in structured formality were tested for their ability to handle complexity, associative fluency, and originality in game-like situations free from time and examination stresses. Results show a curvilinear relationship between creativity of students and informality level of the classroom, suggesting that school environments influence creativity, but the assumption that progressive environments are more favorable must be qualified. Curriculum structure does not affect creativity-intelligence relations; the major influences appear to be average intelligence of the groups and extent to which creativity tasks require school learning, especially verbal skills. Results support the threshold theory of the interrelationship between intelligence and creativity. (29 ref)—J. B. Francis.

8244. Peters, Donald L. & Dorman, Lynn. (Pennsylvania State U, Coll of Human Development) **Program planning and program goals.** In R. W. Colvin & E. M. Zaffiro (Eds), *Preschool education: A handbook for the training of early childhood educators*. New York, NY: Springer, 1974. xviii, 362 p. \$13.95.—Discusses previous studies and theories which may be useful for making

administrative decisions about curricula and goals and objectives in planning educational training programs. The specification of the program's theoretical orientation, the assessment of trainee entry behavior and aspirations, and the program staff's experience are among the sources suggested for decision making. (2 p ref)

8245. Peters, Donald L. & Fears, Lois M. (Pennsylvania State U, Coll of Human Development) **Program personnel.** In R. W. Colvin & E. M. Zaffiro (Eds), *Preschool education: A handbook for the training of early childhood educators*. New York, NY: Springer, 1974. xviii, 362 p. \$13.95.—Presents suggestions for acquiring adequate early education program personnel, including adjunct and consulting relationships, the development of consortiums, differentiated staffing, and generally flexible treatments of staff qualifications. Student selection and services are major issues which determine the "personality" of a program and which are a means of insuring program success.

8246. Peters, Donald L. & Honig, Alice S. (Pennsylvania State U, Coll of Human Development) **Program design and implementation.** In R. W. Colvin & E. M. Zaffiro (Eds), *Preschool education: A handbook for the training of early childhood educators*. New York, NY: Springer, 1974. xviii, 362 p. \$13.95.—Presents suggestions for program requirements, behavioral objectives, and curriculum components for early childhood education personnel training programs. Methods of matching decision outcomes to program goals, tracking sequences of decisions to insure their goal orientation, and designing alternative approaches based on environmental and personnel characteristics are discussed. (17 ref)

8247. Peters, Donald L. (Pennsylvania State U, Coll of Human Development) **Dissemination.** In R. W. Colvin & E. M. Zaffiro (Eds), *Preschool education: A handbook for the training of early childhood educators*. New York, NY: Springer, 1974. xviii, 362 p. \$13.95.—Discusses ethical considerations in the evaluation and dissemination of early childhood education program information, including professional standards and the credibility of evaluative research. Responsibilities of program administrators in disseminating information are briefly considered.

8248. Rubovits, Pamela C. & Maehr, Martin L. **Pygmalion black and white.** In F. Reber & L. Dornon (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Observed the behavior of 66 teachers following manipulation of an expectancy regarding potential in 264 7th and 8th grade students. Teachers gave preferential treatment to "gifted" students; this pattern depended to some extent on race of the student. In general, black students were treated less positively than whites, and blacks labeled "gifted" were subjected to more discrimination than those labeled "nongifted." High-dogmatic teachers, while encouraging whites, tended to ignore blacks. (21 ref)

8249. Ryan, William P. (Molloy Coll) **Workshops about the physical structure of the classroom: An interesting way to work with teachers.** *Journal of School Psychology*, 1974(Fal), Vol 12(3), 242-246.—Presents a method for school psychologists to work with teachers in

an innovative way. A review of the literature suggests that the physical structure of the classroom affects the learning process. Educators generally seem unaware of the impact of these factors upon the learning process. A workshop approach, which encompassed a theoretical frame of reference, experience with a classroom model, and concrete suggestions about classroom changes was utilized.—*Journal abstract*.

8250. Sanjuan Najera, Manuel; Fernandez Uria, Elias & Marteles Lopez, Pascual. (U Zaragoza, Inst de Ciencias de la Educacion, Spain) [Analysis of professor-student verbal interaction.] (Span) *Revista de Psicologia General y Aplicada*, 1974(May-Jun), Vol 29(128), 555-561.—Presents a method of classifying classroom interaction using 16 categories. 2 examples are given of data showing percentages for each category based on classroom observations.

8251. Scheller, Reinhold. (U Trier-Kaiserslautern, W Germany) [Self-assessment and ideal image assessment of prospective elementary-school teachers.] (Germ) *Psychologische Beiträge*, 1973, Vol 15(3), 419-433.—Investigated self-concept and ideal self-concept of teacher candidates in sociometric tests with 179 college freshmen: 62 from schools of education, 61 from schools of technical science, and 56 from schools of economic sciences. Ss were asked to rate themselves on a 15-item, 7-step polarity scale based on E. Roth and R. Cattell. In a 2nd test, they were asked to imagine and describe an ideal person they would like to emulate. The obtained answers show that the group of education students were characterized by a greater difference between self-concept and ideal self-concept and by a lesser degree of self-confidence than the 2 other groups. After a detailed analysis and correlation of the data, it is concluded that the lack of self-confidence of teachers can be detected at the beginning of their studies and that it is not a product of their special education and training. (2 p ref) (English & French summaries)—*T. Fisher*.

8252. Seaton, Hal W.; Lasky, Elaine Z. & Seaton, Jane B. (U Akron) **Teacher and specialist: A communication gap?** *Education*, 1974(Fal), Vol 95(1), 90-91.—Attempts to identify problems which arise from lack of communication between teacher and specialists providing services to the exceptional child. Guidelines are given for implementing a more efficient system for communicating information to the classroom teacher.

8253. Sedlacek, William E. & Brooks, Glenwood C. (U Maryland, Counseling Ctr) **Racism in the public schools: A model for change.** *Journal of Non-White Concerns in Personnel & Guidance*, 1973(Apr), Vol 1(3), 133-143.—Used a model designed to combat racism in white or white-oriented schools in 2 suburban school systems that had experienced racial problems. Conferences, which consisted of small-group and general sessions, were divided into 6 stages which explored cultural and racial differences, racism and how it works, racial attitudes, sources of racial attitudes, what could be done about behavior, and methods of implementing ideas developed in the latter stage. Results of a questionnaire mailed to participants following the conferences indicate that some participants were eager to learn and change while others were uninterested, and were uninvolved in and unwilling to change. It is

suggested that additional steps must be taken by individual school systems to implement programs that will have long-range effects.—*M. E. Pounsel*.

8254. Swift, David W. (U Hawaii) **Situations and stereotypes: Variations in the school administrator's role.** *Elementary School Journal*, 1974(Nov), Vol 75(2), 69-78.—The roles of a school principal include administrator, who may be overloaded with the details of his position; public relations man, who emphasizes the school's public image; disciplinarian/entertainer, who may use aversive or supporting reinforcements to "keep order"; and educator, concerned with the effectiveness of teaching methods.

8255. Tan-Willman, Conchita. (U Toronto, Ontario, Canada) **Assessment and prediction of creativity in teaching.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 393-394.—A high-creative and a low-creative group of student teachers ( $n = 40$ ) were established on the basis of averaged ranks on a verbal and a nonverbal test of creative thinking. 2 series of classroom observations showed that the high-creative group gave more original but not more fluent nor flexible teaching performance. A teacher-creativity index correlated significantly with more subtests of the verbal test than of the nonverbal test of creative thinking.—*Journal abstract*.

8256. Trachtman, Gilbert M. (New York U, School of Education) **T.O.D.D.: An innovative approach to innovation in the elementary school.** *Journal of School Psychology*, 1974(Fal), Vol 12(3), 233-241.—Presents a case study of a successful school consultation in which it was proposed to a board of education members that the initiative for change be handed back to the faculty. Focus was placed on the initiation of certain processes, with product being a secondary consideration.

8257. Trujillo, Rupert. (U New Mexico, Coll of Education) **The program and community participation.** In R. W. Colvin & E. M. Zaffiro (Eds), *Preschool education: A handbook for the training of early childhood educators*. New York, NY: Springer, 1974. xviii, 362 p. \$13.95.—Discusses the rationale for community participation in childhood education programs, factors that can facilitate or impede community participation, and procedures for gaining community understanding and orienting both staff and community members to the goals of the program. Examples of programs based on community support (e.g., story reading and day care) are presented. (38 ref)

8258. Valind, Brigitte & Petterson, Inga-Lill. [Studying without teachers: Questionnaire data from upper secondary school students during a teachers' labour conflict.] (Swed) *Pedagogisk-Psykologiska Problem*, 1974(Apr), No 233, 59 p.—During a Swedish school conflict, when many teachers were not present in the schools, student data were collected by means of postal questionnaires from 2 groups: (a) a random sample from the first and last grades of all the upper secondary schools in Malmö and (b) a special group of 5 complete classes who had 2 yrs earlier taken part in a study on student democracy. Questionnaire data concerned both the work situation during the conflict and student influence in the schools. Results show that there was considerable motivation to organize studies, although there were indications that the students were too little

trained in co-planning and independent planning.  
—English abstract.

8259. Walker, Richard N. **Body build and behavior in young children: I. Body build and nursery school teachers' ratings.** In F. Reblsky & L. Dormon (Eds), *Child development and behavior*. (2nd ed). New York, NY: Alfred A. Knopf, 1973. xxiii, 470 p.—Photographs of 73 male and 52 female nude nursery school students were rated for type of physique. Physique ratings were compared to behavioral data obtained from 63 rating scales. Predictions of physique-behavior correlations were tested. Results indicate that important associations did exist and that these were similar to associations found in a prior study of college-age men.

8260. Webster, William J. & Mendro, Robert L. (Dallas Independent School District, TX) **The effects of a videotape feedback system on classroom teacher behavior.** *Journal of School Psychology*, 1974(Fal), Vol 12(3), 189-198.—Videotaped 159 teachers in 8 matched schools to examine the effects of a staff development program utilizing knowledge of objectives and immediate videotape feedback to modify the behavior of classroom teachers; concomitants of teacher success in the program were also investigated. Experimental Ss improved cognitive behaviors but not affective behaviors more than controls. Characteristics contributing to positive behavioral changes were dissatisfaction with perceived effectiveness, teaching experience, recency of latest degree, teacher attitude toward students, and student achievement. (17 ref)—*Journal abstract*.

8261. Williamson, Janet A. (Pennsylvania State U) **Survey of attitudes of directors of campus health centers toward potential college nurse practitioners.** *Journal of the American College Health Association*, 1974(Feb), Vol 22(3), 197-199.—Surveyed health center directors in 39 2-yr colleges and 358 baccalaureate and/or graduate student institutions regarding attitudes toward an expanded role for the college nurse. This would include duties ranging in complexity from developing and evaluating health education programs and performing complete physical examinations, to ordering, interpreting, and assessing results of laboratory and X-ray tests. 81% of directors of 4-or-more-year institutions (74% were physicians) responded favorably; 60% of directors of 2-year institutions (86% were nurses) supported the concept. It is believed that the greater physician support lay in the conviction that the program would alleviate doctor shortages in college health centers, and at less cost.—*A. de la Haba*.

8262. Winchel, Ronald; Fenner, Diane & Shaver, Phillip. (Columbia U) **Impact of coeducation on "fear of success" imagery expressed by male and female high school students.** *Journal of Educational Psychology*, 1974(Oct), Vol 66(5), 726-730.—Tested 240 male and female high school seniors for fear of success, some while attending coed and some while attending noncoed high schools. The kind of elementary school the Ss had attended, coed or noncoed, was also recorded. Results indicate that (a) both male and female Ss expressed more negative themes when writing stories about a successful female than when writing about a similarly successful male; (b) the coed vs noncoed distinction was a potent predictor of fear of success response in female Ss,

especially at the elementary school level; and (c) when negative consequences of success were mentioned, they were usually social or affiliative if the successful figure in the story was female and nonaffiliative if the figure was male. (11 ref)—*Journal abstract*.

8263. Wolfe, Joan M. (Maryland State Dept of Health & Mental Hygiene, Baltimore) **Patient education.** *Journal of the American College Health Association*, 1974(Feb), Vol 22(3), 231-233.—Describes patient education in a comprehensive college health program including the consideration of the student's need and motivations and the necessity of a constructive, enthusiastic attitude on the part of the college nurse.

8264. Yee, Albert H. (U Wisconsin, Madison) **Schools and progress in the People's Republic of China.** *Educational Researcher*, 1973(Jul), Vol 2(7), 5-15.—Presents descriptions of the methods, types of schools, rationale, facilities, and programs in the educational system of the People's Republic of China, based on the author's 1972 visit. Comparisons between the author's experience in 1947-1948, the present cultural and political contexts of education, and the influence of the collective spirit on education are discussed.

#### Curriculum Development & Teaching Methods

8265. Abelson, Willa D.; Zigler, Edward & DeBlasi, Cheryl L. (Yale U) **Effects of a four-year Follow Through program on economically disadvantaged children.** *Journal of Educational Psychology*, 1974(Oct), Vol 66(5), 756-771.—Longitudinal and cross-sectional comparisons were made of 109 economically disadvantaged children in 1 Follow-Through and several non-Follow-Through primary school programs. A longitudinal comparison was also made of the economically disadvantaged and nondisadvantaged children in the Follow-Through program. Clear-cut program effects were found in the 4th yr (grade 3) when Follow-Through children were superior to non-Follow-Through children on IQ, achievement, and social-motivational measures. The Follow-Through program did not result in the economically disadvantaged children attaining the level of intellectual achievement displayed by the nondisadvantaged children. (30 ref)—*Journal abstract*.

8266. Adams, Eva W. & Allen, LeRoy B. (U Delaware) **Pilot project to develop a home economics curriculum for the middle school.** *Journal of Instructional Psychology*, 1974(Spring), Vol 1(2), 52-56.—Describes a program which was designed to assist adolescents' intellectual, physical, social, and emotional growth. Included are selected illustrations of materials that were developed in the pilot project. (17 ref)

8267. Amdur, Millard J.; Nichols, Margaret; Boroto, Daniel R. & Shay, Barbara L. (U Connecticut) **Issues in developing a multidisciplinary sex education program in a public university.** *Journal of the American College Health Association*, 1974(Jun), Vol 22(5), 364-369.—Presents a critical evaluation of a multidisciplinary sex education program, emphasizing unsuccessful aspects in order to help other institutions avoid these pitfalls. The danger exists that a program in a public university might, in the interests of pleasing administration and legislature, become so diffused and watered-down as to be of little use to the students seeking information. Inadequate

teacher training also can result in a poor program. Hidden agendas may occur with 1 discipline attempting to prove itself superior to or more relevant than the others. Alternatives to the traditional professionally sponsored sex education programs include student-run programs backed up by guest lecturers and consultants, and the assembling of a sex information library. A bibliography for such a library is appended.—*A. de la Haba.*

8268. Baldwin, Bruce A. & Wilson, Robert R. (U North Carolina, Human Sexuality Information & Counseling Service) **A campus peer counseling program in human sexuality.** *Journal of the American College Health Association*, 1974(Jun), Vol 22(5), 399-404.—Discusses a peer-operated human sexuality counseling program on a state university campus, beginning with the organization, growth, and rapid acceptance by the students. 3 basic services are provided: (a) information-education, (b) crisis intervention-counseling, and (c) intermediary referral. Innovative directions taken by the service include the formation of a human sexuality library, small group discussions, and question-answer periods, which have resulted in the formation of a speaker's bureau within the service, a workshop on problem pregnancy counseling, the writing of educational materials. Student staff volunteers find the experience rewarding and sometimes, as a result, enter careers in the health professions.—*A. de la Haba.*

8269. Barber, Lucie W. (Union Coll, Character Research Project) **The counselor as general contractor: Implications for curriculum.** *Character Potential*, 1974(Oct), Vol 7(1), 22-27.—Outlines a developmental curriculum based on the model of personality developed by J. H. Peatling and A. L. Miller-Tiedeman (see PA, Vol 53:Issue 3), but written nontheoretically. The educational goals for 4 general levels of development are specified from the model. Existing and planned curricular materials are indicated. The ultimate goal is the integrated decision-maker who centers self in decision-making. This is the third of 4 papers in a symposium on career, choice, and the self (see PA, Vol 53:Issue 3).—*L. W. Barber.*

8270. Carter, Thomas P. (Dalhousie U, Halifax, Nova Scotia, Canada) **Crossword puzzles in the foreign language classroom.** *Modern Language Journal*, 1974(Mar), Vol 58(3), 112-115.—Presents a crossword puzzle variant for classroom foreign language instruction. Only the diagram is presented; students solicit clues orally in the foreign language. Alternatively, students construct clues for known answers. Listening comprehension and speech are thus substituted for the more restricted processes of reading and single-word encoding in the conventional crossword puzzle.—*C. A. Sherrard.*

8271. DeCecco, John P. & Richards, Arlene K. (San Francisco State U) **Growing pains: Uses of school conflict.** New York, NY: Aberdeen Press, 1974. 269 p. \$8.95.—Presents an analysis of the uses and misuses of the survival vs punishment techniques of experimental psychologists in contemporary educational systems. The currently used "survival teaching" methods which increase the frustration and self-destructive behavior of students are compared with the creative uses of educational "conflict" that emphasize the student's need to

think creatively and develop his own individual skills. Data from surveys of over 8,500 students, parents, and teachers are presented to demonstrate the breakdown of communication in schools today.

8272. DeVries, David L. & Edwards, Keith J. (Johns Hopkins U, Ctr for Social Organization of Schools) **Student teams and learning games: Their effects on cross-race and cross-sex interaction.** *Journal of Educational Psychology*, 1974(Oct), Vol 66(5), 741-749.—Evaluated the effects of 2 teaching techniques—student teams and instructional games—on the level of cross-race and cross-sex interaction in the classroom. Placing 110 7th graders on heterogeneous 4-member student teams created significantly greater cross-race and cross-sex helping and friendship. Team success did not have the predicted positive effect on cross-race and cross-sex interaction. Playing the instructional game had a marginal effect on cross-race helping only; however, the game-team combination considerably increased the incidence of cross-race and cross-sex interaction over that of games alone. (29 ref)—*Journal abstract.*

8273. DeVries, Rheta. (U Illinois, Chicago Circle) **Theory in educational practice.** In R. W. Colvin & E. M. Zaffiro (Eds), *Preschool education: A handbook for the training of early childhood educators.* New York, NY: Springer, 1974. xviii, 362 p. \$13.95.

8274. Diaz-Guerrero, Rogelio & Holtzman, Wayne H. (Ctr de Investigaciones Psicopedagogicas, Mexico City, Mexico) **Learning by televised "Plaza Sesamo" in Mexico.** *Journal of Educational Psychology*, 1974(Oct), Vol 66(5), 632-643.—Studied the effects of "Plaza Sesamo," a Spanish version of "Sesame Street," during its 1st telecast season in Mexico City. 173 children from 3 different lowest-class day-care centers, equally divided by ages 3, 4, and 5, and by sex, were randomly assigned to experimental and control groups. A battery of 9 tests was individually administered pre-, during, and posttelecast. Measures of attention to the program and of attendance were also taken. Highly significant differences were found for specific achievement tests dealing with general knowledge, numbers, letters, and words as taught by "Plaza Sesamo," and for 5 cognitive tests only indirectly related to "Plaza Sesamo," as well as for oral comprehension, a test completely independent of the program content. The largest differences occurred in 4 yr olds; the smallest in 3 yr olds.—*Journal abstract.*

8275. DiNubile, Linda & Wessler, Richard. (Living School, New York, NY) **Lessons from the Living School.** *Rational Living*, 1974(Spr), Vol 9(1), 29-32.—Describes an example of a lesson plan used at the Living School, which is operated by the Institute for Rational Living. The school's educational model is open, stressing acquisition of skills and emphasizing affective education. During a period called "Thoughts and Feelings," lessons deal with experiences shared by the pupils. Pivotal discussion questions help focus the students' attention on principles of rational living.

8276. Drabman, Ronald S. & Tucker, Richard D. (Florida Technological U) **Why classroom token economies fail.** *Journal of School Psychology*, 1974(Fal), Vol 12(3), 178-188.—Divides the reasons for clinical failures of classroom token economies into 3 groups: (a) problems associated with the token program itself, (b)

problems associated with the teacher, and (c) problems associated with the specific population on which the classroom economy is used. Methods of anticipating problems before they occur and ways of solving them should they occur are discussed. (20 ref)—*Journal abstract*.

8277. **Dubnoff, Belle.** *The impact of emotions on learning.* In B. C. Ring & D. R. Schrader (Eds), *Eleventh annual Distinguished Lectures Series in Special Education and Rehabilitation*. Los Angeles, CA: U Southern California, School of Education, 1973. vi, 101 p. \$3.

8278. **Fägerline, Ingemar.** (U Stockholm, Inst for the Study of International Problems in Education, Sweden) *Research on religious education in the Swedish school system. Character Potential*, 1974(Oct), Vol 7(1), 38-47. —Reports on 26 government-sponsored research studies which focus on analysis, development of methods, and educational evaluation. 3 results so far are of particular interest. (a) There was a low level of student interest in the instruction they had been receiving. (b) However, of 337 students 10-12 yrs old, who wrote story endings to stimulus pictures, about 1/2 identified loneliness as their concern, about 1/2 identified violence and suffering in the world as their concern, and several other themes indicate that questions of ethics and existence were of interest. (c) While 10-12 yr olds cannot deal with parables in an abstract sense, they can understand and even generalize parables which are adapted to concrete situations from their own life experiences.—*L. W. Barber*.

8279. **Felton, Gary S.** (Los Angeles City Coll) *Accountability in teaching.* *Education*, 1974(Fal), Vol 95(1), 25-31.—Describes an immensely successful responsibility-generating teaching format implemented in an undergraduate psychology curriculum. The format encourages and enables students to take full responsibility for their own learning experiences, to determine their own course content and process, and to be aware of and continually evaluate the process. Feedback from students was almost unanimously positive, learning was measurably maximized and internalized rather than memorized, class absenteeism was practically eliminated, and excitement about education was greatly enhanced. All of these outcomes reflect a meaningful experiential alternative to more conventional notions of role distinctions between the "expert" teacher and the "uninformed" student and possessiveness in the classroom (e.g., "my students," and "my teacher"). Stimulus is offered for extending this format to many disciplines at all levels of public education.—*Journal abstract*.

8280. **Gardner, R. C. et al.** (U Western Ontario, London, Canada) *Bicultural excursion programs: Their effects on students' stereotypes, attitudes and motivation.* *Alberta Journal of Educational Research*, 1974(Sep), Vol 20(3), 270-277.—Describes a bicultural excursion program designed to determine the extent to which students' (N = 434) stereotypes and attitudes were influenced by a brief 4-day excursion to another linguistic, cultural community. Results indicate that the students benefited by a greater appreciation of the other community, more favorable attitudes towards that group, and an increased interest in learning the language for integrative reasons.—*Journal abstract*.

8281. **Garzone, Tullio.** (State University Coll New York, Oswego) *Is reading for meaning a teachable skill for the beginning reader?* *Reading World*, 1974(Oct), Vol 14(1), 25-36.—Deals with the continuing debate: should beginning readers be taught only decoding skills, or should meaning be emphasized? Various levels of meaning are discussed and their place in beginning reading instruction is detailed.

8282. **Gendel, Evalyn S.** (Kansas State Dept of Health, Div of Maternal & Child Health, Topeka) *Introductory statement: Perspectives on human sexuality.* *Journal of the American College Health Association*, 1974(Jun), Vol 22(5), 356-360.—Examines current approaches to the subject of human sexuality and presents long- and short-range goals for sexuality education and counseling programs. An optimal program is described.

8283. **Golde, Roger A.** *Translation and teaching.* *Teachers College Record, Columbia U*, 1974(Sep), Vol 76(1), 101-117.—Examines that teaching method which involves active translation by the teacher of the lesson material from the teacher's personal language to that of the students. If the new facts or ways of thinking are not translated, they are less likely to get "connected up" with the rest of the learner's personal knowledge; the new material remains unavailable to the student and is forgotten. Teachers have shirked their duty to translate, traditionally leaving that to the student. Research directions are suggested for ascertaining the most appropriate (methodologically and ethically) means of translating so that this can become an active part of teaching.—*L. L. Green*.

8284. **Johns, Jerry L.** (Northern Illinois U, Reading Clinic) *Reading preferences of intermediate-grade students in urban settings.* *Reading World*, 1974(Oct), Vol 14(1), 51-63.—Explored whether or not inner-city children in the intermediate grades would prefer to read books depicting inner-city scenes rather than middle-class scenes. Ss were 597 4th, 5th, and 6th graders (199 in each grade) in 4 large midwestern cities. Ss preferred the middle-class settings. They also preferred to read stories which depicted characters with positive self-concepts and group interactions. (29 ref)—*C. K. Miller*.

8285. **Kaplan, Robert.** (Bell Lab, New Brunswick, NJ) *Effects of learning prose with parts versus whole presentations of instructional objectives.* *Journal of Educational Psychology*, 1974(Oct), Vol 66(5), 787-792.—Studied the effects of part vs whole presentations of objectives and text upon intentional and incidental prose learning. These effects were examined for 3 passage lengths with specific or general objectives and with 2 densities of objectives. Ss were 540 15-18 yr olds. Results show that presentation of objectives generally facilitated intentional learning with either increases or no reduction in incidental learning. The part presentation resulted in greater likelihood of learning intentional items than the whole presentation with no significant loss of incidental learning. Neither specificity nor density of objectives influenced performance. More inspection time was used for part presentations, longer passages, specific objectives, and larger densities.—*Journal abstract*.

8286. **Knobel, Mauricio.** (u Buenos Aires, Medical School, Argentina) *[Sexuality and sexual education in adolescence.]* (Span) *Revista de Psiquiatria y Psicología*

*Médica*, 1974(Jan-Mar), Vol 11(5), 287-293.—Adolescent sexuality often presents many conflicts for the individual and is frequently misunderstood by the educator. Sex education programs must consider their aims, methods, content, and potential pupils in relation to the process of sexual development during adolescence. (English summary)

8287. Knowles, Lyle & Timko, John. (Pepperdine U) **Evaluating educational programs in criminal justice: A technique for obtaining responses from participants.** *Journal of Police Science & Administration*, 1974(Mar), Vol 2(1), 107-114.—Describes a participant evaluation scheme for college-level courses. Results of using the scheme for various courses, instructors, and participants are presented.

8288. Kurzman, Marc G. (U Minnesota, Drug Information & Education Program) **Drug education: Boom or bust?** *Contemporary Drug Problems*, 1974(Spring), Vol 3(1), 61-69.—Discusses the goals and methodologies of drug education programs. Successful drug education efforts must take into account the nature of the specific target populations to which they are directed. Drug education is particularly needed by individuals in 3 categories—users and potential users, interveners, and drug decision makers. It is suggested that complete prevention of drug use is an unrealistic goal for drug education programs, which should aim instead at providing factual information on which rational drug-taking decisions could be based.—J. Kelly.

8289. Lane, David A. (Starcross School, London, England) **Drugs education: Questions and answers.** *Educational Research*, 1974(Feb), Vol 16(2), 107-111.—Reviews drug education studies and programs in England and concludes that current programs confirm existing prejudices and do not prepare individuals to cope with stress. Drug education based on facts and reason is advocated as part of the overall educational policy. (28 ref)

8290. Larson, Charles C. **Effects of self-reinforcement on paranoid behaviors: A case report.** *UMJC: University of Maryland Counseling & Personnel Services Journal*, 1973-1974, Vol 4(1), 13-21.—Describes the use of self-management techniques to eliminate the disruptive classroom behaviors of a 9-yr-old boy. 3 separate treatment phases are discussed—reducing maladaptive verbal behaviors, providing consistent self-reinforcement methods, and maintaining the effects of the self-reinforcement program.

8291. LeBow, Michael D. (Dartmouth Coll, Medical School) **Scheduling: An approach for students with difficulties in studying.** *Journal of the American College Health Association*, 1974(Feb), Vol 22(3), 242-247.—Discusses a behavioral modification program designed to help students whose academic workloads and lack of organized study habits result in crisis situations, sometimes leading to depression, anxiety, or apathy. Students are shown how to construct a schedule containing designated blocks of study time, usually 3-hr periods, and how to find a suitable study place, how to eliminate behavior that is incompatible with studying (daydreaming, etc). A specially tailored series of daily, weekly, and terminal goals are established with gradually increased progress. As the student completes the scheduled study

hours, he may reward himself with a favored activity. Other rewards of this program are the expectation of better grades, praise from the therapist who helped with the schedule, and — by means of careful record-keeping—actual visible signs of progress.—A. de la Haba.

8292. Lee, Patrick C. & Gropper, Nancy B. (Teachers Coll, Columbia U) **Sex-role culture and educational practice.** *Harvard Educational Review*, 1974(Aug), Vol 44(3), 369-410.—Proposes that for schools to serve the needs of both sexes during an era of changing sex-role attitudes, the construct of sex role is better conceptualized in cultural than in psychosocial terms. This allows for a more coherent analysis of the interactions of 3 cultural phenomena: formal schooling, femininity, and masculinity. Genetic differences, cultural differences and biculturalism are 3 models of cultural interaction which contribute to understanding the systematic relationship between sex-role culture and educational practice. From an educational perspective, sex-linked genetic differences are real but unstable and situational. By contrast, bicultural blendings are beneficial and increasingly prevalent. The task of the school is to provide equal access to traditionally sex-typed educational and cultural resources. Biculturalism occurs through the "hidden curriculum" of teacher-pupil role expectations, teacher modeling, and the distribution of classroom space and materials. (101 ref)—C. M. Franks.

8293. Londoner, Carroll A. (Virginia Commonwealth U) **Sources of educational funds as motivators for participating in adult secondary education.** *Adult Education*, 1974(Fal), Vol 25(1), 47-63.—Investigated (a) which, if any, attribute variables differentiated significantly between adult students who paid their own educational expenses and those whose expenses were paid by a public agency; and (b) which educational goals, when controlled by significant test variables, differentiated between the 2 groups. A questionnaire was administered to 134 urban adult students, 14% of whom had had all of their expenses paid. Analysis found that agency-paid Ss were more likely to rate the educational goals higher in importance than self-paid students. It is concluded that the Needs-Social System-Satisfaction model of adult participation may be inappropriate for explaining the high rating responses of agency-paid students compared to the expressed belief of public school administrators that these students are unmotivated to study and learn.—Journal abstract.

8294. Matheny, Kenneth B. & Edwards, C. Randall. (Georgia State U, School of Education) **Academic improvement through an experimental classroom management system.** *Journal of School Psychology*, 1974(Fal), Vol 12(3), 222-232.—Employed an experimental classroom management system involving contingency management, individualized instruction, peer assistance, and teacher adoption of the role of a manager of learning activities in 25 Appalachian classrooms. The system appeared to be responsible for raising the number of students who made 1 month's achievement in reading for 1 mo in the classroom from 27.5% to 57% over a 7-month periods. Student success was related to the degree to which teachers implemented the various aspects of the management system. The system was ineffective in influencing student attendance. Students profiting most

from the system tended to increase their sense of control over events happening to them. The study suggests that improvements in instruction may be accompanied by improvements in the academic achievement of students.—*Journal abstract.*

8295. Mayer, Richard E. (Indiana U) **Acquisition processes and resilience under varying testing conditions for structurally different problem-solving procedures.** *Journal of Educational Psychology*, 1974(Oct), Vol 66(5), 644-656.—Taught binomial probability problems to a total of 225 undergraduates in 2 experiments by emphasizing either calculating with a formula (Sequence F) or meanings of the variables in the formula (Sequence G). Experiments involved a multileveled transfer posttest administered after S read some of the instructional booklet and variational testing conditions (e.g., open vs closed book or speed vs power). A Treatment  $\times$  Post-test interaction (TPI) resulted in which Sequence G Ss excelled on interpretive items while Sequence F Ss excelled on near-transfer items. The TPI did not differ reliably among different points in learning or under different testing conditions. Results indicate the importance of S's initial assimilative set in acquiring new knowledge and the apparent resilience of the acquired structure.—*Journal abstract.*

8296. McClusky, Howard Y. (U Michigan) **The coming of age of lifelong learning.** *Journal of Research & Development in Education*, 1974(Sum), Vol 7(4), 97-107.—Contends that although the practice of adult education is marginal at present, its function is becoming central due to increasing nonwork time, rising levels of formal education, the effect of rapid and pervasive change, and growing confidence that individuals can learn at all ages. This situation has important implications for the education of children and youth as well as for adult programs. It is argued that a comprehensive systems approach involving all related agencies is necessary in order to meet the demands of lifelong learning.—E. S. Goodman.

8297. Mcidinger, Thomas. **A communication model for handling classroom problems.** *School Psychologist*, 1974(Apr), Vol 28(4), 13-15.—Discusses an alternative to the medical and behavior modification models of classroom intervention. The communication model assumes that there is a problem in the relationship between the student and the teacher, usually in terms of conflicting needs. Steps in applying the model are described.

8298. Meyers, Edward M. & Fink, Ira S. **Universities and communities: Planning together for a change.** *Educational Record*, 1974(Sum), Vol 55(3), 193-199.—Analyzes 5 examples of universities seeking community cooperation in planning their future actions. The circumstances under which a community-university organization should be formed and the guidelines for this formation are presented.

8299. Miller-Tiedeman, Anna L. (DeKalb High School, IL) **Deliberate decision-making education: A self-centering approach.** *Character Potential*, 1974(Oct), Vol 7(1), 12-21.—Describes a comprehensive 9-wk program of education in decision making, known as a Sense of Future career class, for high school students. The program is based on the Miller-Tiedeman Pyramid of Decision-Making. The assumptions, goals, tools, and

procedures of the program are described. This is the second of 4 papers in a symposium on career, choice, and the self (see PA, Vol 53:Issue 3). (18 ref)—L. W. Barber.

8300. Miller, D. Merrily; Dorow, Laura & Greer, R. Douglas. (Ctr for Human Development, New York, NY) **The contingent use of music and art for improving arithmetic scores.** *Journal of Music Therapy*, 1974(Sum), Vol 11(2), 57-64.—Examined the effect of pairing a nonpreferred activity with a preferred activity as a reinforcer for improving arithmetic scores, and also examined the effect of pairing activities on activity preference. The maintained level of arithmetic achievement during the postcheck suggests that preference for mathematical activities increased as a result of treatment. The contingent procedures may have caused arithmetic itself to become reinforcing. Results do not establish whether the pairing of a preferred with a less preferred activity modified the reinforcing effect of the less preferred activity. It can only be stated that the less preferred activity was effective as a reinforcer for arithmetic achievement, as were the combined activities. The successful use of a nonpreferred activity to reinforce an academic behavior suggests many possibilities for the classroom teacher. It can be inferred that an activity could be paired with an already reinforcing activity and over a period of time become reinforcing. Thus, new secondary reinforcers might be conditioned through the systematic pairing of activities.—F. O. Triggs.

8301. Miller, Jerry W. **Credit for nontraditional education: A conceptual framework for recognition.** *Educational Record*, 1974(Sum), Vol 55(3), 188-192.—Explores current developments in formal recognition of nontraditional study. To avoid quackery and worthless credentials, existing accrediting agencies should assess such study. At present, accrediting seems to be based on several assumptions: (a) Standard educational philosophy and practice should be the touchstone for nontraditional. (b) Traditional and nontraditional education must interact with one another. (c) Credit hours will be the usual form of educational unit. (d) Most degrees will result from traditional education. (e) Higher standards should not be required for nontraditional than for traditional education. 2 developments are necessary for appropriate assessment of nontraditional education: improved procedures for assessing experiential learning, and recommendations for awarding credit for informal learning. These developments are occurring via the activities of the Educational Testing Service and the American Council on Education.—R. Gutzke.

8302. Monahan, John. (U California, Irvine) **Toward undergraduate education in the interface of mental health and criminal justice.** *Journal of Criminal Justice*, 1974(Spr), Vol 2(1), 61-65.—Describes an undergraduate course on the interface of mental health and criminal justice, and analyzes the course's contribution to the field in terms of preparing future graduate and law students for specializing in this area. (16 ref)

8303. Nias, J. (U Liverpool, England) **Less fuzziness on openness?** *Elementary School Journal*, 1974(Nov), Vol 75(2), 79-86.—Discusses the "open education" of English schools. Topics include openness in the architecture of the school buildings, the "related to life" curricula.

community involvement in the construction of an integrated curriculum, and the fact that responsibility for education rests increasingly on the learners rather than on the teachers.

8304. O'Donnell, Dennis H. (Queen Elizabeth School, Bromyard, England) **Linked courses in Herefordshire.** *Educational Research*, 1974(Feb), Vol 16(2), 133-138. —Surveyed 273 past and present pupils of a mixed 4-form entry rural comprehensive school, using an attitude scale constructed from comments by 70 teachers and other educators and from material in the literature, to determine the relative success of the school-college linked course as part of the secondary curriculum. Responses were received from 80% of those questioned, and indicate highly favorable reaction by students to the course. It is concluded that such courses can be highly effective in introducing students to vocational work during their last few years of schooling.—J. B. Francis.

8305. Parker, Ronald K. (City U New York, Cognitive Development Project) **Theory in early education curricula.** In R. W. Colvin & E. M. Zaffiro (Eds), *Preschool education: A handbook for the training of early childhood educators*. New York, NY: Springer, 1974. xviii, 362 p. \$13.95.

8306. Pine, Gerald J. (U New Hampshire) **Existential teaching and learning.** *Education*, 1974(Fal), Vol 95(1), 18-24.—Notes that existentialism has become for many people an attractive and dynamic force in education. Despite the diversity which may be found among existential writers, common existential principles can be identified which have special relevance for those who hope to arrive at a more effective teaching approach through the medium of existentialism. From these existential principles one can derive teaching and learning principles, and conditions which facilitate freedom and responsibility among teachers and students.—*Journal abstract*.

8307. Pitkanen, Lea. (U Jyväskylä, Finland) **The effect of simulation exercises on the control of aggressive behaviour in children.** *Scandinavian Journal of Psychology*, 1974, Vol 15(3), 169-177.—Conducted an experiment with 2 matched, extremely aggressive groups (experimental, EG, and control, CoG) of 12 8-yr-old males each and with 1 criterion group (CrG) of 12 extroverted, well-controlled Ss. Between pretest (T<sub>1</sub>) and posttest (T<sub>2</sub>) videotape recording of behavior, the ExG was trained in social problem solutions on the purely cognitive level and in role-playing. It was hypothesized that the combination of cognitive training and observational learning with the aim of making children realize alternatives to aggression in coping with thwarting situations and their aftereffects would influence individuals with strong aggressive habits to abandon their aggressive reactions in favor of more constructive behavior. Results support the hypothesis with respect to aggression. For constructive behavior, the ExG maintained the same level of control of social behavior in T<sub>1</sub> and T<sub>2</sub>, while a significant drop occurred in the CoG, and the strategies of problem solution improved significantly in the ExG. In T<sub>2</sub>, the behavior of the ExG resembled more closely that of the CoG than the behavior of the CrG, as hypothesized. (24 ref)—*Journal abstract*.

8308. Presland, John L. (Warwickshire County Council, England) **In search of an "early teaching grammar."** *Educational Research*, 1974(Feb), Vol 16(2), 112-120.—Writing samples from 6-10 yr old children were analyzed into sentences, then classified into a number of structural patterns that could be given labels meaningful to young children. Further analysis of the most common patterns yielded subpatterns which could be arranged in an appropriate teaching sequence. Results show that an early teaching grammar was feasible. The implications for teaching and further research are discussed. (40 ref)—J. B. Francis.

8309. Presland, John. **Dealing with disturbing behaviour in the classroom.** *Association of Educational Psychologists' Journal & Newsletter*, 1973(Win), Vol 3(3), 28-32.—Attempts to show how disturbing classroom behavior can be effectively modified by systematic application of rewards and punishment. The account is general, summarizing behavior modification principles, and assumes that the help of a psychologist may be needed in determining how to apply these general principles to particular practical situations.—I. L. Zimmerman.

8310. Rees, Bill & Zimmerman, Steve. (U Idaho) **The effects of formal sex education on the sexual behaviors and attitudes of college students.** *Journal of the American College Health Association*, 1974(Jun), Vol 22(5), 370-371.—Gathered questionnaire data from 128 male and 102 female college students regarding sexual behavior and attitudes before and after a sex education course. Results indicate behaviors did not change but attitudes did.

8311. Samph, Thomas & Campbell, Patricia. (Syracuse U) **Open education: Students in transition.** *Elementary School Journal*, 1974(Oct), Vol 75(1), 37-41.—Compared the academic effects of open and traditional education. Group 1 Ss were 29 6th graders in a campus laboratory school (CLS). Group 2 consisted of 28 CLS pupils not in the 6th grade. Group 3 were 10 Ss who had applied for admission to the CLS but were not admitted. Group 4 were 170 Ss who did not apply. 3 hypotheses were tested: (a) Ss whose parents apply to have them admitted to the school do not differ in attitude or achievement from Ss whose parents do not apply. (b) CLS Ss have higher achievement scores than Ss in traditional schools. (c) CLS Ss have a more positive attitude toward school than Ss in traditional schools. The Stanford Achievement Test was used to measure differences among the groups, and attitudes were surveyed by bipolar adjective pairs. Results show no significant differences between Groups 1 and 2 (CLS pupils) compared with Group 3 (not in CLS) in teachers' marks or standardized test and attitude scores. No significant differences in teachers' marks were found between Groups 1, 2, and 3 compared with Group 4. The hypotheses were rejected on the level of significance.—A. J. Ter Keurst.

8312. Santeusano, Richard P. (Suffolk U) **Do college reading programs serve their purpose?** *Reading World*, 1974(May), Vol 13(4), 258-271.—Reviews research reports which measured the effectiveness of college reading programs in relation to grade point average. Most of the studies concluded that participation in a college reading program did not result in students

attaining significantly higher college grades. It is suggested that many college reading programs could be more effective if teaching were modified according to each student's needs. (43 ref)—C. K. Miller.

8313. Snow, Richard E. (Stanford U. School of Education) **Representative and quasi-representation designs for research on teaching.** *Review of Educational Research*, 1974(Sum), Vol 44(3), 265-291.—Suggests that the study of school learning requires adapting methodology to match the complexity of students and situations in schools, before the molecular mechanisms of laboratory learning can be traced in the molar behavior of school learning. It is hoped that in the future, alternative kinds of research designs will be developed and various hybrids will be invented, so that the advantages and disadvantages of each can be counterbalanced and more clearly understood. (2½ p ref)—P. D. Leedy.

8314. Strom, Robert & Johnson, Aileen. (Arizona State U) **The parent as a teacher.** *Education*, 1974(Fal), Vol 95(1), 40-43.—Describes a preschool parent involvement program which uses a parental self-assessment (Parent As A Teacher, or PAAT) accompanied by a questionnaire reflecting the child's perception of parental behavior along the same dimensions: control, creativity, frustration, play, and teaching-learning. Analysis of each dimension identifies parent child-rearing strengths and weaknesses. Results of tests with Anglo-Americans, blacks, and Mexican-Americans show significant self-concept gains by mothers ( $N = 70$ ) and their children after an 8-wk program utilizing PAAT as a premeasure, postmeasure, and diagnostic measure along with training sessions focusing on the use of toys as an instructional medium for home curriculum.—*Journal abstract*.

8315. Tobias, Sigmund & Duchastel, Phillippe C. (City Coll., City U New York) **Behavioral objectives, sequence, and anxiety in CAI.** *Instructional Science*, 1974(Oct), Vol 3(3), 231-242.—Randomly assigned a total of 117 Ss to a group either receiving or not receiving instructional objectives and to a logical or random instructional sequence. Performance measures and test and state anxiety scores were obtained. Regression analysis indicates that, as expected, objectives had no effect, whereas the logical sequence reduced program errors and increased achievement. Test anxiety was related to program errors, but not to achievement. Expected interactions among objectives, sequence, and anxiety were not significant. (30 ref)—*Journal abstract*.

8316. Ulmer, Curtis. (U Georgia, Coll of Education) **Remediation as a lifelong learning activity.** *Journal of Research & Development in Education*, 1974(Sum), Vol 7(4), 45-56.—Examines the social and philosophical setting for illiteracy programs and the present status of remedial lifelong education in the US. It is proposed that priorities in public remedial education must shift from recruitment and enrollment to establishment of a program staffed by professional adult educators, operating independently of childhood education, and having a learner-centered orientation. A critique of present programs, recommendations for improvement, and implications for public schools are discussed. (23 ref)—E. S. Goodman.

8317. Umana, Roseann F. & Schwebel, Andrew I. (Columbus Area Community Mental Health Ctr, Family

Crisis Unit, OH) **Academic and behavioral changes in tutored inner-city children.** *Community Mental Health Journal*, 1974(Fal), Vol 10(3), 309-318.—Conducted a study of 60 4th-, 5th-, and 6th-grade children to determine the effectiveness of short-term tutoring in producing improvement in tutored children's academic performance and classroom behavior; the roles of tutor support and supervision and volunteering on the part of tutored children were also examined. Ss were divided into 4 groups: Group 1 Ss were tutored by undergraduates fulfilling a psychology course requirement; Group 2 Ss were tutored by undergraduates who volunteered as part of a community project; Group 3 Ss requested but were not assigned tutors; and Group 4 Ss were those who most closely matched Ss assigned to the previous groups. The improvement by Group 1 children in the 3 academic areas assessed by the Wide Range Achievement Test (WRAT) suggests that with support undergraduates can be effective tutors for inner-city children. Improvement on the WRAT by children who requested but did not receive tutors suggests that children's motivation to seek a tutor is a significant element in bringing about academic improvement. (18 ref)—M. E. Pounsel.

8318. Warren, Jonathan R. (Educational Testing Service, Berkeley, CA) **Adapting instruction to styles of learning.** *Findings*, 1974, Vol 1(1), 1-5.—Discusses the implications of field-dependent vs field-independent cognitive styles for educational situations. Parallels between instructional style preferences (student-centered vs instructor-centered) and cognitive styles are noted. Students preferring student-centered instruction and field-dependent students both tend to prefer socially oriented studies, to be indecisive about career, and to desire a supportive educational environment. Students preferring instructor-centered instruction and field-independent students both tend to prefer scientific fields, lectures rather than discussions, and to be specific in career choices. Similar parallels for teachers' preferences are reported. It is concluded that differing styles in learning and teaching can be identified consistently and used as guides to instructional procedures.—R. Hall.

8319. Whisler, Nancy G. (Richmond Unified School District, CA) **Visual-memory training in first grade: Effects on visual discrimination and reading ability.** *Elementary School Journal*, 1974(Oct), Vol 75(1), 50-54.—Examined the value of training children in visual discrimination of letters and words in learning to read. Ss were pupils from a middle-class background in 12 1st-grade classes in 7 schools. 143 controls received only basic reading instruction. 152 experimental Ss also received, for 15 wks, 15 min of daily training in visual memory. This training included the flash-card technique that required the Ss to remember the specific words and letters they saw and to indicate on record sheets what they remembered. The program included discrimination among words and letters with similar visual images. Experimental Ss had lower initial mean reading scores. Experimental Ss had higher scores at the end of the program ( $p < .01$ ). The Stanford Achievement Test of reading measured the performance of both groups. Experimental Ss were superior to controls in performance or improvement on total reading abilities, the word reading subtest, and the paragraph meaning subtest.—A. J. Ter Keurst.

8320. White, Mary A. (Teachers Coll, Columbia U) **Is recitation reinforcing?** *Teachers College Record, Columbia U*, 1974(Sep), Vol 76(1), 135-142.—Teaching effectiveness may be determined by asking questions in class (recitation), by checking pupils' homework, and by administering teacher-made or standardized tests. Recitation offers the greatest likelihood of positive reinforcement, and is the least punishing to the teacher. This explains recitation's popularity among classroom teachers. It is suggested that one ought to probe the exigencies of the educational systems that foster (reinforce) behaviors of school personnel that are opposed to effective teaching.—L. L. Green.

8321. Wilson, John. **Foundations of research in religious education.** *Character Potential*, 1974(Oct), Vol 7(1), 48-51.—Discusses the problem of asking the right questions before accumulating empirical data which may be useless. The reader is asked to consider the priority and importance of validity and the meaning of words like religion, morality, or education. The relevant and irrelevant must be distinguished, and the problem of inference must be kept in sight.

8322. Wishard, Armin. (Colorado Coll) **Academic report: Term papers or projects?** *Modern Language Journal*, 1974(Mar), Vol 58(3), 118-119.—Describes an informal experiment in teaching method. Works of art were elicited as an alternative to papers in a college literature course. Response was rated "excellent" in extent and quality. A wide variety of projects were submitted, including sculpture, music tapes, collages, book jacket designs, paintings, poetry, and films. It is concluded that the method achieves more expanded concepts and liberated expression in students who write papers with difficulty.—C. A. Sherrard.

8323. Witz, Klaus G.; Goodwin, David R. & Easley, Jack A. (U Illinois) **A cognitive model for the evaluation of units of instruction.** *Instructional Science*, 1974(Oct), Vol 3(3), 307-326.—Describes a model that incorporates the child's preexisting systems of cognitive structures. It is suggested that the example demonstrates the relevance of these structures and illustrates the heuristic value for evaluating and designing instructional procedures of inventing structures to account for organized aspects of human behavior. (40 ref)

8324. Woods, John & Walton, Douglas. (U Victoria, British Columbia, Canada) **Informal logic and critical thinking.** *Education*, 1974(Fal), Vol 95(1), 84-86.—Attempts to clarify the role of critical thinking in education, and suggests resources for the implementation of effective critical thinking programs in curricula. 8 major resource areas are outlined, accompanied by bibliographical references. It is suggested that the area of informal fallacies, and with it the area of critical thinking, has suffered from an underdevelopment of underlying theory, despite the value of practical work in these areas. As a step towards remedying this deficiency, an underlying concept of sound argument is outlined. (19 ref)—*Journal abstract*.

8325. Woolfolk, Anita E. & Woolfolk, Robert L. (Rutgers State U, Douglass Coll, New Brunswick) **A contingency management technique for increasing student attention in a small group setting.** *Journal of School Psychology*, 1974(Fal), Vol 12(3), 204-212.—54

1st, 2nd, and 3rd-grade children previously identified as consistently inattentive participated in an extraclassroom treatment program comparing 3 conditions. In the E condition, attention was reinforced by making the earning of token points (exchangeable for rewards) contingent upon appropriate responses to a signal detection task embedded in the lessons. C1-condition Ss participated in the same lessons without the token system, while C2 Ss remained in their regular classrooms throughout the study. 4 participating classroom teachers received brief training in behavior modification techniques for maintaining student attention. Ss in the E condition were found to be significantly more attentive during the treatment lessons. Changes did not transfer to the regular classroom, however, and training for teachers did not affect in-class attention scores of Ss.—*Journal abstract*.

8326. Yawkey, Thomas D. & Aronin, Eugene L. (Wisconsin Early Childhood Ctr, Madison) **Fostering relevance with career education in the elementary school.** *Education*, 1974(Fal), Vol 95(1), 44-50.—Notes that career education and programs related to vocational development are steadily increasing in the elementary schools. 3 premises underlying career education with 5-12 yr olds are discussed: (a) There is a great need for relevancy of school experience to the world of work. (b) Career activity and maturity results from developmentally unfolding characteristics beginning with the early years. Since the elementary school has a major function in helping the child's development, it should be concerned with the vocational aspects of development. (c) Since the elementary school and career education have mutual objectives and areas of concern, the elementary school should have a major part in carrying out career development objectives. (17 ref)—*Journal abstract*.

### Academic Learning & Adjustment & Achievement

8327. Asher, Steven R. & Markell, Richard A. (U Illinois) **Sex differences in comprehension of high- and low-interest reading material.** *Journal of Educational Psychology*, 1974(Oct), Vol 66(5), 680-687.—Investigated whether sex differences in reading comprehension are affected by variations in the interest level of the material. 49 male and 38 female 5th graders' interests were assessed using a picture-rating technique. Each child then read material that corresponded to his or her high- and low-interest areas. The cloze procedure was used to measure comprehension. Results indicate that boys read as well as girls on high-interest material but that they were significantly poorer readers of low-interest material. (23 ref)—*Journal abstract*.

8328. Balasa, Michael A. (Washington State U) **Vocabulary conceptualization and reading.** *Reading World*, 1974(May), Vol 13(4), 272-275.—Conducted a study to determine how 298 5th graders, classified by IQ, conceptualize words. The Gates-MacGinitie Reading Tests were given for subtest scores of comprehension and vocabulary. Ss who chose function responses, which refer to use or action of a word, rather than conceptual responses scored low on reading achievement tests. Conceptualization of test words was varied, indicating that a child's understanding of words has to be

reinterpreted according to his ability to conceptualize.  
—C. K. Miller.

8329. Barton, K.; Bartsch, T. & Cattell, R. B. (U California, Davis) **Longitudinal study of achievement related to anxiety and extraversion.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 551-556.—Administered the High School Personality Questionnaire to over 300 6th- and 7th-grade children. 3 mo later the Ss completed standardized achievement tests in social studies, science, mathematics, and reading. Treating the achievement scores as dependent variables and various personality scales as independent variables, analyses of variance were performed for each achievement area. Results indicate several significant main effects and interactions, but perhaps most important was the finding that extreme scores on either end of the extraversion or anxiety dimensions were related to high achievement. Possible implications for teachers, counselors, or researchers are discussed. (15 ref)—*Journal abstract*.

8330. Brans, Marvin & Kershner, Keith. (U Delaware) **Differential gains in achievement among Wilmington, Delaware public schools.** *Journal of Instructional Psychology*, 1974(Spring), Vol 1(2), 35-39.—Made interschool comparisons of average gains in achievement in reading, language, and arithmetic for Grades 4, 6, 7, and 10 by converting test scores into grade equivalents. Results show differential gains in achievement among the schools for all grades as well as diminishing gains, especially from the 6th grade, where the average pupil performed at a 5th-grade level, to the 10th grade where he performed at a 6-grade level.—*Journal abstract*.

8331. Coslin, P. G. & Dufoyer, J-P. (U René-Descartes, Genetic Psychology Lab, Paris, France) **[Study of achievement levels in psychology and statistics during first term of students' enrollment for the master's degree in psychology.]** (Fren) *Bulletin de Psychologie*, 1973-1974, Vol 27(13-14), 675-680.—Studied the adequacy of pre-university preparation in statistics/mathematics and genetic psychology/methodology of child psychology among 41 beginning graduate students (35 females, 6 males) enrolled in a master's program in genetic psychology. The independent variables were age, university in which enrolled, and pre-university preparation in the 2 subject areas; the dependent variable was knowledge of the 2 areas. Ss responded to an orally presented 20-item questionnaire designed to measure their knowledge of the 2 general categories. Overall, Ss were significantly weaker in knowledge of statistics/mathematics. A significant loss in knowledge (material taught vs material retained) was evident in both fields. This was attributed, in part, to the structure of the curriculum which frequently did not facilitate continuing hierarchical presentations in 1 subject area throughout a program or liaison between subject areas within a program.—Z. M. Cantwell.

8332. Denney, Douglas R. (U Kansas) **Relationship of three cognitive style dimensions to elementary reading abilities.** *Journal of Educational Psychology*, 1974(Oct), Vol 66(5), 702-709.—Compared 80 good and poor readers in grades 2-5 on 3 cognitive style dimensions—conceptual style preferences, cognitive tempos, and attentional styles—which were assessed with the Conceptual Styles Test, Matching Familiar Figures Test, and

Fruit Distraction Test. Attentional style measures distinguished poor and good readers better than the other cognitive style measures. However, another set of scores aligned with but not identical to the attentional style measures were even more highly related to reading. These scores reflected children's skills at sequentially transposing information from visual to verbal channels. Results are considered in light of the maturational lag hypothesis. (15 ref)—*Journal abstract*.

8333. Descombes, J.-P. (U Lausanne, Inst de Psychologie Appliquée, Switzerland) **[Relations among interests, aptitudes, and academic achievement of 129 Swiss students.]** (Fren) *Revue de Psychologie Appliquée*, 1974, Vol 24(3), 135-147.—Reports correlations between scales of the Kuder Preference Record (Vocational Form C), and the Flanagan Aptitude Classification Tests (FACT). Low correlations were found between the Flanagan and Kuder scales and Ss' grades in 10 academic courses. Success in philosophy, Greek, English, and chemistry were conspicuously not susceptible to prediction.—K. J. Hartman.

8334. Forslund, Morris A. & Hull, Ronald E. (U Wyoming) **Teacher sex and achievement among elementary school pupils.** *Education*, 1974(Fall), Vol 95(1), 87-89.—Tested the hypothesis that both boys and girls in the upper elementary grades achieve at a higher level under male than female teachers. 1,322 male and 1,350 female 6th graders, taught by a total of 47 male and 48 female teachers, were given the Science Research Associates Achievement Series (Form D) and the Lorge-Thorndike Intelligence Test. Analysis of covariance indicates that with IQ held constant, boys achieved at a significantly higher level in science than girls, and girls achieved at a significantly higher level in language arts, regardless of sex of teacher. No significant differences were found with respect to arithmetic, reading, or composite test scores. It is concluded that sex of teacher does not significantly affect achievement of either boys or girls at the upper elementary level.—*Journal abstract*.

8335. Goulet, L. R.; Williams, Kerry G. & Hay, Carol M. (U Illinois) **Longitudinal changes in intellectual functioning in preschool children: Schooling- and age-related effects.** *Journal of Educational Psychology*, 1974(Oct), Vol 66(5), 657-662.—Determined the mental age (MA) and IQ (Peabody Picture Vocabulary Test) of 3 samples of 63 nursery school children varying in chronological age (CA; mean ages at 1st testing were 46.5, 52.2, and 56.8 mo) at 2 points in the school year. The testing points were chosen to conform to a design which permitted the non-CA-related influences of schooling to be estimated. Results reveal that both CA and amount of time in school were positively related to MA. A similar relation between IQ and length of schooling was also found. The direct and indirect influences of schooling on intellectual functioning and potential sampling biases inherent in the norming procedures for available standardized tests are discussed.—*Journal abstract*.

8336. Harris, Edward E. (Indiana U, Indianapolis) **Learning and behavior patterns among high risk students.** *Journal of Instructional Psychology*, 1974(Spring), Vol 1(2), 40-45.—Investigated the relationship between learning patterns and classroom behavior patterns of 84

high risk students. Findings indicate that most students maintained poor academic records throughout the term. Variations in teaching methods had a different impact on degrees of academic success and delinquent classroom behaviors. No one teaching technique was found to be inherently superior. (16 ref)—*Journal abstract*.

8337. **Hogenson, Dennis L.** (Minnesota Public Schools, Robbinsdale) **Senior neurosis: Cause-effect—or derivative.** *School Psychologist*, 1974(Apr), Vol 28(4), 12-13.—Discusses the rare phenomenon of the high school student who has made average or better progress until his senior year and then fails. High school graduation may be symbolic of a feared developmental task and thus acquires very negative characteristics. Such problems are seen as difficult to modify.

8338. **Holmstrom, Engin I.** (American Council on Education, Office of Research, Washington, DC) **Low achievers: Do they differ from "typical" undergraduates?** *ACE Research Reports*, 1973(Sep), Vol 8(6), 44 p.—Compared the educational experience and progress of undergraduates who were low and high achievers in secondary school. Ss were 63,510 students selected from an initial freshman group of 185,848 surveyed in the Cooperative Research Program of the American Council on Education. Results indicate that the proportions of men, nonwhites, and older students were higher among low achievers in secondary schools. Low achievers were more likely than high achievers to aspire to careers in business, less likely to be motivated by the academic quality of the college they attended, more likely to fail one or more courses and to require more than 4 yrs for the baccalaureate. Results also suggest that the highly competitive academic environment of universities may discourage or frustrate low achievers and that they might better attend small, highly selective 4-yr colleges.—*J. B. Francis*.

8339. **Johns, Jerry L.** (Northern Illinois U) **Concepts of reading among good and poor readers.** *Education*, 1974(Fal), Vol 95(1), 58-60.—On the basis of their responses to the question, "What is reading?" 53 4th graders and 50 5th graders were placed in 1 of 5 categories along a continuum representing meaningful-nonmeaningful concepts of reading. Ss were also classified as good and poor readers based on scores on the Comprehension subtest of the Gates-MacGinitie Reading Tests. Results of chi-square analysis support the hypothesis that a significantly greater number of meaningful definitions of reading would be given by good readers. However, results should be interpreted with caution because of the classification methods used and the large number of uncontrolled variables. Methodological issues are discussed.—*A. Olson*.

8340. **Jones, A. D. & Seaborne, A. E.** (London School of Economics & Political Science, England) **Birth order and social class in a London college.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 467-468.—Correlations between birth order and attendance at a London college were somewhat at variance with similar American studies. Differential social-class patterns may play a part in this difference.

8341. **Jorgenson, Gerald W. & Hyde, Elizabeth M.** (Case Western Reserve U) **Auditory-visual integration and reading performance in lower-social-class children.**

*Journal of Educational Psychology*, 1974(Oct), Vol 66(5), 718-725.—Examined the relationship of auditory-visual integration and reading performance (Gates-MacGinitie Reading Test) in 86 1st and 2nd graders from primarily lower-class backgrounds. The effects of grade level, sex, IQ, and single-modality auditory and visual functioning (measured by 2 subtests of the Illinois Test of Psycholinguistic Abilities) were examined as possible moderating variables. Results suggest that auditory-visual integration ability in this sample was developmental; however, the Ss functioned at a lower level than would be expected of middle-class Ss. Significant correlations were obtained between auditory-visual integration and reading vocabulary in the total sample and in the 2nd-grade boys. Although neither IQ nor single-modality ability was a significant contributor to this relationship, grade level, sex, and socioeconomic status did make significant contributions.—*Journal abstract*.

8342. **Leeds, Donald S.** (Kean Coll, Union, NJ) **Sociology of reading: Social and cultural factors.** *Reading World*, 1974(May), Vol 13(4), 318-333.—Reviews literature on reading as a process and an experience. Familial influences, social class, and social status have been reported as factors in the growth of a child's ability to learn to read. (42 ref)

8343. **Reed, Roseanne & Meyer, Robert G.** (U Louisville) **Reduction of test anxiety via autogenic therapy.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 649-650.—To evaluate the role of active and passive instructions to Ss given abbreviated training with J. H. Schultz and W. Luthe's (1959) 6 autogenic exercises, 18 female college students self-referred for test anxiety completed the Test Anxiety Questionnaire and the Wonderlic Personnel Test. Analyses of repeated measures showed treatment decreased test anxiety scores somewhat more for active Ss; 78% of Ss reported high relaxation was achieved and improved performance.—*Journal abstract*.

8344. **Richards, James M.** **A simulation study of the use of change measures to compare educational programs.** *Center for Social Organization of Schools Report, Johns Hopkins U*, 1974(Oct), No 183, 12 p.—Used artificial data to assess the correlation between several estimates of average student change in various schools and the "true" impact of those schools. Results indicate that all estimates involving pretest-posttest differences measured school impact with reasonable accuracy. It is considered important to measure change over the entire course of learning, however, and not just over the later stages of learning. The correlations between change scores and other school characteristics reflect with reasonable accuracy the relationships between those characteristics and impact, but will be large only when the underlying relationships are substantial. It is concluded that simple gain scores measure the true situation about as accurately as other change estimates, are easier to compute, and probably are more meaningful to nonresearchers.—*Journal abstract*.

8345. **Roberts, Nancy.** (Boston U) **A computer system simulation of student performance in the elementary classroom.** *Simulation & Games*, 1974(Sep), Vol 5(3), 265-290.—Describes a computer simulation, DYNAMO, which examines the effect of a number of variables

on student performance in an elementary classroom. In a dynamic system with an emphasis on feedback, the following variables were studied: student's goals and personality, amount of teacher help, student's learning rate and intelligence, and teacher's expectations. Detailed results of a number of computer runs looking at the interaction between variables are presented. 3 variables emerged as most important: student's goals, teacher expectancy, and the amount of extra help given by the teacher. Suggestions are made for the use of models in deepening the educational understanding of those involved in teaching.—D. E. Anderson.

8346. Robinson, Jack E. & Gray, Jerry L. (Old Dominion U) **Cognitive style as a variable in school learning.** *Journal of Educational Psychology*, 1974(Oct), Vol 66(5), 793-799.—Studied the relationship between cognitive style (assessed with verbal analogy items) and school learning of 258 5th graders. Findings indicate that cognitive style was differentially related to school learning for both boys and girls after variance attributed to verbal and nonverbal IQ was taken into consideration in the data analysis. Results suggest that the relationship between a particular style and a particular school-learning variable may be an important consideration prior to assigning children to differential instructional treatments or to instructing children in the use of a particular style. (19 ref)—*Journal abstract*.

8347. Rothkopf, Ernst Z. & Billington, Marjorie J. (Bell Lab, Murray Hill, NJ) **Indirect review and priming through questions.** *Journal of Educational Psychology*, 1974(Oct), Vol 66(5), 669-679.—Conducted 3 experiments with a total of 264 undergraduates and 108 high school seniors to determine (a) whether attempts to answer a question facilitate the retention of other topically related material that is not directly relevant to the original question (indirect review) and (b) whether performance on a test item is better if a question topically related to the test item has recently been asked (priming). Evidence for indirect review was obtained following study of a 6,000-word text using adjunct questions. No priming effects were observed. The indirect review phenomenon suggests that searching one's memory to answer a question strengthens or makes more available a system of semantically related memory features broader than the memory requirements for the initial question.—*Journal abstract*.

8348. Swartwout, J. Baxter. (Private practice, Latham, NY) **Vision and perception related to scholastic achievement.** *Journal of the American Optometric Association*, 1974(Aug), Vol 45(9), 1074-1080.—Describes vision as an information-processing system which is brought to a state of readiness for handling printed symbols through development and learning; a variety of sensory, motor, and integrative experiences are the data necessary to bring meaning to the printed page. Several visual physiological problems are described which may interfere with classroom performance. Observations of eye movement and eye teaming deviations which can be made by optometrist or teacher are discussed. It is suggested that inappropriate outward classroom behav-

iors are often only symptoms of underlying visual problems.—*Journal abstract*.

8349. U'Ren, Richard C. (U Oregon, Medical School, Psychiatry Outpatient Clinic) **The nature of change at West Point.** *Journal of the American College Health Association*, 1974(Feb), Vol 22(3), 185-188.—Discusses a program designed to reduce stress in the early training period of West Point cadets. Comparisons between 1970 and 1971 psychiatric casualties showed a reduction in anxiety and depression symptoms, fewer suicide gestures, and fewer gastrointestinal problems after changes were made in the 1971 program. Changes instituted included more careful selection and training of upperclassmen assigned to cadet training; less upperclass harassment, especially at meal times; providing an initial psychological acclimatization period; and adoption of a more flexible resignation policy. This shift in focus produced a marked reduction in morbidity.—A. de la Haba.

8350. Walberg, H. J. & Singh, R. (U Illinois) **Teacher quality perceptions and achievement in Rajasthan.** *Alberta Journal of Educational Research*, 1974(Sep), Vol 20(3), 226-232.—Social studies achievement test scores of 804 10th-grade Indian students were regressed on their ratings of their teachers, IQ scores, sociometric nominations, socioeconomic status, sex, and school characteristics, plus several product terms and quadratic forms of the variables. The resulting 6-term regression model was cross-subject validated on 452 science students. The analysis suggests that IQ and the teacher rating can each be divided into 2 parts, the class mean and the individual student's deviation from it, both of which were related to individual learning.—*Journal abstract*.

8351. Westbrook, Franklin D. (U Maryland, University Counseling Ctr) **Self-management: An academic approach to fostering personal adjustment.** *UMJC: University of Maryland Counseling & Personnel Services Journal*, 1973-1974, Vol 4(1), 8-12.—Describes the use of self-management principles, which are derived from learning theory, in facilitating college students' personal and academic adjustment and skills. Self-management includes the identification of problem behaviors, assessment of the behavior, reinforcement identification, systematic change of reinforcement, and the gradual elimination of the behavior.

8352. Yawkey, Thomas D. & Jantz, Richard K. (U Wisconsin, Madison) **Differential effects of intelligence, race, SES, and sex variables on arithmetic achievement test performance.** *Journal of Instructional Psychology*, 1974(Spr), Vol 1(2), 2-10.—Investigated the effects on selected factors of (a) IQ levels, (b) race, (c) socioeconomic status, and (d) socioeconomic groups based upon performance and gains in performance using standardized arithmetic test scores for 3,536 Ss attending an urban midwestern school district between 1968 and 1971. Using analysis of covariance, statistically significant differences were found in the levels of performance on all factors. Using mean achievement scores, children with IQ levels of 101 and above significantly differed from children with IQs of 100 and below. However, statistically significant differences were not found for gains in performance on any of the factors examined. (23 ref)—*Journal abstract*.

## Special Education

8353. Azam, R. **Learning handicaps and remedial education: A comprehensive approach.** *Association of Educational Psychologists' Journal & Newsletter*, 1973(Win), Vol 3(3), 3-12.—Discusses a comprehensive remedial education program to control and minimize the problems facing children with learning handicaps. Minimum essential for such a service is proper planning, with maximum emphasis on coordination of resources, early education, and appropriate remedy at the right time. The potential contributions of psychological services to such a program are discussed. (44 ref)—I. L. Zimmerman.

8354. Booth, Tony; Moseley, David & Robertson, John. (Inner London Education Authority, England) **A discussion of attitudes, practices and types of organisation which affect the progress of children with special problems.** *AEP (Association of Educational Psychologists) Journal*, 1974(Spring), Vol 3(6), 37-52.—Examines the scope for improving services for children with special learning problems under the following headings: (a) teacher expectations of needs and capacities of children and their parents; (b) teaching methods in normal and special groups; (c) record keeping and educational guidance; (d) curriculum content; (e) authority structure and ethos within schools, and (f) special educational services. The 1st 5 of these concern changes within schools and the 6th involves the part played by the local authority in organizing and supporting school services for children with special needs.—*Journal summary*.

8355. Braunstein, Suzie & Biederman, Sherry. (U Maryland) **From speech pathologist to language classroom teacher: What does it take?** *Language, Speech & Hearing Services in Schools*, 1974(Oct), Vol 5(4), 245-252.—Describes the transitional changes involved when a speech pathologist becomes teacher-clinician of a language class. The personal changes, the task planning and administration, the aide's responsibilities, the material and equipment, and reporting of children's performance are discussed.

8356. Carroll, H. C. & Hibbert, F. G. **The perceptual ability of a class of partially sighted children.** *Association of Educational Psychologists' Journal & Newsletter*, 1973(Win), Vol 3(3), 17-21.—Surveyed the perceptual ability of 13 partially sighted school children on the following measures: Williams Intelligence Test for Children with Defective Vision, Frostig Developmental Test of Visual Perception, Bristol Social Adjustment Guides, Burt (Re-arranged) Word Reading Test, and the Staffordshire Arithmetic Test. The younger Ss were more intelligent, had better perceptual ability, and were not nearly as backward as the older pupils. Results suggest that in order to avoid deterioration, partially sighted children should be given special education from at least age 5. (18 ref)—I. L. Zimmerman.

8357. Cook, Rose. (United Cerebral Palsy of Denver, CO) **Sex education program service model for the multihandicapped adult.** *Rehabilitation Literature*, 1974(Sep), Vol 35(9), 264-267.—Describes the origin and development of a sex education program for the 120 enrollees of the United Cerebral Palsy Center in Denver. At present the program has 7 components: recognition of need, personal awareness, board support, staff

training, parental involvement, development of a variety of relevant program services, and evaluation of the program. (19 ref)

8358. Cooper, Jean; Moodley, Molly & Reynell, Joan. (U London, Wolfson Ctr, England) **Intervention programmes for preschool children with delayed language development: A preliminary report.** *British Journal of Disorders of Communication*, 1974(Oct), Vol 9(2), 81-91.—Describes 2 intervention programs for preschool children with delayed language development. Both programs are based on the same theoretical model, with the focus on the intellectual aspects of language. In the language clinic program parents and child are seen every 6 wks by a speech therapist for ongoing advice on how to help the child's language development in daily living at home. In the language classes the children attend for half days every day, under the direction of a qualified teacher. The programs and assessment procedures are described, and tentative findings after a 1-yr trial are reported. The large majority of the children in both programs ( $N = 68$ ) made accelerated progress in receptive and expressive aspects of language development.—*Journal abstract*.

8359. Crabtree, Margaret & Peterson, Elizabeth. (Baylor Coll of Medicine, Div of Audiology & Speech Pathology, Houston, TX) **The speech pathologist as a resource teacher for language/learning disabilities.** *Language, Speech & Hearing Services in Schools*, 1974(Oct), Vol 5(4), 194-197.—Describes the way a speech pathologist functioned as a resource teacher to provide extensive remedial treatment of a child with language development problems. S was a 10-yr-old girl in the 3rd grade. Improvement was clearly observed 1 yr after her enrollment in the resource program.

8360. Dublinske, Stan. (Vermont State Dept of Education, Div of Special Education, Montpelier) **Planning for child change in language development/remediation programs carried out by teachers and parents.** *Language, Speech & Hearing Services in Schools*, 1974(Oct), Vol 5(4), 225-237.—Describes an intervention procedure to increase communication among speech pathologists, teachers, and parents so that controlled instructional activities can be effectively applied to specific problems.

8361. England, Gene. (Behavioral Sciences Inst, Carmel, CA) **Structuring remediation regardless of setting.** *Language, Speech & Hearing Services in Schools*, 1974(Oct), Vol 5(4), 204-211.—Describes a behavioral model for remedial treatment of pupils with learning problems. The sequence of the program to be learned is the stimulus variable. The response rate and the accuracy rate are the response variables. Positive reinforcers include tangible objects, social reinforcers, and S's verbal self-reinforcement. The program can be revised on the basis of the performance of a large number of children. It is self-paced and can be given to many pupils when assisted by trained aides. Cross-comparison of pupils' response variables may also serve as criteria of teacher's evaluation.—S. S. Liu.

8362. Fuller, Renée. **Breaking down the IQ walls: Severely retarded people can learn to read.** *Psychology Today*, 1974(Oct), Vol 8(5), 97-102.—Describes a system to teach reading to children who experience difficulty

with traditional methods. The letters are constructed using a circle ("ball"), a line ("stick"), and an angle ("bird"). Reading is begun when 2 letters are learned. The stories are science fiction and grow in complexity as the child learns. The method was used to teach retarded students with IQs of 33-72. The Ss learned to read so well that they were getting 100% on achievement tests. As they learned to communicate, their self-esteem increased.—*E. J. Posavac.*

8363. **Furfey, Paul H.** (Catholic U of America, Bureau of Social Research) **Total communication and the Baltimore Deaf Survey.** *American Annals of the Deaf*, 1974(Aug), Vol 119(4), 377-382.—Studied the responses of 137 deaf individuals regarding the relative educational effectiveness of the oral method and total communication (i.e., speech reading and finger spelling and signs). Results indicate a superiority of the total communication method. (26 ref)

8364. **Glavin, John P. (Ed.).** (Temple U) **Ferment in special education.** New York, NY: MSS Information Corp, 1974. 250 p. \$13(cloth), \$6.50(paper).—Presents a collection of 26 articles on procedures and issues involved in special education. Topics include behavioral management in special education curriculums; evaluation methods for exceptional children; cognitive, affective, and creative curriculum requirements; early education needs of disadvantaged children; controversies in the field of special education; and future research and service needs.

8365. **Hagamen, Mary B. & van Witsen, Betty.** (Sagamore Childrens Ctr, Melville, NY) **Early intervention in childhood schizophrenia: The role of special education.** In R. Cancro, N. Fox & L. E. Shapiro (Eds), *Strategic intervention in schizophrenia: Current developments in treatment*. New York, NY: Behavioral Publications, 1974. xviii, 326 p.

8366. **Jones, Reginald L.** (Haile Selassie I U, Testing Ctr. Addis Ababa, Ethiopia) **Correlates of orthopedically disabled school children's school achievement and interpersonal relationships.** *Rehabilitation Literature*, 1974(Sep), Vol 35(9), 272-274, 288.—Reports that many hypotheses about relationships among ambulation status, dependency, locus of control, and school achievement in orthopedically disabled children were not supported in a study of 102 children enrolled in a special elementary school. Although these findings may indeed represent the actual state of affairs, the great diversity among such populations makes isolation of core variables a fruitless quest, and additional studies are needed to confirm or contradict the hypothesis in question.—*S. L. Warren.*

8367. **Jones, Reginald L.** (U California, Riverside) **Special education and the minority child.** In B. C. Ring & D. R. Schrader (Eds), *Eleventh annual Distinguished Lectures Series in Special Education and Rehabilitation*. Los Angeles, CA: U Southern California, School of Education, 1973. vi, 101 p. \$3.—Discusses minority student perceptions of their special class placements. Attitudes of minority retardates toward school in general, teachers, and activities, and issues involved in educational assessments and adjustment to the school environment are discussed.

8368. **Kent, Louise R.** (Michigan Dept of Mental Health, Coldwater State Home & Training School) **Language acquisition program for the severely retarded.** Champaign, IL: Research Press, 1974. xiii, 185 p. \$5.95.—Describes the major components of the Language Acquisition Program (LAP) for severely retarded children, which is based on a reinforcement paradigm and stresses the acquisition of prerequisite attending behaviors and motor imitation and appropriate receptive and expressive language skills. Specific exercises, methods of assessment and reinforcement, and suggestions for the use of LAP with the deaf are presented.

8369. **Magne, Olof.** **Educational technology in special education.** *Didakometry*, 1974(Oct), No 43, 11 p.—With reference to data from a 1963-1970 Swedish investigation into learning difficulties in mathematics (dyscalculia), an analysis is presented of problems in educational technology in special education. In examining the usual taxonomies with findings in research on the attainment of low-achievers, a number of inconsistencies indicate that alternative taxonomies should be constructed. It is suggested that the developmental cognitive theories of Piaget and others are suitable as a starting point for a taxonomy in mathematics for low-achievers. A taxonomic model is developed from these assumptions. (20 ref)—*Journal abstract.*

8370. **Miller, Pauline.** **All children are special: Some remarks on the segregation of children for educational purposes.** *Association of Educational Psychologists' Journal & Newsletter*, 1973(Win), Vol 3(3), 40-46.—Proposes that segregation into separate classes may not be the most appropriate way of dealing with children who have failed in the ordinary educational system. The limitations of special class placement are discussed and alternative approaches are presented. (18 ref)

8371. **Mittler, P.** (U Manchester, Hester Adrian Ctr for the Study of Learning Processes in the Mentally Handicapped, England) **[The development of language among the mentally handicapped: Educational aspects.]** (Fren) *Revue de Psychologie et des Sciences de l'Education*, 1974, Vol 9(1), 19-51.—Views language development and education as the meeting point between teachers and researchers. Among the aspects discussed are evaluation of verbal development (teacher's observations and developmental scales); development of comprehension (evaluation and remedial aspects); and language facilitation programs. The possible use of each of these aspects in research, the use of research results in education, and promising lines of investigation are discussed. (French & English summaries) (49 ref)—*Journal summary.*

8372. **Nigro, Giovanni.** (United Cerebral Palsy of New York City, NY) **Recreation and adult education.** *Rehabilitation Literature*, 1974(Sep), Vol 35(9), 268-271.—Recreation and adult education programs can correct many of the deficiencies observed in multiply-handicapped adults resulting from childhood deprivations and mishandling—e.g., inadequate personality development, infantilization, and emotional disturbance. Such programs can provide increased opportunities for personal relationships, compensatory activities, and community involvement. Program components include socialization, self-help, academics, physical activity, creative endeavor.

ors, helping experiences, and appropriate vacation opportunities.—S. L. Warren.

8373. Olshansky, Simon. (Community Workshops, Boston, MA) **Mental retardation: Another view.** *Journal of Applied Rehabilitation Counseling*, 1974(Fal), Vol 5(3), 131-137.—Discusses some of the problems experienced by the educable retardate in the school environment. It is suggested that professionals should stop labeling the mentally retarded, attention should be shifted from evaluation to development, and emphasis should be placed on the principle of normalization rather than abnormalization.—*Journal abstract*.

8374. Presland, J. L. **Ascertaining for E.S.N. school.** *Association of Educational Psychologists' Journal & Newsletter*, 1973(Win), Vol 3(3), 37-40.—Gives general advice on assigning children to an educationally subnormal school from the point of view of an educational psychologist, covering such issues as who should be referred, how the referral should be made, and how placement should be proposed to parents.

8375. Robertson, Mary L. & Freeman, Gerald G. (Oakland Schools Speech & Hearing Clinic, Pontiac, MI) **Applying diagnostic information to decisions about placement and treatment.** *Language, Speech & Hearing Services in Schools*, 1974(Oct), Vol 5(4), 187-193.—Discusses the role of the speech pathologist as a member of the school team. His function includes language evaluation, information coordination, and participation in formulating a treatment and educational program.

8376. Scott, Alvin G. & Ryan, Toni M. (Glenrose Hosp, Edmonton, Alberta, Canada) **Nursery experience for physically handicapped children.** *Western Psychologist*, 1973, Vol 4(4), 89-97.—Evaluated the usefulness of several methods of assessing the effects of a nursery experience on severely physically handicapped children. Ss were 6 male and 16 female children (mean age 4 yrs 3 mo) in a hospital nursery program. All were administered the Stanford-Binet Intelligence Scale (form L-M), the Cattell Infant Intelligence Scale, the Vineland Social Maturity Scale, and the Beery Buktenika Test of Visual Motor Integration on entering the program, and 3 and 6 mo later. The change over time for intelligence data was significant, while the change in social and visual motor behavior was not. It is concluded that more appropriate and sensitive measures should be developed for use with physically handicapped children. (17 ref)—D. R. Evans.

8377. Smoll, Frank L. (U Washington) **Motor impairment and social development.** *American Corrective Therapy Journal*, 1974(Jan), Vol 28(1), 4-7.—Discusses interrelationships of physical abilities and social development and adjustment. A failure cycle is described in which poor motor skills result in reluctance to participate in physical/social activities, which further decreases motor abilities. It is suggested that motor impairment can contribute to social maladjustment and delinquent behavior. Implications for educators include provision of adequate physical facilities and careful planning stressing successes for children. Ability grouping is suggested.—C. Wright.

8378. Stansfield, R. T. (Feversham School, Newcastle-upon-Tyne, England) **Aspects of management in a residential school for maladjusted children.** *Association of Educational Psychologists' Journal & Newsletter*,

1973(Win), Vol 3(3), 63-74.—Describes some aspects of an independent residential school for maladjusted children. These include the aims and management policies, the relationships which have been developed between the school and potentially helpful external agencies, and the specific treatment programs available.

8379. Stein, Julian U. (American Assn for Health, Physical Education & Recreation, Programs for the Handicapped, Washington, DC) **What research and experience tell us about physical activity, perceptual-motor, and recreation programs for children with learning disabilities.** *American Corrective Therapy Journal*, 1974(Mar-Apr), Vol 28(2), 35-41.—Examines paradoxes and contradictions in research and application in childhood education. The need is stressed for truly individualized programs that provide successes for both normal and learning-disabled children and emphasize achievement and ability rather than disability and deficiencies.

8380. Thomas, Jerry R.; Chissom, Brad S. & Booker, Lynn. (Florida State U) **Perceptual-motor and academic relationships for disadvantaged children classified as learning disabled and normal.** *American Corrective Therapy Journal*, 1974(May-Jun), Vol 28(3), 95-99.—Investigated correlations among 2 perceptual motor and 4 academic readiness measures in 38 normal and 16 learning-disabled, socioeconomically disadvantaged preschool Ss. Perceptual motor scores correlated highly with academic readiness for the learning-disabled group but not for the normal group. The lack of correlation between the Peabody Picture Vocabulary Test and other measures suggests caution in its use in screening disadvantaged children.—C. Wright.

8381. Woods, Mike. **Caught in the act.** *Association of Educational Psychologists' Journal & Newsletter*, 1973(Win), Vol 3(3), 33-36.—Attitudes and ideas about special education have changed in the 30 yrs since the 1944 Education Act in England was framed, but in most areas a procedure based on a misinterpretation of the Act's intentions is carried out in "ascertaining" children as educationally subnormal. This procedure should be changed (a) because it is formal and compulsory, and (b) because it lays too much stress on doctors' opinions and not nearly enough on assessment by educational psychologists and teachers, who are better qualified to recommend that a child should receive special education and to prescribe what form that education should take.—*Journal abstract*.

### Counseling & Measurement

8382. Adams, Jack & Creamer, Lyle R. (California State Coll, Dominguez Hills) **Cross-modal measurement of test-anxiety.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 471-477.—Attempted to measure test anxiety by an indirect method. 40 college students were asked to match intensities of a 1000-Hz tone to subjective levels of experienced anxiety under 2 conditions: on a day just prior to taking a routine college course examination and on a day when no course examinations were scheduled. In addition, Ss were asked to complete the Affect Adjective Check List (AACL) which permitted a self-description of the degree of anxiety felt under the 2 conditions. Results indicate that both the cross-modal

matching technique and the AACL differentiated between test and control days. These findings suggest that Ss were indeed capable of matching the relative changes in the level of experienced test anxiety with changes in the amplitude of an auditory stimulus.—*Journal abstract.*

8383. **Baird, Leonard.** (Educational Testing Service, Princeton, NJ) **The practical utility of measures of college environments.** *Review of Educational Research*, 1974(Sum), Vol 44(3), 307-329.—Describes and discusses the broad and complex role of colleges as socializing agencies. Recent research suggests that the complexity of the problems involved may soon yield to answers that are both valid and useful.

8384. **Barnett, Rosalind C.** (Harvard U) **Sex differences and age trends in occupational preference and occupational prestige.** *Journal of Counseling Psychology*, 1975(Jan), Vol 22(1), 35-38.—Studied sex differences and age trends in the relationship of occupational preferences and aversions and occupational prestige in 1,531 male and 988 female middle- and upper-middle-class 9-17 yr old Ss to test the hypothesis that females learn early to avoid high-prestige occupations. Rank-order correlation coefficients between empirically established prestige rankings and preference and aversion rankings were calculated separately for each sex at each age. The relationships between preference and prestige were positive and stronger for the males than for the females; those between aversion and prestige were positive and stronger for females than for males. Sign tests for both relationships were significant. It is concluded that males learn to prefer prestigious occupations; females learn to avoid them.—*Journal abstract.*

8385. **Booth, Gordon & Taylor, Margaret.** **Some problems in the rating of child behaviour by teachers: A follow-up of children with high or fluctuating scores on Rutter's Children's Behaviour Questionnaire.** *Association of Educational Psychologists' Journal & Newsletter*, 1973(Win), Vol 3(3), 13-17.—393 normal children in Aberdeen, Scotland, were rated by their teachers twice, a term apart, on the Rutter Questionnaire. Two groups from the sample were then compared: the 18 (4.6%) who in both ratings scored above the maladjustment cutoff point, and the 17 (4.3%) whose 2 scores showed a significant change and who were therefore classified as maladjusted on only 1 of the 2 questionnaires. In follow-up oral interviews with current teachers, Ss who had twice scored as maladjusted were correctly identified in most cases, while none of those with different scores could be classified with assurance as possibly maladjusted. A substantial number of false positives could be attributed to teachers unacquainted with the child being rated, as well as negative or positive halo effects.—*I. L. Zimmerman.*

8386. **Bowser, Philip B. & Carrubba, Michael J.** (Western Carolina U) **Nonstandard administration of WPPSI Information subtest in a preschool screening battery.** *Bulletin of the North Carolina Psychological Association*, 1973(Spr), 22-25.—Compared 2 nonstandard administration and scoring systems for the Information subtest of the Wechsler Preschool and Primary Scale of Intelligence with the standard procedure. 9 preschool children were studied, 3 in each scoring group. The nonstandard systems resulted in significant savings

in time and both correlated significantly with the actual raw score for the subtest, suggesting the applicability of nonstandard techniques for screening purposes where time limitations are imposed.—*R. S. Albin.*

8387. **Evans, Ellis D.** (U Washington) **Measurement practices in early childhood education.** In R. W. Colvin & E. M. Zaffiro (Eds), *Preschool education: A handbook for the training of early childhood educators*. New York, NY: Springer, 1974. xviii, 362 p. \$13.95.

8388. **Evans, Roy & Ferguson, Neil.** **Screening school entrants.** *AEP (Association of Educational Psychologists) Journal*, 1974(Spr), Vol 3(6), 2-9.—Reviews the screening techniques and evaluation instruments available for preschool and early school testing of children, covering 3 main areas: (a) prereading evaluation (reading readiness); (b) academic or school readiness; and (c) early identification of learning disabilities or learning potential. The instruments are examined in terms of their relevance and utility within the context of British Infant and Primary Schools. (21 ref)—*I. L. Zimmerman.*

8389. **Fincher, Cameron.** (U Georgia, Inst of Higher Education) **Is the SAT worth its salt? An evaluation of the use of the Scholastic Aptitude Test in the university system of Georgia over a thirteen-year period.** *Review of Educational Research*, 1974(Sum), Vol 44(3), 293-305.—Contents that the genuine effectiveness and utility of the SAT may not lie either in its predictive efficiency or its cost effectiveness. Other considerations may be more relevant and should be studied more carefully. The uses of the SAT should be supplemental to the decisions and actions that facilitate transition from 1 institution to another. Such decisions and actions should not be based on predicted performance alone and may always be not susceptible to successful cost accounting. (17 ref)—*P. D. Leedy.*

8390. **Gilman, David A.** (Indiana State U) **The economics and psychology of the report card.** *Measurement & Evaluation in Guidance*, 1974(Oct), Vol 7(3), 157-162.—Describes the psychological and economic principles and theories that are used in the grading process and discusses some of the problems involved in attempting to transfer these theories and principles to the evaluation of student achievement. It is suggested that despite efforts to discredit the practice of assigning grades to students, there is empirical and theoretical evidence that grading can aid students' achievement.—*M. E. Pounsel.*

8391. **Gipps, C. & Ewen, E.** (National Foundation for Educational Research, Slough, England) **Scoring written work in English as a second language: The use of the T-unit.** *Educational Research*, 1974(Feb), Vol 16(2), 121-125.—Applied the technique of the "minimal terminable unit," or T-unit, scoring the National Foundation for Educational Research open-ended writing and speaking tests which are part of the battery of Tests of English Proficiency for Immigrant Children. During the development of this method the tests were administered to Asian children with up to 5½ yrs schooling in Britain. The average T-unit length in writing and speech increased with increasing length of stay in Britain, and much of their speaking and writing proficiency developed after 3½ yrs.—*J. B. Francis.*

8392. Goodwin, William L. (U Colorado) **Evaluation in early childhood education.** In R. W. Colvin & E. M. Zaffiro (Eds), *Preschool education: A handbook for the training of early childhood educators.* New York, NY: Springer, 1974. xviii, 362 p. \$13.95.

8393. Gottfredson, Gary D. & Holland, John L. (Johns Hopkins U) **Vocational choices of men and women: A comparison of predictors from the Self-Directed Search.** *Journal of Counseling Psychology*, 1975(Jan), Vol 22(1), 28-34.—Examined several predictors of occupational choice derived from J. L. Holland's 1973 theory of careers. Hypotheses that a person's competencies, activities, self-estimates, interests, and vocational choices can be organized by a 6-category typology to understand and predict subsequent choice were tested. 894 men and 989 women took the Self-Directed Search at entry into 2 colleges and reported their occupational choices 1 or 3 yrs later. All hypotheses received support, although the predictive efficiency varied. Current vocational choice was the best predictor of later choice and scores based on sex-specific norms were less efficient predictors than raw scores. Findings support both the theory and the validity of the Self-Directed Search assessment for men and women. (18 ref)—*Journal abstract.*

8394. Hicks, R. E. (Dept of the Public Service Board, Papua New Guinea) **Vocational interests, values and abilities of some Australian high school students in Papua New Guinea: Cross-cultural comparisons.** *New Guinea Psychologist*, 1974(Apr), Vol 6(1), 17-24.—Compared a group of 31 male and 23 female Australian expatriate high school students studying in Port Moresby, New Guinea, with (a) local students, (b) Australian students in Australia, and (c) norms for US students via instruments including the Pacific Vocational Interests Analysis, the Alport-Vernon-Lindzey Study of Values, and locally designed tests. Scores indicate local New Guinean students are more interested in clerical, numerical, and social activities, and expatriates place more value on economic and esthetic categories than US students. The locally developed tests are highly correlated and predictive of success for both groups of students in Papua New Guinea.—*C. Wright.*

8395. Johnson, W. Russell; Sieveking, Nicholas A. & Clanton, Earl S. (Vanderbilt U) **Effects of alternative positioning of open-ended questions in multiple-choice questionnaires.** *Journal of Applied Psychology*, 1974(Dec), Vol 59(6), 776-778.—Conducted 2 studies with 110 black high school and college students and 156 white college students to study the effect of the placement of open-ended questions, relative to multiple-choice questions, on the responses elicited. Both studies found that positionings at both the beginning and the end of a predominantly multiple-choice questionnaire elicited significantly more responses than did either placement alone. When the 2 positions were used singly, the one at the beginning was found to elicit more discrete ideas and response categories. This was true for black samples and white samples and for different questionnaire topics and lengths.—*Journal abstract.*

8396. Jones, Leon. (Howard U, School of Education) **A methodological approach to evaluation.** In R. W. Colvin & E. M. Zaffiro (Eds), *Preschool education: A*

*handbook for the training of early childhood educators.* New York, NY: Springer, 1974. xviii, 362 p. \$13.95.

8397. Kelly, Eugene W. (Old Dominion U) **Classroom discussions for personal growth and democratic problem-solving.** *Elementary School Journal*, 1974(Oct), Vol 75(1), 11-15.—Discusses bridging the psychosocial gap between the teacher and her pupils by the use of informal meetings of the pupils without the teacher. The school counselor presides over such meetings. Members of such a discussion group should arrange themselves in a complete circle to reduce the psychological distances among the members. These meetings should discuss problems pertinent to the school community and should never indulge in fault-finding or meting out punishment to an atypical member. Discussion of school problems could eventually include social problems, such as friendships with atypical members of the school.—*A. J. Ter Keurst.*

8398. Labon, Don. **Some effects of school-based therapy.** *AEP (Association of Educational Psychologists) Journal*, 1974(Spring), Vol 3(6), 28-34.—Describes a program in which emotionally disturbed children in English primary schools are being helped within their own schools by part-time withdrawal from their classes into small groups. The teachers engaging in this work attend monthly inservice training sessions conducted by educational psychologists. Some of the outcomes of this program are described, and potentialities and limitations of work with disturbed children in normal schools are discussed. (16 ref)—*I. L. Zimmerman.*

8399. McCarthy, Barry W.; Wasserman, Craig W. & Ferree, Elizabeth H. (American U, Counseling Ctr) **Growth and development of a university companion program.** *Journal of Counseling Psychology*, 1975(Jan), Vol 22(1), 66-69.—Describes the development of an innovative peer counseling program in a university environment. The problems with which the peer counselors are most effective are identified, paraprofessional training is described, and the professional and paraprofessional roles are clarified. The wider effect of such a program on the university and the program participants is discussed.—*Journal abstract.*

8400. Mirante, Timothy J. & Ryckman, David B. (U Washington) **Classroom Behavior Inventory: Factor verification.** *Journal of Research in Personality*, 1974(Oct), Vol 8(3), 291-293.—3 factors of the 18-item inventory—Task-Oriented vs Distractibility, Extraversion vs Introversion, and Considerateness vs Hostility—loaded perfectly, according to the a priori structure of the instrument, on data from 2nd graders. Investigations of the reliability and objectivity of the scale are suggested.

8401. Mitchell, John & Allen, Harry. (U Miami) **Perception of a physically disabled counselor in a counseling session.** *Journal of Counseling Psychology*, 1975(Jan), Vol 22(1), 70-73.—Conducted a counseling-analog study to determine whether an apparently physically disabled counselor compared with an able-bodied counselor would be perceived as exhibiting higher levels of 4 therapeutic ingredients. Ss were 189 undergraduates who were randomly divided into 2 groups. 1 group viewed a videotaped counseling session (role-played) with the counselor in a wheelchair. The

comparison group viewed the same counseling dyad except the counselor was seated in a chair. Both groups rated their respective counseling tape sessions on the Barrett-Leonard Relationship Inventory. The disabled counselor was rated significantly higher on all therapeutic variables compared with the same counselor when viewed as nondisabled. (21 ref)—*Journal abstract*.

8402. O'Rourke, Thomas W. & Conley, John A. (U Illinois) **Indices of evaluating course instruction.** *Journal of the American College Health Association*, 1974(Feb), Vol 22(3), 234-241.—Describes the Course Evaluation Questionnaire (CEQ) developed by the office of Instructional Resources at the University of Illinois. Designed as a tool for process evaluation, it is an attempt to measure such variables as instructor, textbook, homework, outside assignments, course content, method of instruction, and student interest. Extensive testing and revision produced a 50-item, later reduced to 25-item, multiple choice instrument administered to students of any given course to evaluate teacher-curriculum impact. The CEQ appears to fill the need for a test to measure relevancy, currency and justification, all topics of interest to both student and administration. It also furnishes the instructor with an aid for revision of course content, text, and methods of grading. The questionnaire is appended.—*A. de la Haba*.

8403. Ohlsen, Merle M. (U Illinois) **[Dissident students.]** (Span) *Revista de Psicología General y Aplicada*, 1974(Mar-Apr), Vol 29(127), 261-274.—Discusses present-day students and how to help them, primarily through the work of qualified counselors in group settings. (English summary) (19 ref)

8404. Palmer, Edward L. (Davidson Coll) **Frequency of tests and general subject-area mastery.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 422.—2 groups of college students who were tested on psychology-textbook material 6 or 3 times during a 10-wk course performed better on a final test of psychological knowledge than Ss who utilized the same textbook without periodic tests. Results suggest that regular assessment may be more important than the frequency of regular assessment.

8405. Pankove, Ethel. (Montgomery Township Schools, NJ) **Identification of the gifted.** *School Psychologist*, 1974(Apr), Vol 28(4), 8-11.—Argues that giftedness is multidimensional, hence, identification of gifted individuals requires the development of measures for each dimension. In addition to the use of standardized intelligence and achievement tests, direct observations are suggested: reports by peers, teachers, and parents on behavior, or samples of work done by the child (e.g., handicrafts, art work, maps). The use of standardized creativity tests is also discussed. Some of the characteristics of creative children may make them difficult for the teacher who prefers a quiet classroom. Socioeconomic status, ethnic or religious group membership, familial attitudes, and personality factors are all seen as important elements affecting the expression of giftedness. (16 ref)—*D. R. Evans*.

8406. Quattrocki, Carolyn G. **Recognizing creative potential in preschool children.** *Gifted Child Quarterly*, 1974(Sum), Vol 18(2), 74-80.—Identified "creative potential" in 1,101 preschool children using the Stark-

weather Originality Test, obtaining 60% agreement with predictions of preschool teachers.

8407. Rhoads, David J. **Student-made tests.** *UMJC: University of Maryland Counseling & Personnel Services Journal*, 1973-1974, Vol 4(1), 1-7.—Studied the effect of student participation in test construction on test scores using 2 groups of 68 graduate and undergraduate students, one of which constructed 62 multiple-choice items for a midterm examination and one group which did not. Ss who participated in constructing the test had significantly higher scores on it than Ss who did not construct it.

8408. Richards, James M. **A simulation study comparing procedures for assessing individual educational growth.** *Center for Social Organization of Schools Report, Johns Hopkins University*, 1974(Oct), No 182, 17 p.—Developed a computer simulation procedure to reproduce the overall pattern of results obtained in the Educational Testing Service growth study (1971). Simulated data for 7 sets of 10,000-15,000 cases were analyzed with several techniques for assessing growth, or change, and these techniques were compared on the basis of correlations between estimated and true growth scores. Growth was estimated most accurately by procedures that involved the difference between the pretest and the posttest, and all estimates that involve this difference had approximately equal correlations with true growth. The simple difference between pre- and posttest scores was as accurate as any other estimate, was easier to compute, and should be meaningful to nonresearchers. It is concluded that advocates of complex procedures should demonstrate practical, not just theoretical, advantages for their techniques before researchers should be expected to utilize them. (18 ref)—*Journal abstract*.

8409. Schilling, Karl. (U Florida) **The peer counseling program in the residence halls of the University of Florida.** *Journal of the American College Health Association*, 1974(Feb), Vol 22(3), 182-184.—Describes a 2-part peer counseling program consisting of paid resident assistants and student volunteers in a big-brother/big-sister system. Student resident assistants are selected from junior and senior applicants who demonstrate maturity and ability to relate to people. A 3-credit course in counseling skills, with emphasis on role playing, prepares them for the job of counselor-administrator-disciplinarian. Student volunteers are chosen by a faculty adviser and the resident assistant staff, chiefly to assist in orienting newcomers in the early weeks. The volunteer relinquishes his role of leader as student leaders emerge.—*A. de la Haba*.

8410. Sheverbush, Robert L. (U Illinois, Medical Ctr. Chicago) **An analysis of subtests performance by gifted students on the Stanford-Binet Intelligence Scale (1960 Form L-M).** *Gifted Child Quarterly*, 1974(Sum), Vol 18(2), 97-107.—Reports a cluster analysis of the Stanford-Binet (S-B) subscores (Lutwyche system), using 192 4th graders who had been found gifted compared with an equalized control group. Several tables show age level, socioeconomic status, median ceiling, etc., against S-B subscores.

8411. Stafford, Jerry. (Shippensburg State Coll) **Reading test review: Reflections on the Diagnostic**

**Reading Scales.** *Reading World*, 1974(Oct), Vol 14(1), 5-8.—Re-examines the Diagnostic Reading Scales, an individually administered battery containing tests of word recognition, oral reading, rate of reading, silent reading, reading potential, and 6 supplementary phonics tests. It is concluded that the instrument offers considerable potential in diagnosing a wide variety of reading skills and needs. A more detailed description of reliability and validity data is needed, however, as well as refined suggestions for recording oral reading behavior.—C. K. Miller.

8412. Sue, Derald W. & Kirk, Barbara A. (California State U, Hayward) **Asian-Americans: Use of counseling and psychiatric services on a college campus.** *Journal of Counseling Psychology*, 1975(Jan), Vol 22(1), 84-86.—Studied 3,053 Asian-American and non-Asian students in the 1966 freshman class of a large state university over a 4-yr period to determine usage of mental health services. Asian-Americans underutilized the campus psychiatric service but significantly overutilized the counseling center. Possible reasons related to the Asian-Americans' subcultural values explain these findings. Nearly 50% of Chinese-American females utilized mental health services of some kind. This extremely high usage may be due to a domestic vs feminist conflict.—*Journal abstract*.

8413. Taylor, E. G. & Nuttall, D. L. **Question choice in examinations: An experiment in geography and science.** *Educational Research*, 1974(Feb), Vol 16(2), 143-150.—Investigated the difficulties experienced by examination candidates when faced with a choice of questions. 220 candidates from 12 schools were asked to continue working on examination papers in geography in a different colored ink after the examination to see how much more of the paper they could answer. 280 candidates from 15 schools taking physics examinations were asked to work on different questions, answering as many as possible, with virtually unlimited time. Results indicate that a sizable minority of candidates were unable to choose the questions where they could show to best advantage, and that candidates awarded lower grades experienced greater difficulty in selecting questions. Possible changes in the structure of examinations and in the instructions to candidates, based on these findings, are discussed.—J. B. Francis.

8414. Valine, Warren J. (Auburn U) **Focused feedback with video tape as an aid in counseling underachieving college freshmen.** *Small Group Behavior*, 1974(May), Vol 5(2), 131-143.—Studied the effects of video feedback in group counseling of underachieving college freshmen on grade point average (GPA). 3 groups received either counseling with immediate feedback (IF) via video tape, with delayed video feedback, or with no video feedback. A control group received no counseling. Groups did not significantly differ on pregroup-postgroup differences in GPA. The IF group decreased in intracception as measured by the Edwards Personal Preference Schedule. 64% of the Ss indicated that video feedback was helpful in the group discussion. (27 ref)—G. R. Breed.

8415. Voss, James F. (U Pittsburgh) **Acquisition and nonspecific transfer effects in prose learning as a function of question form.** *Journal of Educational*

*Psychology*, 1974(Oct), Vol 66(5), 736-740.—Studied acquisition and nonspecific transfer effects in prose learning by presenting a different 2,000-word prose passage to 30 undergraduates on each of 3 successive days, with each day consisting of 4 reading and testing trials. Testing employed either multiple-choice or completion questions. Performance failed to improve over passages, indicating an absence of nonspecific transfer effects. Performance on the latter trials tended to deteriorate as a function of passage in the multiple-choice condition. The percentage errors after the 1st correct response were also greater in the multiple-choice than in the completion condition. Findings provide no evidence that learning-to-learn effects exist with prose materials and suggest that repeated use of the multiple-choice test produces interference at the higher levels of learning.—*Journal abstract*.

8416. Wakefield, James A. et al. (U Houston) **The geometric relationship between Holland's personality typology and the Vocational Preference Inventory for blacks.** *Journal of Counseling Psychology*, 1975(Jan), Vol 22(1), 58-60.—Administered Holland's Vocational Preference Inventory to 115 black undergraduates. The 1st 6 scales of the inventory were tested for correspondence to J. L. Holland's personality theory using a method recently presented by J. A. Wakefield and E. B. Doughtie (see PA, Vol 51:8049). The scales for the black Ss corresponded generally to Holland's model but not as well as they do for white Ss. 3 weaknesses in the correspondence between the scales of black students and Holland's model were identified. The Realistic and Intellectual scales were not as closely associated to Holland's model for blacks as for whites; the Social and Enterprising scales were not as closely associated; and the Conventional and Intellectual scales were not as closely associated as they are in Holland's model.—*Journal abstract*.

8417. Westbrook, Franklin D. (U Maryland) **High scales on the Strong Vocational Interest Blank and the Kuder Occupational Interest Survey using Holland's occupational codes.** *Journal of Counseling Psychology*, 1975(Jan), Vol 22(1), 24-27.—Compared the arrays of high-interest occupations produced by the Strong Vocational Interest Blank, T-399, and the Kuder Occupational Interest Survey (Form DD) when the instruments were administered to the same Ss (60 male college students). Holland-type summary codes were devised from the arrays of occupations and were analyzed by correlated  $t$  tests and Pearson  $r$  correlations. A frequency percentage count showed 85% of the pairs of summary codes had 2 identical characteristics, and some support was found for J. L. Holland's hexagon.—*Journal abstract*.

8418. Whitely, Susan E. & Dawls, René V. (U Kansas) **Effects of cognitive intervention on latent ability measured from analogy items.** *Journal of Educational Psychology*, 1974(Oct), Vol 66(5), 710-717.—Cognitive intervention may potentially be used to investigate both the cognitive processes underlying test performance and the possible incorporation of learning experiences into ability estimates. 184 inner-city high school students were randomly assigned to 1 of 5 experimental conditions or to the control group and were administered a test-intervention-retest sequence using verbal analogy

items. It was found that although latent ability estimates may be significantly increased by a short intervention, modifiability depends on the type of intervention. Furthermore, it was found that general types of relationships may effectively mediate analogy item solving. (21 ref)—*Journal abstract*.

8419. Wilson, Robert M. (U Maryland, Reading Ctr) **Comprehension diagnosis.** *Reading World*, 1974(Oct), Vol 14(1), 49-50.—Evidence suggests that a teacher's method of questioning may affect his assessment of a student's reading comprehension. There appears to be little justification for asking a child literal questions about what he has read without his having access to the passages. By reducing the memory burden, child and teacher are free to concentrate on other aspects of comprehension.

8420. Zimmerman, Robert R.; Wise, Larry & Smith, Olin W. (Central Michigan U) **Early detection of final performance in an introductory course in general psychology.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 620-622.—In a study with 164 undergraduates, it was found that final grades in an introductory psychology course correlated significantly with a test representative of course content and American College Test scores. Contrary to traditional predictions, the content specific test was not superior to the general abilities test in the prediction of final grades. Course content tests taken during the 1st 3 wks of the academic quarter correlated .85 with course content tests taken during the last 3 wks of the academic quarter. Results suggest that both general ability tests and specific content tests given early in the academic year could be used to assign students to course programs that might provide the special assistance some students require to cope with traditional large lecture college courses.—*Journal abstract*.

## APPLIED PSYCHOLOGY

8421. Blaiwes, Arthur S. (Naval Training Equipment Ctr, Orlando, FL) **Formats for presenting procedural instructions.** *Journal of Applied Psychology*, 1974(Dec), Vol 59(6), 683-686.—30 male undergraduates performed a mock communication controller's task under 3 different instructional formats (short sentences, logical tree, and coding). Accuracy did not differ as a function of instructional format for 3 easier types of problems. However, for 2 more difficult problem types, coding resulted in significantly more accuracy in 1 case, while coding and short sentences showed significantly greater accuracy in another. It is concluded that (a) format variations mainly influence difficult tasks, (b) logical-tree superiority appears to be related to the number of conditions at a choice point and/or retention conditions, and (c) coding can be a potent technique.—*Journal abstract*.

8422. Carroll, Stephen J. & Falthzik, Alfred M. (U Maryland) **Research note on some factors related to completion rates in surveys of employed persons.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 377-378.—80 salesmen were randomly assigned to 1 of 2 survey conditions. It was found that when the interviewer represented himself as from a local university a

significantly higher response rate was obtained than when he said he represented Marketing Facts, a fictitious firm.

8423. Cross, Stan & Renner, Edward. (Kansas State U) **An interaction analysis of police-black relations.** *Journal of Police Science & Administration*, 1974(Mar), Vol 2(1), 54-61.—Analyzes person-to-person police-black interactions, excluding variations arising either from conflicting social roles or from the personalities of the participants. A person may or may not possess interactive skills for a situation, may or may not share a particular role definition for the situation, and the role for the individual may or may not be clear. All components are given a range of tolerable variation. The implications of an interaction model are discussed.—R. J. Albers.

8424. Donnelly, James H. & Etzel, Michael J. (U Kentucky) **Attempting to operationalize product newness: A reply to Ostlund and Tellefsen.** *Journal of Applied Psychology*, 1974(Dec), Vol 59(6), 761-763.—Responds to L. E. Ostlund and B. Tellefsen's (see PA, Vol 53:Issue 4) questions regarding some methodological procedures, including the operationalization of product newness, employed in a 1973 study by J. H. Donnelly et al. These questions are addressed in an attempt to clarify the procedures and conclusions of the Donnelly et al investigation.

8425. Feldman, Jack M. (U Florida) **Note on the utility of certainty weights in expectancy theory.** *Journal of Applied Psychology*, 1974(Dec), Vol 59(6), 727-730.—Tested the usefulness of "certainty of response" as a moderator variable in expectancy models in the context of M. Fishbein's 1967 construct of "attitude toward the act." The direct evaluation of 5 job-seeking behaviors by a racially and socioeconomically heterogeneous sample of 200 18-50 yr old men was predicted from 5 combinations of outcome evaluation, outcome expectancy, and response certainty. Contrary to the hypothesis, the simple sum of the evaluations of the outcomes of each behavior best predicted the directly measured evaluation. Results are discussed in terms of possible modifications of the expectancy model and the concept of uncertainty as reflected in subjective probability estimates.—*Journal abstract*.

8426. Gwynne, Jeffrey L. (Illinois Dept of Law Enforcement, Bureau of Identification, Joliet) **The specific concern test for the detection of deception.** *Journal of Police Science & Administration*, 1974(Mar), Vol 2(1), 38-39.—Proposes a specific sequencing of irrelevant, relevant, and control questions in the polygraph procedure so that responses by Ss to relevant and control questions can be compared on a one-to-one basis.

8427. Harrell, Gilbert D. & Bennett, Peter D. (Michigan State U) **An evaluation of the expectancy value model of attitude measurement for physician prescribing behavior.** *Journal of Marketing Research*, 1974(Aug), Vol 11(3), 269-278.—Presents data from research which used expectancy value and normative belief measures to predict physicians' drug brand preference and purchases. Group depth interviews, attitude measures, and data from a panel of prescribing physicians were employed to test M. Fishbein's beha-

vioral intentions model. Ss were internists and general practitioners whose attitudes and behavior in the treatment of diabetes mellitus were assessed. Results support the use of the Fishbein model in behavioral intention and attitude studies. The correlation between actual behavior and behavioral intention was only moderate (.40), although this can be explained by the specifics of the diabetes condition and methodological difficulties. Behavioral intention was a much stronger correlate of evaluative beliefs than it was of actual behavior. (29 ref)—*L. Gorsey.*

8428. Kuykendall, Jack L. (California State U, San Jose) **Styles of community policing.** *Criminology: An Interdisciplinary Journal*, 1974(Aug), Vol 12(2), 229-240. —Discusses 4 policing styles as they reflect the reactive-proactive emphasis given to various combinations of positive and negative methods and counselor and enforcer roles.

8429. Levin, Irwin P. (U Iowa) **Averaging processes in ratings and choices based on numerical information.** *Memory & Cognition*, 1974(Oct), Vol 2(4), 786-790. —A total of 87 university students were presented sets of numbers said to represent sample price information from grocery stores. Ss rated the relative desirability of shopping at each of a series of stores and were also asked to make paired-comparison preference choices. In Exp I some sets contained favorable information, some contained unfavorable information, and some contained neutral information added to the favorable or unfavorable information. The addition of neutral information led to a decrease in the polarity of responses. This is consistent with an averaging, but not an adding, formulation of how the information was integrated. In Exp II sets of favorable or unfavorable information varied in size, and a set-size effect was obtained. The greater the amount of favorable or unfavorable information, the more extreme the response. This is accounted for by assuming that an initial neutral expectancy was averaged with the information presented.—*Journal abstract.*

8430. Lidz, Charles W. (Yale U) **The cop-addict game: A model of police-suspect interaction.** *Journal of Police Science & Administration*, 1974(Mar), Vol 2(1), 2-10. —Accompanied vice squad policemen, as an observer, to study their interactions with suspected criminals. These interactions are seen as a "game model" which is in contrast with the "professional model" of police as guardians of the social order. A game model assumes that competition, rules, and fairness prescribe behavioral interactions. It is concluded that the focus should be on lessening tensions between police and alleged criminals by strengthening patterns in the relationship that support peaceful and fair relations between the 2 sides.—*R. J. Albers.*

8431. Litten, Gary L. (Massachusetts Inst of Technology) **Application of a modified linear learning model of buyer behavior.** *Journal of Marketing Research*, 1974(Aug), Vol 11(3), 279-285. —Examined the performance of a stochastic model of individual buyer behavior compared with data from gasoline diaries kept by 1,074 families. Statistical data are presented to illustrate use of the model for pricing decision making under a set of

assumptions about competitive behavior in a market situation.

8432. Lundman, Richard J. (U Delaware) **Domestic police-citizen encounters.** *Journal of Police Science & Administration*, 1974(Mar), Vol 2(1), 22-27. —Conducted a 15-mo study, using 7 participant-Os, to investigate the nature, frequency, and social processes of domestic (husband-and-wife) police-citizen encounters. Os recorded and analyzed 1,978 police calls involving verbal or nonverbal interaction with citizens. Using a new definition of "domestics," noncriminal encounters of this type constituted only 77 (4%) of all encounters recorded. In these 77, communicative acts of officers and citizens were essentially polite and nonviolent. (30 ref)—*R. J. Albers.*

8433. McFarland, Barry P. **Potential uses of occupational analysis data by Air Force management engineering teams.** *US AFHRL Technical Report*, 1974(Jul), No 74-54, 11 p. —Identified and evaluated areas in which US Air Force management engineering teams (MET) might benefit from occupational research data. Occupational research data were provided as a supplemental input to the development of MET engineered manpower standards for base-level data automation. The analysis revealed that the techniques used by MET and occupational analysis yielded essentially the same information. A number of areas were identified in which occupational research data and techniques could be beneficially employed by MET.—*Journal abstract.*

8434. Mitchell, Terence R. (U Washington) **Expectancy models of job satisfaction, occupational preference and effort: A theoretical, methodological, and empirical appraisal.** *Psychological Bulletin*, 1974(Dec), Vol 81(12), 1053-1077. —The development and refinement of expectancy theory is described, and empirical support for the valence and effort models is reviewed. Findings indicate more support for the former model than the latter one. A number of methodological, empirical, and theoretical issues are raised and discussed. It is stressed that conceptualizations and applications of the theory have been poorly designed. A variety of remedies are suggested. (78 ref)—*Journal abstract.*

8435. Nevin, John R. (U Wisconsin, Graduate School of Business, Madison) **Laboratory experiments for estimating consumer demand: A validation study.** *Journal of Marketing Research*, 1974(Aug), Vol 11(3), 261-268. —Assessed the extent to which the simulated shopping and paired-preference laboratory experiments commonly used in marketing research generate externally valid estimates of consumer reactions to price changes in the market place, and whether the product class under study affects the external validity of laboratory-generated demand estimates. 3 experiments—a sales area experiment, a simulated shopping experiment, and a paired-preference experiment—were conducted with consumers from 2 small midwestern cities whose purchases of various drinks at different prices were assessed. Findings show that both simulated shopping and paired-preference studies generated reasonably valid estimates of consumers' reactions to real-life price changes for brands of cola, and relatively invalid estimates for coffee. There was a tendency for laboratory estimates, particularly for coffee, to overstate the actual effects of price

changes and to become less valid as the size of the price change increased. Results are discussed in terms of consumer awareness of prices of different product classes.—*L. Gorsey.*

8436. Norman, Kent L. & Louviere, Jordan J. (U Alabama) **Integration of attributes in bus transportation: Two modeling approaches.** *Journal of Applied Psychology*, 1974(Dec), Vol 59(6), 753-758.—Studied judged probability of riding hypothetical bus systems as a function of fare, frequency of service, and walking distance to the bus stop. The judgment process of 20 undergraduates was modeled by 2 different approaches. A policy-capturing approach using regression analysis indicated that a linear model accounted for the data adequately. However, a polynomial model incorporating both linear and multiplicative components in the judgment policy provided a better fit. A method of scaling known as functional measurement served to reject the linear model and confirmed that a multiplying model was correct. Functional measurement provided subjective scales for fare, frequency of service, and proximity to the bus stop.—*Journal abstract.*

8437. Ostlund, Lyman E. & Tellefsen, Brynulf. (U Pennsylvania) **Relationship between consumers' category width and trial of new products: A reappraisal.** *Journal of Applied Psychology*, 1974(Dec), Vol 59(6), 759-760.—An earlier study conducted in 1973 by J. H. Donnelly et al (see PA, Vol 51:1939) concluded that an individual's breadth of categorization was related to his purchase of new products. Questions are raised about how the products studied were selected, choice of Ss, and the measure of association used. It is argued that the original conclusion is weakly supported.—*Journal abstract.*

8438. Potter, Norman R. & Dieterly, Duncan L. (Systems Research Lab, Dayton, OH) **Methods for predicting and assessing the impact of technology on human resource parameters: Report of the literature.** *US AFHRL Technical Report*, 1974(Aug), No 74-71, 49 p.—Reviews the literature to establish the current status of the methodology for forecasting and assessing technology and for quantizing human resource parameters with respect to the impact of incoming technologies. References are included which describe current methodologies in detail and which better satisfy the objectives of the research effort. The review fails to provide solution to the problem of quantizing human resource parameters, but the use of a normative forecasting technique is strongly supported. A relevance-tree approach is the technique viewed as amenable to the problem of successive identification of increasingly finer components in an organized, structured manner. The procedure, known as a Design Option Decision Tree, is practical for detailing a system to a level permitting the identification and assessment of human resource components for impact quantification. Expanded summaries of 17 studies are included. (6 p ref)—*Journal abstract.*

8439. Rothkopf, Ernst Z. & Coatney, Richard P. (Bell Lab, Murry Hill, NJ) **Effects of readability of context passages on subsequent inspection rates.** *Journal of Applied Psychology*, 1974(Dec), Vol 59(6), 679-682.—In 2 experiments 92 undergraduates studied a 1,200-word (19-paragraph) passage prepared in a standard (Flesch

Reading Ease, RE = 51) and a difficult (RE = 20) version. 46 Ss switched after the 1st 19 paragraphs from the standard to the difficult version or vice versa. The remainder saw all 19 paragraphs in the same (standard or difficult) form. Inspection rates depended not only on the readability of currently inspected text but also on the readability of recently inspected text segments. The last 9 paragraphs in standard form were inspected more slowly if the 1st 10 paragraphs were difficult than if the passage had been in the standard version throughout. Smaller context effects on inspection rate were observed when Ss were switched from standard to difficult material.—*Journal abstract.*

8440. Saccuzzo, Dennis P.; Higgins, Gwendolyn & Lewandowski, Denis. (Middle Tennessee State U, Ctr for the Study of Crime, Law Enforcement & Corrections) **Program for psychological assessment of law enforcement officers: Initial evaluation.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 651-654.—For the initial evaluation of Tennessee's Law Enforcement Candidate Assessment Program, 104 metropolitan and 92 nonmetropolitan candidates for police certification were studied and compared with respect to their scores on the MMPI, Kuder Preference Record—Vocational (Form CH), and Otis-Lennon Mental Ability Test (Form J). The mean profiles for each group individually, as well as the profiles for the groups combined, were calculated. Results show that the nonmetropolitan applicants were older and had lower IQ scores than the metropolitan group. Both groups approached the MMPI in a "faking good" manner. These profiles, nevertheless, were relatively flat and hovered around the mean. In terms of interests, both groups showed peaks in the social service area with the metropolitan sample scoring somewhat higher than the nonmetropolitan group, who also showed a strong interest in outdoor activities. Their other interests appeared to be approximately equal. Although caution is suggested in interpreting the results, the data indicate that, if psychopathology is present in police officers, it will most commonly be manifest as a character disorder as described by the 4-9 or 4-3 MMPI profile code type.—*Journal abstract.*

8441. Weeks, Gerald D.; Kelly, Michael J. & Chapanis, Alphonse. (Johns Hopkins U) **Studies in interactive communication: V. Cooperative problem solving by skilled and unskilled typists in a teletypewriter mode.** *Journal of Applied Psychology*, 1974(Dec), Vol 59(6), 665-674.—2-person teams of 8 skilled and unskilled typists each (female high school students) cooperated to solve credible, real-world problems by communicating through interconnected typewriters or, as a control, by conversing face-to-face. Performance was assessed by (a) the time taken to solve a problem, (b) measures of behavioral activity, and (c) several measures of verbal output. All 3 criteria showed large differences between face-to-face conversation and communication via typewriter. There were, however, no differences between the 2 groups of typists on any criteria even when they communicated by typewriter, in part because  $\frac{1}{4}$  or less of the total time was spent typing, and in part because Ss composed their own messages. Findings have implications for the use of keyboard terminals in

telecommunications and interactive computer system.

### Occupational Guidance & Personnel Selection & Training

8442. Abe, J. (U Tohoku, Japan) [Urban-rural differences in counseling of adolescents in present-day Japan.] (Span) *Revista de Psicología General y Aplicada*, 1974(May-Jun), Vol 29(128), 583-591.—Presents information regarding vocational choices of about 1,000 Japanese adolescents. Choice reflects the historical social structure of the family and the community and is a way of maintaining the life space of the individual. (English summary)
8443. Akman, Allan; Nordhauser, Fred & Roach, James F. (System Automation Corp, Silver Spring, MD) A technical description of the Officer Procurement Model (TOPOPS). *US AFHRL Technical Report*, 1974(Jul), No 73-76, 50 p.—Presents a comprehensive mathematical formulation of the aggregate-level, computer-based model of the US Air Force system, TOPOPS (Total Objective Plan for the Officer Procurement System). It is designed to simulate officer accession and training and achieve optimal solutions in terms of either cost minimization or accession quality maximization over a 5-yr procurement period. The technical description specifies the objective functions and constraints in symbolic terms. A hypothetical sample problem for minimizing cost is presented, and the results are discussed. The problem is also subjected to sensitivity analysis which examines the impact of various policies on cost and accession quality. The computer-generated reports are included in an appendix.—*Journal abstract.*
8444. Asgill, M. G. & Taudevin, L. R. (Dept of the Public Service Board, Psychological Services Branch, Papua New Guinea) Vocational interests and aptitude measures as predictors of success of R105 drivers. *New Guinea Psychologist*, 1974(Apr), Vol 6(1), 30-33.—Reports on the predictive validity of vocational interest tests in a sample of dump truck driver trainees in Papua New Guinea. Results suggest that vocational interest tests should be added to the aptitude test battery.
8445. Atwater, David C.; Alf, Edward F. & Abrahams, Norman M. (US Navy Personnel Research & Development Ctr, San Diego, CA) The unobtrusive measurement of racial bias among recruit classification specialists. *US Navy Personnel Research & Development Center Technical Report*, 1974(Oct), No 75-6, 47 p.—Investigated whether there are significant differences between black and white classification interviewers in their treatment of black and white US Navy recruits. The nature of the classification procedure resulted in the essentially random assignment of 2,413 black and 15,339 white recruits to 8 black and 38 white classifiers. This procedure obviated numerous problems inherent in racial bias studies. The major hypothesis that black and white classifiers would be differentially biased in their treatment of black and white recruits was not supported. A 2nd hypothesis that classifiers within either racial group would be differentially biased in their treatment of black and white recruits was also not supported. Sample sizes were so large that classifier bias accounting for as little as 1% of the criterion would have been detected as significant. Thus, there was neither statistically nor practically significant bias detected among classification specialists.—*Journal abstract.*
8446. Barocas, Harvey A. (Bernard M. Baruch Coll, City U New York) Iatrogenic and preventive intervention in police-family crisis situations. *International Journal of Social Psychiatry*, 1974(Spr-Sum), Vol 20(1-2), 113-121.—An iatrogenic ailment is one unintentionally caused by a physician in his attempts to heal. Similarly, police may cause iatrogenic disturbances in their attempts to bring order. Elements of crises and police roles which may aggravate crises are discussed. A police training model is presented.
8447. Bennett, M. (U Hong Kong) Interest patterns, work expectancy and occupational opportunities in two South Pacific cultures. *New Guinea Psychologist*, 1974(Apr), Vol 6(1), 25-29.—Compared scores on the Pacific Vocational Interest Analysis (PVIA) of Melanesian high school students in Fiji ( $n = 170$ ) and in New Hebrides ( $n = 119$ ). Significant differences ( $p < .01$ ) appeared on 5 of the 8 PVIA scales between the groups as a whole and in within-sex comparisons. New Hebrides students' scores indicate less occupational sophistication and lower expectations. Interests in both groups seem negatively related to existing opportunities in their respective areas. Applications for vocational counseling in developing nations are discussed.—C. Wright.
8448. Buzzotta, V. R.; Lefton, Robert E.; Karraker, Dean & Sherberg, Mannie. A pragmatic approach to sales training. *Training & Development Journal*, 1974(Nov), Vol 28(11), 34-42.—Advocates a systematic 10-step approach to sales training as a program that gets results. Abstract concepts are avoided, and role playing provides practice in actually carrying out recommended techniques. After faults are diagnosed, prescriptions for cures are given, always with attention to practical procedures that can be carried over from training to specific sales contacts. Continuous follow-up research is done to make sure the training is producing worthwhile sales results.—R. L. Sulzer.
8449. Cobb, B. B. & Nelson, P. L. (FAA Civil Aeromedical Inst, Aviation Psychology Lab, Oklahoma City, OK) Aircraft-pilot and other pre-employment experience as factors in the selection of air traffic controller trainees. *FAA Office of Aviation Medicine Report*, 1974(Sep), No 74-8, 35 p.—4,092 Federal Aviation Agency (FAA) air traffic control (ATC) trainees (1,740 hired during 1960-1963; 2,352 hired during 1969) were followed up to determine those still in ATC work as of January 1, 1973. Retention in ATC work was more closely related to entry age than to aptitude levels, educational levels, or type of aviation-related experience prior to training. Ss with previous pilot experience had lower retention rates than did Ss with no aviation-related experience. Findings suggest that only previous ATC work should receive credit points in eligibility ratings for hiring ATC trainees. For en route and terminal FAA options, previous ATC experience involving instrument flight rules was a more valid predictor of retention than previous experience involving only visual flight rules.—W. E. Collins.
8450. Eddowes, Edward E. A cognitive model of what is learned during flying training. *US AFHRL Technical*

*Report*, 1974(Jul), No 74-63, 9 p.—Presents a model which relates the growth of pilot ability to the student's increasingly refined cognitive discriminations about his flying performances made possible by his improved familiarity with the phenomena of flight gained while practicing aircraft control tasks. As the student pilot becomes familiar with his flying tasks, he anticipates his control requirements. Consequently, his performance improves. This leads to better error discriminations, increased aircraft control effectiveness, and more familiarity with the phenomena of flying, which is in turn followed by another incremental cycle. This interpretation views the acquisition of flying skill as a spiral-type expanding cognitive process rather than as a linear-type perceptual motor skill refinement process.—*Journal abstract*.

8451. Frenzel, Gunnel; Lilieblad, Bertil; Sköld, Per & Stahlberg, Berit. [Investigations concerning the enlistment of conscripts.] (Swed) *MPI B-Rapport*, 1974(Jun), No 102, 46 p.—Presents discussions of 7 experiments on the reliability of psychological judgments of Swedish enlisted personnel, the judgment of soldier eligibility and commanding officer eligibility, the activity of the unit psychologist in interviewing personnel and designing educational programs, the development of tests of mechanical and technical knowledge of military personnel and the assessment of the validity and reliability of these tests, and the development of a revised "Enlistment" test for all entering personnel.—*English abstract*.

8452. Frieling, E.; Kannheiser, W. & Lindberg, R. (U Augsburg, W Germany) **Some results with the German form of the Position Analysis Questionnaire (PAQ).** *Journal of Applied Psychology*, 1974(Dec), Vol 59(6), 741-747.—Describes the development of a German form of the Position Analysis Questionnaire (PAQ) to serve as a structured job analysis procedure. In Phase 1, independent translations of the PAQ, made by 3 groups of psychologists, were incorporated into the PAQ Bd (the German edition). 30 trained graduate students analyzed 61 positions with the PAQ Bd. Average interrater reliability was .79; average reliability of the individual job elements was .65. In Phase 2, 70 industrial psychologists rated the importance of 59 attributes, modified to include better definitions, for each of the 205 job elements. Satisfactory levels of reliability were achieved. It seems possible to construct profiles of job requirements for positions on the basis of the PAQ Bd analyses of jobs in combination with the attribute profiles of the individual elements. (16 ref)—*Journal abstract*.

8453. Gottfredson, Gary D.; Holland, John L. & Gottfredson, Linda S. (Johns Hopkins U) **The relation of vocational aspirations and assessments to employment reality.** *Center for Social Organization of Schools Report*, Johns Hopkins U, 1974(Sep), No 181, 11 p.—Used a typology to organize 1970 US Census data University kinds of employment, survey data about people's aspirations, and the results of vocational assessments made with and without norms for men and women at 2 educational levels—some high school or above and some college or above. Results indicate that kinds of employment differed greatly for different educational levels and between the sexes. The distribution of people's aspira-

tions resembled the distribution of actual employment with some notable exceptions. Findings demonstrate that the use of sex-based interest inventory norms is unrealistic because they create distributions that diverge greatly from the distribution of actual employment. Implications of the congruence between kinds of people and their employment are discussed for vocational guidance, test development, and career development research and theory. (16 ref)—*Journal abstract*.

8454. Henry, Peter H. & Engelken, Edward J. **A laser-generated visual display and tracking task for a link GAT-1 flight trainer.** *USAF School of Aerospace Medicine Technical Report*, 1974(Sep), No 74-36, 28 p.—Details the electronics and hardware of a prototype test system that permits assessment of a pilot's ability to track a target which moves about 3 separate axes: vertically (altitude), laterally, and in depth (range). A low-cost laser-generated visual display and rear projection screen is used to create the visual tracking task which is crudely akin to aerial refueling or formation flying. Performance is assessed on-line in terms of integrated absolute tracking error and time on target, by using a bench-top analog computer and simple hardware. A 14-channel analog tape recorder collects the data necessary for subsequent human operator analysis.—*Journal abstract*.

8455. Jepson, David A. & Dilley, Josiah S. (U Iowa) **Vocational decision-making models: A review and comparative analysis.** *Review of Educational Research*, 1974(Sum), Vol 44(3), 331-349.—Notes that vocational decision-making (VDM) models are similar in many ways to decision theory and to each other, but are not interchangeable. These models are applicable to different types of decisions, and vary substantially in their assumptions about the decision maker and the conditions under which the decision is made. No evaluative conclusions have been reached, but research has isolated some fundamental issues which future theorists and researchers should confront. (2½ p ref)—*P. D. Leedy*.

8456. Karp, Harvey B. (Old Dominion U, School of Business Administration) **What's going on? Training & Development Journal**, 1974(Nov), Vol 28(11), 46-50.—Derives from Gestalt concepts another approach to training salespeople. Besides knowledge of the product, success depends on making and maintaining contact with the prospect, on working with resistance rather than overcoming it, and on flexibility, or constant awareness of what's going on in the sales situation.

8457. Lewis, William E. et al. (McDonnell Douglas Corp, St Louis, MO) **Precision measuring equipment (PME) individualized instruction.** *US AFHRL Technical Report*, 1974(Aug), No 74-46, 62 p.—Describes the development, administration, and evaluation of self-paced programmed and audio-visual (AV) instructional materials to assess the feasibility of individualizing the PME course as part of the US Air Force Advanced Instructional System (AIS). The materials for a 90-hr block of instruction included printed and AV media and covered complex cognitive and performance skills. The 35 trainees achieved 99% of the performance objectives on the 1st attempt. Trainee attitudes toward the materials and system as measured by an attitude scale were positive. Reduction in training time coupled with trainee achievement supports the feasibility of individu-

alizing the PME course as part of the AIS. Projected cost savings for 1,025 students argue strongly for the cost-effectiveness of individualizing the entire PME course and other similar technical training courses.—*Journal abstract*.

8458. Mandia, Richard J. (Betz Lab, Treve, PA) **Sales training: As simple as P-A-C.** *Training & Development Journal*, 1974(Nov), Vol 28(11), 15-20.—The Parent-Adult-Child concept of personality in transactional analysis provides a frame of reference for training in the skillful handling of people. A 3-5 day continuous session starting with a personality inventory questionnaire and stressing personality theory has proven to be a practical training program.

8459. Meyer, Robert P.; Laveson, Jack L.; Weissman, Neal S.; Eddowes, Edward E. (Design Plus, St Louis, MO) **Behavioral taxonomy of undergraduate pilot training tasks and skills: Surface task analysis, taxonomy structure, classification rules and validation plan.** *US AFHRL Technical Report*, 1974(Jul), No 74-33(2), 102 p.—Assimilates and directs taxonomic theory toward a practical application in flying training research. A surface task analysis is developed on the basis of a breakdown of task elements according to the cue, mental action, and motor action involved. The tasks analyzed fall into 3 categories: fundamental and composite transitions and continuous transactions. A cubic taxonomic structure is developed with cue and mental and motor action dimensions, and a set of classification rules are provided for locating any flying training task in a specific "pigeon hole" within the taxonomic structure. A procedure for evaluating the validity of the system is established for use during the 2nd phase of this ongoing study. A glossary, an appendix of surface task analyses, and an annotated bibliography of 35 studies on taxonomy development and applications related to flying tasks are included. (15 ref)—*Journal abstract*.

8460. Neumann, Idell & Abrahams, Norman M. **Identification of Naval Academy applicants with engineering and science interests.** *US Navy Personnel Research & Development Center Technical Report*, 1974(Oct), No 75-7, 20 p.—Used the Strong Vocational Interest Blank (SVIB) to identify individuals more likely to select an engineering or science program at the US Naval Academy. A dichotomous criterion based on midshipmen major selections (i.e., engineering-science vs other majors) was used to construct a scale using SVIB responses of half the 1973 graduating class ( $N = 435$ ). The scale was cross-validated on the remaining 1973 graduates, as well as the 1976 ( $N = 1,141$ ) and 1977 ( $N = 1,220$ ) classes. The 1976 class was also used to study the relationship between the scale and disenrollment at the academy. Test-retest reliability was assessed using a subgroup of the 1977 class who completed the SVIB under selection and experimental conditions. Cross-validated biserial correlations of .57, .62, and .63 were obtained for the 1973, 1976, and 1977 classes, indicating a high degree of statistical and practical significance for the scale for differentiating between Ss selecting engineering-science rather than another major. Test-retest correlations of .80 and .81 for 2 subgroups of Ss were obtained. A linear progression between scale

scores and disenrollment rates for the 1976 class was observed.—*Journal abstract*.

8461. Pina, Manel. **The assignment of airmen by solving the transportation problem.** *US AFHRL Technical Report*, 1974(Jul), No 74-58, 10 p.—Discusses 2 techniques to help US Air Force managers understand some of the many optimization methods available—one which directly optimizes payoff values and one which indirectly optimizes payoff values. The policy of fill and the policy of fit are described. It is suggested that these techniques for solving the transportation problem will give the Air Force manager insight into at least 2 assignment policies and will pose questions which must be considered in trying to optimize assignment of Basic Military Training graduates to their Air Force Specialty Code.—*Journal abstract*.

8462. Super, Donald E. (Teachers Coll, Columbia U) **[Psychic determinants of professional choice.]** (Span) *Revista de Psicología General y Aplicada*, 1974(May-Jun), Vol 29(128), 563-582.—Vocational choice is not an event but a developmental process. Determinant factors are economic, social, and psychological. Psychological determinants include intelligence, aptitudes, interests, values, and self-concept. (English summary) (32 ref)

8463. Triandis, Harry C.; Feldman, Jack M.; Weldon, David E. & Harvey, William M. (U Illinois, Urbana-Champaign) **Designing preemployment training for the hard to employ: A cross-cultural psychological approach.** *Journal of Applied Psychology*, 1974(Dec), Vol 59(6), 687-693.—A review of reports concerning the effects of training of the hard-to-employ suggest that the training is ineffective. One major factor responsible for the lack of success may be the neglect of cultural variables. A theoretical framework is presented which helps in the design of training programs that take cultural variables into account. (69 ref)—*Journal abstract*.

8464. Wiener, Yoash & Schneiderman, Mark L. (Case Western Reserve U) **Use of job information as a criterion in employment decisions of interviewers.** *Journal of Applied Psychology*, 1974(Dec), Vol 59(6), 699-704.—Conducted 2 factorially designed experiments to investigate the extent to which job information was used by interviewers as a criterion for their decisions. In Exp I 48 experienced and 48 unexperienced job interviewers received identical job information. Applicant information was either relevant or irrelevant to the job information. Ss' judgments were based on composites of relevant and irrelevant information segments. Each of the segments was either favorable or unfavorable. Exp II replicated Exp I, except that the 48 Ss did not receive job information. Findings indicate extensive use of job information. Availability of such information reduced the effect of irrelevant attributes on decisions but did not eliminate it. Use of job information was not enhanced by experience in interviewing.—*Journal abstract*.

8465. Woodruff, Robert R.; Smith, James F. & Morris, Robert A. **Use of the T-4G simulator in USAF undergraduate pilot training (UPT), Phase I.** *US AFHRL Technical Report*, 1974(Jul), No 74-61, 38 p.—Evaluated a T-37 flight training simulator with limited visual and motion capability to determine the extent to

which its technology could be used to substitute for flying hours in the UPT T-37 syllabus. A special syllabus maximizing the simulator's capabilities was used. The 1st phase in which 6 UPT students were trained in the program by 8 experienced instructors is described. The students completed contact training in 23.4 flying hrs (a savings of 3.8 hrs), and they completed instrument training in 9.7 flying hrs (a savings of 11.1 hrs).—*Journal abstract*.

### Job Performance & Satisfaction

8466. Balch, David E. (State of California Dept of Justice Commission on Peace Officer Standards & Training, Los Angeles) **Performance rating systems: Suggestions for the police.** *Journal of Police Science & Administration*, 1974(Mar), Vol 2(1), 40-49.—Describes 7 performance rating systems and the errors that can arise in using them. Based on studies by the US Army and Navy of the effectiveness of various systems, the "paired-choice" or "forced choice" system was selected for testing in 3 police departments of different size, location, and organization. Officers were ranked both by their supervisors and their peers, and in each of the 3 departments the 2 rankings were almost identical. Results thus indicate that the paired-choice system can correctly identify the officers who are doing the best job.—R. J. Albers.

8467. Baty, D. L.; Wempe, T. E. & Huff, E. M. (NASA, Ames Research Ctr, Man-Machine Integration Branch, Moffett Field, CA) **A study on aircraft map display location and orientation.** *IEEE Transactions on Systems, Man, & Cybernetics*, 1974(Nov), Vol 4(6), 560-568.—6 airline pilots participated in a fixed-base simulator study to determine the effects of 2 horizontal situation display panel locations relative to the vertical situation display and of 3 map orientations on manual piloting performance. Significant performance differences were found between wind conditions and among pilots but none between map locations and orientations, illustrating the potential tracking accuracy of such a display.

8468. Blunt, Peter. (U Natal, Durban, South Africa) **Cultural and situational determinants of job satisfaction amongst management in South Africa: A research note.** *Journal of Management Studies*, 1973(May), Vol 10(2), 133-140.—Compared managerial attitudes in South Africa with those in several countries in other parts in the world. English-speaking middle managers in 13 small to medium-sized South African companies (60-3,000 employees) answered a questionnaire (response rate 71%) regarding 16 items relevant to 5 need categories. These managers were more dissatisfied in almost every need category than managers in other countries, except that in France and Italy there was more dissatisfaction with social needs. In developing countries (e.g., Argentina, Chile, and India) managers seemed to be more dissatisfied in all needs except the important category of self-actualization. Possible reasons for this difference are discussed. It is suggested that this dissatisfaction among South African managers with respect to self-actualization arises from political and social factors in South Africa.—R. S. Albin.

8469. Chernik, Doris A. & Phelan, Joseph G. (California State U, Los Angeles) **Attitudes of women in management: I. Job satisfaction: A study of perceived need satisfaction as a function of job level.** *International Journal of Social Psychiatry*, 1974(Spring-Summer), Vol 20(1-2), 94-98.—662 bank employees responded to a mail survey of job satisfaction based on A. Maslow's need hierarchy, indicating their sex, education, job level, and salary. Amount of need satisfaction was positively related to occupational level and negatively related to hierarchical level of the need. Male ratings of the importance of each need were positively related to hierarchical level of the need. Females, however, rated security as their most important need, although it is low on Maslow's hierarchy. Results confirm earlier findings and extend the generality of earlier studies by including non-managerial-level Ss.—W. R. Street.

8470. Churchill, Gilbert A.; Ford, Neil M. & Walker, Orville C. (U Wisconsin, Madison) **Measuring the job satisfaction of industrial salesmen.** *Journal of Marketing Research*, 1974(Aug), Vol 11(3), 254-260.—Describes a job satisfaction measure specifically designed for industrial salesmen. Norms, a detailed description of the methodology used, and suggested techniques for evaluating the measure's factor structure, reliability, and construct validity are presented. The questionnaire assesses various job components, including the job itself, fellow workers, supervision, company policy and support, pay, promotion, and customers. Data from several samples of salesmen support the reliability of the measure, although validity measures are considered somewhat equivocal. (17 ref)—L. Gorsev.

8471. Fisher, Allan H. & Rigg, Leslie S. (Human Resources Research Organization, Alexandria, VA) **Career potential of enrollees in PLC, ROC and AVROC: A comparison of surveys conducted in May 1972 and May 1973.** Alexandria, VA: Air Force Human Resources Lab, Manpower Development Branch, MR 74-5, 1973. 60 p.—Reports that from 30 to 40% of the enrollees in the Navy Reserve Officers Candidate program, the Aviation Reserve Officers Candidate program, and The Marine Corps Platoon Leaders Class program indicated intent to pursue a military career, regardless of financial benefits. Reasons given for entering the programs were similar for both years of the survey.

8472. Garza, Andrew T. & Carpenter, James B. **Comparative job attributes of airmen and civil service personnel having similar job types.** *US AFHRL Technical Report*, 1974(May), No 74-45, 15 p.—Compared US military and civil service personnel ( $n = 998$  in each group) having similar job types and from comparable accounting and finance career ladders. Data reveal distinct differences between the 2 populations, with the magnitude of the differences being highly variable as functions of specific job types considered. Generally, civilians performed a larger number of tasks; the tasks and overall jobs they perform were more difficult; they found their jobs more interesting; and they felt that their jobs made greater use of their talents and training. In view of these differences in attributes and the potentially higher cost of military personnel, conversion of certain military positions to civilian positions to meet operational needs appears feasible. Unique attributes of

civilian and military personnel point out the necessity for further research into their causes and consequent effects in such areas as promotion, skill upgrading, center progression, worker attitudes, and retention.—*Journal abstract.*

8473. Gilson, Richard D. & Fenton, Robert E. (Ohio State U) **Kinesthetic-tactual information presentations: Inflight studies.** *IEEE Transactions on Systems, Man, & Cybernetics*, 1974(Nov), Vol 4(6), 531-535.—Compared the efficacy of a kinesthetic-tactual compensatory display with 2 types of visual displays in a highly structured approach and landing task and a less structured task involving tight turns about a point. Results show that a 55% reduction in tracking error was obtained using the tactual display along with decreased maximum altitude variations and decreased speed variations. It appears that such a display offers considerable potential for inflight use.

8474. Hamner, W. Clay; Kim, Jay S.; Baird, Lloyd & Bigoness, William J. (Michigan State U) **Race and sex as determinants of ratings by potential employers in a simulated work-sampling task.** *Journal of Applied Psychology*, 1974(Dec), Vol 59(6), 705-711.—Examined the way the sex and race of the rater and the sex and race of the ratee influence assessments of ratee performance on a simulated work-sampling task. 36 undergraduates assumed the role of a manager and rated all 8 combinations of male-female and black-white performers. Results indicate that sex-race stereotypes do influence assessments of behavior on a work-sampling task even when objective measures are defined. Findings are discussed in terms of potential methods of overcoming these biases to use more effectively the work samples for selection and promotion decisions are discussed. (25 ref)—*Journal abstract.*

8475. Ivancevich, John M. (U Houston) **Effects of the shorter workweek on selected satisfaction and performance measures.** *Journal of Applied Psychology*, 1974(Dec), Vol 59(6), 717-721.—Studied effects of the 4-day, 40-hr workweek by comparing 104 experimental and 106 control Ss (members of the steelworkers' union) on measures of job satisfaction, anxiety-stress, and performance over a 13-mo period. The analysis indicated that the workers in the 4-day, 40-hr division were more satisfied with personal worth, social affiliation, job security, and pay; experienced less anxiety-stress; and performed better with regard to productivity than their control group (5-day, 40-hr) counterparts. (15 ref)—*Journal abstract.*

8476. Kloosterhuis-Duinker, M. (Rijks Geneeskundige Dienst te 's-Gravenhage, Netherlands) **[Ability to assume tasks and the relationship to age of retirement.]** (Duth) *Mens en Onderneming*, 1974(Mar-Apr), Vol 28(2), 100-114.—Examined the opinions of 725 staff officials from 3 government departments as to their health and their desire for retirement before the age of 65. The Ss who felt sickly, overburdened by their tasks, and desirous of earlier retirement were, in decreasing order of percentages, females between 60 and 64, females between 55 and 59, and males between 60 and 64.

8477. Knowles, Lyle & DeLadurantey, Joseph C. (Pepperdine U) **Performance evaluation.** *Journal of Police Science & Administration*, 1974(Mar), Vol 2(1),

28-33.—Considers the problem of assessing the performance of law enforcement agents. The objectives of evaluation are discussed. 3 basic evaluation systems are described: (a) the graphic rating scale, (b) the checklist system, and (c) the narrative or open-end form system. Several other methods are also presented. Problems and possible errors in rating systems are summarized. Police agencies tend to evaluate employees on the basis of personality and behavioral rating scales. Suggestions are made for improved evaluation of performance.—R. J. Albers.

8478. Mathews, J. J.; Collins, W. E. & Cobb, B. B. (FAA Civil Aeromedical Inst, Aviation Psychology Lab, Oklahoma City, OK) **Job-related attitudes of non-journeyman FAA air traffic controllers and former controllers: A sex comparison.** *FAA Office of Aviation Medicine Report*, 1974(Aug), No 74-7, 22 p.—Sent questionnaires to 2 groups of men and women who had all entered training with Air Traffic Control (ATC) at the same time. Group 1 (attritions) had left ATC. Group 2 (retentions) were still in ATC work 2 or more yrs later. The questionnaire return rate was 87%. A major section consisted of 107 agree-disagree items related to job attitudes. Over 93% of Ss agreed that ATC work, a predominantly (97%) male occupation, was challenging, respected, and useful. More women than men (88% vs 66%) indicated that entry-level ATC pay was better than pay for most jobs they could get. More women than men (24% vs 5%) felt that coworkers discriminated against women; as many female retentions as attritions agreed to this. Discrimination against women by management was perceived by 29% of the female and 18% of the male attritions, and discrimination by supervisors was perceived by 26% of the female and 12% of the male attritions. Among the retentions, discrimination by management was perceived by only 9% of females and of males, and by supervisors by only 3% of females and of males. More female attritions (38%) than retentions (18%) felt that shift work was not desirable. Other findings concern assignments, working conditions, promotions, perceived expectations and treatment of trainees, "best" and "worst" features of ATC work, and proposals for improving the ATC job. (35 ref)—W. E. Collins.

8479. Oliver, Richard L. (U Kentucky) **Expectancy theory predictions of salesmen's performance.** *Journal of Marketing Research*, 1974(Aug), Vol 11(3), 243-253.—Conducted a 6-mo cross-sectional study to examine the applicability of V. H. Vroom's expectancy theory to the 6-mo productivity and production goals of 80 life insurance salesmen (mean age = 38 yrs). The dependent variables were (a) 6-mo production volume and (b) a goal attainment criterion derived from actual and estimated production. Compensation, incentives, intrinsic and most desirable job outcomes, the valence of various outcomes, and instrumentality, expectancy, and ability variables were also measured by questionnaire. Results show that valence and instrumentality perceptions of the 4 incentive outcomes (e.g., membership in a production club) were strongly related to productivity and, to a lesser extent, goal attainment. No other outcomes were consistently related to the criteria. (48 ref)—L. Gorsey.

8480. **Pedalino, Ed & Gamboa, Victor U.** (Pedalino & Assoc, Ann Arbor, MI) **Behavior modification and absenteeism: Intervention in one industrial setting.** *Journal of Applied Psychology*, 1974(Dec), Vol 59(6), 694-698.—Used behavior modification to decrease absenteeism in 215 hourly employees at a manufacturing-distribution facility. Employees in 4 adjoining plants served as comparison groups. An ABA (baseline, intervention, return to baseline) intervention using a lottery incentive system constituted the experimental design. Absenteeism decreased significantly following the experimental group intervention but did not decrease in any of the 4 comparison groups. Further, stretching the schedule of reinforcement did not increase in rate of absenteeism.—*Journal abstract.*
8481. **Prichard, Robert D.; Leonard, Dale W.; von Bergen, Clarence W. & Kirk, Raymond J.** (Inst for Organizational Behavior Research, Lafayette, IN) **The effects of varying schedules of incentive delivery on technical training.** *US AFHRL Technical Report*, 1974(Sep), No 74-32, 98 p.—Assessed the impact of various schedules of reinforcement on performance and attitudes in US Air Force-related setting. 24 17-19 yr old males matching the characteristics of Air Force trainees were hired to work for 4 wks, 1 wk under each of 4 schedules of reinforcement: salary, fixed-ratio, variable-ratio, and variable-ratio-variable-amount. Results indicate that the salary schedule resulted in the lowest performance and attitudes. Performance was best under the variable-ratio-variable-amount schedule, while attitudes were best under the fixed-ratio schedule. It is concluded that instituting a fixed- or variable-ratio-variable-amount schedule of incentive delivery would be a highly cost-effective procedure in computer managed Air Force training. (6 p ref)—*Journal abstract.*
8482. **Riola, Peter W.** (Burlington Northern, St Paul, MN) **Measuring performance of salaried salespeople.** *Training & Development Journal*, 1974(Nov), Vol 28(11), 12-14.—Proposes that if the organization encourages the individual to plan well, particularly by setting reasonable goals and by constantly evaluating changing conditions, production will rise. Performance should be judged on the accomplishment of such planning and evaluation as well as on attainment of routine sales goals.
8483. **Rosseel, Eric.** (Lab voor Industriële Psychologie—VUB, Brussels, Belgium) **[Fatigue and boredom resulting from reduced task motivation.]** (Duth) *Psychologica Belgica*, 1974, Vol 14(1), 67-78.—Investigated the causes of fatigue and boredom in 48 assembly line workers performing a monotonous task in social and solitary situations. Personality measures were obtained with the Maudsley Personality Inventory. Fatigue was hypothesized to be dependent on a reduction of task motivation and boredom to result from an incongruity between alternative behavior tendencies and work situation. The 2 hypotheses were, in general, supported by the results. Boredom was associated with neuroticism in the social situation and with extraversion in the solitary situation. (English abstract)—*S. Slak.*
8484. **Sandler, B. E.** (Ctr for Creative Leadership, Greensboro, NC) **Eclecticism at work: Approaches to job design.** *American Psychologist*, 1974(Oct), Vol 29(10), 767-773.—Explores a particular aspect of work—job design—and emphasizes the range of alternatives available. Job enlargement and modified work weeks are briefly examined. It is suggested that the orientation of the problem solver and the issue of problem formulation are vital, but usually neglected aspects of job design. Some approaches to job design which capitalize on the existence of individual differences in the work force are considered. (32 ref)—*Author abstract.*
8485. **Wild, R. & Dawson, J. A.** (U Bradford, Management Ctr, England) **Prediction of the job attitudes and behaviours of female manual workers: A research note.** *Journal of Management Studies*, 1973(May), Vol 10(2), 113-117.—Reports briefly on lack of success in predicting, from nonpersonal data, the attitudes, performance, etc, of 315 female workers in an electronics factory. Data from questionnaires and company records were subjected to principal components and regression analyses. The only biographical item that correlated with general job satisfaction, specific job attitudes, behavior and performance, and efficiency, was age. Most of the equations developed provided indices of predictive efficiency less than 10%. Results suggest that the individual variables used do not afford a reliable practical means of making decisions regarding selection and placement of personnel.—*R. S. Albin.*
8486. **Wiley, Llewellyn N.** **Across-time prediction of the performance of airman administrators and mechanics.** *US AFHRL Technical Report*, 1974(Jul), No 74-53, 25 p.—In a follow-up study of 662 US Air Force Administration Specialists and 690 Aircraft Mechanics it was found that supervisors' ratings of Ss' job performance were predictable across time. Ss were rated on overall job performance and 65 traits. After 2 yrs for mechanics and 3 yrs for administrators, at least 16% of the performance variance was predictable from trait ratings, with multiple Rs from .40 to .47. The 1st overall performance ratings made less prediction than did the 65 trait ratings taken as a whole. Results support earlier findings, on samples which included these airmen, that the traits important for the performance of mechanics differ somewhat from the traits important for administrators and that skill levels within ladders differ in their trait requirements.—*Journal abstract.*
8487. **Yampey, Nasim.** **[Coming of age at work?]** (Span) *Acta Psiquiátrica y Psicológica de América Latina*, 1974(Jun), Vol 20(3), 187-193.—Work is a means of survival and a source of pleasure, gratification, social status, and feelings of personal worth. Thus it is essential for good mental health. 5 cases of serious working troubles are reported, emphasizing the role of leisure and the complexities of work functions.—*English summary.*
8488. **Zanders, H. L.** (Katholieke Hogeschool, Tilburg, Netherlands) **[Flexibility of labor: A case study.]** (Duth) *Mens en Onderneming*, 1974(Mar-Apr), Vol 28(2), 84-99.—Studies changes in the attitudes of relocated workers. Ss were a statistically derived sampling of 21 mine workers from a total of 600. Closing of the mine had changed their work to metal construction. Interviews with the Ss indicated that the previous employment had been more desirable than the present one for most of the Ss with respect to the opportunity for interruptions in the task, relative independence in the performance of the work, and fixed mealtimes. Employment in the new

industry was preferred by most Ss because of the tempo of the work, the fixed time of the work periods, the popular regard of the importance of the task, the quality of the abilities of the coworkers, the contacts with the foreman, the physical conditions of the work, and higher wages. The most adverse aspect of the process of relocation was the period of negotiation for the new employment.—A. J. Ter Keurst.

### Management & Leadership

8489. Austin, Charles J. (Xavier U) **A national study of educational programs in health administration.** *Administration in Mental Health*, 1973(Fal), 73-75.—Describes the work of the Commission on Education for Health Administration, which is studying administrative roles and functions in relation to present and future health delivery systems in order to recommend educational and credentialing programs.

8490. Cabell, David E. (Baldwin-Wallace Coll) **The relevance of a management game.** *Simulation & Games*, 1974(Jun), Vol 5(2), 201-211.—36 teams of 6 business administration students each participated in a management simulation game for 2 wks. 4 different interaction patterns (experimental conditions) were developed by manipulating leadership style (participative vs nonparticipative) and specialization (product vs functional) while variables relating to information systems, control systems, and delegation of authority were held constant. The specialization and leadership style variables focused on the peer group interactions and the superior-subordinate interactions, respectively. Results indicate that students perceived some degree of relevance (as measured by a 3-item questionnaire) between their duties, decisions, and relationships and the real world. Perceptions of the relationships between duties (i.e., allocation of budget funds to a set of decisions and negotiating for additional funds from the leader's slush fund) were positively related to the main effects of the specialization variable. However, neither the specialization nor the leadership style variables were related to the student's perceptions of the management game as an opportunity for gaining knowledge about the decisions and relationships which a manager would encounter in the real world.—D. E. Anderson.

8491. Etzel, Michael J. & Ivancevich, John M. (U Kentucky, Coll of Business & Economics) **Management by objectives in marketing: Philosophy, process, and problems.** *Journal of Marketing*, 1974(Oct), Vol 38(4), 47-55.—Reviews management-by-objectives tenets, successes, and failures. Implementation guidelines are presented which suggest that it can be an effective tool for marketing managers.

8492. Fry, John P. (Human Resources Research Organization, Western Div, Fort Bliss, TX) **The army officer as performance manager.** *HumRRO Professional Paper*, 1974(Aug), No 13-74, 11 p.—Describes the results of one US Army officer's experiment in applying the techniques of psychological research on the job. With a view to developing his subordinates' leadership ability and initiative and permitting them an active role in managing the battalion, he emphasized particularly the principles of contingency management, participative management, and performance counseling. Despite some

initial resistance by other officers, the experiment paid off in terms of battalion morale, responsiveness, and esprit de corps. Although emphasis was on self-motivation rather than the threat of punishment as a motivating force, there was no breakdown in discipline.—*Journal abstract*.

8493. Harmon, Shirley J. (U Colorado, Medical Ctr, Denver) **Management training and development: An interim project approach: Optimizing the transfer of training back to the work situation.** *Training & Development Journal*, 1974(Jun), Vol 28(6), 16-18.—Suggests that combining workshop learning with on-the-job follow-up application to interim projects may avoid the pitfalls of a training program based solely on classroom or work situation methods. After completing the interim projects, participants should benefit from a summary report workshop.

8494. Hegarty, W. Harvey. (Indiana U) **Using subordinate ratings to elicit behavioral changes in supervisors.** *Journal of Applied Psychology*, 1974(Dec), Vol 59(6), 764-766.—Determined whether feedback of subordinates' ratings of supervisors leads to positive changes in the supervisors' behavior. The employees of the 56 supervisors in the experimental and control groups completed an information-opinion survey using a modified Likert scale format. Feedback reports were given to the experimental supervisors, and a 2nd survey was conducted 10 wks later to measure change. 2 independent measures showed significant positive change for the experimental supervisors.—*Journal abstract*.

8495. Horstman, Preston. (National Association of State Directors of Law Enforcement Training, Gaithersburg, MD) **Leaderless group discussion as an assessment tool for supervisory and command promotions.** *Journal of Police Science & Administration*, 1974(Mar), Vol 2(1), 34-37.—Recommends "leaderless group discussion" as a method for selecting policemen for supervisory roles. A group of examinees are asked to discuss a job-related topic for a given period of time, without direction or leadership from the examiners. Raters check criteria based on performances by group members. In implementing this procedure, several factors must be considered: size of groups, seating, pretest coaching, amount and kind of participation and motivation. The problem of validity is also discussed.—R. J. Albers.

8496. Hsu, Chris Ching-Yang & Newton, Richard R. (General Motors Corp, Detroit, MI) **Relation between foremen's leadership attitudes and the skill level of their work groups.** *Journal of Applied Psychology*, 1974(Dec), Vol 59(6), 771-772.—Studied the relation between foremen's leadership attitudes, as measured by the Leadership Opinion Questionnaire, and the skill level of their work groups. Ss were 243 foremen and 66 general foremen in a manufacturing plant. Results indicate that the skill level of the foremen's work group was significantly related ( $p < .01$ ) to his structure attitude but not to his consideration attitude toward these workers.—*Journal abstract*.

8497. Johnson, Bruce A. & Pierce, John. (First National City Bank, Money Market Div, New York, NY) **Research brings proof of value, future direction to sales training.** *Training & Development Journal*, 1974(Nov), Vol 28(11), 25-32.—Summarizes a technique

developed by McGraw-Hill to determine how salespeople are performing with prospects who are not customers. Questionnaires, tape recordings of hypothetical situations, sales statistics before and after training, and interviews with prospects produced data for the experimental evaluation program.

8498. Koverman, Robert B. (Genesee Community Coll, Batavia, NY) **Team policing: An alternative to traditional law enforcement techniques.** *Journal of Police Science & Administration*, 1974(Mar), Vol 2(1), 15-19.—Describes the experimental police decentralization program in Dayton, Ohio, which consists of neighborhood police stations, informal dress, crisis intervention training, and cooperation with social service agencies.

8499. Lacey, L. A. (US Naval Weapons Ctr, China Lake, CA) **Discriminability of the Adjective Check List among scientists and engineers: Comparison of supervisors and non-supervisors and stayers and leavers.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 401-402.—Scientists and engineers were divided into supervisory and nonsupervisory subgroups, and staying and leaving subgroups. Significant differences were found on 10 of 24 Adjective Check List scales for the supervisory-nonsupervisory comparison and on 6 of 24 scales for the staying-leaving comparison.

8500. Leidecker, Joel K. & Hall, James J. (U Santa Clara) **Motivation: Good theory—poor application: Transferring conceptual knowledge into practice.** *Training & Development Journal*, 1974(Jun), Vol 28(6), 3-7.—Attempts to apply motivational theories in practical situations often fail to achieve the desired increase in productive efforts. This poses the question, are the hypothesized interactions between needs and goals and the widely known frameworks of A. Maslow's need hierarchy and Herzberg's dual factor theory unsatisfactory as theories, or are basic errors often made in attempting to apply these concepts? Observation of managerial performance in a number of settings suggests that the answer is poor application of good motivational theory. Managers often err in identifying employee needs and in ensuring that employees perceive that desired rewards are actually available contingent upon productive work. Employee participation in setting goals, and clear evaluation of performance with adequate feedback between employee and supervisor are other areas where theory is often poorly applied. Inadequate job enrichment may also limit the success of motivation efforts.—R. L. Sulzer.

8501. Neuburger, Oswald & Roth, Bernhard. (U München, Psychologisches Inst, W Germany) **[Leadership style and group performance: A test of the contingency model and the LPC concept.]** (Germ) *Zeitschrift für Sozialpsychologie*, 1974, Vol 5(2), 133-144.—Studied F. Fiedler's contingency model of leadership effectiveness in 48 groups of the West German Army, which corresponded to his Situation-Octants I and V. Specific contingency model predictions were verified for Octant I, but not for Octant V. No relationship between leader behavior (as measured by a German version of the Leader Behavior Description Questionnaire) and Least Preferred Coworker (LPC) score was found for the total sample. LPC scores were compared with other question-

naire and rating data in order to construct and validate the score. Only partial support for Fiedler's assumptions was found. (53 ref)—*English abstract.*

8502. Quigley, William S. & Stupak, Ronald J. (Western Coll) **An experiment in managerial creativity: The Federal Executive Institute and the policy-making process.** *Training & Development Journal*, 1974(Jun), Vol 28(6), 22-28.—Suggests that decision situations where there is no agreement about causes and no preferences as to possible outcomes may be becoming more frequent and important in the federal bureaucracy. Termed inspirational decisions, these challenges to the character and creativity of the decision maker require the Federal Executive Institute to stress the development of imagination and innovation. Student executives spend much of the 8-wk session just thinking. They schedule their own work and choose their learning techniques, colleagues, and geographical locations. The theme of the sessions is generally people-centered, with social science techniques presented as aids. Seminars, simulations, and participatory devices obviate passive assimilation. The end result may be more government managers capable of going beyond standard organizational operating procedures.—R. L. Sulzer.

8503. Sashkin, Marshall; Taylor, F. Carter & Tripathi, Rama C. (Wayne State U) **An analysis of situational moderating effects on the relationships between least preferred co-worker and other psychological measures.** *Journal of Applied Psychology*, 1974(Dec), Vol 59(6), 731-740.—Correlations were computed between a manager's least-preferred-coworker (LPC) score and 17 psychological measures and moderated by subordinates' satisfaction with the manager in 34 offices of a nationwide brokerage firm. Results tend to support the hypothesis that correlations between LPC and the psychological measures should be opposite in direction for high- vs low-satisfaction offices. The hypothesis was directionally confirmed for 11 of 17 pairs of correlations, and the differences were statistically significant for 5 of the 17 pairs. Results also support F. E. Fiedler's interpretations of effective leader behavior and the relation between LPC and behavior. (37 ref)—*Journal abstract.*

8504. Schultz, George P. & McKersie, Robert B. **Participation—achievement—reward systems (PAR).** *Journal of Management Studies*, 1973(May), Vol 10(2), 141-161.—Presents a case study in the PAR systems approach to business management. This system is based on the concept that people participate more energetically and creatively when (a) they have a stake in the enterprise and (b) enterprises are so organized as to encourage and facilitate their participation in problem solving. This approach is illustrated by a study done for an oil company at 4 of its locations. The process of developing a wage payment plan is detailed and the advantages and disadvantages of such an approach are discussed.—R. S. Albion.

8505. Steger, Joseph A.; Woodhouse, Richard & Goocey, Robert. (Rensselaer Polytechnic Inst, School of Management) **The clinical manager: Performance and management characteristics.** *Administration in Mental Health*, 1973(Fal), 76-81.—Presents a performance-based, criterion-referenced study of the factors in

effective mental health administration. 7 mental health managers were multiply rated on 15 bipolar scales which assessed personal qualities, administrative skills, and leadership style. Performance was measured by the product of the percentage of completed projects and the percentage of active service areas. Factor analysis of ratings yielded factors of administrative skill, interpersonal skill, and energy. The ratings, weighted by their factor loadings, were correlated with the performance measures. Only the administrative factor had a significant relation to performance. Contrary to many other studies, empathy was not found to be sufficient for effective management.—*R. J. Albers.*

8506. **Sternier, Frank M.** (Purdue U, Krannert Graduate School of Industrial Administration) **The effective management development facilitator: 26 characteristics, techniques and approaches.** *Training & Development Journal*, 1974(Jun), Vol 28(6), 8-11.—Enumerates and briefly defines those properties of the individual engaged in management development that seem to have an important bearing on productivity. By describing the sort of person who can bring about the desired organizational changes, the list may provide insight into factors that affect the success of development efforts.

8507. **Szilagyi, Andrew D. & Sims, Henry P.** (U Houston) **Cross-sample stability of the Supervisory Behavior Description questionnaire.** *Journal of Applied Psychology*, 1974(Dec), Vol 59(6), 767-770.—Performed a factor analysis on the item intercorrelations obtained from the administration of Fleishman's Supervisory Behavior Description (SBD) to a predominantly female (79.6%) sample of 1,161 medical center employees. Factor congruence coefficients were calculated to compare the results from this sample with previous leader behavior studies. The SBD measures of consideration and initiating structure were stable across time, sex differences, type of organization, culture, and analysis technique.—*Journal abstract.*

8508. **Zeira, Yoram.** (Tel-Aviv U, Israel) **Training the top-management team for planned change: Experimental training via the system approach.** *Training & Development Journal*, 1974(Jun), Vol 28(6), 30-36.—Cites experience with a 320-hr course and a subsequent evaluation study in support of conclusions about failures to achieve planned changes. To persuade top-level executives to allow and participate in needs analysis—a precondition for defining training goals—may require a preliminary educational effort to develop this willingness to participate. Assumptions often made in organizational development theories require refinements, particularly in the diagnostic and implementation stages. Both external and internal change agents should participate in diagnosis of present and desired future situations. Trainees cannot always execute the agreed changes fully without continued help from the external experts.—*R. L. Sulzer.*

### Organizational Structure & Climate

8509. **Devito, Robert A.** (Madden Zone Ctr, Hines, IL) **The supervisory bypass: A symptom of organizational anxiety.** *Hospital & Community Psychiatry*, 1974(Nov), Vol 25(11), 724-725.—Results of a study at the Madden Zone Center in Illinois suggest that bypassing the

immediate supervisor and taking work-related problems to the top is a manifestation of anxiety within or between programs. The value of a flat, as opposed to a vertical, organizational system in fostering improved communication, initiative, and creativity is discussed.

8510. **James, Lawrence R. & Jones, Allan P.** (Texas Christian U, Inst of Behavioral Research) **Organizational climate: A review of theory and research.** *Psychological Bulletin*, 1974(Dec), Vol 81(12), 1096-1112.—Previous organizational climate research, definitions, and measurement approaches are reviewed and differentiated into 3 categories: a multiple measurement-organizational attribute approach, a perceptual measurement-organizational attribute approach, and a perceptual measurement-individual attribute approach. Similarities and differences between these approaches are discussed in an attempt to address a number of theoretical and psychometric concerns. A major focus is the extent to which organizational climate duplicates other organizational and individual domains. Recommendations for future research include a rationale for differentiating between organizational climate and psychological or individual climate, and an emphasis upon the distinction between level of measurement and level of explanation as related to future definitions of climate. (52 ref)—*Journal abstract.*

### Human Factors Engineering & Safety

8511. **de Greene, K. B.** (U Southern California, Inst of Safety & Systems Management, Los Angeles) **Models of man in systems in retrospect and prospect.** *Ergonomics*, 1974(Jul), Vol 17(4), 437-446.—Considers that none of the historical and current theoretic and working or operational models of man, by virtue of limitations to only a part of human behavior, is completely valid for systems planning and design. The need is stressed to develop general systems models capable of describing and predicting human individual and collective behavior of varied populations in a wide variety of systems and environments. Man-machine, sociotechnical, and social systems involving military, industrial, and civil applications must be considered. Criteria for model development should include quality of life and limits to growth as well as economic costs and performance effectiveness. Increasingly, the impact of the system on the environment, not just the environmental constraints on the system, must be considered. Models must further be consistent with the dynamic properties and forces within complex systems and reflect motivations, attitudes, values, complex learning and problem solving, and other aspects of higher-order hierarchical organization. These issues, with an emphasis on working models, are discussed in relationship to problems of education, research, systems effectiveness, and system-environment interactions. (French & German summaries) (16 ref)—*Journal abstract.*

8512. **Dowd, Patrick J.** (USAF School of Aerospace Medicine, Brooks Air Force Base, TX) **Sleep deprivation effects on the vestibular habituation process.** *Journal of Applied Psychology*, 1974(Dec), Vol 59(6), 748-752.—Studied the effects of sleep deprivation on habituation of the vestibular system in a stressful situation. 143 experienced pilots were exposed to 2 tests of Coriolis

acceleration after periods of sleep deprivation (24-30 hrs) or rest (6 hrs). Nystagmus responses to Coriolis stimulation were recorded after 4 right-to-left tilts. Sleep deprivation resulted in (a) increased sensitivity to Coriolis stimulation, (b) a decreased recovery rate, and consequently, (c) interference with the vestibular habituation process. Implications of sleep loss in increasing the hazards of flying are discussed. (15 ref)—*Journal abstract*.

8513. Drury, C. G. & Dawson, P. (State U New York, Buffalo) **Human factors limitations in fork-lift truck performance.** *Ergonomics*, 1974(Jul), Vol 17(4), 447-456.—Results of experiments conducted to evaluate the effect of spatial restrictions on speed and errors in fork-lift truck driving show that performance in terms of speed and errors improved as the spatial restrictions were eased. Theoretical models of driving performance were fitted to the data with good results. Deviations from these models are used to set practical limits on the spatial requirements for rapid, safe, fork-lift truck performance. (French & German summaries)

8514. Franke, Joachim & Hoffmann, Kristine. (Inst für Wirtschafts- und Sozialpsychologie, Nuremberg, W Germany) [Contributions to the application of psychology in city planning: III. General structural components of housing developments which affect viewers' impressions.] (Germ) *Zeitschrift für Experimentelle und Angewandte Psychologie*, 1974, Vol 21(2), 181-225.—Using semantic differentials, interviewers asked 30 residents and 30 passers-by to judge 29 residential areas varying from single houses to apartment complexes. A factor analysis of the results yielded 6 relatively stable components which influenced the judgments: stimulation, spaciousness, representativeness, organization, attractiveness, and efficiency. Other less stable factors depended upon intimacy with the area judged. Implications of these findings for city planning are discussed. (English & French summaries) (16 ref)—*W. J. Koppitz*.

8515. Klemmer, E. T. & Stocker, L. P. (Bell Lab, Holmdel, NJ) **Effects of grouping of printed digits on forced-paced manual entry performance.** *Journal of Applied Psychology*, 1974(Dec), Vol 59(6), 675-678.—In 2 experiments with a total of 42 engineers, clerical and shop workers, and housewives, numbers were presented to be keyed at a forced-paced rate, chosen separately for each S from his self-paced rate so as to provide moderate speed stress. Under this condition, the error rate was doubled by using a 1-5-1 grouping of 7-digit numbers as opposed to a 3-4 grouping. For 5-digit numbers, which cannot be grouped by 3s and 4s, no significant difference in performance was found between 3-2 grouping and ungrouped presentation.—*Journal abstract*.

8516. Leplat, Jacques. (Ecole Pratique des Hautes Études, Lab de Psychologie del Trabajo, Paris, France) [Criteria in the ergonomic studies of highway security.] (Span) *Revista de Psicología General y Aplicada*, 1974(Mar-Apr), Vol 29(127), 241-259.—Presents methods of categorizing accidents and near accidents in terms of driver-vehicle systems. (French summary)

8517. Mortimer, R. G. (U Michigan, Highway Safety Research Inst) **Foot brake pedal force capability of drivers.** *Ergonomics*, 1974(Jul), Vol 17(4), 509-513.—Conducted an experiment to derive guidelines for the

maximum force requirement for actuation of an automobile service brake by US drivers. Since the 5th-percentile female maximum brake pedal force was about 400 newtons, it is recommended that no more than this force be required to attain near maximum braking capability from a passenger car. (French & German summaries)

8518. Ross, Don H.; Sanneman, Richard A.; Levison, William H. & Berliner, Jeffrey E. (Sanders Associates, Nashua, NH) **Tactual display for aircraft control.** Nashua, NH: Sanders Associates, 1974. 98 p.—Describes the 2nd phase of a study on tactual displays for aircraft control which presents a description of an improved tactile display system and its evaluation as a 1 and 2 axis error display instrument during a series of manual tracking experiments. Tracking errors for the new display were better than the initial system, and of 4 Ss, 2 preferred the electrotactor array because of its clearer haptic display.

8519. Routledge, D. A.; Repetto-Wright, R. & Howarth, C. I. (U Nottingham, England) **The exposure of young children to accident risk as pedestrians.** *Ergonomics*, 1974(Jul), Vol 17(4), 457-480.—A study by C. I. Howarth et al (1974) described a framework in which measures of exposure were defined and related to the accident statistics to obtain estimates of absolute levels of risk for different categories of pedestrian in different traffic situations. The present survey of children's exposure was carried out to provide suitable data for this quantitative analysis. A representative sample of 288 5-11 yr old schoolchildren were interviewed about their journeys in the previous 24 hrs, and the number of roads crossed and the traffic densities of these roads were recorded. Measures of exposure were related to the accompaniment of children on their journeys, the type of area in which they lived, time of day, and national and local accident statistics. Results provide estimates of risk to children of different ages and sex in their normal pattern of road crossing and in crossing roads of different traffic density, and indicate that the accident statistics alone considerably underestimate the degree of risk to children under the age of 8 yrs. Interviews with a sample of the parents of the children suggest that children may provide a more accurate measure of their exposure than do their parents. (French & German summaries)—*Journal abstract*.

8520. Rumar, K. (U Uppsala, Traffic Safety Research Group, Sweden) **Dirty headlights: Frequency and visibility effects.** *Ergonomics*, 1974(Jul), Vol 17(4), 529-533.—In Exp I dirt layers were systematically collected under various road conditions. The wetness of the road was found markedly to influence the amount of dirt deposited. In Exp II light reduction caused by dirt on cars in traffic was measured. It was found that even in dry weather on seemingly clean roads light reduction due to headlamp dirt was normally 10-20%. In bad (slushy) road conditions few cars had light reduction below 50%. Drivers normally did not react to light reduction below 60%. In Exp III reduction in visibility during night driving was measured as a function of light reduction. Light reduction of 60% caused a 20% reduction of high-beam visibility and a 15% reduction of low-beam visibility. (French & German summaries)—*Journal abstract*.

8521. **Schultetus, Von W.** (Siemens Aktiengesellschaft, Bad Neustadt a. d. Saale, W Germany) [**Ergonomics as an aid in the design of products for industrial application.**] (Germ) *Ergonomics*, 1974(Jul), Vol 17(4), 515-527. —Argues that the design of work systems requires adaptation of the work to the person and vice versa. To attain this objective all those who have a hand in this design process must be convinced of the necessity of applying the knowledge of ergonomics. The manner in which knowledge of ergonomics can be applied to the industrial workplace is demonstrated by examples of design of industrial products which take into account anthropometric and physiological factors and technical information. A method of calculating permitted muscle strain is described. (German & French summaries) —*English summary.*

8522. **Sheridan, Thomas B. & Ferrell, William R.** (Massachusetts Inst of Technology) **Man-machine systems; information, control, and decision models of human performance.** Cambridge, MA: MIT Press, 1974. ix, 452 p.—Presents a series of man-machine models, based on information theory, control theory, and decision theory, intended to provide methods for the quantitative description of inanimate physical systems. Certain ones of these methods have been extended to the description and modeling of human performance. The 3 sections of the book cover probability estimation and Bayesian probability updating, system identification and modeling, and riskless and risky decision making and signal detection theories.

8523. **Tormes, Felix R. & Guedry, Fred E.** (Naval Aerospace Medical Research Lab, Pensacola, FL) **Disorientation phenomena in naval helicopter pilots.** *USN AMRL Technical Report*, 1974(Jul), No 1205, 17 p.—Investigated the special orientation problems of US Navy helicopter pilots engaged in operations at sea and landing on moving platforms. A questionnaire concerning disorientation was answered anonymously and individually by 104 pilots. 56% indicated one or more episodes of severe disorientation and 8.6% indicated having experienced severe disorientation 5 or more times while piloting helicopters. A number of factors condu-

cive to disorientation were identified. Some precipitating factors appeared to be specific to operations over water or over a moving deck, although some of these may well have their counterparts in special operations over land. Other factors were common to land- and sea-based operations, and some were common to fixed-wing as well as rotary-wing aircraft. Potential countermeasures for various precipitating factors are discussed.—*Journal abstract.*

8524. **Weiss, Steven L.** (U Oklahoma, Health Sciences Ctr) **Similarity of judge and violator in professional decision making.** *Psychological Reports*, 1974(Aug), Vol 35(1, Pt 2), 523-529.—Investigated how decision-making processes are affected by social class considerations in situations which involve concrete violations of law. 2 groups of 12 27-61 yr old accident prevention specialists (former pilots) were presented with varying descriptions of an hypothetical air-traffic violation. For 1 group of Ss, the "violatee's" life style was highly similar to that of the Ss, while for the 2nd group it was discrepant. After reading the accident report, Ss indicated the extent to which they agreed or disagreed with 17 alternative courses of action. Results indicate a significant tendency for Ss to be authoritative and punitive when dealing with a younger "violatee" whose background was at variance with their own, especially in the preponderance of psychiatric recommendations for the "violatee." It is concluded that a judgmental decision-making process may involve the de-identification of the judge and that many factors other than raw data may interact to influence the judge's attitudinal state or decision. —*Journal abstract.*

8525. **Wulfeck, Joseph W.; Queen, John E. & Kitz, William M.** **The effect of lighted deck shape on night carrier landing.** Inglewood, CA: Dunlap & Associates, Western Division, 1974. 57 p.—Studied the effect of parallel vs tunnel runway lighting, scaled to aircraft carrier lighted deck size, on male engineering and science students' accuracy in judging the plane of the runway to be horizontal. The tunnel lighted deck showed less error at all ranges than the parallel lighted deck.

# BRIEF SUBJECT INDEX

Entries in the Brief Subject Index are derived from a 4,000-term *Thesaurus of Psychological Terms*. Only those terms representing subject matter content covered in this monthly issue are listed. A thesaurus term missing from the listing indicates that no material of major relevance to the concept is included in the issue. Records are indexed at the level of specificity contained in each document. Each index entry also refers the reader to broader generic concepts as well as to more specific concepts related to each term. Thus, a reader interested in articles concerning childhood psychosis may find additional relevant information under "psychosis" or "early infantile autism."

**Delinquency (Juvenile)** [See Juvenile Delinquency]  
**Delirium** 7757  
**Delusions** 7447, 7583, 7596  
**Dementia (Senile)** [See Senile Dementia]  
**Dementia Praecox** [See Schizophrenia]  
**Democratic Party** [See Political Parties]  
**Demographic Characteristics** 6681, 6756, 7168, 7197, 7214, 7257, 7280, 7459, 7484, 7509, 7511, 7545, 7579, 7664, 7735, 8099, 8195, 8197, 8210, 8219  
**Denial** 6455, 7732  
**Denmark** 7364  
**Dentistry** 7650  
**Dependency (Drug)** [See Drug Dependency]  
**Dependency (Personality)** 7077, 7078, 7291, 7602, 7618, 7934, 8231, 8366  
**Depression (Emotion)** [See Also Involutional Depression, Manic Depression, Neurotic Depressive Reaction, Psychotic Depressive Reaction] 6455, 6891, 6925, 7512, 7539, 7544, 7552, 7556, 7571, 7581, 7585, 7587, 7590, 7595, 7613, 7616, 7618, 7682, 7690, 7691, 7809, 7900, 7907, 7911, 7917, 7920, 7924, 7930, 7950

**Depression (Spreading)** [See Spreading Depression]  
**Depressive Reaction (Neurotic)** [See Neurotic Depressive Reaction]  
**Deprivation** [See Cultural Deprivation, Food Deprivation, Sensory Deprivation, Sleep Deprivation, Social Isolation, Water Deprivation]  
**Depth Perception** [See Also Stereoscopic Vision] 6540, 6549, 6556  
**Dermatitis** 7535  
**Desensitization (Systematic)** [See Systematic Desensitization Therapy]  
**Design (Experimental)** [See Experimental Design]  
**Design (Man Machine Systems)** [See Man Machine Systems Design]  
**Desipramine** 6829, 6869, 7911  
**Desirability (Social)** [See Social Desirability]  
**Desires** [See Motivation]  
**Detection (Signal)** [See Signal Detection (Perception)]  
**Developmental Age Groups** [See Adolescents, Adults, Aged, Children, Infants, Middle Aged, Neonates, Preschool Age Children, School Age Children, Young Adults]  
**Developmental Differences** [See Also Age Differences, Delayed Development, Sex Linked Developmental Differences] 7019, 7031, 7033, 7116  
**Developmental Psychology** [See Also Gerontology] 6999  
**Developmental Stages** [See Also Menopause, Puberty] 7069  
**Deviant Behavior** [See Antisocial Behavior]  
**Deviations (Sexual)** [See Sexual Deviations]  
**Devices (Experimental)** [See Apparatus]  
**Dexamphetamine** [See Dextroamphetamine]  
**Dexedrine** [See Dextroamphetamine]  
**Dextroamphetamine** 6803, 6807, 6814, 6829, 6833, 6834, 6841, 6870, 6881  
**Diabetes** [See Diabetes Mellitus]  
**Diabetes Mellitus** 7765  
**Diacetylmorphine** [See Heroin]  
**Diagnosis** [See Also Differential Diagnosis, Electro Oculography, Electroencephalography, Electromyography, Electroretinography, Galvanic Skin Response, Medical Diagnosis, Ophthalmologic Examination, Psychodiagnosis, Psychodiagnostic Interview, Urinalysis] 7507, 7722, 7744, 7755, 7939  
**Dialect** [See Also Nonstandard English] 7350, 7378  
**Dialysis** [See Also Hemodialysis] 8103  
**Diarrhea** 7747  
**Diazepam** 6876  
**Diencephalon** [See Hypothalamus, Thalamus Nuclei]  
**Differential Diagnosis** 7549, 7572, 7577, 7627  
**Differential Limen** [See Thresholds]  
**Difficulty Level (Test)** 6446, 6498, 6626, 7390  
**Digestive System** [See Esophagus, Lips (Face), Liver, Teeth (Anatomy), Tongue]  
**Digestive System Disorders** [See Colon Disorders, Diarrhea, Fecal Incontinence, Gastrointestinal Ulcers, Ulcerative Colitis, Vomiting]

# BRIEF SUBJECT INDEX

**Digits (Mathematics)** [See Numbers (Numerals)]  
**Disadvantaged** 7060, 8034, 8113, 8265, 8380  
**Discipline (Child)** [See Child Discipline]  
**Discipline (Classroom)** [See Classroom Discipline]  
**Discrimination (Cognitive)** [See Cognitive Discrimination]  
**Discrimination** [See Also Related Terms] 6932  
**Discussion (Group)** [See Group Discussion]  
**Diseases** [See Disorders]  
**Dislike** [See Aversion]  
**Disorders** [See Also Related Terms] 7210, 7265, 7452, 7503, 7505, 7507, 7766, 7838, 8159, 8182  
**Disorientation (Place)** [See Place Disorientation]  
**Displays** [See Tactual Displays, Visual Displays]  
**Disruptive Behavior** [See Behavior Problems]  
**Dissociative Patterns** [See Amnesia, Multiple Personality]  
**Dissonance (Cognitive)** [See Cognitive Dissonance]  
**Distance Discrimination** [See Distance Perception]  
**Distance Perception** 6546, 6827, 6989  
**Distortion (Perceptual)** [See Illusions (Perception)]  
**Distractibility** 7764  
**Distress** 7773  
**Distress Calls (Animal)** [See Animal Distress Calls]  
**Distrust** [See Suspicion]  
**Disturbed (Emotionally)** [See Emotionally Disturbed]  
**Diuretics** [See Caffeine]  
**Diurnal Variations** [See Human Biological Rhythms]  
**Divergent Thinking** 6589, 7022, 8224  
**Doctors** [See Physicians]  
**Dogmatism** [See Authoritarianism]  
**Dogs** 6800, 6836, 6889, 6939  
**Doll Play** 7106  
**Dominance (Animal)** [See Animal Dominance]  
**Dominance Hierarchy** 6978, 7337  
**Domination** [See Authoritarianism]  
**Dopamine** 6820, 6823, 6837, 6847, 6860, 6862, 7608  
**Dormitories** 8409  
**Downs Syndrome** 7693, 7697, 7700, 7711  
**Draftees** 8451  
**Drawing** 6451, 6466, 6995, 7050, 7607  
**Dream Analysis** 6743, 8011, 8135  
**Dream Content** 6743  
**Dream Interpretation** [See Dream Analysis]  
**Dreaming** [See Also Nightmares] 6408, 6707, 6709, 6744, 7636, 7876  
**Drinking (Alcohol)** [See Alcohol Drinking Patterns]  
**Drinking Attitudes** [See Alcohol Drinking Attitudes]  
**Drinking Behavior (Animal)** [See Animal Drinking Behavior]  
**Drive** [See Motivation]  
**Driver Safety** [See Highway Safety]  
**Drivers** 8444, 8517  
**Driving Behavior** 6857, 8513, 8520  
**Dropouts** [See Also School Dropouts] 7148

**Drug Abuse** [See Also Drug Addiction, Heroin Addiction] 7236, 7256, 7264, 7547, 7647, 7651, 7658, 7896, 7909, 7931, 7958, 8058, 8081, 8084, 8090, 8232  
**Drug Addiction** [See Also Heroin Addiction] 7643, 7644, 7648, 7657, 7667, 7681, 7683, 7893, 7896, 7905  
**Drug Administration Methods** 6809, 6839, 7256  
**Drug Adverse Reactions** 7647  
**Drug Dependency** [See Also Drug Addiction, Heroin Addiction] 6824, 6829, 6861, 6867, 7676, 7896  
**Drug Dosages** 6798, 6808, 6841, 6851, 7660, 7918  
**Drug Education** 7194, 7380, 8072, 8078, 8084, 8090, 8100, 8232, 8288, 8289  
**Drug Effects** [See Also Drug Addiction, Drug Adverse Reactions, Drug Dependency, Heroin Addiction, Side Effects (Drug)] 6599, 6764, 6798, 6799, 6800, 6801, 6802, 6803, 6804, 6805, 6807, 6808, 6809, 6810, 6811, 6812, 6813, 6814, 6815, 6816, 6817, 6818, 6819, 6820, 6823, 6825, 6826, 6827, 6828, 6831, 6832, 6833, 6834, 6835, 6837, 6839, 6840, 6841, 6843, 6844, 6845, 6846, 6847, 6848, 6849, 6850, 6851, 6852, 6853, 6854, 6855, 6856, 6857, 6859, 6860, 6862, 6863, 6864, 6865, 6866, 6868, 6869, 6870, 6871, 6873, 6874, 6875, 6876, 6877, 6879, 6880, 6881, 6882, 6883, 6884, 6885, 6886, 7608, 7638, 7757, 7910, 7913  
**Drug Laws** [See Also Marijuana Legalization] 6855, 6856  
**Drug Potentiation** 6834, 6845, 6881, 7911  
**Drug Rehabilitation** 7470, 7644, 7659, 7660, 7893, 7896, 7905, 7908, 7909, 7912, 7919, 7922, 8036, 8044, 8056  
**Drug Synergism** 6860, 6881, 7891  
**Drug Therapy** 6754, 6835, 6855, 6856, 7783, 7791, 7799, 7832, 7869, 7887, 7888, 7889, 7890, 7891, 7892, 7894, 7897, 7898, 7899, 7900, 7901, 7902, 7903, 7904, 7906, 7907, 7910, 7911, 7913, 7914, 7915, 7916, 7917, 7918, 7920, 7921, 7923, 7924, 7925, 8104, 8427  
**Drug Tolerance** 6830, 6859  
**Drug Usage** [See Also Drug Abuse, Drug Addiction, Drug Dependency, Glue Sniffing, Heroin Addiction, Marijuana Usage] 6886, 7173, 7180, 7200, 7205, 7217, 7218, 7220, 7227, 7228, 7232, 7238, 7239, 7247, 7267, 7270, 7272, 7380, 7470, 7524, 7548, 7670, 7808, 7915, 7926, 8100  
**Drug Usage Attitudes** 7173, 7191, 7194, 7197, 7217, 7247, 7256, 7470  
**Drug Withdrawal** 6829, 6861  
**Drug Withdrawal Effects** 6836, 7757  
**Drugs** [See Also Related Terms] 6854, 6874, 6876, 6882, 7227, 7608, 7638, 7890, 7925, 8427  
**Drunkenness** [See Alcohol Intoxication]  
**Ducks** 6801, 6915

**Escape Behavior (Animal)** [See Animal Escape Behavior]  
**Escape Conditioning** 6914  
**Eserine** [See Physostigmine]  
**Eskimos** 7873  
**Esophagus** 8105  
**ESP (Parapsychology)** [See Extrasensory Perception]  
**Esteem (Self)** [See Self Esteem]  
**Esterases** [See Also Acetylcholinesterase] 6746  
**Estimation** [See Time Estimation]  
**Estradiol** 6746, 6812, 7890  
**Estrogens** [See Also Estradiol] 6764, 6820, 6825, 7895  
**Estrus** 6966  
**Ethanol** 6811, 6847, 6852, 6868, 6870, 7680  
**Ethics** [See Also Personal Values, Professional Ethics, Social Values, Values] 7281  
**Ethnic Groups** [See Also American Indians, Eskimos, Mexican Americans] 7047, 7153, 7154, 7169, 7611, 8097, 8205, 8391, 8412  
**Ethnic Identity** 7154  
**Ethnocentrism** 7450  
**Ethology (Animal)** [See Animal Ethology]  
**Ethyl Alcohol** [See Ethanol]  
**Etiology** 7507, 7512, 7521, 7543, 7618, 7639, 7663, 7680, 7693, 7726, 7766, 7857  
**Etymology** 7382  
**Euphoria** 6824  
**Europe** 7198, 8468  
**Evaluation** [See Also Educational Program Evaluation, Mental Health Program Evaluation, Personnel Evaluation, Self Evaluation] 6402, 8208, 8216

# BRIEF SUBJECT INDEX

**Evaluation (Educational Program)** [See Educational Program Evaluation]  
**Evaluation (Mental Health Program)** [See Mental Health Program Evaluation]  
**Evaluation (Personnel)** [See Personnel Evaluation]  
**Evaluation (Self)** [See Self Evaluation]  
**Evaluation (Treatment Effectiveness)** [See Treatment Effectiveness Evaluation]  
**Evoked Potentials** [See Also Auditory Evoked Potentials, Cortical Evoked Potentials, Somatosensory Evoked Potentials, Visual Evoked Potentials] 6569, 6721, 6785, 7630  
**Evolution (Theory of)** [See Theory of Evolution]  
**Exceptional Children (Gifted)** [See Gifted]  
**Exceptional Children (Handicapped)** [See Handicapped]  
**Excretion** [See Urination]  
**Executives** [See Top Level Managers]  
**Exercise** 6751, 7245, 7961, 8379  
**Exhaustion** [See Fatigue]  
**Existential Therapy** 7826  
**Existentialism** 6824, 7603, 7826, 8306  
**Expectations** 6678, 7317, 7323, 8202, 8425, 8434, 8479  
**Experience (Practice)** [See Practice]  
**Experience Level (Job)** [See Job Experience Level]  
**Experiences (Events)** [See Early Experience, Life Experiences, Vicarious Experiences]  
**Experiences (Life)** [See Life Experiences]  
**Experimental Apparatus** [See Apparatus]  
**Experimental Design** [See Also Followup Studies, Hypothesis Testing, Longitudinal Studies] 6495, 6502, 6504, 6511, 6518, 7199, 7915, 8122  
**Experimental Instructions** 6607, 6625, 6667, 6684, 6712, 6728, 7312, 7431, 8216, 8343, 8421  
**Experimental Laboratories** 6999  
**Experimental Methods** 6402, 6432, 6433, 6504, 6702, 6777, 6891, 7278, 7687, 7830  
**Experimental Psychology** 6699  
**Experimental Replication** 6525, 6616, 6694, 6697, 6920, 7002, 7184, 7286, 7357, 7471  
**Experimentation** [See Also Related Terms] 6406, 6420, 6425, 6479, 6504, 6898, 7028, 7066, 7134, 7638, 8433  
**Experimenter Bias** 6433  
**Experimenters** 6684  
**Exploratory Behavior** [See Animal Exploratory Behavior]  
**Explosive Personality** 7750  
**Exposure Time (Stimulus)** [See Stimulus Duration]  
**Expressions (Facial)** [See Facial Expressions]  
**Extinction (Learning)** 6693, 6905, 6911, 6912, 6914, 6920, 6921, 6925, 6928, 6947, 6951, 6952  
**Extrasensory Perception** 6525  
**Extraversion** 6682, 7336, 7448, -7449, 8329  
**Extrinsic Motivation** 7207  
**Eye (Anatomy)** [See Also Cones (Eye), Cornea, Retina, Rods (Eye)] 6730  
**Eye Disorders** [See Also Color Blindness, Myopia, Nystagmus] 7752  
**Eye Examination** [See Ophthalmologic Examination]

**Eye Movements** 6510, 6517, 6562, 6572, 6655, 6720, 6731, 6735, 6742  
**Eyeblink Reflex** 6759  
**Eyelid Conditioning** 6641, 6642, 6759

**Facial Expressions** [See Also Smiles] 7376  
**Facilitation (Social)** [See Social Facilitation]  
**Factor Analysis** [See Also Cluster Analysis, Equimax Rotation, Oblique Rotation, Orthogonal Rotation, Statistical Rotation] 6465, 6481, 6482, 6489, 6491, 6498, 6499, 6507, 6679, 8219  
**Factorial Validity** 6449, 7384  
**Factors (Sociocultural)** [See Sociocultural Factors]  
**Factory Environments** [See Working Conditions]  
**Faculty** [See Educational Personnel]  
**Fads And Fashions** [See Clothing Fashions]  
**Failure** 6687, 7443, 7865, 8337  
**Faking** [See Also Malingering] 6471, 7069  
**Familiarity** 7285  
**Family Background** [See Also Family Socioeconomic Level, Parental Occupation] 7205, 7232, 7875  
**Family Counseling** [See Family Therapy]  
**Family Life** [See Family Relations]  
**Family Members** [See Also Daughters, Fathers, Heterozygotic Twins, Housewives, Illegitimate Children, Monozygotic Twins, Mothers, Parents, Siblings, Spouses, Stepparents, Twins, Unwed Mothers] 7576, 7655, 8094  
**Family Planning** [See Also Birth Control, Intrauterine Devices, Oral Contraceptives] 7170, 7192, 7198, 7199, 7234, 8124, 8127  
**Family Planning Attitudes** 7213  
**Family Relations** [See Also Child Discipline, Childrearing Practices, Father Child Relations, Marital Conflict, Marital Relations, Mother Child Relations, Parent Child Relations, Parental Attitudes, Parental Role] 7147, 7165, 7190, 7499, 7534, 7576, 7589, 7651, 7824, 8079, 8094, 8156, 8182, 8442  
**Family Size** 7192  
**Family Socioeconomic Level** 7570, 8352  
**Family Structure** [See Also Birth Order, Family Size, Father Absence, Parental Absence, Schizophrenogenic Family] 7006, 7089, 7105, 7178, 7206  
**Family Therapy** 7466, 7831, 7879, 7940, 7951, 7983, 7989, 7998, 8061, 8079, 8131, 8140  
**Fantasy (Defense Mechanism)** 7876  
**Father Absence** 7081, 7103, 7121  
**Father Child Relations** 7113, 7123, 7679  
**Fathers** 7155, 7214, 8079  
**Fatigue** 6737, 6745, 8483  
**Fatty Acids** 7506  
**Fear** 6693, 6826, 6935, 7380, 7445, 7447  
**Fecal Incontinence** 7785, 7818, 7953  
**Feeble-mindedness** [See Mental Retardation]  
**Feedback** [See Also Biofeedback, Delayed Auditory Feedback, Sensory Feedback, Visual Feedback] 6582, 6583, 6627, 6670, 7319, 8211, 8494  
**Feeding Behavior (Animal)** [See Animal Feeding Behavior]

**Feelings** [See Emotions]  
**Felonies** [See Crime]  
**Female Animals** 6764, 6820, 6895, 6966  
**Female Orgasm** 7172, 7980  
**Females (Human)** [See Human Females]  
**Femininity** 7193, 7445  
**Fiction** [See Literature]  
**Field (Visual)** [See Visual Field]  
**Field Behavior (Animal)** [See Animal Open Field Behavior]  
**Field Dependence** 6566, 7039, 7339, 8318  
**Fighting** [See Aggressive Behavior]  
**Figure Ground Discrimination** 6982  
**Financial Assistance (Educational)** [See Educational Financial Assistance]  
**Fishes** [See Also Goldfish] 6931, 6972, 6978  
**Fixed Interval Reinforcement** 6624, 6818, 6929  
**Fixed Ratio Reinforcement** 6818, 6911, 6929, 6930, 7002  
**Flight Instrumentation** 8518  
**Flight Simulation** 8465  
**Flooding Therapy** [See Implosive Therapy]  
**Fluphenazine** 7921  
**Folie A Deux** 7626  
**Folklore** [See Myths]  
**Folktales** [See Myths]  
**Followup (Posttreatment)** [See Posttreatment Followup]  
**Followup Studies** 7612, 7712, 7729, 8385, 8486  
**Food Deprivation** 6701, 6852, 6910, 6947, 6950  
**Food Intake** [See Also Eating] 6791, 6806, 6812, 6876, 6917, 6921, 6947, 7592  
**Food Preferences** 6854  
**Foreign Language Education** 8270  
**Foreign Language Translation** 6470  
**Foreign Languages** 6662, 7021, 7855  
**Foremen (Industrial)** [See Industrial Foremen]  
**Forgetting** 6438, 6611, 7422  
**Form And Shape Perception** 6520, 6545, 6556, 6557, 6650  
**Form Classes (Language)** [See Also Adjectives, Adverbs, Nouns] 7354  
**Form Perception** [See Form And Shape Perception]  
**FORTAN** [See Computer Programming Languages]  
**Fowl** [See Birds]  
**France** 7182, 7655  
**Free Recall** 6602, 6638, 6662, 6666, 6672, 7035, 7350  
**Frequency (Stimulus)** [See Stimulus Frequency]  
**Freud (Sigmund)** 6412, 6438, 6439, 7356, 7417, 7424, 8018  
**Friendship** 7305  
**Frigidity** 7935, 8013  
**Frogs** 6984  
**Frontal Lobe** 7762  
**Frustration** 6909, 6928, 6937, 6944  
**Fulfillment** [See Satisfaction]

**Galvanic Skin Response** 6694, 6728, 7058  
**Games** [See Also Prisoners Dilemma Game, Simulation Games] 6435, 7286  
**Gastrointestinal Disorders** [See Colon Disorders, Diarrhea, Fecal Incontinence, Gastrointestinal Ulcers, Ulcerative Colitis, Vomiting]  
**Gastrointestinal System** [See Liver]

# BRIEF SUBJECT INDEX

Gastrointestinal Ulcers 6748, 6771, 7778  
 Gastropods [See Mollusca]  
 Gates MacGinitie Reading Test 8339  
 Gates Reading Readiness Test [See Gates MacGinitie Reading Test]  
 Gates Reading Test [See Gates MacGinitie Reading Test]  
 General Hospital Psychiatric Units [See Psychiatric Hospitals]  
 General Practitioners 7845, 7853  
 Generalization (Cognitive) [See Cognitive Generalization]  
 Generalization (Stimulus) [See Stimulus Generalization]  
 Generators (Apparatus) 6906  
 Genetic Disorders [See Also Albinism, Autosomal Disorders, Chromosome Disorders, Down's Syndrome, Klinefelters Syndrome, Sex Chromosome Disorders, Turner's Syndrome] 7768  
 Genetics [See Also Related Terms] 6761, 6762, 6763, 6859, 6923, 6938, 6958, 6984, 7440, 7529, 7740, 7818, 8292  
 Genital Disorders [See Also Gynecological Disorders, Klinefelters Syndrome, Turner's Syndrome] 7802  
 Geniuses [See Gifted]  
 Genotypes 6763  
 Geographic Regions [See Geography]  
 Geography 7352  
 Geometry [See Mathematics Education]  
 Gerbils 6953, 6976  
 Geriatric Patients 8195  
 Gerontology 7134  
 Gestalt Psychology 6426, 7409, 8456  
 Gestalt Therapy 7810  
 Gestation [See Pregnancy]  
 Gestures 7353, 7376  
 Ghettoes 7378, 8179, 8184, 8196  
 Gifted 7057, 8405, 8410  
 Gilles De La Tourette Disorder 7904  
 Glands [See Adrenal Glands, Endocrine Glands, Pineal Body]  
 Globulins [See Antibodies, Immunoglobulins]  
 Glucose [See Blood Sugar]  
 Glue Sniffing 7670  
 Goals 6692, 7788, 8057, 8151, 8479  
 Goats 6740  
 Goldfish 6992  
 Gonadotropic Hormones [See Prolactin]  
 Government 7171  
 Government Agencies 8096  
 Government Bureaucracy [See Government]  
 Government Personnel [See Also Air Force Personnel, Army Personnel, Commissioned Officers, Law Enforcement Personnel, Military Personnel, Navy Personnel, Parole Officers, Police Personnel, Prison Personnel] 8472  
 Government Policy Making [See Abortion Laws, Drug Laws, Laws, Marihuana Legalization]  
 Government Programs 7265  
 Grade Point Average [See Academic Achievement]  
 Grading (Educational) 8301, 8390  
 Graduate Education [See Graduate Psychology Education, Medical Education, Psychiatric Training]  
 Graduate Psychology Education 7465, 7477, 7478, 7482, 8331  
 Graduate Students 6463, 8331  
 Grammar [See Also Adjectives, Adverbs, Form Classes (Language), Nouns, Or-

thography, Phonology, Sentence Structure, Syntax] 7031, 7037, 7354, 7386, 8308  
 Great Britain 7154, 7166, 7191, 7322, 8200, 8303  
 Greece 7411

 Hyoscine [See Scopolamine]  
 Hyoscyamine (DI-) [See Atropine]  
 Hyperactivity [See Hyperkinesis]  
 Hyperkinesis 7665  
 Hypersensitivity (Immunologic) [See Immunologic Disorders]  
 Hypertension 7787  
 Hypnoanalysis [See Hypnotherapy]  
 Hypnosis 6509, 6511, 6524, 6527, 6585, 6742, 7789, 7864, 7926, 7994, 8108  
 Hypnotherapy 7787, 7804, 7814, 7816, 7833, 7854, 7864, 7876, 7884, 7931  
 Hypnotic Drugs [See Also Apomorphine, Chloralose, Pentobarbital, Phenobarbital] 6839, 6877  
 Hypnotic Susceptibility 6517, 6518, 6524, 6804  
 Hypochondriasis 7588  
 Hypogonadism [See Klinefelters Syndrome, Turners Syndrome]  
 Hypothalamus 6769  
 Hypothalamus Lesions 6768, 6794, 6797  
 Hypothesis Testing 6619

Hypoxia [See Anoxia]  
 Hysteria 7635  
 Hysterical Color Blindness [See Color Blindness]  
 Idealism 6422  
 Ideation [See Imagination]  
 Identical Twins [See Monozygotic Twins]  
 Identification (Defense Mechanism) 6640, 7284, 8009  
 Identity (Ethnic) [See Ethnic Identity]  
 Identity (Personal) [See Self Concept]  
 Identity Crisis 7539  
 Idiocy [See Mental Retardation]  
 Idiots [See Profoundly Mentally Retarded]  
 Illegitimate Children 7006, 7214  
 Illiteracy [See Literacy]  
 Illness (Physical) [See Disorders]  
 Illumination [See Also Photopic Stimulation, Scotopic Stimulation] 6534, 6553, 6555, 6563, 6566, 6570, 6574, 6578, 6718, 6725, 6730, 6757, 6780, 6917, 6940, 6991, 7336, 8520, 8525  
 Illusions (Perception) [See Also Afterimage, Perceptual Aftereffect] 6561, 6577  
 Image (Body) [See Body Image]  
 Image (Retinal) [See Retinal Image]  
 Imagery [See Also Conceptual Imagery] 6615, 6622, 6655, 6659, 6674, 6675, 7049  
 Imagery (Conceptual) [See Conceptual Imagery]  
 Imagination 6440, 6524, 6585  
 Imbeciles [See Severely Mentally Retarded, Trainable Mentally Retarded]  
 Imbecility [See Mental Retardation]  
 Imipramine 6869, 7900, 7907, 7911  
 Imitation (Learning) 6599, 6640, 7108, 7532, 7708  
 Immigrants [See Immigration]  
 Immigration 7689  
 Immunization 6750  
 Immunoglobulins 6872  
 Immunologic Disorders [See Also Allergic Disorders, Allergic Skin Disorders] 7773  
 Immunology 6747  
 Immunopathology [See Immunology]  
 Impulsive Therapy 7947, 7950, 7994, 7999  
 Impotence 7929  
 Imprinting 6844, 6915  
 Incarceration 7678, 8130  
 Incentives [See Also Educational Incentives, Monetary Incentives] 8480  
 Incest 7258, 7656, 7679  
 Incidental Learning 6600, 8285  
 Income (Economic) 7177, 7464  
 Income Level [See Lower Income Level]  
 Incontinence (Fecal) [See Fecal Incontinence]  
 Incontinence (Urinary) [See Urinary Incontinence]  
 Independent Party (Political) [See Political Parties]  
 India 6896, 7139, 7688, 8150, 8186, 8350  
 Indians (American) [See American Indians]  
 Individual Counseling [See Individual Psychotherapy]  
 Individual Differences 6602, 6738, 6762, 7357, 8484  
 Individual Psychotherapy 7824, 7880, 7882, 8059

Individual Therapy [See Individual Psychotherapy]  
 Individualism [See Individuality]  
 Individuality 7062  
 Individualized Instruction 7284, 8294, 8457  
 Induced Abortion 7260, 7462  
 Inductive Deductive Reasoning [See Also Inference] 6897, 7555  
 Industrial Foremen 8496  
 Industrial Personnel [See Business And Industrial Personnel]  
 Industrialization 7174, 7188, 7216, 7436, 7881  
 Industry [See Business]  
 Infancy [See Infants]  
 Infant Development [See Also Neonatal Development] 6996, 7008, 7011, 7018, 7064, 7066, 7076, 7079, 7080, 7097, 7115, 7117  
 Infant Vocalization 7076, 7079, 7083  
 Infantile Psychosis [See Childhood Psychosis]  
 Infants [See Also Neonates] 6522, 6993, 7000, 7008, 7034, 7043, 7055, 7056, 7086, 7092, 7104, 7109, 7114, 7117, 7125  
 Infarctions (Myocardial) [See Myocardial Infarctions]  
 Infections [See Infectious Disorders]  
 Infectious Disorders 6750  
 Inference 6608, 6623, 7030, 7328  
 Infirmaries [See Hospitals]  
 Influence (Interpersonal) [See Interpersonal Influences]  
 Influences (Social) [See Social Influences]  
 Information (Concepts) [See Concepts]  
 Information (Messages) [See Messages]  
 Information Exchange 7306  
 Information Processes (Human) [See Cognitive Processes]  
 Information Processing (Automated) [See Automated Information Processing]  
 Information Retrieval (Automated) [See Automated Information Retrieval]  
 Information Seeking 6691, 7296  
 Information Storage (Human) [See Human Information Storage]  
 Information Theory 7343, 8522  
 Inhibition (Proactive) [See Proactive Inhibition]  
 Inhibition (Retroactive) [See Retroactive Inhibition]  
 Injections [See Intramuscular Injections, Intraperitoneal Injections]  
 Injuries [See Burns, Head Injuries]  
 Inmates (Prison) [See Prisoners]  
 Inner City [See Urban Environments]  
 Innovativeness [See Creativity]  
 Insanity [See Mental Disorders, Psychosis]  
 Insects [See Also Bees] 6722, 6958, 6987  
 Insecurity (Emotional) [See Emotional Security]  
 Inservice Teacher Education 8207, 8230, 8249, 8260  
 Inservice Training (Mental Health) [See Mental Health Inservice Training]  
 Insomnia 6707, 7792, 7984  
 Instinctive Behavior (Animal) [See Animal Instinctive Behavior]  
 Institutionalization [See Also Hospital Admission, Hospital Discharge, Hospitalization, Incarceration, Psychiatric Hospital Admission, Psychiatric Hospi-

# BRIEF SUBJECT INDEX

- tal Readmission, Psychiatric Hospitalization 8181, 8192  
**Institutionalized Mentally Retarded** 8164  
**Institutions (Correctional)** [See Correctional Institutions]  
**Institutions (Residential Care)** [See Residential Care Institutions]  
**Instruction** [See Teaching]  
**Instruction (Computer Assisted)** [See Computer Assisted Instruction]  
**Instruction (Individualized)** [See Individualized Instruction]  
**Instruction (Programed)** [See Programed Instruction]  
**Instructional Media** [See Educational Audiovisual Aids, Reading Materials]  
**Instructions (Experimental)** [See Experimental Instructions]  
**Instructors** [See Teachers]  
**Instrumental Conditioning** [See Operant Conditioning]  
**Instrumental Learning** [See Operant Conditioning]  
**Instrumentation (Flight)** [See Flight Instrumentation]  
**Insurance** [See Also Health Insurance] 7464  
**Insurance Agents** [See Sales Personnel]  
**Integration (Racial)** [See Racial Integration]  
**Intellectual Development** [See Also Language Development] 7006, 7020, 7072, 7086, 7133, 7700, 7738  
**Intellectually Gifted** [See Gifted]  
**Intelligence** 7000, 7057, 7129, 7133, 7307, 7339, 7518, 7555, 7706, 7743, 8265, 8335, 8341, 8352, 8462  
**Intelligence Measures** [See Also Stanford Binet Intelligence Scale, Wechsler Intelligence Scale Children] 6446, 6453, 6456, 6469, 7132, 7390, 7404, 7405, 7431, 7451, 7716, 8386, 8440  
**Intelligence Quotient** 7388, 7393, 7440  
**Intelligence Scales** [See Intelligence Measures]  
**Intensity (Stimulus)** [See Stimulus Intensity]  
**Intentional Learning** 6600, 8285  
**Interaction (Interpersonal)** [See Interpersonal Interaction]  
**Interaction (Social)** [See Social Interaction]  
**Interdisciplinary Treatment Approach** 7805  
**Interest Inventories** 6457  
**Interest Scales** [See Interest Inventories]  
**Interest Surveys** [See Interest Inventories]  
**Interests** [See Also Occupational Interests] 7367, 8327, 8462  
**Interference (Learning)** [See Also Proactive Inhibition, Retroactive Inhibition] 6615, 6627, 6672, 6677  
**Intergroup Dynamics** 7275  
**Intermittent Reinforcement** [See Reinforcement Schedules]  
**Internal External Locus of Control** 7412, 7436, 7553, 7644, 8366  
**International Relations** 7163, 7231, 7237, 7322  
**Interpersonal Attraction** 7195, 7290, 7293, 7300, 7304, 7305, 7306, 7308, 7318, 7328, 7333, 7334, 7338, 7817  
**Interpersonal Communication** [See Also Bargaining, Body Language, Group Discussion, Interviewing, Interviews, Job Applicant Interviews, Psychodiagnostic Interview] 7112, 7282, 7293, 7301, 7328, 7338, 7886, 7940, 7973, 8032, 8252, 8432, 8441  
**Interpersonal Influences** 7283, 7341  
**Interpersonal Interaction** [See Also Assistance (Social Behavior), Bargaining, Conflict, Cooperation, Friendship, Group Discussion, Group Participation, Interpersonal Attraction, Interpersonal Communication, Interpersonal Influences, Interviewing, Interviews, Job Applicant Interviews, Participation, Peer Relations, Psychodiagnostic Interview, Riots, Social Dating, Violence, War] 7096, 7098, 7113, 7161, 7288, 7294, 7298, 7340, 7651, 7809, 7878, 7979, 8272, 8423, 8430  
**Interpersonal Perception** [See Social Perception]  
**Interpretation (Psychoanalytic)** [See Psychoanalytic Interpretation]  
**Interresponse Time** 6927, 6943  
**Interstimulus Interval** 6528, 6550, 6557, 6600, 6646, 6772, 6908  
**Intertrial Interval** 6905  
**Interval Reinforcement** [See Fixed Interval Reinforcement, Variable Interval Reinforcement]  
**Intervals (Stimulus)** [See Stimulus Intervals]  
**Interviewing** 8080  
**Interviews** [See Also Job Applicant Interviews, Psychodiagnostic Interview] 7180, 7287, 7318, 7475, 7561, 8033, 8422  
**Intimacy** 7258, 7318, 7847, 7979  
**Intoxication (Alcohol)** [See Alcohol Intoxication]  
**Intramuscular Injections** 6818  
**Intraperitoneal Injections** 6806, 6829  
**Intrauterine Devices** 7226  
**Intrinsic Motivation** 7207  
**Introspection** 6690  
**Introversion** 6682, 7336, 7381, 7449  
**Intuition** 6702  
**Inventories** [See Interest Inventories]  
**Inventories (Attitude)** [See Attitude Measures]  
**Inventories (Personality)** [See Personality Measures]  
**Inventories (Preference)** [See Preference Measures]  
**Invertebrates** [See Arachnida, Bees, Crabs, Insects, Mollusca, Protozoa, Worms]  
**Investigation** [See Experimentation]  
**Involutional Depression** 7533  
**Involvement** 7044  
**Ions** [See Electrolytes]  
**Isoniazid** 6825  
**Iran** 7511  
**Irradiation** [See Radiation]  
**Ischemia** [See Cerebral Ischemia]  
**Isolation (Social)** [See Social Isolation]  
**Israel** 8124  
**Italy** 7039, 7142, 7648  
**Item Analysis (Test)** 6444, 6446, 6465, 6466, 6498, 6626, 8400, 8470  
**Item Content (Test)** 6448  
**Jails** [See Prisons]  
**Japan** 7091, 7234, 7436, 7452, 7483, 7574, 7689, 8089, 8442  
**Job Analysis** 8433, 8452, 8470, 8472, 8484  
**Job Applicant Interviews** 7318, 8464  
**Job Descriptions** [See Job Analysis]  
**Job Experience Level** 7836, 8449, 8469  
**Job Mobility** [See Occupational Mobility]  
**Job Performance** [See Also Employee Productivity] 7497, 8118, 8456, 8466, 8467, 8473, 8474, 8475, 8477, 8479, 8482, 8483, 8485, 8486, 8492, 8496, 8497, 8505  
**Job Performance Evaluation** [See Job Performance, Personnel Evaluation]  
**Job Requirements** [See Job Analysis]  
**Job Satisfaction** 8213, 8434, 8468, 8469, 8470, 8475, 8478, 8485, 8487  
**Job Selection** [See Occupational Choice]  
**Jobs** [See Occupations]  
**Joy** [See Happiness]  
**Judgment** 6433, 7303, 7341, 7379, 7450  
**Jung (Carl)** 6416, 6417  
**Jungian Psychology** 6401, 6414, 6415, 6440, 6442, 7347, 7363, 7371, 7437, 8020  
**Junior Colleges** [See Colleges]  
**Junior High School Students** 7197, 8217, 8248, 8272, 8329, 8330  
**Junior High School Teachers** 8235  
**Jury** [See Adjudication]  
**Justice** 7185, 7288  
**Juvenile Court** [See Adjudication]  
**Juvenile Delinquency** 7629, 7662, 7664, 7991, 8115, 8174  
**Juvenile Delinquents** [See Also Male Delinquents] 7698, 7933, 8077, 8116  
**Karyotype Disorders** [See Chromosome Disorders]  
**Keypunch Operators** [See Clerical Personnel]  
**Kidney Transplants** [See Organ Transplantation]  
**Kinesthetic Perception** 8473  
**Klinefelters Syndrome** 7760  
**Knee** 6634  
**Kuder Occupational Interest Survey** 8417  
**L Dopa** [See Levodopa]  
**Labor (Childbirth)** 7172  
**Laboratories (Experimental)** [See Experimental Laboratories]  
**Laborers (Construct And Indust)** [See Blue Collar Workers]  
**Labyrinth (Anatomy)** [See Cochlea, Vestibular Apparatus]  
**Labyrinth Disorders** [See Motion Sickness]  
**Lactation** 6828, 6895  
**Lag (Response)** [See Reaction Time]  
**Language** [See Also Adjectives, Adverbs, Antonyms, Bilingualism, Dialect, Etymology, Foreign Languages, Form Classes (Language), Grammar, Homographs, Language Development, Letters (Alphabet), Linguistics, Literacy, Nonstandard English, Nouns, Numbers (Numerals), Orthography, Phonology, Psycholinguistics, Public Speaking, Semantics, Sentence Structure, Sentences, Slang, Syllables, Synonyms, Syntax, Vocabulary, Words (Phonetic Units), Written Language] 7364, 7383, 8283  
**Language Arts Education** [See Also Reading Education, Spelling] 8305, 8308, 8355

# BRIEF SUBJECT INDEX

**Language Development** 7025, 7026, 7028, 7036, 7037, 7045, 7056, 7059, 7628, 8358, 8359, 8360, 8368, 8371  
**Laryngeal Disorders** 8105  
**Latency (Response)** [See Response Latency]  
**Lateral Dominance** 6517, 6530, 6535, 6543, 6614, 6710, 6994, 7000, 7040, 7703  
**Law (Government)** [See Also Criminal Law] 8381  
**Law Enforcement Personnel** [See Also Parole Officers, Police Personnel, Prison Personnel] 8153, 8186, 8477, 8498  
**Laws** [See Also Abortion Laws, Drug Laws, Marihuana Legalization] 7208, 8221, 8233, 8524  
**Lawyers** [See Attorneys]  
**Leadership** [See Also Leadership Style] 7284, 7340, 8492, 8495, 8496  
**Leadership Style** 7955, 8490, 8501, 8505  
**Learning (Programed)** [See Programed Instruction]  
**Learning Ability** 7046, 7665  
**Learning Disabilities** [See Also Dyslexia] 7698, 7709, 7769, 8353, 8359, 8361, 8379, 8380, 8388  
**Learning Disorders** [See Also Dyslexia, Learning Disabilities, Reading Disabilities] 7695, 8354  
**Learning Rate** 6932, 7665  
**Learning Theory** 6620, 6632, 7405, 8361  
**Learning** [See Also Related Terms] 6620, 6621, 6636, 6880, 7966  
**Least Preferred Coworker Scale** 8501, 8503  
**Legal Processes** [See Also Adjudication, Incarceration, Parole, Probation] 7171, 7211, 7222, 7230, 7235, 7240, 7686, 7800, 8070, 8126, 8181, 8233, 8234  
**Legalization (Marihuana)** [See Marihuana Legalization]  
**Lesions** [See Also Brain Lesions, Hypothalamus Lesions] 6825, 7752  
**Lesson Plans** 8275, 8315  
**Letters (Alphabet)** 6554, 8319

Opium Alkaloids [See Opiates]  
Opium Containing Drugs [See Opiates]  
Opium Derivatives [See Opiates]  
Optic Lobe 6722, 6768  
Optical Illusions [See Illusions (Perception)]  
Oral Communication [See Verbal Communication]  
Oral Contraceptives 7226  
Organ of Corti [See Cochlea]  
Organ Transplantation 7777, 8103  
Organic Brain Syndromes [See Senile Dementia]  
Organic Therapies [See Drug Therapy, Electroconvulsive Shock Therapy]  
Organization (Spatial) [See Spatial Organization]  
Organizational Change 7160, 8087, 8145, 8168, 8506, 8508  
Organizational Climate 8145, 8509, 8510  
Organizational Development 8069  
Organizational Goals [See Organizational Objectives]  
Organizational Objectives 8482, 8508  
Organizational Structure 8158, 8498, 8509  
Organizations [See Also Government Agencies, Professional Organizations] 7236, 7274  
Orgasm [See Female Orgasm]  
Orientation (Perceptual) [See Perceptual Orientation]  
Orientation (Spatial) [See Spatial Orientation (Perception)]  
Orienting Responses 7562  
Originality [See Creativity]  
Orthogonal Rotation [See Also Equimax Rotation] 6476  
Orthography 6584, 7715  
Orthopedically Handicapped [See Physically Handicapped]  
Outcomes (Psychotherapeutic) [See Psychotherapeutic Outcomes]  
Outpatient Psychiatric Clinics [See Psychiatric Clinics]  
Outpatient Treatment 7867, 7878, 8083, 8087, 8151  
Outpatients 6752, 7545, 7845, 7859, 8151  
Ovariectomy 6764, 6812, 6895  
Overpopulation 7169, 7273  
Overweight [See Obesity]  
Oxidases [See Monoamine Oxidases]

Pacemakers (Artificial) [See Artificial Pacemakers]  
Pain [See Migraine Headache]  
Pain Perception [See Pain Thresholds]  
Pain Relieving Drugs [See Analgesic Drugs]

Pain Thresholds 6831, 6859  
Paired Associate Learning 6597, 6600, 6601, 6628, 6845, 7710  
Palsy [See Paralysis]  
Paradoxical Sleep [See REM Sleep]  
Paralysis [See Also Cerebral Palsy, Parkinsons Disease] 7727  
Paralysis Agitans [See Parkinsons Disease]  
Paramedical Personnel [See Psychiatric Aides]  
Paramedical Sciences [See Nursing, Pharmacology, Psychopharmacology]  
Parametric Statistical Tests 6494  
Paranoia (Psychosis) 7572, 7763, 8017  
Paranoid Personality 8021  
Paranoid Schizophrenia 7906  
Paraprofessional Education 7455, 8081, 8399  
Paraprofessional Personnel [See Also Psychiatric Aides] 7455, 7469, 8081  
Parapsychological Phenomena [See Also Extrasensory Perception] 6513  
Parapsychology [See Extrasensory Perception, Parapsychological Phenomena]  
Parent Child Relations [See Also Father Child Relations, Mother Child Relations, Parental Attitudes] 7091, 7102, 7119, 7413, 7539, 7745, 7776, 7841, 7951, 7982, 8075, 8076, 8078, 8084, 8091  
Parental Absence [See Also Father Absence] 8052  
Parental Attitudes 7122, 7213, 7570, 7879  
Parental Influence [See Parent Child Relations]  
Parental Occupation 7468  
Parental Role 7111, 7155
